
APPENDIX.

APPENDIX

TO THE

CONGRESSIONAL RECORD.

The Army Bill and Philippine Policy.

SPEECH OF

HON. JOHN F. SHAFROTH,
OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 5, 1900.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (S. 4300) to increase the efficiency of the military establishment of the United States—

Mr. SHAFROTH said:

The pending bill authorizes the President to increase the standing Army of the United States from 26,800 to 100,000 men, and makes no provision for ever letting it decrease below 58,000.

It is admitted by all that the full 100,000 will be enlisted as soon as possible, and no one claims he can foresee when the Army will ever be reduced.

The only attempt to justify such a large increase in the permanent Army is the claim that a temporary emergency in the Philippines requires it. Even if the purpose were commendable, the bill should be framed to meet temporary conditions and not for a permanent establishment. A bill providing for a standing Army should be constructed with relation to the needs of the Government in times of peace, for that is the condition of our country nine-tenths of the time. We have always and will always rely upon the volunteers during wars, because experience has demonstrated that they make the best soldiers. Though not as well drilled, they enlist for a cause which inspires them to the most heroic acts of valor.

Without the condition in the Philippines the Administration can show no reason whatever for increasing the standing Army. The policy of the United States, notwithstanding the desire of the Administration, has not been definitely settled with respect to the archipelago, and until it is so settled legislation of a permanent character is premature. There is to be an argument before the Supreme Court of the United States on the 17th day of this month in a case, the decision of which will determine the question whether or not the Constitution follows the flag.

If that decision is that the inhabitants of the possessions of this Government are entitled to the privileges of the Constitution, then I can not believe that the American people will ever sanction the holding of the Philippine Islands.

If we are not going to retain them no one will contend that we need an army of 100,000 men. Consequently the passage of this measure should necessarily depend upon what policy the nation is going to pursue with respect to those islands, that is, whether the Administration's policy should be continued.

In my judgment it is one of the most momentous questions that has ever arisen in American politics. It goes to the very fundamental principles which underlie our form of government. It is the question as to whether the law of our being shall longer exist, whether we shall pursue the principles of a republic, or establish the doctrines of an empire.

I wish now to examine this question—

First, from the moral aspect: Is it right?

Second, from the legal aspect: Is it legal?

Third, from the practical aspect: Is it expedient?

I. MORAL ASPECT—IS IT RIGHT.

About two and a half years ago the United States found a people near its southeastern border on the island of Cuba struggling for freedom, for liberty, and for independence. The insurrection, caused by the tyranny and oppression of Spain, had existed for a

long period of time. We had sympathized with the Cuban patriots for a number of years, but finding that sympathy was of no avail, we determined to put a stop to the tyranny inflicted, and declared war against Spain. In the declaration of war we stated that the people of Cuba "are, and of right should be, free and independent."

No holier war was ever waged by one nation against another. It was a war against tyranny and oppression, for liberty, for freedom, and for independence. It was an unselfish war upon the part of the United States, for in that same declaration we stated that it was not the intention of this Government to appropriate or acquire any part of the island of Cuba, and no one dreamed of taking any of her other possessions. On the 1st day of May, 1898, in order to bring victory to our cause, Admiral Dewey sailed into Manila Harbor and completely destroyed the fleet of Montejó. He found in the Philippines, that the people of those islands were in arms against the Spanish Government, to prevent the same cruelty and tyranny which had been inflicted for years in Cuba. Thirty thousand insurgents were organized against the Spanish forces. They had been fighting just as the Cubans—for freedom, for liberty, and for independence, the only difference being that the Philippine people had been fighting for a much longer period of time. Instead of a strife of ten years, there had been for more than three hundred years almost a continual war in the Philippine Islands against the Spanish Government.

Admiral Dewey immediately saw the necessity of asking the cooperation and assistance of the insurgent soldiers. He invited Aguinaldo, their former leader, to take command of those forces, and caused him to be brought in an American vessel to the Philippine Islands. The insurgent troops were supplied with arms and ammunition by the American officers, and they immediately began a most aggressive warfare against the Spanish. They captured and conquered town after town where Spanish troops were garrisoned. They took 7,000 prisoners and drove from the interior of the islands into the city of Manila every Spaniard to be found. They captured the second largest city of the Philippine Islands—namely, the city of Iloilo—without the assistance of a single American soldier.

General Anderson, the general in command of the American Army, on the 4th day of July, 1898, wrote a letter to the commander of the Philippine forces, in which he said:

I desire to have the most amicable relations with you and to have you and your people cooperate with us in military operations against the Spanish forces.

And again, on July 23, 1898, General Anderson, in a letter to Aguinaldo, used the following language:

When I came here three weeks ago I requested your excellency to give what assistance you could to procure means of transportation for the American Army, as it was to fight in the cause of your people.

Soon thereafter Aguinaldo issued a proclamation to the Filipinos, in which the following language was used:

Die rather than be ungrateful to our American liberators. Where you see the American flag flying assemble in numbers. They are our redeemers.

A large number of Spanish prisoners were delivered by the American forces to the Filipinos, to be kept as prisoners of war. The Philippine troops and the American soldiers surrounded the city of Manila.

On the day of the surrender of Manila 15½ miles of the surrounding line was occupied by the Filipinos and 600 yards by the American troops. It is a well-recognized rule in military affairs that when two armies are besieging a third the surrender of the besieged must always be made to the force having the greater numbers.

In the meantime a government had been formed and organized by the Philippine people. They issued a declaration of independence, and on the 18th day of June, 1898, adopted a constitution. The government immediately began to exercise its functions, proceeding with the establishment of a judicial and a school system and the collection of taxes for the maintenance of the government.

These were the conditions and these the services rendered by the Filipinos at the time of the signing of the treaty of peace at Paris. While the peace commissioners were sitting, the Philippine government sent a deputation to Paris for the purpose of being heard as to its right to the islands. They knocked at the door of the commission, but knocked in vain. After the signing of the treaty of peace they came to Washington and tried to submit to the President of the United States the reasons why the United States was in honor bound to recognize the independence of the Philippine people, but the door of the White House was closed, and they knocked in vain.

OUR PRINCIPLES OF GOVERNMENT.

Mr. Chairman, previous to 1776 there was practically but one form of government existing throughout the world. It recognized the doctrine that all powers of government were vested in one man—the king or sovereign; that he granted to the people just such rights, such liberties, and such privileges as he deemed proper that they should have. It was a theory of government that recognized that God Almighty gave powers of government to the king, who exercised them as he deemed best. It was called “the divine right of kings.” The rights and privileges which were given to the people were generally granted only upon compulsion.

When tyranny and oppression existed to such an extent that it became intolerable, the people at times arose and compelled the sovereign to grant them rights and privileges. The right of trial by jury and the right to the writ of habeas corpus were obtained from the king only at the point of the sword. These privileges and rights when once granted were respected, and such governments were termed limited monarchies, but the original source of authority was by all recognized to be in the sovereign.

In 1776 the Revolutionary patriots contended that the doctrine of “the divine right of kings” was false; that powers of government were not vested in one man, but that all powers of government ascended from the people instead of descending from the king.

They issued a proclamation called the Declaration of Independence, and in that instrument they declared that all men are created equal before the law; that they are entitled to life, liberty, and the pursuit of happiness, and that the just powers of government are derived from the consent of the governed.

The war of 1776 is called the war of the Revolution, because it promulgated a form of government which completely revolutionized the ideas of government that existed previous to that time.

I take it that every American citizen believes in the fundamental principles of the Declaration of Independence, and therefore it seems strange that we have to ask Americans, Is it right for the Administration to violate the fundamental principles of that declaration? Is it right to treat men as unequal before the law? Is it right to forcibly annex a people without their consent? Is it right to subjugate a people who are struggling for freedom, for liberty, and for independence? The citing of instances where it is claimed this Government has violated these principles, even if parallel (which they are not), would not justify another violation. One wrong can never justify another.

The national Republican convention met in the city of Philadelphia last June for the purpose of declaring the principles of that great political party. They met at a place which should have made the heart of every delegate pulsate with sentiments of liberty, of freedom, and of independence. It was there that the immortal Declaration of Independence was first promulgated to the world. It was there that Liberty Bell pealed forth its sweet tones to an oppressed people. Yet, notwithstanding the hallowed memory of these patriots, the delegates to that convention forgot the principles that are enunciated in that immortal instrument and declared as to the Philippines that they would give to them “the largest measure of self-government consistent with their welfare and our duties.” To be determined by whom? To be determined by us. That to-day is the policy of the present Administration.

Ah, Mr. Chairman, what a great departure is that language from the language of liberty, of freedom, and of independence. How near does it resemble the language of kings and of emperors. I want to arraign that declaration, not in the feeble words that I am capable of uttering, but in the language of the man who, above all others, is most competent to speak for the Republican party. I mean that greatest of American commoners, Abraham Lincoln. Here is the statement that he made relative to almost the identical language contained in the Republican platform. He said:

These arguments that are made that the inferior races are to be treated with as much allowance as they are capable of enjoying; that as much is to be done as their condition will allow—what are these arguments? They are the arguments that kings have made for enslaving the people in all ages of the world. You will find that all the arguments in favor of kingscraft were of this class; that they always bestrode the necks of the people, not that they wanted to do it, but because the people were better off for being ridden. Turn it whatever way you will, whether it come from the mouth of a king, an excuse for enslaving the people of the country, or from the mouth of men of one race for enslaving the men of another, it is all the same old serpent.

And again, Mr. Lincoln, referring to the principles of the Declaration of Independence, used the following language:

The principles of Jefferson are the definitions and axioms of free society, and yet they are denied and evaded with no small show of success. One dashing call them “glittering generalities;” another bluntly calls them “self-evident lies;” others insidiously argue that they apply to “superior races.”

These expressions, differing in form, are identical in object and effect—the supplanting the principles of free government and restoring those of class, caste, and legitimacy. They would delight a convocation of crowned heads plotting against the people. They are the vanguard, the miners and sappers, of returning despotism. We must repulse them or they will subjugate us. This is a world of compensation, and he who would be no slave must consent to have no slave. Those who deny freedom to others deserve it not themselves, and, under a just God, can not long retain it.

All honor to Jefferson, to the man who, in the concrete pressure of a struggle for national independence by a single people, had the coolness, forecast, and capacity to introduce into a merely revolutionary document an abstract truth applicable to all men and all times, and so to embalm it there that to-day, and in all coming days, it shall be a rebuke and a stumbling-block to the very harbingers of reappearing tyranny and oppression.

Abraham Lincoln, in a speech delivered on September 11, 1858, again referred to our reliance against a resumption of tyranny in these words:

Our reliance is in the love of liberty which God has planted in our bosoms. Our defense is in the preservation of the spirit which prizes liberty as the heritage of all men, in all lands, everywhere. Destroy this spirit, and you have planted the seeds of despotism around your own door.

What a terrible arraignment of the resolution of the Republican national convention upon the Philippine question do these declarations of Abraham Lincoln constitute!

President McKinley, in his message to Congress on April 11, 1898, said:

I speak not of forcible annexation, for that can not be thought of; that by our code of morals would be criminal aggression.

And again, in a speech at the New England dinner given at New York in 1890, he used the following language:

Human rights and constitutional privileges must not be forgotten in the race for wealth and commercial supremacy. The government by the people must be by the people, and not a few of the people. It must rest upon the free consent of the governed. Power, it must be remembered, which is secured by oppression or usurpation or by any form of injustice is soon dethroned.

Yet, notwithstanding these declarations, the Republican party, through the Administration, is now waging a war for forcible annexation of islands whose people never did us any harm, but who welcomed us as their redeemers; who aided and assisted us in every way in defeating Spain and in driving the Spaniards from the Philippine Islands.

I say this is a war not of the Government but of the Administration, for although the power to declare war is vested by the Constitution of the United States in Congress alone, yet Congress has passed no resolution declaring war against the Filipinos.

Is it possible that anyone who believes in the doctrine of republics should even have to be asked the question as to whether the policy of this Administration as to the Philippines is right?

Sir, we knew that they were fighting for independence when we asked their cooperation, and every moral obligation required the Government after receiving the benefit of their assistance to aid them in their independence.

We have had an instance in the history of our own Government that can make us clearly see the injustice of the action of this Administration in the Philippines. During the war of the Revolution France sent to this country General Lafayette, with several thousand brave French soldiers. They knew we were fighting for liberty, for freedom, and for independence. They fought side by side with the forces of Washington and the other generals of the Revolutionary war, just as the Filipinos fought side by side with the American troops in the archipelago.

What would you have thought of the moral turpitude of France if, after the surrender of the British at Yorktown, she had sent a commission to Great Britain and negotiated a treaty with that Empire by which, in consideration of \$30,000,000, there should be ceded to France the thirteen colonies of America?

There is not a man within the sound of my voice but what would have condemned that action in the most severe terms. What would Americans have done under those circumstances? They would have said that we fought England with courage and determination, but we will fight France with heroism and desperation.

“Do unto others as you would that others should do unto you.” When we apply to ourselves the action which this Administration is authorizing in the Philippines, there is no man so blind but what can see the injustice of such conduct.

IMPERIAL GOVERNMENT NOW IN THE PHILIPPINES.

The Republicans tell us that there is no such thing as imperialism involved in this policy; that the charge of imperialism is false; that it is a “bogey man” with which to scare the people, and they defy anybody to define imperialism.

Imperialism is government without the consent of the governed. Our forefathers said that taxation without representation

was tyranny, and I believe it is as much tyranny to-day as it was in the days of the Revolutionary war.

In order to govern the Philippine people, who were not in insurrection, but who, it was claimed, desired annexation with our country, a commission was appointed by the President without any authority from Congress to supplant the military rule theretofore existing and establish civil government.

I hold in my hand a dispatch from Manila, which no man can hear without knowing that imperial government is now being imposed in the Philippine Islands. Though he may not agree as to my definition of imperialism, yet he must recognize, after hearing this dispatch, that according to any definition of imperialism which he may frame it exists to-day in those islands. All the dispatches that are sent from Manila first go through the hands of an American officer, and whenever anything is contained therein that is of detriment to the Administration he strikes it out at his will. It is called "censoring the dispatches." Hence you can rely upon the fact that this dispatch from Manila tells nothing more against the Administration than is absolutely true. This is the dispatch:

MANILA, August 5, 1900.

On September 1 the commission, headed by Judge Taft, will become the legislative body of the Philippines, with power to take and appropriate insular moneys, then establish judicial and educational systems and to make and pass laws.

No money will be permitted to be drawn from the insular funds except by authorization of the committee. Judge Taft and his colleagues will also exercise certain executive functions. For instance, they will appoint judges, officials in the educational department, and officers of municipalities.

This commission was appointed by President McKinley, a foreign ruler to the Philippine people. It consists of five men who are not even of the same race with them; men who never saw the Philippine Islands before the Spanish war; men who did not then and do not now speak the language of the Filipinos; men who do not know the wants or needs of these people. How would we like to be ruled by a commission of that kind?

And yet that commission goes to these islands, assumes control of the government, and becomes the legislative body thereof, with power to take and appropriate, as they deem proper, the moneys raised by taxation of the Philippine people. Not only that, but they will appoint all the judges, officials in the educational department, and officials of the municipalities. In other words, these five gentlemen appointed from Washington will pass all the laws, spend all the money, and appoint all the officers of the islands.

If you search the colonial governments of the empires of the world, it will be difficult indeed to find one which imposes more arbitrary power than this form of government for the Philippines.

King George III never imposed such government upon the thirteen colonies. They always had the right to elect a legislature from among the people, and absolute freedom of speech was allowed in these legislative bodies.

It was in the Virginia house of burgesses, if you remember, that Patrick Henry arraigned King George III himself, and closed with the ever memorable sentence, "As for me, give me liberty or give me death."

A new form of caption in legislative bills is now being used for the first time in the history of our Government, in the introduction and passage of measures through this commission of the Philippines. Every bill that is considered by this commission commences with these words, "By the authority of the President of the United States, be it enacted by the Philippine Commission."

Is it possible that there is a man within the sound of my voice who does not know, beyond the peradventure of a doubt, that the government now being imposed in the Philippine Islands is imperial?

England prides herself on her great Empire, but she has no such arbitrary form of government in a single one of her numerous colonies. And is it possible that there is a man who believes in the principles of the Declaration of Independence; who believes that the just powers of government are derived from the consent of the governed; who believes that all men are created equal and are entitled to life, liberty, and the pursuit of happiness, can for a moment believe that the arbitrary action of this Administration with relation to the Philippines is right?

The golden rule is the best test of justice. Ask yourself what you would think if you were in their place.

Abraham Lincoln well said:

No man is good enough to govern another man without that other man's consent. When the white man governs himself, that is self-government; but when he governs himself and also another man, that is more than self-government—that is despotism.

WILL CONGRESS GIVE JUST GOVERNMENT TO THE PHILIPPINES?

It is said that in time Congress will give a just government to the Philippine people, that there is no danger of imperialism from an American Congress. Ah, Mr. Chairman, the same thing was said as to Porto Rico. If there ever was a people who should have been generously treated it was the inhabitants of that little island. They had welcomed our invading army with flowers and greet-

ings of joy. Our generals had told them that they should receive the privileges and blessings of our Constitution. By annexation we had deprived them of the open markets of Spain. Yet when it came to enacting laws for that island, Congress, guided by its own selfish interests, imposed a tax upon their goods shipped to this country, notwithstanding the Constitution declares that no duty can be imposed upon goods transported from one part of the United States to another. No annexationist will admit that Congress is going to extend the Constitution to the Philippine Islands. Can an advocate of the principles of a republic believe that Congress can give just government to a people, and yet deny to them the principles of its being and the privileges of its Constitution?

No nation can govern a people of another race in distant lands without having conflicting interests continually arise, which will be affected by the laws imposed. Nations, as well as individuals, are selfish. They will generally favor their own country, and thereby do a wrong to the people so governed. It is for that reason that self-government is the most satisfactory government known to man.

It may be contended that the imposition of duties is simply a matter of taxation, and therefore not serious. But, when we remember that our forefathers fought because of the imposition of a stamp tax, we can not close our eyes to the fact that the power of taxation can be made the most oppressive engine of destruction, devastation, and desolation a country can know.

The denial of the right of trial by jury would affect only about one man in five hundred, and the denial of the right to the writ of habeas corpus would affect only about one in a thousand; but the imposition of taxes affects every man, woman, and child in the land. Discrimination in duties often destroys industries and produces poverty and distress, and it is said the power of taxation can be made the instrument of annihilation.

FLAG ARGUMENT APPEAL TO SENTIMENT NOT REASON.

What answer do the Republicans give to these arguments as to the moral aspect of the question? They answer by saying, "Never pull down the American flag." That is an appeal to our sentiment and not to our reason. They make that appeal because they know that the American people love the American flag. They love that flag because it has always been the emblem of freedom, of liberty, and of independence.

Do they not know that the American flag was pulled down from the City of Mexico; from the embattlements of Chapultepec, and from the heights of Quebec; from the northwest boundary of Maine, and even from the western shore of England itself, where it was planted by John Paul Jones?

Is it possible that a flag should be compelled to float when it would be to the detriment of the nation to retain it there? The American flag should be hauled down from every place where it never should have been planted.

Last summer we unfurled the flag upon the walls of Peking and we hauled it down less than six weeks thereafter. Is there an American in this broad land who believes that the flag should have remained there forever?

It is also true that in nearly every one of those instances the blood of our soldiers had consecrated the soil of those countries, and to-day at the City of Mexico lie buried some of the bravest soldiers of the war of 1847.

WHO ARE THE PATRIOTS?

Do you not recognize that the flag argument is purely an appeal to sentiment? Does not everyone know that it would be criminal to keep a flag at any place where we violate the fundamental principles of our Government, or where it would be detrimental to the interests of our nation?

The Republican party, in its flag argument, attempts to make out that everyone who believes in taking down the flag and not upholding the Administration in this war is unpatriotic, and that we should not even indulge in criticism of the Administration's policy with respect thereto. Is it possible that when a policy is being pursued which in our judgment is fraught with so much disaster to our institutions and future welfare, it is unpatriotic to protest? As long as we believe that the policy is so fatal to our country it would be unpatriotic not to protest.

Who are the patriots upon this question? The position we take is not out of love for the Filipinos. I never knew a Filipino in my life, nor have I a friend in the Philippine Islands, and I doubt very much whether anyone has within the sound of my voice.

It is not for the Filipinos that we want to give them their liberty, their freedom, and their independence, but it is because of the effect that a policy of conquest would have upon the citizens of our own country and the welfare of our nation.

No man can justify forcible annexation unless he resorts to the argument that "might is right;" and when he does that, he blunts his own sense of equity and justice. Abraham Lincoln has well said that—

Those who deny freedom to others deserve it not themselves, and under a just God can not long retain it.

Who are the patriots? Are they those whose policy will compel the trampling under foot of the sacred principles of the Declaration of Independence or are they those who want to retain the government of a republic? Are they those who want to change the form of our Government, who want to govern distant islands without the consent of the governed, or are they those who believe in liberty, freedom, and independence for all mankind?

Ah, Mr. Chairman, when one analyzes this question, he can come to no other conclusion than that if there are unpatriotic people in this country, they are those who want to overthrow the principles under which this Government has existed and flourished for more than a century and start the nation upon a career of colonial empire.

VALUE NO ANSWER TO MORAL QUESTION.

What other answers do they make to the moral aspect of this question? Oh, they say the islands are fabulously rich in minerals and soil, and they must be ours. Do you not recognize in that declaration an appeal to your cupidity, to your greed, to your rapacity? Is it possible that we should determine a question of morals by the gain that we can make? That is the argument of the highwayman. That is the argument of everyone who wants something that does not belong to him, and it is the argument of every land-grabbing empire in the world. The Bible has well said, "What doth it profit a man if he gain the whole world and lose his own soul?" and I say, What doth it profit a nation if it gain the whole world and lose its sense of right and justice?

I therefore contend that from the moral aspect the policy of this Administration as to the Philippine Islands is wrong.

II. LEGAL ASPECT—IS IT LEGAL?

I wish now to examine this question as to its legal aspect.

1. It is a principle of international law that no nation can transfer title to territory over which it has not control and possession.

The reason for this rule is very clear. International law receives the sanction of governments in order to prevent difficulties, conflicts, and wars among nations. You can readily see that if it were legal for a nation to transfer title to territory of which it has not possession, it would produce innumerable conflicts and wars between nations. After a people had won their independence it would only be necessary for the mother country to cede the land so liberated to some greater power, which would crush the new government. If title to territory is to be recognized as belonging to a nation after it has lost possession and sovereignty, for what period of time can it still claim title. There is no statute of limitations known to international law.

The King of England retained as part of his title the words "Duke of Normandy and King of France" down to the beginning of the nineteenth century, but the cession by the King of England of the dukedom of Normandy or the Kingdom of France would not have been recognized by a single nation in the world.

At the time the treaty of peace between the United States and Spain was signed not a single foot of territory of the entire archipelago was in possession of Spain. The Filipinos had driven every Spaniard from the islands into the city of Manila and had captured 7,000 prisoners, and the city of Manila had been taken by the cooperation of the Filipinos and the American forces. So that at the time Spain ceded the islands to the United States, according to the principles of international law, she had no more title to those islands outside of the city of Manila than you have to the Kingdom of Spain. Therefore this Administration, in attempting to assert title in violation of the principles of international law, is wrong from a legal aspect.

2. There is another principle of international law which is well established, and that is that no ally can enrich himself at the expense of another.

In the testimony of Commander Bradford, of the United States Navy, before the Paris peace commission the following question and answer succinctly states the situation:

Mr. FRYE. I would like to ask just one more question in that line. Suppose the United States, in the progress of that war, found the leader of the present Philippine rebellion an exile from his country in Hongkong, and sent for him and brought him to the islands in an American ship, and then furnished him 4,000 or 5,000 stands of arms and allowed him to purchase as many more stands of arms in Hongkong, and accepted his aid in conquering Luzon, what kind of a nation in the eyes of the world would we appear to be to surrender Aguinaldo and his insurgents to Spain to be dealt with as they pleased?

Answer. We became responsible for everything he has done. He is our ally, and we are bound to protect him. (Sen. Doc. No. 62, p. 489.)

When General Anderson wrote to the leader of the insurgents that he desired the cooperation of the Filipino insurgents with the American troops against the Spanish forces, and when he assured them in another letter that "the American Army was to fight in the cause of your people," and when Admiral Dewey declared, "I have given him (Aguinaldo) to understand that I consider the insurgents as friends, being opposed to a common enemy," a moral alliance was formed as clearly as it is possible to form an alliance between forces. And when the Filipino insurgents actually rendered the assistance in aiding the Americans in conquering Spain, in taking Spanish prisoners and Spanish strongholds, with the

Americans well knowing that they were fighting for their liberty and independence, it constituted an alliance that should be as sacred as any treaty stipulation that was ever signed and ratified. And yet, in view of these facts, should we enrich the Government at the expense of our allies by annexing the Philippine Archipelago?

What does that mean? It means a betrayal of an ally. It is said that even savage tribes will never betray an ally. Should this, the greatest Government on earth, the nation highest in civilization and in morals, take advantage of the assistance and cooperation of our allies and make them the subjects of our Government? No, never.

3. There is another principle of international law to which I wish to call your attention. It is that on the cession of territory the inhabitants of the ceded territory have the right to choose whether their allegiance shall remain to the government existing at the time of the cession or whether it shall be given to the new possessor. It is contended that the insurgents are rebels to our Government. No one can be a rebel to a government who does not owe allegiance to that government; and can anyone indicate when and where the Filipinos raised their hands and swore to support the Constitution of the United States?

They had the right to choose whether they should remain citizens of the government existing at the time of the formation of the treaty or whether they should declare their allegiance to the United States. And it is as legitimate to criticize the Administration as to its action in the Philippines as it is to criticize the same Administration as to its conduct with respect to the strike in the Cœur d'Alene district, in the State of Idaho.

This is the legal aspect of the case, and I maintain that the Administration has violated the fundamental principles of international law in its conduct as to the people of the Philippine Islands.

III. PRACTICAL ASPECT—IS IT EXPEDIENT?

I wish now to examine the question from the practical aspect. Is it expedient for the United States to hold the Philippine Islands? And in the discussion of this phase of the question I wish to examine it, first, from the political standpoint; second, from the commercial standpoint, and, third, from the military standpoint.

POLITICAL STANDPOINT.

1. From the political standpoint, I mean as such action will affect the great political policies of our Government. We are bound to treat the Filipinos either as subjects or as citizens. The rights and privileges of the Constitution either extend to them or they do not. No one contends that certain parts of it apply and other parts do not. The Constitution as an entirety either follows the flag or it does not.

What political difficulties do we get into if we treat the Philippine people as subjects? We thereby give them cause for complaint and discontent. They will say to us that the Declaration of Independence, which the Supreme Court of this nation has declared to be the spirit of this Government, states that all men are created equal, and are entitled, as an inalienable right, to life, liberty, and the pursuit of happiness, and that from the consent of the governed all just powers of government are derived, and they will thereupon ask, "Why are we not treated as equal, when the spirit of your Government says that we are?" "Why are we not entitled to life, liberty, and the pursuit of happiness when it is guaranteed, and why is not our consent asked in the exercise of the just powers of government?" There can be no answer to these questions that can possibly satisfy them, or would satisfy any of us if we were in their place, and, consequently, treating them as subjects gives cause for discontent, for violence, and for insurrection.

There has been considerable comment to the effect that the Philippine insurgents get their encouragement to resist from the declarations made in the Senate and other places relative to their treatment.

Ah, Mr. Chairman, the Filipinos get their encouragement from our own Declaration of Independence, for it is there said that—

Whenever any form of government becomes destructive to these ends it is the right of the people to alter or abolish it and to institute new government, laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness.

As they are fighting for their independence, the treatment of them as subjects will forever be a cause of discontent, discord, violence, and insurrection.

If we are to govern the islands under such conditions, it will require thousands and thousands of troops, which will make the expenses of governing them far out of proportion to any benefit or return we will get by reason of their annexation.

What political difficulties do we get into if we treat them as citizens? When we say that the Constitution extends to the Philippine Islands, we say that the products of the cheap labor of the Philippine Islands can be brought to this country to compete freely with the products of the labor of the American citizens, and that the Filipino can come to the country to which he owes allegiance and can himself here compete with the labor of our

own people. We know that the American laborer will never stand the competition of the cheap labor of the Orient, and they should not be compelled to compete with men who can live on 3 cents a day, and whose daily wage is between 20 and 30 cents. We have had an exhibition of the spirit of the American workman upon this question. The permission of this Government to let Chinese immigrate to our shores produced among our own workmen discontent and violence, and if restrictive legislation had not speedily followed it would have resulted in revolution itself.

So that, when we treat the Filipinos as citizens and let them compete with our own workmen, we do our own laborers a wrong, and give them cause for discontent and for violence. Thereby we simply transfer the storm center of discontent from the Philippine Islands, where it will exist if we treat them as subjects, to our own country, where it will exist if we treat them as citizens. Nor can we ever solve this problem during annexation, for we attempt to do so on principles which are against human nature. The little brown men love independence as well as we, and the only solution is in treating them as we do the Cubans.

The acquiring and holding of islands in the Orient waives our right to insist upon the application of the Monroe doctrine. That doctrine was promulgated for the purpose of preventing the colonization of territory on this side of the Atlantic by nations of the Eastern Hemisphere. It was for the purpose of preventing the establishment of monarchies upon this side of the waters. Its reciprocal implied promise was that we should not interfere with any of the affairs of the Eastern Hemisphere. When we acquire territory in the Orient, we are in justice bound to give to European nations the privilege of acquiring territory on this continent.

The Monroe doctrine, in my judgment, has done more to the upbuilding of this country than any other one policy which it has pursued, and it has done more for liberty and freedom and the establishment of republican institutions than any policy the United States could have followed. I for one am not willing to abandon or jeopardize the wholesome effect of that great policy.

The history of the world shows that race problems have been the most difficult of all to solve. While people have been willing to acknowledge the equality of men of their own race, they have generally in practice denied it as to other races. While man will suffer the bitterest enemy of his own race to exercise authority over him, he will not quietly permit men of other races to do the same.

Race wars will surely ensue, and they are the most cruel and unrelenting of all conflicts. Why jeopardize the peace and quiet of a contented people, and invite the violation of the laws of our Government, by adding to our country a people of a tropical clime, who are not homogeneous with us in either manners, customs, or character?

From the political standpoint, therefore, it seems to me foolish for the United States to attempt to hold the Philippine Islands.

COMMERCIAL STANDPOINT.

2. I wish now to examine this question from the commercial standpoint. Is it wise for the United States to keep the Philippine Islands?

I hold in my hand the last statement issued by the Insular Bureau of the War Department of the United States, which contains the imports to the Philippine Islands from the various nations of the world for the fiscal year ending June 30, 1900. I regard this statement as the most powerful and potent argument against the annexation of the Philippine Islands that has ever been made. It truly tells a most wonderful tale.

It shows the total imports, including gold and silver coins, to those islands for that period were \$36,152,597. The imports by the leading countries are as follows: From China, \$6,446,680; United Kingdom, \$3,941,422; Spain, \$2,092,530; United States, \$1,656,469; British East Indies, \$1,998,680.

It will be seen from that statement that although the flag of our country has been floating over the ports of the archipelago, yet the United States has acquired not one-twentieth of the imports to the islands.

It will be further noted that the total imports from the United States were \$1,656,469, a large part of which consists of goods demanded and purchased by our own soldiers. It is asserted that the average exporter does exceedingly well if, after the payment of transportation charges and insurance, he makes a profit of 10 per cent upon his goods. That profit is more than the average made.

Ten per cent of the imports from the United States to Manila is simply \$165,646. That is the total profit in an entire year which is made to commerce by the holding of the Philippine Islands. What is the cost of maintaining that commerce?

We have at the present time in the Philippine Islands 65,000 American soldiers. It has been the estimate of the War Department ever since the close of the civil war that the average cost of a soldier, including his food, uniforms, equipment, and ammunition in times of peace is \$1,000 for each soldier. It would be much more for

the soldiers in the Philippines, as transportation is much farther and supplies much dearer, but counting it at that average, 1,000 times 65,000 soldiers means \$65,000,000 which the United States is paying in order to maintain a commerce in which there is a profit of \$165,000 a year.

Who gets the profit? The United States Government? Oh, no. The profit is to the exporter and manufacturer of goods. Who pays the cost of \$65,000,000 a year? The Government. And who pays the Government? The people of the United States.

How long will the American people stand the expenditure of \$65,000,000 a year out of moneys collected from the people for the purpose of putting into the pockets of a few of the exporters and manufacturers of goods a profit of only \$165,000 a year?

Mr. HULL. Will the gentleman yield just for one question?

Mr. SHAFROTH. Yes, sir.

Mr. HULL. Do I understand the gentleman from Colorado to say that we are keeping soldiers there to maintain commerce, or is it not to maintain order there?

Mr. SHAFROTH. I will come to that in a minute. It is probably to maintain your authority there at the present time; but you will find that even according to the President's message you propose to keep a large number of men there an indefinite length of time. I do not believe you will ever be able to withdraw a single soldier from the Philippine Islands.

Divide the \$65,000,000 by the three hundred and sixty-five days in the year and you will find that the Government is paying each day, out of moneys collected from the people, more money than the total profit in an entire year is to the manufacturer and exporter of goods.

To a business man how preposterous does this proposition appear. How long would he be willing to spend \$365 of his money for the purpose of putting into the pocket of some one else a profit of \$1, and yet that is exactly what is being done in the Philippine Islands.

The cost of imperialism is far greater than I have stated. It is shown in the appropriations by Congress for this year as contrasted with the appropriations for the year prior to the Spanish war. For the fiscal year ending June 30, 1897, they were \$469,499,010. For the fiscal year ending June 30, 1901, the appropriations amounted to \$710,150,862, a difference of nearly \$250,000,000, and in addition contracts for the Navy were authorized to the amount of \$52,334,374. But greater than all cost is the loss in life of thousands of the flower and youth of our land, which, even if we have peace, from tropical diseases must continue as long as we hold the islands.

It is said, however, that the war will soon be over and it will not be necessary to have so many troops there. Ah, Mr. Chairman, the war will not soon be over. The same spirit of liberty and independence which burned so intensely in the breasts of our forefathers also burns in the heart of the "little brown man," and it will be years and years before the insurrection has been totally suppressed.

I have heard of no estimate, even if we conquer the Filipinos, but by which it will require 30,000 troops to patrol the islands, and 30,000 troops means at least \$30,000,000 a year, and that means an expenditure of at least \$180 for each \$1 of profit to the exporter.

The chances are that instead of the soldiers being less than 65,000 in number they will be increased to 100,000 before the war is over, and that will mean more than \$100,000,000 expenditure per annum.

It is also said that the commerce of the Philippine Islands will increase. Yes, it will increase; it may double, it may quadruple, it may increase even tenfold, and yet it could not do that except after a long series of years, as no nation ever has so greatly increased its commerce in a generation; but even if it were to increase tenfold and the islands were in a state of pacification with only 30,000 troops to patrol it, nevertheless there would be an expenditure of \$18 of the people's money in order to maintain a commerce in which there would be a profit of only \$1 to the American exporter.

So, no matter from what standpoint we look at it, the holding of the Philippines will continually be a financial loss to the Government of the United States. We have taken hold of a red-hot poker, and the quicker we let it go the less of a burn we will receive.

But this little statement tells another mighty tale. If you notice, it says the imports from Spain were \$2,092,530. You have heard of the claim that trade follows the flag, and yet this little document demonstrates that the Philippine people bought from Spain—hated Spain, the Government with which they had been at war for three hundred years—more goods than they bought from the country whose flag now floats over Manila.

It demonstrates that trade does not follow the flag, but does follow the price list; that the Filipinos, like the Americans, will buy where they can buy cheapest and sell where they can sell dearest.

The theory that we need the Philippine Islands for the purpose

of extending our trade to China is the most chimerical dream that was ever fancied. What manufacturer would ship goods to Manila, a port 600 miles from China, unload them, and then re-ship them to points in that Empire. Could he compete with wholesale dealers and manufacturers at Hongkong or Shanghai? The mere statement of the proposition is conclusive of its truth.

The Chinese Government has granted a concession to the foreign powers to erect business houses and factories in a certain district containing several square miles at Shanghai. The entire government of that district, including imposition of taxes, is conferred upon the foreigners. Although the district is inhabited by 200,000 Chinese, they have no voice whatever in the municipal government thereof. That concession is worth more to our manufacturers and exporters than a hundred Manilas. Its location being at the entrance to the Yangtze Valley, which contains the richest lands of Asia, constitutes indeed the open door of our commerce for the Chinese Empire. It is the most economical distributing point that can be designated, and is the most available place from which to acquire the trade of the Orient.

It seems to me, therefore, that from the commercial standpoint it is the height of folly for this Government to hold the Philippine Islands.

MILITARY STANDPOINT.

3. From the military standpoint I mean, does the annexation of the Philippine Islands strengthen or weaken our nation?

It is the universal opinion of men skilled in the science of government that consolidarity of territory is the most invulnerable form of possession. Is it wise for us to exchange concentration for diffusion?

If we hold the Philippine Islands we will place targets 7,000 miles from our shores for the guns of every hostile power. Nations always assault each other at the weakest points. We recently had a war with Spain. We did not attack that country on her home territory. If we had it would have required ten times the men and ten times the ships to have accomplished the same result. We attacked Spain at her weakest points—in her outlying possessions—in the islands of the Philippines and in the island of Cuba. We brought the war speedily to a successful issue.

If we annex the Philippines, the first difficulty that we have with a foreign nation will make those islands the point of attack.

Lord Macaulay has eloquently denied the military value of colonies in the following language:

There are some who assert that from a military and political point of view the West Indies are of great importance to this country. This is a common but a monstrous misrepresentation. We venture to say that colonial empire has been one of the greatest curses of modern Europe. What nation has it ever strengthened? What nation has it ever enriched? What have been its fruits? Wars of frequent occurrence and immense cost, fettered trade, lavish expenditure, clashing jurisdiction, corruption in governments, and indigence among the people.

In order to overcome the weakening effect of retaining in our possession islands 7,000 miles from our shore, it will be necessary to inaugurate great changes in our governmental policy. It will be necessary first to have a navy two or three times as large as that which is amply sufficient to protect the shores of our own territory. The building and maintaining of a navy requires the expenditure of millions and millions of dollars, which must be paid for by the Government. The maintenance of such a navy requires thousands and thousands of marines, which cost millions and millions of dollars annually, all of which must be paid for by the people.

As Dewey surprised the fleet of Montejó in Manila Harbor, it demonstrates the necessity of any people holding the Philippine Islands being prepared against surprises, and in order to prevent such attacks it will be necessary to keep a large part of our Navy in Asiatic waters and to have on the islands themselves a large standing army. That large standing army will cost annually millions of dollars to maintain, and all of it must be paid from taxes collected from our own people. It seems to me, therefore, that from a military standpoint the acquisition of the Philippines is weakening instead of strengthening to our nation.

In conclusion, I wish to say that in my judgment the gravest and most serious problems are involved in the Philippine policy. May it be ultimately determined in the interest of the preservation of the great principles of our glorious Republic.

I have attempted to show that the policy of annexing and holding the Philippine Islands is wrong—first, from the moral aspect; second, from the legal aspect, and, third, from the practical aspect; that political problems are bound to arise on the annexation of these islands that can never be solved except by treating the Filipinos as we treat the Cubans. Any other attempted solution is against human nature, and therefore can not be effective. From the commercial standpoint I have shown that it must be a financial loss to our Government; and from a military standpoint that it is weakening rather than strengthening to our nation.

The departure from the fundamental principles of our Government are far-reaching in their consequences. We can not deny to

men the right of self-government without in time it affecting our own people. It was truly said that the Republic could not endure half slave and half free, and I believe it can not endure half republic and half empire.

Such a condition produces two schools of politics, one believing in the policies of an empire and the other in those of a republic; one believing in the right of some men to govern, and the other in the equality and rights of man. An irreconcilable conflict begins and continues for the supremacy of their respective doctrines, just as the slave power fought for the extension of slavery in the Territories.

One must ultimately triumph. Republics are formed only after revolution; the change to the empire is slow and gradual. One of the saddest things in history is that whenever these schools of politics have met the final result has been the triumph of imperial doctrines. Should we not profit by the experience of history?

This Army bill is one of the first measures made necessary by the policy of colonial empire. Other measures must be presented by which you will be compelled to vote either for the upholding of the principles of republican institutions or for the establishment of the policy of an imperial government. I know not what course you may pursue, but as for me, I want to say that I am for the Republic forever and for the empire never.

Army Bill.

SPEECH

OF

HON. JAMES R. WILLIAMS,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 6, 1900.

The House being in the Committee of the Whole on the state of the Union, and having under consideration the bill (S. 4300) to increase the efficiency of the military establishment of the United States—

Mr. JAMES R. WILLIAMS said:

Mr. CHAIRMAN: This bill was reported to the House on Tuesday and taken up for consideration on Wednesday. Therefore members who are not on the Committee on Military Affairs have had very little opportunity to study the provisions of this measure and the report thereon. As the law under which our present Army is organized does not expire till next July, it seems to me there is no occasion for such undue rush in the passage of this bill.

A proposition of so much importance to the people and one which makes such radical and dangerous changes in the military establishment of this country deserves more deliberate consideration at the hands of Congress. During the short time I have before the committee I can do but little more than emphasize my sincere opposition to the passage of this bill, and express my surprise that even a Republican would support a proposition so un-American in principle and so full of threats and dangers to the time-honored policy of this Republic.

This bill proposes to increase the standing Army of the United States to about 100,000 men, at an annual cost to the people of from one hundred to one hundred and twenty-five million dollars, and this large and expensive standing Army is to be maintained in time of peace as well as in time of war. In fact, the chairman of the Committee on Military Affairs, who has charge of this bill, was frank enough to admit in this debate that this large standing Army of 100,000 men is not intended for war, but for peace, and he says we will still depend on the volunteer soldier for military service in time of war.

This large standing army is merely to serve as a police force in time of peace, and to come out occasionally on dress parade to advertise to the world that we are indeed a world-power, and all this military splendor in time of peace is not to cost the taxpayers over one hundred and twenty-five millions a year. Now, Mr. Chairman, I can understand that if we are to pursue the policy of an empire and govern people by force, then we need a large standing army to execute our despotic purposes; but if we are to continue a republic, as assured by Republican speakers in the late campaign, then, sir, there is no occasion to tax our people for all this useless and dangerous military glory. A large standing army belongs to an empire, but has no place in a republic.

Under a government like ours, where the people rule, the people may always be relied upon to defend the people's rights. I believe in the volunteer soldier for the army of a republic. He loves to fight for liberty and hates to fight against it. We have always depended upon his patriotism, courage, and efficiency in the past, and can surely rest our hopes and purposes upon his strong arm in the future. Upon every page of our military history the volunteer soldier has written the splendid achievements

of his patriotic valor. As a Representative upon this floor I would rather tax the American people to pay a liberal pension to the volunteer soldier who served his country in time of war than tax the people to pay a large standing army to serve the country in time of peace. Can any gentleman on the other side of this Chamber explain why it is that we need nearly 75,000 more soldiers in our standing Army to-day than we required two, three, or five years ago?

If he answers that they are necessary on account of the war in the Philippine Islands, my reply is that we were repeatedly assured by Republican orators in the late campaign that the war was almost over there, and the reelection of Mr. McKinley would end it in less than sixty days. In fact, military gentlemen were brought back from those islands and paraded in their uniforms over the country to assure the people of my district and others that there was but a very small per cent of the Filipinos in rebellion, encouraged by the utterances of Mr. Bryan and other Democrats, and in case of Mr. McKinley's reelection hostilities would cease in a few weeks. Can it be possible that these Republican statesmen and military heroes were all mistaken in their glittering prophecies? Why, even the President, in his recent message to Congress, not having entirely recovered from the deceit practiced by the Republicans in the late campaign, still insisted that a very small per cent of the Filipinos are in insurrection.

Now, Mr. Chairman, if it is true, as claimed by many Republicans, that nine-tenths of the Filipinos are friendly to the policy of the Administration, then surely they ought to be able to protect themselves against the other one-tenth without sending a single American soldier there to aid them.

Mr. FITZPATRICK. Can the gentleman explain why it is that the Philippians have not answered Paul's letter? [Laughter.]

Mr. JAMES R. WILLIAMS. I am afraid that I shall have to refer that question to our President, who is engaged in the work of "benevolent assimilation," or St. Mark, his chief adviser.

But when the President sufficiently emerges from the Republican dreams and prophecies of the recent election he candidly admits that he still needs forty-five thousand of these hundred thousand soldiers to complete his policy of criminal aggression in the Philippine Islands. And these 45,000 American soldiers are to be kept in that hotbed of disease and death, at an annual expense to our people of about \$75,000,000, not to benefit our country or our people, but to gratify the selfish greed which seems to control this part of the Administration.

But, Mr. Chairman, the President says in his message that these 45,000 men will be needed in the Philippine Islands only temporarily. Then why do you include them in a permanent standing army of 100,000 men to be continued in time of peace?

Why do you not bring in a bill providing a temporary force to meet this emergency which you claim is only temporary? Ah, Mr. Chairman, this large standing Army means something more than to furnish soldiers in the Philippines. It means a very radical and dangerous departure from the whole history of our Government, and no one regrets more than myself to see such a serious innovation upon the long-established, wise, and peaceful policy of this nation.

I sincerely fear it means more to the future of this Republic than many of us now realize. I am afraid it will do more to destroy than to defend the liberties of our people. If it follows the experience and teachings of other nations in this regard, it will bring us more loss than gain, more trouble than pleasure, more despotism than liberty, more darkness than sunshine. One of the most objectionable features of this bill is that provision which gives to the President the unwarranted and dangerous power to increase our Regular Army about 40,000 men whenever he sees fit to do so without the approval of Congress. This is a power which under our form of government rightfully belongs to the representatives of the people. This is too great a responsibility to place in the hands of any one man.

While such a power might be safe in the hands of such a President as Washington, it might become a weapon of great despotism in the hands of those whose ambition might excel their patriotism. It is certainly a move toward centralization at which the American people may well take warning.

Mr. Chairman, the great expense of a large standing army in time of peace is by no means its worst feature. Its tendency has always been to intimidate the citizen in the peaceful exercise of his civil rights, and finally undermine and endanger the very existence of self-government. It is always more dangerous in the hands of an ambitious ruler than a volunteer army.

But it is insisted by the friends of this bill that a hundred thousand men is not a large standing army for the United States when compared with the standing armies of European countries. It must be remembered that America has been so well fortified by nature with a great ocean on either side that it does not require for its defense a large standing army like Germany or other countries bounded on all sides by hostile governments. Besides, our people have no inclination to follow European countries in their

bloody history of war and conquest. We have a well-organized militia in almost every State, whose services the Federal Government has a right to command whenever an emergency arises.

And experience has demonstrated that it takes a very short time to equip a volunteer army whenever an occasion calls for it. I have no doubt but the President could raise a volunteer army of a million men in less than sixty days to defend the rights of our Government or the liberties of our people. Self-government cultivates a love of country and a patriotic interest in the affairs of state and creates a responsibility upon the citizen which the true American has always been quick to discern and ready to meet, and this patriotic concern for the welfare of our country is always more intense among our citizens on the approach of war than in time of peace; and it requires only the tap of the drum to enthuse the great body of our patriotic people for a ready march to battle and to victory. With such a government and such a people we have no occasion, in time of peace, to maintain in idleness a large standing army at such a heavy expense to the taxpayers of our Government.

It surely indicates that we are drifting away from the republican principles of Washington, Jefferson, and Lincoln into the military customs and dangers of European monarchies. The bill provides that, while the Army may be reduced to about 60,000, the number of commissioned officers shall remain the same, and that we shall continue on the pay roll as many commissioned officers for an army of 60,000 as was required for an army of 100,000. This is certainly a very objectionable piece of extravagance. But I do not know as it deserves very serious consideration, for it is not at all probable that our Army will ever be reduced. In fact it is more likely to be increased hereafter. You will find it an evil which will surely feed upon itself. With its many desirable offices it is likely to exert such an influence upon future Congresses as to control legislation to meet its growing ambition.

The larger we make our standing Army the more we advance the military over the civil authority of our Government. I prefer to live under a government where the civilian with his ballot, engaged in the faithful discharge of his peaceful duties, is considered just as patriotic and potent as the soldier with his musket. I repeat my surprise that a bill so full of evil promises for the future of our Government should be permitted to go through this House with such indifferent consideration. I have simply endeavored, in the short time allowed me, to call the attention of the House and the country to the general features of this bill, to show, so far as I have been able, the great dangers which it carries to the civil rights of our people, to the true Americanism of our Government, and to the general welfare of our country. [Applause on the Democratic side.]

The Grant Bill.

SPEECH OF

HON. SAMUEL S. BARNEY,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1900,

On the bill (H. R. 3717) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine.

Mr. BARNEY said:

Mr. SPEAKER: I took occasion during the first session of this Congress, and while the Alaskan bill was under discussion, to make some remarks upon the bill now under consideration. My remarks at this time will therefore necessarily be something of a repetition of what I then said.

The power of Congress to impose a tax upon oleomargarine colored in imitation of butter is unquestioned; hence the only question is as to the propriety and justice of such a tax. It is claimed that the effect of this legislation will be to crush out and ruin the industry of manufacturing oleomargarine made in imitation of butter, and for that reason that the bill ought not to become a law; and some have even claimed that it is unconstitutional for that reason.

The latter position is clearly wrong, for when the right to impose the tax at all is conceded, it will not be within the power of the courts to say to what extent it shall be exercised or when the limit of prohibition begins. The public welfare may demand the imposition of a tax prohibitory in its effect, and when it does, Congress has always freely exercised such power. It was done in the tax on State-bank circulation, on filled cheese, and adulterated flour.

The evidence introduced upon the hearings when this bill was before the Committee on Agriculture during the last session of this Congress clearly shows that the oleomargarine industry as

conducted at the present time is a fraud upon the public. Such being the case, how can it be said that a law is either unconstitutional or unjust which imposes a tax the incidental effect of which is to defend the public from a fraud and a counterfeit?

Upon this point the language of the court in the case of *Plumley vs. Massachusetts* (155 U. S., 461) is particularly applicable. Justice Harlan, in delivering the opinion, said:

And yet it is supposed the owners of a compound which has been put in a condition to cheat the public into believing it is a particular article of food in daily use and eagerly sought for by people in every condition of life are protected by the Constitution in making a sale of it against the will of the States in which it is offered for sale because of the circumstance that it is in an original package and has become a subject of ordinary traffic. We are unwilling to accept this view. We are of the opinion that it is within the power of a State to exclude from its markets any compound manufactured in another State which has been artificially colored or adulterated so as to cause it to look like an article of food in general use and the sale of which may, by reason of such coloration or adulteration, cheat the general public into purchasing that which they may not intend to buy.

The Constitution of the United States does not secure to anyone the privilege of defrauding the public. The deception against which the statute of Massachusetts is aimed is an offense against society. The States are as competent to protect their people against such offenses or wrongs as they are to protect them against crimes or wrongs of more serious character, and this protection may be given without violating any right secured by the National Constitution and without infringing the authority of the General Government. A State enactment forbidding the sale of deceitful imitations of articles of food in general use among the people does not abridge any privilege secured to citizens of the United States, nor in any just sense interfere with the freedom of commerce among the several States.

Why is the manufacture of oleomargarine a fraud? Because it is made and sold in the market for that which it is not, butter. The advertisements of its manufacturers all show that it is colored for the purpose, and the only purpose, of making the purchaser from the retailer believe that he is buying and eating butter. It goes into the market and upon the table of the consumer under false pretenses, claiming to be butter when it is nothing but a conglomeration of soap grease and oleo oil.

It is claimed by those who oppose this measure that oleomargarine is a better article of food than very much of the butter which is sold in the market.

That may be true, and yet it is no justification for this fraud. Bad butter may be a poor article of food, but it at least has the quality of being honest. It travels upon its own merits—or demerits—and deceives no one. If oleomargarine is such a superior article, why does it sneak into the market under disguise? Why does it dishonestly assume the color and appearance of that which it is not, and an inferior article at that? This brings me to a discussion of some things which have been said in opposition to this measure and which I believe are a misrepresentation of the motives of the promoters of this law. It is said in the report of the minority, and has been repeatedly said in this debate, that the object of this measure is to totally destroy the business of manufacturing oleomargarine. That is not the object, and neither will it be the result.

It only seeks to drive from the market that portion of oleomargarine which is colored and sold in imitation of butter. It only seeks to drive out of the market that part of this oleomargarine business which is a counterfeit and a fraud, or if it remains it must pay a tax commensurate with its fraudulent profits.

The dairymen of this country and the consumers of this country do not object, and they have no right to object, to the manufacture and sale of oleomargarine if placed upon the market and sold without deception—that is, uncolored to imitate butter. Let it go into the market for just what it is and be sold upon its own merits and no one will have a right to complain or will complain.

In the report of the minority the impression is sought to be conveyed that W. D. Hoard, ex-governor of Wisconsin and president of the National Dairy Union, desires and expects by this measure to destroy the business of manufacturing oleomargarine, uncolored as well as colored. That such is not the case will be seen from his statement before the committee as printed in the hearings, for he says:

The hoped-for effect of the legislation asked of Congress is not to destroy the oleomargarine industry, but to force it over onto its own ground; to compel it to be made in its own guise and color. Is there anything unjust or unreasonable about this?

With a tax of 10 cents a pound on the counterfeit substitute, we believe the temptation for unjust profits, deceptive sale, dishonorable and dangerous conspiring against law, and fraudulent competition with an honest industry will be greatly modified.

An isolated extract is also given in the minority report from the statement made before the committee by Mr. Adams, pure-food commissioner for the State of Wisconsin, to show that his expectation was the same, viz, to destroy the oleomargarine industry, honest as well as dishonest. That that is not true is shown by this letter, which I have received from him and which he wrote when his attention was called to that part of the report:

THE RALEIGH,
Washington, D. C., December 8, 1900.

DEAR SIR: In the report of the minority of the Committee on Agriculture upon the Grout bill I am quoted as having said in my testimony before the committee, March 7, 1900, "There is no use beating about the bush in this matter. We want to pass this law and drive the oleomargarine manufacturers out of the business."

The statement is absolutely incorrect. I made no such declaration. I did say that the purpose of the Grout bill was to stop the coloring of oleomar-

garine in imitation of butter and to destroy that portion of the oleomargarine business which depended for its success upon the deception of the public. I have never, at any time or place, thought or said that the manufacture and sale of oleomargarine, when not a counterfeit of butter, should be prohibited.

Respectfully, yours,

Hon. S. S. BARNEY,
House of Representatives, Washington, D. C.

H. C. ADAMS.

It has been said in this debate that the coloring of pure butter by the dairyman is upon the same footing and equally fraudulent as the coloring of oleomargarine in imitation of butter. The incorrectness and even utter absurdity of such an argument hardly needs refutation. Oleomargarine is colored to cheat the purchaser and consumer into believing that he is buying pure butter, while butter is colored to suit his taste and is not intended to deceive him and does not deceive him as to the kind of article he is purchasing.

Pure butter is not even shaded in color by the manufacturer to deceive the public as to the time when it was made. There is no June butter in the market at this season of the year, or if it was it would not command as high a price as butter made last week. Winter butter, therefore, is sometimes colored, not for the purpose of making anyone believe that it is June butter, for that would depreciate its value, but because some people desire butter of a higher color than others. Woolen cloth is colored all shades of the rainbow, not for the purpose of deceiving anyone as to the material of which it is made, but because tastes differ in the selection of material for clothing. There is no more deception in the coloring of pure butter in the one case than there is in the coloring of wool in the other.

I am heartily in favor of the passage of this measure because, first, it is in the interest of pure food; second, because it is in the interest of the consumer, who has a right to know what he is purchasing and eating, and hence can buy it for what it is reasonably worth, and third, because it is a protection to the great dairying interests of this country against fraud and dishonest competition.

It is claimed by the friends of oleomargarine that this measure will deprive the poorer classes of the privilege of buying a cheap and nutritious article of food, and hence benefit the farmer at the expense of other classes. There is no foundation whatever for such a claim, because the natural and necessary effect of it will be to benefit the consumer of oleomargarine and the dairyman alike. It will injure no one but the dishonest manufacturers and dealers who are engaged in this fraud, and they ought to be injured and driven from the business.

The evidence shows that oleomargarine can be made for less than 8 cents per pound, and yet it is sold by retailers for 25 cents per pound and more, because the purchaser believes he is buying butter.

Let the bill become a law and oleomargarine will be compelled to go into the trade uncolored and for just what it is, and, as a result, can be bought for less than one-half what it costs now.

I say, then, that this bill is not only in the interests of the manufacturers of pure butter, but is equally in the interests of all who wish to use oleomargarine and to purchase it for what it is and for what it is honestly worth. For my part, I wish to see Congress go to the fullest extent of its taxing power for the suppression of fraud in any business, and particularly in the manufacture of what the public eats and drinks.

At the present time there are men engaged in the manufacture of honest—that is, uncolored—oleomargarine, and no one seeks to interfere with them.

In several cities in my own State these manufacturers of uncolored oleomargarine are putting their product upon the market and are selling it for a little more than one-half the price of the colored and fraudulent product. That fact proves that the passage of this bill will benefit the consumers of oleomargarine equally with the dairyman.

It will relieve the latter from dishonest and fraudulent opposition, and the former from dishonest and exorbitant profits.

It has been urged that this is improper class legislation; that is, that it is a measure for the benefit of one class to the detriment of another.

On the contrary, I say it is legislation designed to prevent one class from fraudulently obtaining undue advantage over another; legislation to prohibit the dishonest oleomargarine manufacturer from cheating the consumer directly and the dairyman indirectly.

The millions of dairymen in this country who are interested in this bill are scarcely heard, because of their scattered and necessarily unorganized forces. The other millions of consumers who are interested in pure food and honest prices are not heard, partly for the same reason and partly because they hardly realize the fraud which is being perpetrated upon them.

This is a battle of the honest butter producer and the honest consumer on the one hand against a gigantic combination of grease producers, who by fraud and dishonesty seek to rob both.

Let this bill pass and become a law and it will only benefit those who ought to be benefited and injure those who ought to be injured.

Army Bill.

SPEECH

OF

HON. JOSEPH B. CROWLEY,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 6, 1900,

On the bill (S. 4300) to increase the efficiency of the military establishment of the United States.

Mr. CROWLEY said:

Mr. SPEAKER: The present strength of the Army is 100,000 men—65,000 Regulars and 35,000 Volunteers. We are advised by the War Department that there is need of haste in passing this bill, as by the 30th of June next our Army will be reduced to the minimum, and it takes some time to get a new army recruited and in the field for action. We know there is necessity for some legislation in regard to reorganizing the Army this session, but I am opposed to passing this bill as it now stands. There are some obnoxious features in the bill; a number of its provisions I can not indorse. My strongest objection is that it provides for a permanent military establishment which is to continue in time of peace as well as war.

Another objection is that it takes the power which rightfully belongs to Congress and vests it solely in the President to increase the Army from 58,000 to 100,000 at his pleasure. This is a dangerous and unwarranted authority to give any one man.

We ought to consider this bill as though we were working on a peace basis, and 58,000 would then be as great an army as we would need. I do not believe in making the Philippine emergency an excuse for fastening this standing army on us permanently. If an emergency exists at this time it should be dealt with as a case for legislation within itself. It does not come properly under this head at all. If we have an emergency, let us provide, as we have always done, with volunteers, and when the time of their service has expired let them return to their homes and pursue their peaceful avocations. I am unalterably opposed to putting an emergency provision in this bill intended to provide a permanent standing army. It admits on its face the fact that it would be possible to get along with 58,000 men.

This bill does not pretend that it is an emergency to strengthen the Executive to carry on the war in the Philippine Islands, as half the people in the United States right now regard it, but it is a bill introduced to fasten a standing army on us forever, no matter what our condition hereafter may become.

It is the duty of Congress to declare war and say what our standing Army shall be. This bill is not the production of this legislative body, but is the product of the Secretary of War and the President.

President McKinley in his message says:

There are assuring indications that the Philippine insurgents are coming to acknowledge the authority of the United States.

If this is the true state of affairs, why does he want an army of 100,000 men? Does he expect to go to war in the near future? We are at peace with the whole world, excepting Aguinaldo, and if we are to credit our President's message we will soon have him caught once again.

It is within the power of Congress to give the Executive all the soldiers necessary to maintain the authority of the United States in the Philippines and still not depart from the principles underlying our free Government. I am willing to give the Commander in Chief of the Army every man necessary to put down a rebellion against the established authority of the Government wherever found and vote every dollar necessary toward carrying it out. This country has never yet waged a war when there was a lack of brave men ready to fight. In 1898 our Government was called upon to meet an emergency which required the speedy raising of a large volunteer force. Our young men answered the call cheerfully and enthusiastically, and we had more volunteers than we could accept the service of. These men were brave and intelligent and capable of being made into the finest soldiers in the world. We as a nation have been opposed to a large standing army. It is not necessary for us to hold a large body of idle men in readiness to do our fighting. It has ever been our policy to have a small regular army and keep its standard as high as possible, and trust to the great mass of patriotic people to fight the battles of this country. I believe it is a wise policy. We should continue, as we have always done, to devote the energies of our people to the development of our resources. When conditions arise that we must put a large volunteer force into the field on short notice, let it be done in such a way as will bring the least burden upon the people and the least interference to those engaged in peaceful pursuits, and at the same time give us the best mili-

tary establishment possible for the amount of money and energy invested.

Now, we do not desire, in this country, to copy too much the systems of the armies of Europe. Quoting Representative McCall of Massachusetts: When we compare our standing Army with those of Europe we are very careful not to compare the relative costs. The French army costs \$125,000,000 a year and the German army \$130,000,000 a year. These figures include pensions and fortifications. If this bill passes, the War Department will ask for \$113,000,000.

There is another cost not included in these figures, which is a necessary incident to the Army and as much a part of the cost as the pay of the soldier—that is the pension system. We are appropriating for that purpose \$145,000,000 a year. Our total charges, therefore, for military purposes are \$258,000,000 per year (leaving out fortifications and ordnance), an amount greater than the joint military expenses of France and Germany.

The army of Germany works like a machine, and no doubt the Germans think it invincible. But it is this system of militarism that drives more Germans to the United States as an asylum than any one thing else. We do not want nor expect to sacrifice years out of the lives of our young men teaching them to be soldiers. What we desire is to allow our young men to be free to follow ordinary business avocations, and leave them to compete in the various pursuits whereby the energy and intelligence of our people may be encouraged and developed.

To meet any military necessity that may arise it is necessary to spread military knowledge as far as possible without interfering in the pursuits of our citizens. The organization and perfection of our State militia and National Guard is a step in that direction.

We have a fine Military Academy at Westpoint for training officers. I am in favor of enlarging it so as to accommodate a sufficient number of cadets to officer any large volunteer army we may be called upon at any time to raise in order to maintain peace within our own borders or repel invaders. An officer should not only be a man of general education, but should be master of the technical and practical business of handling large bodies of men according to the most improved military methods. It is just as necessary for an Army officer to have a professional education as it is for a doctor, a lawyer, or a minister of God's word. An Army officer has the lives of his men in hand, and the complaint about mismanagement at our camps during the late Spanish war was not due to the quality of our men, but was largely due to a lack of proper knowledge and technical training on the part of some of the officers. I will say nothing here as to how they obtained their appointment, as that has become a piece of notorious political history.

Not one word would I say to detract from the honor and the glory that belongs to the great men who have risen to high places in all our wars in spite of their lack of professional education. Some men are born leaders.

Whenever it is necessary to protect the United States, give me the old volunteer. There never has been a battle fought in this country in which the victory was not achieved by our volunteer forces. I am not afraid of Illinois volunteers failing to defend the Stars and Stripes. They have been tried and never found wanting. I have no criticism to make of our present standing Army. It is good to a certain extent, but it can be made better, and that is what I want. Keep it small, but raise it to the highest standard.

Excellent as our military school at Westpoint is, no man claims it is yet perfect. It should be kept in touch with the people all over the United States. It should be essentially democratic. Boys are appointed from the different Congressional districts, and they take their places in the institution without regard to previous condition or social standing. The son of the millionaire must comply with the regulations exactly the same as the son of the farmer or laboring man of any description. Each one at the door of Westpoint enters equal, and from thence on depends upon his own individual merit. I oppose too many appointments given over to the President, on the ground of starting an aristocratic military class, whereby Westpoint could be used to take care of the "sons of the somebodies." Indeed, I favor that all appointments in Congressional districts should even be made by competitive examinations, where your son and my son and the son of the most lowly laborer can compete for one of the highest honors of our land. This is democratic. This is the original intention of the fine military school furnished by our Government.

I approve of enlarging the school and of giving Congressional districts a greater number of cadets, to be selected by competitive examinations held by nonpartisan boards.

The general effect on a large volunteer force of men having among them thoroughly educated officers can not be overestimated. The whole organization is bound to absorb, almost unconsciously, many ideas of military tactics from them. This question is one of the greatest importance to us right now.

I am going to vote for this substitute bill providing a temporary

army of 100,000 men. I believe that we need an army of 100,000 men until the insurrection in the Philippines is put down, but I want to adhere to the principles that have always controlled us in these matters. We were told during the recent campaign that as soon as McKinley should be reelected the Filipinos would hasten to embrace peace, but such does not seem to be the case, the President's message to the contrary. We are now informed officially that it is absolutely necessary to reorganize the Army with 100,000 men, as they will be needed before the Philippines are subjugated.

While I am opposed to the policy of the Philippine war, you gentlemen on the other side of this House have adopted it and are responsible for the results. Now, in order to save life and end the suffering of our boys in the Philippines I am willing to vote any number of men in order that this war may be brought to a speedy termination. But is this the purpose of your intention when you ask us to vote 100,000 men? If so, why not accept them temporarily? Or is it because we have been told that we have become a world power that we want them as an evidence of our pomp and splendor?

Senator HOAR has truly said:

They tell us that we have become so great and powerful that the world needs us, but what the world most needs is not the touch of our power, but the blessing of our example.

The Grout Bill.

SPEECH

OF

HON. W. T. ZENOR,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1900.

On the Bill (H. R. 3717) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported and to change the tax on oleomargarine.

Mr. ZENOR said:

Mr. SPEAKER: I do not propose to enter into any elaborate discussion of the many incidental questions to which this measure has given rise in the course of debate. What I most desire is to emphasize the very great importance of this bill to the producers and consumers of dairy products of our country. The magnitude of this industry in my State, and especially in my district, may not equal that of the great States of Pennsylvania, New York, Iowa, Wisconsin, and many other States of the Union, nor of that of many other Congressional districts represented by other gentlemen upon this floor, but is of sufficient magnitude and importance to justify me in occupying a few moments in submitting a few remarks in support of this bill.

The Committee on Agriculture, after long and continued sittings, full hearing, and carefully weighing all the evidence for and against, favorably reported it. There is a maxim as old as government itself to the effect that when the farmer is prosperous the country is prosperous, and the experience of generations has proven the truth of this. The conditions that bring about decay in the great agricultural industries of a country also mark the decline of the prosperity of the country itself. There can be no enduring prosperity unless it has for its basic support the general welfare of the great body of men who till the soil. As a means designed to promote this interest, I favor the passage of this measure, known as H. R. 3717, the Grout bill.

I not only believe it will do much to promote the legitimate interests of the farmers and dairymen, but that it will accomplish this without injuring any other legitimate industry engaged in the production of articles of pure food which may wish to enter the market without fraud and deception, notwithstanding the contention of those opposed to it. This bill, if passed, will in a large measure accomplish two purposes. It will safeguard the interests of the producers of butter, and will also protect the consumer from deception in the nature and quality of the food he buys. If he wishes to buy butter, he can do so without the risk of getting some imitation substitute. If he wishes to buy oleomargarine, it enables him to purchase this article, and to obtain either commodity he chooses at the proper price of each.

This bill has been widely misrepresented. It could not, however, be expected that a measure antagonized by such a combination of common interests as is represented by more than twenty-six oleomargarine and butterine manufactories, which are deriving such immense profits from their business, conducted in the main in defiance of law and under cover of fraud, would receive fair treatment. In saying this I do not wish to be understood as asserting, however, that all the opposition to the bill comes from those directly interested in the manufacture and sale of oleomargarine. There is opposition urged by many members of the House upon

higher grounds than any merely pecuniary interest—opposition based upon what is claimed to be an objection to a fundamental principle involved and violated in the provisions of the bill. I do not care to discuss this objection, as this has already been done by able and distinguished gentlemen and this phase of the question fully presented.

What I do wish to say, however, is this: That ever since this bill was presented to the House, and even while it was pending before the committee, the oleomargarine people have been industriously engaged in an effort to create a prejudice and opposition to the bill in certain quarters by seeking to array the cattle industry, the hog industry, and the cotton industry against the bill as a measure that would materially affect and curtail the market for certain products of these different industries. They further insist that the underlying purpose of its authors and friends is to invoke the taxing power of the Government to crush and drive out of business one industry for the benefit of another, to levy a tax of 10 cents per pound upon colored oleomargarine in imitation of butter, and thereby make it impossible to pursue that industry further. In this view I do not concur, nor do I agree with the contention that it is either the design or purpose of the bill to crush out the business of the manufacture and sale of oleomargarine, nor that this would be the effect of its operation.

The bill simply provides that oleomargarine shall be sold as oleomargarine, and not as butter, and that consumers seeking butter shall not be imposed upon. The bill merely seeks to place each industry on its own basis and let each stand or fall by its own merits. What injustice is there in this proposition? What more fair? How is it possible to crush out a legitimate industry by law which only requires its product to be sold for what it is?

The protest made by the friends of imitation butter that the bill will ruin them is a protest against the enforcement of the anti-coloring oleomargarine laws passed by 32 States of the Union; a protest in defiance of the expressed will of more than fifty millions of the people of the United States; and a confession that they depend on selling their imitation and fraudulently advertised commodity for butter in order to continue a monopoly of that business and to add to their already overgrown coffers.

While I do not, on principle, fully approve some features of this bill, and would cheerfully support some other practical measure, if possible to draft one to accomplish its purpose equally as well, freed from its obnoxious features, yet, inasmuch as the able committee reporting this bill, after full and careful deliberation, have concluded that this is the most effective measure they are able to present to reach the evils sought to be cured, I am willing to yield to the emergency and give it my support. It is alleged that the passage of this bill will destroy a great industry and prevent the further manufacture of oleomargarine. The absurdity of this pretense is apparent when we recall the fact that 32 States of the Union now have laws prohibiting the sale of oleomargarine colored in imitation of butter, namely (in order of population, census of 1890):

Population.	Population.
New York..... 5,937,853	South Carolina..... 1,151,149
Pennsylvania..... 5,228,014	Nebraska..... 1,058,910
Illinois..... 3,830,351	Maryland..... 1,042,360
Ohio..... 3,672,516	West Virginia..... 762,794
Missouri..... 2,679,134	Connecticut..... 746,253
Massachusetts..... 2,238,943	Maine..... 601,086
Michigan..... 2,093,889	Colorado..... 412,198
Iowa..... 1,911,899	New Hampshire..... 376,530
Kentucky..... 1,858,635	Washington..... 349,380
Georgia..... 1,837,353	Oregon..... 313,767
Tennessee..... 1,736,518	Vermont..... 312,442
Wisconsin..... 1,686,880	South Dakota..... 328,808
Virginia..... 1,655,989	Utah..... 297,905
Alabama..... 1,513,017	North Dakota..... 182,711
New Jersey..... 1,444,933	Delaware..... 168,493
Minnesota..... 1,301,826	
California..... 1,208,130	Total population..... 50,117,440

The States and Territories which have not yet passed laws prohibiting the sale of oleomargarine colored in imitation of butter are, with populations:

Population.	Population.
Texas..... 2,235,623	New Mexico..... 153,593
Indiana..... 2,192,404	Montana..... 132,156
North Carolina..... 1,617,947	Idaho..... 84,385
Kansas..... 1,427,086	Oklahoma..... 61,834
Mississippi..... 1,289,700	Wyoming..... 60,705
Arkansas..... 1,128,179	Arizona..... 59,620
Louisiana..... 1,118,587	Nevada..... 45,761
Florida..... 821,422	
Rhode Island..... 345,506	Total population..... 12,604,790
District of Columbia..... 230,392	

These laws, while varying in form, express the opinion of the lawmaking representatives of the 60,000,000 people now living in the States named.

If in connection with the foregoing table we consider the statement that the oleomargarine factories of the United States have more than doubled their output in the last four years, we can readily see that the claim put forward by the oleomargarine advocates is a fallacy pure and simple. The aggregate output of the

imitation product of these factories for the year 1897 was 45,000,000 pounds, and in 1899 the amount had risen to 83,000,000 pounds, and it is claimed that for this year it will reach about 104,000,000 pounds, an annual increase of more than 20 per cent. Of this vast amount of oleomargarine manufactured and sold it is estimated that the greater part was consumed under the belief that it was butter. If it were not for the fact, as I understand the situation, that such a large per cent of this product is palmed off and sold as butter, and that purchasers and consumers have no adequate protection against the deception, this measure would not have the support it manifestly has from the farmers and butter consumers of the United States. Congress was not appealed to and importuned until every other method of protection to the dairy interests from this unfair, fraudulent, and ruinous competition had been exhausted.

A majority of the States of the Union have enacted laws forbidding oleomargarine being colored in imitation of butter, but from the very nature of things these laws have been found inefficient. Oleomargarine manufactured in one State can be sold in another in violation of law, and the officials of neither State can successfully trace the shipment and enforce the law. It is not the manufacture of the commodity known as oleomargarine or butterine that is sought to be affected by the provisions of this bill.

The bill does not seek to change or alter existing law to the prejudice of a single manufacturer of these articles. It does not attempt in any manner to deprive them of any legitimate rights they now enjoy in this regard. It strikes at the source of the evil by saying to the manufacturer of oleomargarine, colored in imitation of butter, that he shall pay a tax in such an amount that its cost to the retailer will approximately be equal to that of butter, and thereby remove the incentive to fraud. It is conceded that oleomargarine can be manufactured at a cost not to exceed 7 cents per pound, and can be sold at a fair profit for from 10 to 12 cents per pound. If he was forced to place on the market and sell his commodity for what it is, and purchasers and consumers were given to understand what they were buying when they purchased it, the competition arising out of the conduct of such a business would be one of which no one could justly complain.

But when this commodity is colored in imitation of butter, advertised as butter, and sold as butter to an unsuspecting public it becomes a matter of serious concern to the more than five million of farmers who depend either directly or indirectly on the butter market for their well-being. It becomes a fraud and unfair competitor in the markets of the producers of butter as well as a deception upon the whole consuming public. I know that one of the stock arguments used against this bill is that it will destroy an industry that is now engaged in the manufacture of a pure and healthful article of food that enters into the use and consumption of the poor at a price much cheaper than creamery butter and that is preferred by many to butter.

This argument is employed by the representatives of the oleomargarine interests, and is presented with such plausibility by its advocates that many of the labor organizations of the country have been induced to make protests against its passage. They have been persuaded to believe that such a measure of legislation is an unjust interference with their rights to purchase, if they choose, this cheaper article instead of the higher-priced and, as they claim, less desirable article of pure butter. But the facts of the case, as demonstrated by the experience of years and the weight of evidence, not only does not sustain this view, but, on the other hand, shows that these fears are groundless. The fact is that under existing conditions and the almost universal practice oleomargarine has been and is being sold to the poor, but in most instances is sold as butter and for butter prices.

Under the operation of this bill, if enacted into law, not only will no restrictions be imposed upon the rights of the oleomargarine producer to sell his commodity, but no interference whatever is proposed with the right of anyone to purchase that commodity; but provision is made to safeguard the purchaser and to enable him to secure the article for what it is and for a fair price—for the price of oleomargarine, and not for butter—while at the same time it forbids the manufacturer to color and place his product on the market for something it is not.

In the case of *Plumley vs. The State of Massachusetts*, Plumley had been convicted under the Massachusetts law of selling a compound known as oleomargarine, colored in semblance of butter. The case was carried to the supreme court of the State, where the judgment was affirmed; it was then appealed to the Supreme Court of the United States. The defense was that Plumley was held under a statute which was unconstitutional. That this case and the points involved may be understood, I here insert a statement of the case and an extract from the opinion of Judge Harlan in delivering the judgment of the majority of the Court in that case:

The statute in that case prevented the sale of this substance in imitation of yellow butter produced from pure, unadulterated milk or cream of the same, and the statute contained a proviso that nothing therein should be construed to prohibit the manufacture or sale of oleomargarine in a sepa-

rate or distinct form and in such manner as will advise the consumer of its real character, free from coloration or ingredients that cause it to look like butter." The court held that a conviction under that statute for having sold an article known as oleomargarine, not produced from unadulterated milk or cream, but manufactured in imitation of yellow butter produced from pure, unadulterated milk or cream, was valid. Attention was called in the opinion to the fact that the statute did not prohibit the manufacture or sale of all oleomargarine, but only such as was colored in imitation of yellow butter produced from unadulterated milk or cream of such milk.

If free from coloration or ingredient that caused it to look like butter, the right to sell it in a separate and distinct form and in such manner as would advise the consumer of the real character was neither restricted nor prohibited. The court held that under the statute the party was only forbidden to practice in such matters a fraud upon the general public; that the statute seeks to suppress false pretenses and to promote fair dealing in the sale of an article of food, and that it compels the sale of oleomargarine for what it really is by preventing its sale for what it is not; that the term "commerce among the States" did not mean a recognition of a right to practice a fraud upon the public in the sale of an article even if it had become the subject of trade in different parts of the country.

Judge Harlan, in delivering this opinion, said:

And yet it is supposed the owners of a compound which has been put in a condition to cheat the public into believing it is a particular article of food in daily use and eagerly sought for by people in every condition of life are protected by the Constitution in making a sale of it against the will of the States in which it is offered for sale because of the circumstance that it is in an original package and has become a subject of ordinary traffic. We are unwilling to accept this view. We are of the opinion that it is within the power of a State to exclude from its markets any compound manufactured in another State which has been artificially colored or adulterated so as to cause it to look like an article of food in general use, and the sale of which may, by reason of such coloration or adulteration, cheat the general public into purchasing that which they may not intend to buy.

The Constitution of the United States does not secure to anyone the privilege of defrauding the public. The deception against which the statute of Massachusetts is aimed is an offense against society. The States are as competent to protect their people against such offenses or wrongs as they are to protect them against crimes or wrongs of more serious character. And this protection may be given without violating any right secured by the national Constitution and without infringing the authority of the General Government. A State enactment forbidding the sale of deceitful imitations of articles of food in general use among the people does not abridge any privilege secured to citizens of the United States, nor in any just sense interfere with the freedom of commerce among the several States.

Will it be contended that if oleomargarine can be forced upon the market for just what it is and sold at prices that such a commodity will command in the market that any purchaser, rich or poor, will be either deprived of the article itself or compelled to pay a higher price to obtain it? Certainly such a contention is an open concession of the fallacy of the whole theory of the opposition to this bill. It is a frank admission that in order to continue in the business they must practice the fraud of coloring their goods in imitation of butter. This means that if they are forced to comply with the requirements of this bill they will in the future be unable to obtain the high prices for their goods that they have been receiving in the past. And this admission ought to be the most conclusive evidence to the purchaser that under the provisions of this bill the purchaser of oleomargarine will be able to obtain his butter supply, if he prefers the oleomargarine to the dairy or creamery article, at a much lower price than he now pays, if not colored in imitation of genuine butter.

If, however, he prefers the use of colored oleomargarine, and wishes to purchase this quality because he places a higher value upon it, for his purposes, than genuine butter, then he would be compelled to pay approximately the higher price of dairy butter to obtain it; and there is no reason why he should not. The very object of the pending bill is to force the oleomargarine manufacturer, if he persists in the fraudulent practice of coloring his product in imitation of butter, either to accommodate the wishes of his customers, or to obtain higher prices for his product, or both, to raise the price of such commodity to approximately the market price of genuine dairy butter in order to make a profit from its sale, and thus preserve to the farmer and dairymen their market as against the competition of this spurious compound.

It will no doubt have the tendency of raising the price and giving to the producers of dairy butter better prices and a larger market for their product. If it did not, it would essentially fail in the accomplishment of the purposes of its author and friends. This is strictly in line with the policy of many laws upon the statute books of various States, which forbid meats of different kinds being placed upon the markets and offered for sale except under their own names. To this end the Agricultural Department has employed eminent chemists, who during the last year have made an examination of and analyzed 39 samples of horse meat with the view of determining a method whereby horse meat may be easily detected if sold under any other name. The same is being done by this Department with reference to other food products.

Again, referring to the bill under consideration, it is claimed and insisted by the friends of the manufactories that the coloring matter used in oleomargarine does not contain any deleterious substance injurious to health, and it is admitted upon both sides that it neither adds to nor detracts from its quality as a food product. This being a fact, there can be no excuse for the use of the coloring matter but to imitate butter, and the only plausible reason for this imitation is to induce the public to believe that it is butter, and this is manifest in the instructions sent out over the

country to their retail customers, accompanied by cards on which are given the different grades of coloring suitable to the color of butter at the different seasons of the year. If it was not intended to deceive the consumer into believing that the article was pure butter, then why adopt the color that so perfectly imitates butter at these different seasons of the year.

The strong and manifest trend of public sentiment for some years past has been to inaugurate a national policy upon the subject of pure food, and to adopt national legislation supplemental to the legislation of the several States to suppress all adulterations of pure food. In quite a number of the States the laws which have been passed have been molded upon the Brosius pure-food bill, which is now pending before this House, and which if passed is believed by those who have given careful study to the subject would secure almost if not perfect control of interstate traffic in adulterated food. Every producer and consumer in this as in all other countries are deeply interested in securing State and Federal legislation that will make absolutely secure the right of the producer and consumer to have placed on the market nothing but pure and unadulterated food, and that the commodity, whatever it may be, whether of the farm or factory, should be exposed for sale and consumption for just what it is.

Every consideration of honesty and justice to the producer and consumer demands that Congress should take early action upon the pure-food bill, to which I have adverted, or some other measure of similar scope and character. Every honest farmer and producer is interested in knowing that his product goes upon the market for just what it is, and will not have to compete in that market with some spurious article in imitation thereof. Every consumer is vitally interested in knowing that when he purchases an article of food he is not deceived into purchasing an adulterated imitation or counterfeit of what he intends to secure.

Pass this bill, and if its provisions shall be enforced the purchaser of one of the staple articles of food will then know what he is getting when he makes his purchase. He will then understand, if he pays the higher price of dairy butter for his oleomargarine, that he does it because he prefers it and not because of any deceit in the sale. Pass this bill and it will afford protection not only to the proprietors but to the guests and patrons of hotels, boarding houses, and restaurants, who usually pay a round price for butter to spread their bread. No, there need be no apprehension or alarm felt among the poor or labor organizations of the country that the cost of their living will in the slightest degree be enhanced by the Grout bill, if it shall become a law, unless they prefer pure creamery or dairy butter; but, on the contrary, they have every assurance that so far as this item of oleomargarine, uncolored, affects that cost, it will be materially reduced.

Again, it is urged that this is an effort to strike down and destroy a great industry involving large sums of money and capital invested in manufacturing plants. The friends of this bill disclaim any such purpose, and deny that such can or will be its effect if passed. That large investments have been made in machinery and equipments of the twenty-six or more oleomargarine and butterine plants of the country will not be disputed. Much exaggeration has, however, characterized the statements made as to the extent and magnitude of these interests. One among the largest, if not the largest, oleomargarine manufacturers in the country is the firm of William J. Moxley & Co., of Chicago. The value of this plant, fixtures, and machinery, according to the latest statement made by that firm to one of our most reliable mercantile agencies, is \$30,850.63. As estimated, there are about twenty-six such firms in the United States, the majority of them smaller and with less capital invested. The Moxley plant being estimated at \$30,000, it is fair to assume, the others being smaller and with less invested in machinery and fixtures, that the average value of these plants would be about \$25,000. Upon this basis the twenty-six oleomargarine plants in the United States would aggregate \$650,000.

I have not the data at hand to accurately state the number of creameries in my own State, but I may safely say that the number is much less than that of the State of Wisconsin, and we have the statement made upon this floor by the gentleman from Wisconsin [Mr. DAHLE], who seems to have given most careful attention to this subject, that there are in that State alone 951 creameries, with an average value of \$2,700. According to this statement the total value of the plants, machinery, and fixtures of the creameries in this State alone would be \$2,567,700. When you compare, therefore, the value of the oleomargarine factories, estimated at \$650,000, in the United States with the aggregate value of the plants and creamery factories of the single State of Wisconsin of \$2,567,700, it will readily be seen how insignificant the amount invested in the imitation business is when compared with the legitimate industry.

The representatives of the oleomargarine business have laid great stress upon the magnitude of their establishments, the amount of capital employed, and the large number of people they employ as a reason why they should be permitted to continue

their fraudulent practices. As has been said, if the amount invested shall be the test, how infinitesimally small is the voice of the oleomargarine interests in this discussion as compared with the stupendous investments in the legitimate pursuits of the great body of our people in the farm and dairy butter-making business throughout the country, the annual cash value of whose product exceeds \$600,000,000.

But I do not insist that this is the proper gauge of battle. I do not maintain that the fate of this measure should be made to depend upon any such an issue. Its merits or demerits should be decided upon more substantial and defensible grounds. The necessity for some relief by Federal legislation for the consumer and legitimate butter producer can not be more clearly emphasized than by the admitted fact that immense quantities of oleomargarine, colored in imitation of butter, is from year to year sold in the States where such sales are absolutely prohibited by State law.

It has been the proud boast of all those who have assumed to speak for their parties in the great struggle of contending forces in political campaigns that they were the especial friends of the farmer and of the great agricultural interests of the country. This is the first great measure designed to conserve this interest that has been introduced in the American Congress for many years. Now that an opportunity is presented to demonstrate the good faith of these assurances so often and so enthusiastically given to the farmer, let the friend of the American farmer not desert him in his hour of need; let him attest that friendship and his fidelity to his interest by casting his vote for the pending bill.

Army Bill.

SPEECH

OF

HON. WILLIAM L. STARK,

OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, December 5, 1900.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (S. 4300) to increase the efficiency of the military establishment of the United States—

Mr. STARK said:

Mr. CHAIRMAN: I did not intend to make any speech upon the Army bill. During the campaign I told my people that I would vote to extend the present military establishment for a reasonable time, but that I should resist any permanent increase in the Regular Army of the United States. I have been able to keep faith with them and cast my vote as promised on both propositions, and it is only by reason of things that have recently come to pass that I have concluded to avail myself of leave to print at this time.

We are at last face to face with the question we have been approaching ever since the vision of colonial possessions first appeared to those who have leadership in shaping the destinies of our nation. It is the custom of gentlemen of the opposition to feel their way and approach conclusions by successive steps, protesting meanwhile that each shall be the last. In the days of James G. Blaine they abhorred the single gold standard. Later they reluctantly tolerated it until it could be abolished by international agreement. They now pronounce it to be the "foundation of the best financial system the world has ever seen."

They were once for the protection of American home industries. Their last national platform changes the phrase to a demand for the protection of American labor—no matter whether of Chinese, Portuguese, or Malay origin, so that the American flag of conquest has been raised over the territory they occupy—and the next step will be to abolish all trade restrictions, to the end that "the sails of American commerce may whiten every sea and our manufacturers displace in the markets of China and Japan the manufactured goods of England or any other European people." They once loathed trusts; now "there are good and bad trusts," and as they fear to strike at any of them lest they should hit a friend, it requires no gift of divination to see what the end will be. The following extract from a late issue of the Springfield (Mass.) Republican shows how the trusts have been affected by their triumph:

Standard Oil trust stock sold this week on the curb market at New York at \$23 a share, which is \$275 a share more than this security was quoted at prior to the election last month. The last previous sale was at \$736 or thereabouts, and scant respect is shown to the President's message in its relation to anti-trust legislation when such a stock jumps up \$229 a share on the very day of the message's publication.

Conquest and forcible annexation were once wrong according to Republican principles, but they purpose to ask the Almighty to amend the decalogue as they amend the Declaration of Independence, and it is soon to be written that men of swarthy skin

are inferior to Anglo-Saxons, incapable of self-government and intended by Providence to be the wards of the chief liberty-loving people of the globe, whose Christian duty it will be to tax them without representation and protect them (on paper) from the intoxicating liquors and immoral influences in which superior races may be supposed to very safely and properly indulge.

There was a time when Republican speakers gloried in our small standing Army, in the peaceful tendencies of our people, in the adequacy of a right course respecting the liberties of others. They said that our great reserve force of patriotic volunteers was at all times sufficient for purposes of defense, and that there never would or should be criminal aggression. Then came a skillful plea for the greatest measure of liberty that inferior peoples are capable of enjoying, and finally the same pious platitudes and meaningless mouthings with which England has for centuries been speaking of the nations she exploits.

This change of attitude required a change in the military establishment of our country. A temporary law was enacted, and this is to be supplanted by the permanent increase as provided by this bill. What lasting good will be accomplished thereby is for gentlemen of the opposition to demonstrate, but the great burden which it will entail is ably presented by Congressman McCALL, of Massachusetts, who in a recent speech has made for his party a compilation of its comparative cost with that of the military expenses of other leading nations. He said:

The motive that had been most widely put forth was that it was for our advantage, and especially our pecuniary advantage. As a part of the cost of this policy we are to include the greater expense under this bill, which is the first-born and legitimate offspring of the policy. Those who compare our standing army with the standing armies of Europe usually are careful not to compare the relative costs. The French army costs \$125,000,000 a year, the German \$130,000,000, the British \$100,000,000, and the Russian \$153,000,000. These figures include pensions and fortifications. If this bill passes, the War Department will need \$113,000,000. There is another cost not included in these figures, which is a necessary incident to an army, and as much a part of its cost as the pay of the soldiers. That is the pension system. We are appropriating for that purpose \$145,000,000 a year. Our total charges, therefore, for military purposes are \$268,000,000 a year—an amount greater than the joint military expenses of those two armed rivals, France and Germany.

I realize to the fullest extent that it is useless to present argument on the Army bill at this stage of the proceedings. In form, I am discussing legislation supposed to be under deliberation by representatives of the people. In fact, I am speaking of a measure devised by party leaders, framed in the War Department, with which popular representation had nothing whatever to do, and passed without any discussion worthy the name by the votes of those who seem to make allegiance to party the supreme test of good citizenship. It can profit my constituents little for me to assume that I am debating a proposition that is already decided, and I therefore choose to avail myself of the general leave to print in placing before them facts they might not gather from any other source, and that I think it to their interest they be advised of.

I live in Nebraska, the home of William J. Bryan, upon whom much ridicule has been bestowed, but to whom an unworthy sentiment or an unmanly action has never been imputed. He has been defeated, and though majorities are not always right, their will should always be respected until they in turn become minorities. No true American questions this, but if the victorious party is not great enough to be generous it should at least be just, and not seek to create false impressions because they have the power to manipulate figures and have control of a large majority of the news-distributing agencies.

William J. Bryan received but 1,920 votes less in Nebraska in 1900 than he did in 1896, and I will hereafter adduce explanations to show that he has really suffered no loss whatever of friends or influence in his home State. The Fusionists have not lost, but the Republicans have gained. We are no weaker, but they have, from some mysterious source, received reinforcements. Making allowance for a trick played upon some of our voters at the polls, we see that more Nebraskans than ever before rallied under our banner, only to be outnumbered; overwhelmed, but neither silenced nor convinced.

William J. Bryan received more—not less—votes than did our fusion State ticket. He was substantially a thousand in advance of Governor Poynter and more than 2,000 ahead of any other of our State nominees.

From whence, then, came this influx of voters into a State which a comparison of the official censuses for 1890 and 1900, both taken entirely by Republican enumerators, shows to have been almost stationary in population during the whole of the last decade? The comparison furnished me on personal application to the Census Department is as follows:

ADVANCE BULLETIN OF POPULATION.

DEPARTMENT OF THE INTERIOR, CENSUS OFFICE,
Washington, D. C., November 27, 1900.Hon. WILLIAM R. MERRIAM,
Director of the Census.

Sir: I have the honor to report that the population of the State of Nebraska, according to the official count of the returns of the Twelfth Census, is as follows: 1900, 1,068,539; 1890, 1,058,910. These figures show an increase in the population of the State since 1890 of 9,629, or 0.9 per cent. The population

in 1880 was 452,402, showing an increase of 606,506, or 134 per cent, from 1880 to 1890.

(For population of Nebraska by counties, see attached sheets.)

Very respectfully,

WM. C. HUNT,
Chief Statistician.

Population of Nebraska, by counties, 1900.

Hooker	432	Wheeler	1,362
		York	18,205

To show how much of an increase would be necessary to honestly account for the result, it will only be necessary to take the highest vote ever previously polled in Nebraska, which was a little less than 225,000 in the year 1896. This year the total vote reaches 251,005, or an increase of more than 25,000 votes over four years ago. This would represent an increase in population of 125,000 people. It is a well-known fact that a number of western and southern counties have lately decreased in population on account of a recent crop failure. The official census returns show that 28 counties out of 90 contain a lessened population, which would leave the increase to be divided among the 62 remaining counties, requiring an average increase of over 2,000 per county for each of these agricultural counties, in none of which is a large city.

As there are on an average not to exceed 20 voting precincts per county, our people will note that to square with the returns there should be in every voting precinct of the counties showing a greater population a hundred new citizens who have established their residence there during the last four years. They may have some difficulty in finding them now that election is over, but they should be placed in evidence. The year 1896 was a Presidential one, and it is said that the fullest vote in the history of the State was cast at that time. Comparing the vote cast for all candidates for Congress in my own district that year with the vote cast for all at the last election, I find that while we have by official figures decreased in population 6,312, we have an increased vote of 1,572, or, in other words, to accord with our diminished population we should have cast 2,834 votes less than were deposited and counted. I make no charge of wholesale fraud or corruption against the party in power. I merely present the grave indictment contained in the figures (their own figures) and allow them to make satisfactory explanations—if they can.

Some things have come to my own knowledge and under my personal observation that should be stated as affecting not only the increased vote, but the distribution of the same. I am informed that census enumerators, in addition to their official duties, made it a point to inquire concerning former residents and where they might be found, and that subsequently many of these parties appeared, claimed that their departure from the State was only temporary, that they intended eventually to return, and voted at our elections. In one instance, at the city of

Schuyler, the challenged elector put in an appearance after an absence of twenty-five years. It is also true that Republicans had a large fund, enabling them to take advantage of a half-fare rate made by Nebraska railroads to enable absentees to come home to vote, and that the fusionists had no money to expend for such a purpose.

Residents of our State are fully aware that the small diminution of our vote could much more than be accounted for by the fact that letters and men were sent out to confuse the voters upon a very unsatisfactory and poorly devised ballot given us by the last Republican legislature, and that, especially in neighborhoods not well versed in the English language, a trick was played whereby the voter was asked to not only vote for the electors on his own ticket, but give the courtesy of a complimentary vote to some one man on the opposition electoral ticket as well. Race preferences were taken advantage of in neighborhoods of German, Bohemian, and Swedish ancestry, and when a man was persuaded to vote for nine electors, his ballot was of course thrown out on that part of the ticket. We have yet to hear of a single county in which there were not a number of this kind of votes, and I append a clipping from the Daily State Journal of December 8 showing how it operated in a single neighborhood:

EIGHTEEN VOTES LOST.

J. J. Langer, one of the Republican electors, when in Lincoln recently was telling some of his friends the result of a story started about him before election. The World-Herald just before November 6 spread the story that Mr. Langer was working systematically to get Fusion Bohemians to vote for him on the ground of his nationality alone. In Saline County the returns showed that some of the Bohemians endeavored to pay their friend a compliment. To his own knowledge 18 ballots voted by Fusionists were spoiled by the voter voting for all the Fusion electors and then for him also.

In addition to the usual methods of pressure brought to bear upon employees, tenants, and borrowers, a new scheme was devised of sending out solicitors for stock shipments before election, these buyers impressing the owner of the stock with a fear that Bryan would be elected, that there would be a panic and no market for either hogs or cattle. This fear of a panic produced a panic on the part of the more timid of the voters, and no doubt contributed its part to the increased strength of President McKinley.

The verified expense account required by our law of treasurers of the State committees of the two parties shows that the Fusion forces expended for political purposes \$10,934.97, and that the Republican fund was \$58,075.41, of which there had been expended at the time the report was made \$56,367.08, leaving a balance of \$1,708.33, and unpaid bills aggregating \$1,361.13. This indicates that they expended from the regular fund more than five times as much money as their opponents, making no account of the fact that their local contributions were much larger, and that they had an immense fund of which no account was made to pay transportation charges for the bringing home of absent voters. An appropriation of \$1,000 for each of 58 selected counties, or even a straight distribution of \$640 to their committee in each county of the State, might be very effective in enabling them to secure results over an adversary whose resources were greatly circumscribed. Their own sworn statements show that Republicans expended an average of more than \$30 to every voting precinct in Nebraska.

These constitute some of the factors that should be known and taken into account when next the voters pass upon the merits and accomplishments of political parties in State and nation. I have devoted some time to a review of the past; let me now call attention to the spirit manifested in the present. All semblance of disguise has been thrown off on the money question. Opposition to the greenbacks, which have for nearly forty years furnished us with a good currency free from interest tribute, is now declared. Those remaining are to be retired, and an interest-bearing bond is to be used as the basis of a bank-note circulation to take their place. The control of the volume of currency, that has so much to do with fixing the price of labor and commodities, is conceded by a Republican Congress to belong to the bankers and not to the representatives of the people. Distinguished Republican Congressmen no longer send forth appeals for the oppressed of Porto Rico. The protests of distinguished Republican Senators against the abrogation of the Declaration of Independence are no longer addressed to the consciences of any portion of their party. They have changed, and in place of their lofty appeals to duty, mere "rills of oily eloquence in soft meanders lubricate the course they take." The Army bill, with its permanent expense, its ever-present dangers, is an all but accomplished fact, and the passage of the pernicious ship subsidy to millionaire mendicants seems to be inevitable. These perils press upon us, and others threaten. What is the spirit of the conquerors? As they say that Mr. Bryan has been their most effective speaker, allow me to submit their own language and demeanor at their Belshazzar festivities in the city of Washington this week, and see how much it will strengthen them in the estimation of thoughtful citizens.

The gathering I speak of was a meeting of the Nebraska Republican Club, which was held on Friday evening, December 7, at

the Rifles' Armory Hall, on G street, Washington, and the occasion was a grand celebration of their victory in the home State of the People's, Independent, Democratic, and Free Silver Republican candidate for President. The hall was one that would contain about three thousand people. Its seating capacity was fully occupied, and perhaps two hundred persons were standing during the fore part of the exercises, there being seats for all before its close. The meeting was called to order by Mr. Edgar C. Snyder, correspondent of the Omaha Bee and private secretary to Senator THURSTON, who pronounced a patriotic declamation, announced a singer of patriotic songs, and renounced the chairmanship in favor of Hon. JOHN M. THURSTON, senior Senator from our State.

The singing won considerable applause, and caused the waving of numerous flags which had been thoughtfully provided for the audience. In well-modulated tones the distinguished permanent chairman then stated that he had agreed not to make a speech, but had a few thoughts to present on the conditions which made the Republican victory in Nebraska so remarkable; that Nebraska was the Populist center of the nation; that Populists were for the most part honest, patriotic men, who organized a reform party with good motives for the betterment of the nation; that like all independent parties they had fallen a prey to one or the other of the older organizations, and it finally transpired that the typical beast emblematic of Democracy had two riders—one faced forward and the other backward. [Great applause.] He then related that while at Lincoln he had seen a swelled frog used in one of the stores for advertising purposes that completely resembled the Fusion forces, as it had a green back, a silver belly, a face like Aguiña'do, could not be trusted, and was as likely to jump one way as another. [Prolonged applause.]

Mr. THURSTON grew earnest and impressive as he said that he had faith in our Government, not as an imperial dynasty, or with tendencies in that direction, but as one ever ready to listen to the voice of the people; with a Constitution not destroyed, but amended to meet the needs of an expanding and progressive civilization. He averred that prior to McKinley's Administration "our largest battle ships could sail unnoticed into foreign harbors, but now the smallest boat bearing the American flag is received with 'hats off' in any part of the world." Having concluded this sweeping arraignment of every Republican President from Abraham Lincoln to Benjamin Harrison, he closed with the eloquent peroration that "the name of Washington stands for independence, of Lincoln for liberty, while that of McKinley represents the flag and man's humanity to man"—inadvertently omitting to name the man. Summing up his speech, he first praised Populists and then derided them; revealed by his skillfully turned phrases about necessary amendments to the charter of our Government that he held with Pope, "Manners with fortunes change, humors turn with climes; tenets with books, and principles with times," and it never occurred to him that some people would be fully as well satisfied to belong to an organization resembling a swelled frog, that no matter how uncertain the direction of its jump never jumps backward, than to belong to one that might be typified by the swelled accounts of a Rathbone or the swelled tax roll of a military government.

With extravagant eulogy Hon. CHARLES H. GROSVENOR was then presented, but as he bowed his acknowledgments, Senator HANNA entered, advanced to the front of the stage, and was received with an ovation that far exceeded any demonstration of the evening. Again and again the cheering broke forth, indicating that he was their acknowledged leader; their highest ideal of American manhood. Mr. GROSVENOR with ready tact turned the incident to good account, saying truly that if half the complimentary things spoken of him by the chairman were true, the demonstration was no more than he deserved, put his hearers in high good humor by his pungent pleasantries, and then proceeded to give an account of his experiences in Nebraska the year before when the results were not so satisfactory to his party as in the last campaign. He explained their failure to hearken to his words of wisdom in this wise:

No state has been so thoroughly cursed by the dense ignorance and monumental stupidity of Populism as has Nebraska. Her people neither thought or cared for the dangers of imperialism, militarism, or trusts, because they were just getting rid of the curse of Populism. They had sense enough to know that better times came about as a result of Republican rule. There is not one thing that has happened in the past four years they would care to retain that has not come about as the necessary and inevitable result of a Republican Administration.

He then related how he had striven to keep Senator HANNA from going to Nebraska; that he wanted him to live a great while; that there is no other like him; that of him, as of another great man, it might truthfully be said: "He came, he saw, he conquered." He remarked that it was "pretty cheeky" for Mr. HANNA to go to Lincoln and tell Bryan that he was not fit to be elected to the office of constable, but that an overwhelming victory in the Republican county of Lancaster had followed that declaration.

Not contented with having classified Senator HANNA with imperial Caesar, Mr. GROSVENOR then proceeded to compare him with

Christ, by stating that in his own preliminary tour in 1899 he acted as John the Baptist and was the voice of one crying in the wilderness to prepare the way for a man the latchet of whose shoes he was not worthy to unloose. This nauseating flattery, blasphemous as it was, seemed highly pleasing to both audience and recipient, though we observe that it was omitted in the accounts of the meeting that appeared in the daily papers on the following morning. The Senator's face beamed, his eye kindled with a look of gratification, as though he felt himself appreciated at his true worth, apparently sublimely unconscious of any application of the words of Goldsmith:

Of praise a mere glutton, he swallow'd what came,
And the puff of a dunce, he mistook it for fame;
Till his relish grown callous, almost to disease,
Who pepper'd the highest was surest to please.

He continued with another Scriptural reference, adjuring the Democrats "Ye must be born again," as it was useless to try to reorganize a dead thing. He admitted that he had several times delivered a funeral oration on the demise of the Democratic party when it displayed very vigorous life afterwards, but averred that never under such circumstances had they ever been thoroughly fumigated, and that they always had the odor of the grave about them. He concluded with the good old anecdote of two young men who possessed a joint stock mother-in-law. After vibrating between the two households for some years the lady finally died at one of them. The telegram sent to the other was as follows: "Mother-in-law dead. Shall I embalm, cremate, or inter?" Answer. "The reply soon came, 'Embalm, cremate, and inter. Quickly and deeply.'" This he suggested as the proper course to be pursued with Bryanism. Comment on such a speech could not make its weakness or malice more apparent, and it is submitted without argument. The best natured part of it was the mother-in-law story, and it suggests another of equal veracity and antiquity:

A boy asked his teacher's permission to absent himself from school to attend another boy's funeral. Permission was readily granted and Johnny departed. But as the teacher was on her way home late that afternoon she met her absent scholar.

"And Johnny," asked the teacher, "did you attend your friend's funeral?"

"No, marm," replied Johnny. "I went to the house, but the boy wasn't dead. We had a high old time wrestling until he throwed me flat 'f my back. 'F you think he's dead, you just tackle him; that's all."

Auditor Andrews then read in precise accents a few formal letters of regret from distinguished individuals who were not able to be present, being assisted therein by Mr. Snyder, who had a better voice and more agreeable presence. The list of names was very imposing, but none of the communications rose above the level of commonplace, the most noticeable and original idea contained in any of them being the statement by ex-Senator Manderston that "Populism is a combination of imbecility and dishonesty."

Then once more did the honorable chairman take his turn at the treacle. He rose to "introduce one man whom Republicans always delight to honor, and deservedly so—one of our most patriotic citizens, who is yet, perhaps, to receive higher honors. He has been mistaken for the devil with horns by members of the opposition, and this is perhaps not unnatural, as he has now for the second time given them a devil of a licking. In his new rôle of orator I wish to present Our Mark."

Thunders of enthusiastic applause followed this presentation and the appearance of the man who, with Rough Rider Roosevelt, possesses the exact degree of intelligence and higher civilization to enable them to share equally first honors at the gatherings of latter-day Republicans. With a placid smile at the plaudits he had evoked, the hero remarked:

This reminds me of Nebraska. I have often appeared in the same rôle and I notice that all our speakers are glad to avail themselves of the audience I draw. The only reason that GROSVENOR did not want me to go to Nebraska was because he was not going along. I take the result of this election in Nebraska to be an indication that people are returning to their senses, and the reclamation of that State is what seems to me significant as the dawning of a new sun all over our country. If there was any one reason more than another why I consented to undertake the management of another campaign, it was because I had a feeling that my work had not been entirely finished; that I had overlooked a few States west of the Missouri River.

I claim no unequal share in the results in that or any other State. I do claim that never in my political experience in the management of affairs has there been a State more thoroughly organized or one in which the leaders worked so loyally. It is through organization more than any other agency in closely contested elections that victory comes.

Of course loyalty and patriotism are necessary auxiliaries for the workers, but organization is everything.

In order to match the celebrated calf story with which Hon. Theodore Roosevelt is wont to illustrate his own rugged and invincible honesty, Mr. HANNA closed his address by repeating a pleasant incident that occurred during his Nebraska travels. He was at one point asked to come to the rear end of the train to have his picture taken. As he stepped to the platform his eye fell upon the engineer, who was dressed in his working clothes.

Desiring to establish the fact once and for all time that he was not proud and haughty, and that his heart beats in sympathy with

and love for the common people, Senator HANNA advanced, thrust his arm through that of his humble companion, and made use of the following language:

Come with me, and we will both have our pictures taken. We are two engineers—you and I; I am running the Republican party and you are running me. The picture was taken in this manner, and I shall always remember my side partner, as I called him (aside to Mr. Snyder, "What was his name?"), Burden, oh, yes, Burden. I shall never forget him nor the pleasant occurrence I have related.

With praise and panegyric Congressman LITTLEFIELD was then presented and made his stately bow. His remarks should always be read in a deep bass voice and very rapidly. He mentioned the birth throes of Nebraska, the political delirium of Populism, thought it very significant that Bryan failed to carry his own ward or city, but sneeringly intimated that he might have his own family with him; paraded the time-honored joke about the resemblance between Bryan and the Platte River, adding thereto a postscript which he claimed as an original discovery that the resemblance was further continued, as the "Platte is growing shaler and shallower every year;" accepted Mr. HANNA's story and referred to him several times as the "chief engineer," and closed with a plea for a divisor that would give Nebraska six Congressmen by way of recognition of their splendid services to the cause of the Republican party.

Assistant Secretary Brigham followed, speaking of "the blight of Populism." It will be noticed that while nominally rejoicing over the defeat of Democracy, the bitterest ridicule and denunciation was heaped upon the party that their chairman had said was in the main composed of honest men, actuated by good motives. Some of the speakers must have known of the condition of the Nebraska State government, of our State school fund, and State treasury when it passed under fusion control, and of the condition in which these are returned to the charge of that party which had before proved so unfaithful to its trust; but there was not in the whole exercises one word of frank admission of past misgovernment, nor of commendation to fusionists for their great accomplishments. There are to-day several Republican States that could be mentioned, which would do well to experience a few years of the "curse" or "scourge" of Populism. We append an extract from the Omaha Bee of the same date as the meeting, showing not only the satisfactory condition of the funds, but admitting a small part of the former losses due to the rule of men whose protestations of love for the flag and professions of loyalty were no less vehement than those heard at Rifles Armory hall on Friday evening last:

STATE TREASURY BALANCES—SEMIANNUAL REPORT SHOWS \$600,000—UNINVESTED SCHOOL FUND REDUCED—STATE TREASURER MESERVE MAKES A SHOWING OF HIS DEPARTMENT'S OPERATIONS DURING THE TIME SINCE JUNE 1 LAST.

LINCOLN, December 6, 1900.

Treasurer Meserve to-day submitted his last semiannual report for inspection by Governor Poynter. The document was filed in the executive department, and will be supplemented on December 31 by a final report covering the last month of the present treasurer's term of office. The disbursements of the State treasury during the six months ending with December were \$1,372,406.17, while the receipts for the same period, not including the balance on May 31, were \$1,166,142.80. The total balance of all funds on December 1 was \$615,018.34, and the total balance at the beginning of the period was \$819,281.71.

Of the total balance \$159,947.95 are contained in the educational trust and endowment funds. Whatever portions of these funds that remain uninvested when Treasurer Meserve retires from office must be turned over to his successor in actual money. It is estimated now that the uninvested school money at the end of the present month will amount to slightly more than \$150,000.

During the six months covered by the report the suspended account, made by shortages and losses in bank failures, was reduced by the payment of \$36,897.08, of which \$35,454.27 was dividends on the State's deposit in the Capital National Bank, and \$1,442.81 a partial payment of the State's deposit in the Exchange Bank, of Atkinson. Of the total of \$337,763.27 of State money deposited in banks that failed, only \$35,953.27 has been recovered, leaving the broken banks still owing the State \$301,808.

It will be noticed that Congressman LITTLEFIELD asked as a reward for the exertions of Nebraska Republicans that a basis of enumeration be fixed upon that would entitle the State to retain its present membership, and Republicans are urging Fusion Congressmen to join in making such an effort and stand for an apportionment that will not lessen the power nor prestige we now have. The thought had occurred to me that they were, perhaps, a little more interested from the standpoint of party than of public interest, but there was no evidence that such was the case until after the publication of an interview given by Congressman BURKETT to a correspondent of the Omaha Bee, which will be submitted a little later.

Section 1, Article II, of the Constitution, provides that—

Each State shall appoint, in such manner as the legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress.

Because of that provision the electoral college is now made up of 447 members, being the exact equivalent of 90 United States Senators and 357 Congressmen.

It must not be forgotten that upon the apportionment now made will depend the membership of the electoral college for the next ten years.

In the interview reported in the Omaha Bee of December 6 my esteemed colleague says:

Of course, I surmise that the Republicans will try not to give the Democrats any unnecessary advantage in numbers in either place. If the present membership of 357 should be retained and an apportionment be made on that basis, considering that the States would go politically as they did at the last election, the Republicans would lose in the electoral college 1 vote each from Indiana, Kansas, Maine, Michigan, Nebraska, and Ohio, or a total of 6, and would gain 1 each from Illinois, Minnesota, New Jersey, and New York, or a total of 4, thus leaving them with a net loss of 2.

OPPOSITION WOULD WIN.

On the other hand, by this arrangement the Democrats would lose 1 each in Kentucky, South Carolina, and Virginia, making a total loss of 3, and would gain 1 in Colorado, Louisiana, and 2 in Texas, or a total gain of 4, leaving them a net gain of 1, while the Republicans would have a net loss of 2. If the basis for membership should be 360, the Republicans would lose 4 and gain 11, a net gain of 7, while the Democrats would lose 1 and gain 6, a net gain of 5.

If the membership were placed at 395, no State would lose anything in its delegation nor in the electoral college, for the Republicans would gain 24 and the Democrats would gain 14. This latter is the best number of the three to settle upon, from a Republican standpoint.

A membership of 395 would make the House of Representatives more expensive and cumbersome than at present. There is no reason why Nebraska, because of political reasons, should ask the representatives of the whole nation for a divisor that will prevent her from suffering less than sister States from either a padded or an insufficient census, or give to her undue representation that she has not the population to justify, and believing that 395 members would be an unprecedented and unnecessary increase, I shall oppose it.

A word of explanation about my vote on the Army bill will now be in order.

The Taft commission fixed a sixty-day limit for the conclusion of the Philippine conflict after the election of President McKinley. If the struggle is so soon to end, and we have the reputation as combatants spoken of by Senator THURSTON, it is difficult to see the need of more than trebling our Army. Judging by the speeches made in my district by visiting statesmen during the last campaign, it would seem to be much cheaper and more effective—the football season being over—to employ some of their megaphone experts to go there and send reverberating over their hills in tones of thunder the disheartening intelligence that “Bryan is licked,” and if the rebellion can really be shortened in this way we should prefer such method to the sending over of ships and soldiers.

I was willing to go to the extent of giving my support to the resolution of Congressman McCLELLAN to recommit the bill for the purpose of extending the temporary army until June 30, 1903, but was forced by my convictions of right to vote against a measure placing so much power in the hands of a single man. This I would have done had that man been William J. Bryan, whose fellow-citizens regard with undiminished respect and admiration, and who stands in defeat, as he would have done in victory, the greatest living American.

The Grout Bill.

SPEECH OF HON. LOT THOMAS, OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1900.

On the bill (H. R. 8717) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine.

Mr. THOMAS of Iowa said:

Mr. SPEAKER: Inventive genius, within the last half century, has contributed very materially to the advancement of the dairy interests in this country. The art of invention has brought into use new processes in the development of the dairy farm, and the methods of butter and cheese making have been improved, in a degree, to keep pace with the advancements made in the other industrial pursuits characterizing the general development of a uniform and harmonious industrial system. Scientific investigations have led to improved methods of manufacture and to the improvement of the dairy farms and herds. They have operated within the area of country engaged in the dairy business, have widened its field of activity, and increased the products of the farms.

Cooperative associations have been organized in nearly every community where dairy farming is carried on; and they have proven of great benefit in the dissemination of valuable information pertaining to the business of dairying, the improvement of the dairy herds, and the introduction of the best appliances for use in the operation of the business.

By intelligence in the skillful operation a pure product is produced for which a ready market is found everywhere. The tables of the rich and poor alike demand a supply of pure butter. This demand has led to the building up of a great industry, requiring large amounts of capital and the employment of millions of our people. It gives diversity to agricultural pursuits, and has thus enlarged the field of agricultural possibilities, until today it has become one of the chief wealth-producing sources of the farming communities. The demand for the pure and unadulterated product has widened the field of production, and has engaged inventive genius to produce an article to supply that demand acceptable to the consumers in quality.

Manufacturers of pure creamery and dairy butter have, by persistent efforts and the expenditures of large amounts of money, and by honest dealing, built up a reputation for their product that affords it a ready market. To all the benefits of this reputation, as the result of their own efforts, they are entitled, and they have as just a claim for protection as the person who by his genius has invented some article useful in the development of our commercial and other industries.

The demand for pure butter has made the industry of producing it profitable and has created a good price for the pure article.

This has led others not engaged in the dairy business to produce a counterfeit or imitation of butter, commonly called oleomargarine, and place it on the market as pure creamery or dairy butter. It is claimed that oleomargarine is a good, healthful food product, not inferior to genuine butter made from pure cream. Whether this be true or not it is not material to stop here to inquire.

By using certain coloring in its manufacture oleomargarine is made to resemble genuine butter and is put on the market and sold not as oleomargarine, but as pure butter. By coloring it to resemble butter and offering it for sale as such the manufacturers are, on the reputation of pure butter as a food product and the demand that has been created for it, enabled to sell the counterfeit product at the prices of pure butter, while its actual value and cost of production are much less.

The oleomargarine manufacturers and dealers are not willing to place their product on the market on its own reputation. But, for the purpose of increasing their sales and enhancing their profits, they are seeking to appropriate to their own use and purpose the reputation established by the manufacturer of pure butter, without having contributed anything to build up and establish that reputation. The dairy farmer has, by many years of persistent effort, gained a market for his product, which, it is conceded on all sides, can not be produced so cheaply as oleomargarine, and now the producer of the counterfeit article is placing his product upon the market and offering it for sale as pure butter, having manufactured it and colored it so as to resemble the pure article so closely that the counterfeit can not be detected by the ordinary dealer, and by so doing brings his counterfeit and cheaper article in direct competition with the genuine product of the dairy farmer. This is a fraud, not only upon the manufacturer and honest dealer in pure creamery and dairy butter, but also upon the consumer who buys the spurious article and pays butter prices for it, believing that it is genuine butter.

It is not the purpose or design of the producer or dealer in butter manufactured from pure cream or milk to interfere with or prohibit the oleomargarine manufacturer or dealer from manufacturing or selling oleomargarine. But they claim the right to insist that the oleomargarine shall be sold, if at all, upon its own merits and reputation, and not upon the reputation and merits that the manufacturers and dealers of pure butter have acquired for their product at great expense and toil for many years.

In order that the fraud may be perpetrated by selling the oleomargarine as butter it is artificially colored so as to resemble genuine butter. This coloring is not a necessary ingredient to improve its condition as a useful or healthful food product. It is admitted by manufacturers and dealers and those who have made investigation into the subject that the only purpose of adding the coloring is to make it resemble pure butter and to make it marketable as such.

If oleomargarine is a pure food product—and we have no purpose to controvert the fact now—the right may be conceded to manufacture it and place it on the market with the same freedom that other producers have in relation to their products, but in doing so manufacturers and dealers in that product should be required to rely upon the merits and reputation of the product they produce, and not be permitted to color it artificially so as to resemble pure butter, and by that means be enabled to place it in the field of commerce for sale in competition in the markets of the country with the genuine article, depending upon the reputation of pure butter for an enhanced market value of the spurious product over and above its cost and market value as oleomargarine.

For the purpose of confining oleomargarine in the markets of the country within the limits of its own reputation and actual merits as a food product, a number of the States have enacted

laws prohibiting the sale of oleomargarine and like products when artificially colored so as to resemble butter made from pure milk or cream. This is one of the purposes of the bill now before the House.

The creamery and dairy manufacturers have, for a number of years, been trying to inaugurate some system or adopt some measure that would prevent the manufacturers of and dealers in oleomargarine from placing their imitation product on the market and selling it as genuine butter. To accomplish this purpose they have appealed to both Congress and the legislatures of the several States, and in answer to this appeal a majority of the States have enacted laws with the accomplishment of that object in view.

Thirty States, having a population, according to the census of 1900, of 58,402,142, have laws on their statute books prohibiting the sale of oleomargarine artificially colored in imitation of butter manufactured from pure milk or cream, and designed to be sold as butter.

Two States, having a population of 1,302,591, prohibit the sale of imitation butter not made from pure milk or cream, unless it be colored pink.

The District of Columbia and seven States, having a population of 8,252,833, require that oleomargarine and similar imitations of butter shall be put up in packages and labeled or stamped with the name of the contents of the package, and shall only be sold in such packages properly labeled and stamped.

From this statement it will be seen that 39 States and the District of Columbia, with a population of 67,857,566, out of a total population in all the States and Territories of 76,285,220, have taken cognizance of the action of the manufacturers of and dealers in oleomargarine of artificially coloring their product to resemble pure butter with the purpose of placing it on the market and selling it as such, in competition with the pure article and upon the reputation of creamery and dairy butter, and have adopted restrictive laws to protect the public and dairymen, as well, from the deception attempted thereby. This legislation is based upon the principle that the action of the manufacturers and dealers in oleomargarine in attempting to palm off their counterfeit product as the genuine article is a fraud upon the producers of pure butter and also on the public who seek to buy pure butter, and it is its purpose to prevent such fraud.

These statutes provide penalties for violation of their provisions. They form a part of the criminal laws of the States. It seems that in many of the States the penalties are not as severe as they ought to be. Whether this be the fact or not, it is well known that these laws are constantly being violated with impunity.

In some of the States these laws are openly violated; in others in a clandestine manner.

In Illinois and some of the other States where the principal oleomargarine manufactories are located the laws enacted, prohibiting the manufacture and sale of the product when colored in resemblance of pure butter, have been violated with impunity. It has been found very difficult to enforce these laws in the face of the violent and persistent opposition of the manufacturers and dealers in their determination to override their provisions.

This class of legislation has been attacked and every technical defense has been used to defeat its provisions. It was first claimed that these laws were in violation of the Constitution of the United States giving to Congress the power to regulate commerce between States, but it has been held by the Supreme Court of the United States that this clause of the Constitution does not apply to the manufacture of any products within the several States, even though it may be the purpose of the manufacturer to ship them to other States for sale. The manufactured products only come within the interstate-commerce clause of the Constitution when they are put in process of transportation. In the case of *Plumley vs. The Commonwealth of Massachusetts* (155 U. S., 461) the Supreme Court of the United States carefully considered and gave a judicial construction to a statute of Massachusetts providing that—

No person by himself or his agents or servants shall render, or manufacture, sell, offer for sale, expose for sale, or have in his possession with intent to sell, any article, product, or compound made wholly or partly out of any fat, oil, oleaginous substance or compound thereof not produced from unadulterated milk or cream from the same, which shall be an imitation of yellow butter produced from unadulterated milk or cream from the same: *Provided*, That nothing in this act shall be construed to prohibit the manufacture or sale of oleomargarine in a separate and distinct form, and in such manner as will advise the consumer of its real character, free from coloration or ingredient that causes it to look like butter.

The Supreme Court held that this clause is not in violation of the interstate-commerce clause of the Constitution, and that the State had the right to prohibit the manufacture and sale of oleomargarine and like products when artificially colored to imitate butter made from pure milk or cream. The Supreme Court says in its opinion:

It will be observed that the statute of Massachusetts which is alleged to be repugnant to the commerce clause of the Constitution does not prohibit the manufacture or sale of oleomargarine, but only such as is colored in imi-

tation of yellow butter produced from pure unadulterated milk or cream of such milk. If free from coloration or ingredient that "causes it to look like butter" the right to sell it "in a separate and distinct form and in such manner as will advise the consumer of its real character," is neither restricted nor prohibited. It appears in this case that oleomargarine, in its natural condition, is of a light-yellowish color, and that the article sold by the accused was artificially colored in imitation of yellow butter.

Now, the real object of coloring oleomargarine so as to make it look like genuine butter is that it may appear to be what it is not, and thus induce unwary purchasers who do not closely scrutinize the label upon the packages in which it is contained to buy it as and for butter produced from unadulterated milk or cream from such milk. The suggestion that oleomargarine is artificially colored so as to render it more palatable and attractive can only mean that customers are deluded by such coloration into believing that they are getting genuine butter. If anyone thinks that oleomargarine not artificially colored so as to cause it to look like butter is as palatable or as wholesome for purposes as food as pure butter, he is, as already observed, at liberty under the statutes of Massachusetts to manufacture it in that State or to sell it there in such manner as to inform the customer of its real character. He is only forbidden to practice in such matters a fraud upon the public. The statute seeks to suppress false pretenses and to promote fair dealing in the sale of an article of food. It compels the sale of oleomargarine for what it is to prevent its sale for what it is not.

Can it be that the Constitution of the United States secures to anyone the privilege of manufacturing and selling an article of food in such manner as to induce the mass of the people to believe that they are buying something which in fact is wholly different from that which is offered for sale? Does the freedom of commerce among the States demand a recognition of the right to practice deception upon the public in the sale of any article, even those that may have become the subject of trade in different parts of the country?

The court further says in the same opinion, in quoting from an opinion of the same court in the case of *Dent vs. West Virginia* (129 U. S., 114):

The power of the State to provide for the general welfare of its people authorizes it to prescribe all such regulations as in its judgment will secure or tend to secure them against the consequences of ignorance and incapacity as well as deception and fraud. If there be any subject over which it would seem the States ought to have plenary control, and the power to legislate in respect to which it ought not to be supposed was intended to be surrendered to the General Government, it is the protection of the people against fraud and deception in the sale of food products.

The court further says in the same opinion:

We are of opinion that it is within the power of the State to exclude from its markets any compound manufactured in another State which has been artificially colored or adulterated so as to cause it to look like an article of food in general use, and the sale of which may, by reason of such coloration or adulteration, cheat the general public into purchasing that which they may not intend to buy. The Constitution of the United States does not secure to anyone the privilege of defrauding the public. The deception against which the statutes of Massachusetts is aimed is an offense against society; and the States are all competent to protect their people against such offenses or wrongs as they are to protect them against crimes or wrongs of more serious character.

This decision is based upon the principle that the statute of Massachusetts, which contains provisions similar to the statutes of many of the other States, was enacted for the purpose of protecting its citizens from deception and fraud; and it recognizes the fact that the manufacture and sale of oleomargarine, when artificially colored in imitation of pure butter for the purpose of making it appear like butter and to induce its sale as such, is a fraud upon the public which the legislatures of the several States have the right to prohibit by proper legislation.

While the laws of these States prohibiting the sale of oleomargarine when colored in imitation of butter have been sustained by the Supreme Court of the United States as within the power reserved to the several States under the Federal Constitution, they have proven entirely inefficient to accomplish the purpose designed by their enactment.

Legislation of this character having been approved by such a large majority of the people of the nation, acting through their several State legislatures, and it having been demonstrated that a remedy could not be effected through the action of the States proceeding alone, Congress undertook to deal with the question some years ago by passing a law on this subject.

The act of Congress approved August 2, 1886, entitled "An act defining butter, also imposing a tax upon and regulating the manufacture, sale, importation, and exportation of oleomargarine," imposes a tax on all manufacturers of and wholesale and retail dealers in oleomargarine when "made in imitation of or resemblance of butter, or when so made calculated or intended to be sold as butter."

This act also provides for the payment of a tax of 2 cents per pound on all oleomargarine "manufactured and sold or removed for consumption or use," and further provides that it "shall be packed by the manufacturer thereof in firkins, tubs, or other wooden packages not before used for that purpose, each containing not less than 10 pounds, and marked, stamped, and branded" in accordance with the regulations provided for in said act.

It further provides that retail dealers in oleomargarine must sell only from original packages in quantities not exceeding 10 pounds, and shall pack the oleomargarine sold by them in suitable wooden or paper packages, which shall be marked and branded as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe.

It seems that the revenue officers of the Government have considered their duties performed in relation to the enforcement of this law when the manufacturers paid the required tax, and but

little effort has ever been made to enforce the provisions of the law in relation to retail dealers.

Investigations made by the committees of the Senate and House of Representatives show that this law has been quite generally observed so far as the payment of the special tax is concerned, but has been very generally violated by the retail dealers so far as it requires them to "pack the oleomargarine sold by them in suitable wooden or paper packages" and mark and brand such packages as required by the Commissioner of Internal Revenue.

To strengthen the law so as to make it more effective in carrying out the purposes of its enactment and to secure a better observance of it, the pending bill has been introduced.

The first section of this bill provides that oleomargarine and similar products colored in imitation of pure butter, not made of pure milk or cream, transported into any State or Territory shall "be subject to the operation and effect of the laws of such State or Territory to the same extent and in the same manner as though such articles or substances had been produced in such State or Territory." This section proposes to extend to the several States the same power of control as a police regulation over oleomargarine when transported from one State or Territory into another, on its arrival at the place of consignment, as though it had been produced in such State or Territory.

That such legislation is, under the interstate-commerce clause of the Constitution, within the powers conferred upon Congress is clearly held by the Supreme Court of the United States in the cases of *In re Rahrer* (140 U. S., 514) and *Vance vs. Vandercook & Co.* (170 U. S., 438), construing a similar act of Congress, declaring that intoxicating liquors transported into any State or Territory shall be subject to the operation and effect of the laws of such State or Territory to the same extent and in the same manner as though they had been produced in such State or Territory.

The laws of the several States prohibiting such artificial coloring of oleomargarine have been generally violated by manufacturers and dealers in that article, and owing to the fact that oleomargarine is principally manufactured in a few centers and from there transported into the several States for sale and consumption, it has been found that the enforcement of these laws is next to impossible. To overcome this difficulty and to confine the trade in oleomargarine to its legitimate field, resting upon its own merits and reputation, the second section of the pending bill has been incorporated.

This section provides that a tax shall be paid of one-fourth of 1 cent per pound on oleomargarine manufactured when the same is not colored in imitation of butter; but when the same is colored in imitation of butter the tax paid by the manufacturer shall be 10 cents per pound. This section does not attempt to interfere with or limit the manufacture of oleomargarine when manufactured and sold as such, without coloring to imitate butter.

The manifest purpose of this bill is to secure the cooperation of the State and Federal authorities to prevent the fraudulent manufacture and dealing in oleomargarine; to protect the public, who desire a pure article of butter, as well as the butter makers against fraud and deception, and to require that oleomargarine, when placed on the market, stand on its own merits as oleomargarine and not on the reputation of pure butter.

Under the construction of the interstate-commerce clause of the Constitution, as announced in the case of *Plumley vs. The State of Massachusetts*, the States now have the authority to prohibit absolutely the manufacture and sale of oleomargarine when colored to resemble pure butter.

Under the authority reserved to the States by the Constitution, they have plenary power to deal with the question of the manufacture and sale of oleomargarine within their respective jurisdictions when it does not affect the commerce of this article between the several States or with foreign nations.

Oleomargarine is a much cheaper article and can be produced at a much less cost and put upon the market at a much less price than genuine dairy and creamery butter. The object of this section is to adopt this as a revenue measure by the General Government, and as an incident to this measure to prevent the manufacture and sale of oleomargarine when artificially colored in imitation of butter or to place such a tax upon it that when placed upon the market the actual cost of doing so to the producer will be as great, or nearly as great, as the cost of making or manufacturing and placing upon the market pure butter; or, to state the proposition in other words, it proposes to require the oleomargarine manufacturer or dealer to pay a tax on oleomargarine colored as butter large enough to raise the expense to the producer equal to the expense of producing pure butter or to rely for a sale of his product upon its actual merits without deception or fraud in artificially coloring it to resemble pure butter and then selling it on the market as such.

If the bill now pending becomes a law, it will leave the oleomargarine dealer and manufacturer the right and privilege of manufacturing and selling their product upon the market without

restriction, except the payment of a tax of one-fourth of 1 cent per pound; and all those who desire or prefer to use oleomargarine instead of pure butter, because they may think it better or cheaper than butter, will have the opportunity of buying it at its real and actual value and price. The oleomargarine in its natural color is as palatable and as healthful as a food product, and it may be as handsome in appearance as genuine yellow butter, but when it does not have the coloring the opportunities for deceiving the public and realizing the profits by reason of the reputation of creamery butter are removed. The proposition that this is a proper subject of legislation in the interests of honest and legitimate trade, so far as applies to dairymen and butter makers and also to the public who desire to use dairy products, can hardly be controverted.

It is claimed by those who oppose this bill that the manufacture of oleomargarine has grown to be a great industry, and that, if this bill becomes a law, it will materially affect this industry and impair the large capital invested in the oleomargarine business and throw many people engaged in that business out of employment. If we admit this to be true, it presents no argument against the bill, but rather sustains the proposition that the bill ought to be passed. There is nothing in the bill that imposes any restriction on the manufacture and sale of oleomargarine with its natural color, except the tax of one-fourth of 1 cent per pound, and to this tax there seems to be but little objection. If the only objections made to the bill were confined to this provision, speaking for myself alone, I should be willing to see this provision stricken out.

Under the second section of this bill the manufacturer of oleomargarine, with the exception of the small tax imposed, has the same freedom to manufacture and put his product on the market as and for oleomargarine as the dairymen has to put his product on the market as and for pure butter. But this is not what the oleomargarine manufacturer wants. He wants to put his product on the market without restriction, not as oleomargarine, but as and for genuine dairy or creamery butter; and his objection to the bill arises from the fact that it requires him to pay the tax of 10 cents per pound when it is colored in resemblance of butter, and in this way raises the expense of putting his product on the market up to the price of creamery butter. This removes the opportunity for large profits. The butter dealer sells his product for what butter is actually worth on the market. The oleomargarine dealer wants the privilege of selling his, not for what it is actually worth on the market as oleomargarine, but for the price that butter brings on the market. The fact is, there is not now and never has been a market price, open and public, for oleomargarine between dealers and consumers. It has never been put on open market as oleomargarine. The evidence taken before the committees of Congress plainly establish the fact that it would not find purchasers if offered for sale as oleomargarine. It is therefore put on the market as butter and at butter prices.

It is further urged that oleomargarine is a healthful food product and can be produced much cheaper than butter and that those who desire to buy the cheaper article ought to be permitted to do so. We may admit this to be true. But the fact remains that the pending bill does not attempt to impose restrictions on the manufacture or sale of oleomargarine as such, but on the contrary it requires that it be designated as a distinctive product, so that those who desire it may have the genuine article, without coloring to resemble butter, at oleomargarine prices. If uncolored, all chance of deception and fraud is removed, and the party who wants to buy the stuff at its actual value will have the privilege of doing so and will get a cheaper food product for what it is worth; but when colored to resemble butter, and sold as butter, he must pay butter prices. Oleomargarine colored in resemblance of butter is not sold at oleomargarine prices, because that would disclose its identity and destroy the demand for it as a butter.

It is the policy of the Government to secure manufacturers, dealers, and traders in their right to trade-marks adopted or used by them as descriptive of their business or trade or to identify or distinguish their goods or products. They acquire a property right in them, and through them the people are able to identify and distinguish the things bearing these marks from other things of a like character offered to the public by others.

As a matter of business ethics the same principle ought to apply as between the manufacturers and dealers in pure butter and oleomargarine not only to prevent deception and fraud on the public, but also for the protection of the butter makers and dealers, who have built up a great industry and have established an open market that ought not to be invaded by the free introduction of spurious compounds, artificially colored so as to resemble the genuine product so nearly that the public in buying are unable to detect the deception or distinguish the counterfeit from pure butter.

In the minority report of the Committee on Agriculture, after submitting "testimony" which it is claimed "established beyond

controversy that oleomargarine is a nutritious and wholesome article of food," it goes on to say:

The only just complaint (indeed, the only complaint) against the existing oleomargarine law consists in the facility with which the retail dealers, in selling from the original or wholesale package and substituting a new and non-marked wrapper, may violate the law. There is nothing in H. R. 3717 (known as the Grout bill) which would decrease the temptation or increase the difficulty of such violations. On the contrary, the increased taxation would either be fraudulently evaded or else would force the honest manufacturer out of business.

Why would "the increased taxation" be "either fraudulently evaded or else force the honest manufacturer out of business?" The bill is not intended to be a protection to rogues who aim to palm off their spurious article on the public as and for pure butter and on the reputation that butter makers have acquired for their genuine product. To place oleomargarine, artificially colored in resemblance of butter, on the market as and for pure butter is a fraud, both on the public and on the dairymen and creamery men as well. The chief purpose of the bill before the House is to prevent the perpetration of such fraud. It is to make the oleomargarine manufacturer and dealer act honestly in the production and sale of their product.

From the evidence of oleomargarine makers and dealers taken before the Senate and House committees it is made plainly to appear that oleomargarine is put on the market and sold, not as oleomargarine, but as pure butter, and that if put on the market and offered for sale as and for oleomargarine it could not be sold. This is admitted by the dealers in that article themselves. Under the simple habits of our people of years ago this kind of dealing was characterized as fraudulent; but under some of our more modern methods of business and our modern teachings in business ethics, as we have heard them analyzed on the floor of this House, this is thought to be only a modernization of the moral code of business principles. But we still confidently maintain that now, as well as heretofore, deception in business methods constitutes a fraud within the purview of morals which it is the province of the law to prevent.

But we are told in the minority report that if the bill becomes a law one of two things would follow: "The increased taxation would be fraudulently evaded or else it would force the honest manufacturer out of business." Or, to put it in other words, the honest manufacturer who would put his product on the market for what it is, without deception or fraud, and not for what it is not, will be forced "out of business." Then, if we assume that the position of the minority of the committee is correct, there is no way by which an honest man can continue in the oleomargarine business whether the bill before the House becomes a law or not, because the oleomargarine manufacturer can only find a market for his product when colored in imitation of butter and offered for sale as butter. The opponents of the bill now plead for this one privilege—in the interests of morality and fair dealing of course—to be permitted to go on without hindrance and practice this little deception and fraud on the public, because if compelled to be honest they will be driven out of business.

This deception has been practiced so largely that a great industry has been built up by reason of it at the expense and on the reputation of another industry, so that it is now urgent that it would be a great injustice to make them deal honestly in conducting such business.

I can hardly see the logic of the argument.

The minority of the Committee on Agriculture conclude their report by saying:

They beg to assure the House and the country in the most solemn manner possible that it has been their earnest intention, and is now their determination, to do everything possible to be done to enforce the sale of oleomargarine as oleomargarine and to prevent its sale as butter, to prevent fraud and not to stamp out an industry has been our purpose.

It is not our purpose to criticize or question the motives of the minority of the committee, but it does seem that the only practicable way to accomplish "their earnest intention * * * and their determination" is to strike at the root of the evil to be remedied by removing as far as possible the cause and motive for fraud and deception, or make it as hard or inconvenient as possible to commit such fraud and deception. That can only be done by prohibiting entirely the artificial coloring of oleomargarine in resemblance of butter, or place a tax on the colored article in such an amount as will bring the cost up to something near the price of pure butter and admit the uncolored product, where deception can not be practiced, to the markets with as little restriction as possible.

If it be the purpose of those on the floor of this House who support the recommendation of the minority report, "to do everything possible to be done to enforce the sale of oleomargarine as oleomargarine, to prevent its sale as butter, to prevent fraud," why not remove the inducements and opportunities for the commission of fraud and deception? Let us take away the inducement for the commission of such fraud by placing a tax on the product colored in resemblance of butter so as to make its cost to the producer somewhere near the cost of producing pure butter,

or take away the opportunity for committing such frauds by requiring that it shall not be artificially colored to resemble butter, so that those who may desire to purchase may know, from inspection, what they are buying.

This is not imposing any unreasonable restriction on the oleomargarine manufacturer or dealer. It only requires him to be honest; and the fact that if oleomargarine manufacturers are required to be honest it might force them out of business—as seems to be indicated by the minority report of the Committee on Agriculture—this can hardly be recognized as a sufficient reason why the pending bill should not be passed. It is wholesome, and sometimes for the good of the country, that legislation should proceed on such lines as to inculcate lessons of honesty, integrity, and fair dealing.

The cry against the pending bill is the echo of the oleomargarine manufacturers and dealers pleading for immunity in the practice of fraud and deception. They have disregarded the State laws on this subject. They have succeeded in evading the provisions of the existing Federal law almost with impunity, and are now opposing the pending measure because they see in it provisions that may prove stronger in securing its observance.

Section 2 of the substitute for the bill now before the House, as reported by the minority of the committee, provides—

That all oleomargarine shall be put up by the manufacturer for sale in packages of 1 and 2 pounds, respectively, and in no other or larger or smaller package; and upon every print, brick, roll, or lump of oleomargarine, before being so put up for sale or removal from the factory, there shall be impressed by the manufacturer the word "oleomargarine" in sunken letters, the size of which shall be prescribed by regulations made by the Commissioner of Internal Revenue and approved by the Secretary of the Treasury; that every such print, brick, roll, or lump of oleomargarine shall first be wrapped with paper wrapper with the word "oleomargarine" printed thereon in distinct letters, and said wrapper shall also bear the name of the manufacturer, and shall then be put by the manufacturer thereof in such wooden or paper packages or in such wrappers and marked, stamped, and branded with the word "oleomargarine" printed thereon in distinct letters, and in such manner as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall prescribe, and the internal-revenue stamp shall be affixed so as to surround the outer wrapper of each 1 and 2 pound package: *Provided*, That any number of such original stamped packages may be put up by the manufacturer in crates or boxes, on the outside of which shall be marked the word "oleomargarine," with such other marks and brands as the Commissioner of Internal Revenue shall, by regulations approved by the Secretary of the Treasury, prescribe.

Retail dealers in oleomargarine shall sell only the original package to which the tax-paid stamp is affixed.

Whatever may be the purpose of the minority of the committee in preparing and reporting this substitute, it is quite evident from the language used, that it is an attempt, and would if adopted, result in enabling oleomargarine manufacturers and dealers to evade the principle of law as announced in the case of *Plumley vs. Massachusetts*.

In that case it is held that the interstate-commerce clause of the Constitution is not such a limitation on the power of the States as to prevent the legislatures thereof from so legislating as absolutely to prohibit the sale of oleomargarine when colored in resemblance of butter, with the purpose of selling it as such. The substitute is an attempt to define and fix by law an "original package" of commerce on which the tax shall be paid and in which form it may be sold by the "retail dealers" under the protection of the interstate-commerce clause of the Constitution, and removed from the control of State law.

It is a carefully devised plan to place the sale of oleomargarine, when transported from one State into another, under the protection of the interstate-commerce clause of the Constitution and to remove it from the operation of State control.

Whether, under the principles announced in the case of *Plumley vs. Massachusetts*, the substitute would have that effect, is not clear.

These "original package" cases, commencing with *Leisey vs. Hardin* (135 U. S., 100), have all been decided by a divided court; and what the action of that court would be in defining the power of the States in regulating or prohibiting the sale of oleomargarine, colored in resemblance of butter, when put up and offered for sale in packages clearly authorized and defined by Congress as "original packages" and prepared for sale and commerce in that form, under an act of Congress, is yet uncertain.

With the diversity of opinion among the members of that court on these important questions, it yet remains to be determined how far the power of the States will be held to extend in controlling or prohibiting the sale of colored oleomargarine when put up in packages, as provided for in the minority substitute for the bill, if it were to become a law.

It would certainly present a question that was not determined in the case of *Plumley vs. Massachusetts*.

We object to the substitute because it seeks to give to the oleomargarine dealers even greater opportunity to evade and override the laws of the several States on this subject than they have under existing laws.

Under the substitute for the bill the retail dealers would have the same motives for violating and evading the law as they have under the law as it now exists. The packages proposed by the

substitute are to be put up by the manufacturers and by them marked and stamped, and they are required to pay the tax imposed, and when that is done, like the law as it now stands, the interests of the Government are secured, and there will be no further motive under such law for the officers of the Government whose duty it is to see that the provisions of the law are enforced to follow up these packages into the hands of the consumer than there is under the present law. The present law requires the manufacturer to put up the oleomargarine offered for sale by him in packages of not less than 10 pounds, and it requires the retail dealer to sell only from these packages and to put up the article sold by him in paper or wooden packages properly stamped and marked as required by the Commissioner of Internal Revenue; but, as has been clearly demonstrated, this part of the law has been violated almost with impunity.

Experience under the old law has taught us that the only way to secure an observance of the law and to require dealers in oleomargarine to sell it as such, and not as butter, is to remove the opportunities for counterfeiting the article or to place such a tax upon it as to take away the motive for so doing. This is the purpose of the pending bill, and nothing less or short of the provisions of that bill will accomplish the desired end.

We therefore urge, with absolute confidence in the justice of our position, that the substitute presented by the minority of the committee should be defeated and that the bill as reported by the committee should be adopted.

The Grout Bill.

SPEECH

OF

HON. HENRY C. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1900.

On the bill (H. R. 3717) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine.

Mr. HENRY C. SMITH said:

Mr. SPEAKER: I most earnestly support the Grout bill. The bill is just to all interests. The object of the bill is to discourage the production and sale only of such oleomargarine as is colored in semblance of butter, in conflict with the laws of thirty-two States in the Union and in opposition to the sentiment of three-fourths of the people of the United States. Public opinion has declared in favor of honesty and fair dealing and against fraudulent practices.

This is sought to be accomplished by requiring the payment of 10 cents per pound of internal revenue upon oleomargarine colored to resemble butter, and by reducing such revenue on that not so colored from the present rate of 2 cents per pound to one-quarter of a cent per pound. This will aid and assist the manufacturers of the product who care to sell their article on its merits, honestly and fairly, under its own natural color. If their purpose be just, they should be satisfied with this law.

Every article of food that goes out upon the sea of commerce is fairly dealt with when it is permitted to sail, unchallenged, under its own flag—under its own color.

The principles of this law are older than the legislation of the States, older than the Constitution, older than the Congress, older than the Magna Charta. They are as old as justice, as old as our civilization.

This principle was handed down to us on tables of stone, handed down from the mountain top by the first great lawgiver: "Thou shalt not bear false witness against thy neighbor."

Again, "If thy son shall ask for a fish, will ye give him a serpent? if he shall ask for bread, will ye give him a stone?" If he ask for butter, will ye give him oleomargarine? if he ask for the cow, will ye give him the chemist?

But we are told that farmers color butter yellow. They color butter to look like real, natural butter. They give it the color the cow gives it, the color stained by the pigments of nature, not the colors of the compounding apothecary. If they colored it to look like oleomargarine, this would be a fraud upon the manufacturers of that product, in which case they ought to be restrained.

The farmer is honest and wants not to sail under the black flag of the pirate, and he asks that these pirates of trade shall not plunder under the protection of the Stars and the Stripes in defiance of the statutes of the States.

The farmer is honest and asks that others shall compete with him and only on the same plane. That is all; nothing more; and he will be satisfied with nothing less. He lives near the bosom of

nature and breathes her honesty. He lives with the trees that change not; with the rocks and hills, ever true. Nature is honest. Nature is true. The colors in the grasses never run. The ribbons in the grasses never fade. Babbling brooks are always current. The gold on the ripened grain is never counterfeit. The diamond in the dewdrop is ever genuine. The leaves and the trees give him the music of purity. He lives in nature's cathedral, 'mid the songs of birds and the fragrance of flowers. And he is good, and true, and just. From creation's dawn to now the honest farmer has ever been the pride and glory of the world. He is to-day the best hope of this Republic. He is in possession of the world's largest and best business, and he ought to be protected.

The moral side of this question is the most important one. The history of civilization instructs us that when the minds of the people are entirely given over to gold and to silver, to trading and getting gain, that then the nation of that people is in peril. Honest purpose will win in every race of life. The trouble is this: Oleomargarine must be kept on the ice; kept in the refrigerator. When it melts it separates, is unseemly to the sight. The whole nature rebels against it; it is sickening to behold.

Butter is kept in the same ice box. The temptation is too strong. Weak nature can not resist the temptation. Here lie, side by side, butter and oleomargarine. The price is 28 cents per pound. One costs the merchant 5 cents, the other 24. The customer has no means of distinguishing between the two; he stands between the merchant's honesty and his cupidity. Honesty will many times go down. After the first time the sin grows easier, and to-day we find some merchants, hotels, and restaurant keepers fighting with the manufacturers of this fraud for the privilege to swindle. Be it said to the praise of our civilization, they are few.

We are told that science justifies the use of oleomargarine. We need only to consult our experience. Doctors' opinions are often for sale; knocked down to the highest bidder; on the universal bargain counter, for barter and sale in the department store of our modern life.

Only yesterday I was reading the opinion of a learned scientist that physical exercise was harmful to health—a crumb of comfort to the indolent. Within a year another learned scientist stated and proved that a certain quantity (and quite a large amount, too) of alcoholic liquor was absolutely necessary to good health—a very comfortable theory to all good fellows who get thirsty at 5 a. m. Every whisky vender sends out the opinion with his prospectus. Many nice and agreeable things are made comfortable for us these days.

If their compound is really pure, good, and all right, why the resisted and stubborn fight in this House last spring against spreading upon the record here and laying before the public an analysis of what we are made to eat when we want butter? "By their fruits ye shall know them."

There should be made no objection to this compound meeting competition on the markets upon its merit. It has always been the policy of the civilized world that food stuffs should be pure and wholesome. In the law there is an implied warranty that all articles of food, without word or hint of warranty, are warranted to be pure and wholesome.

I want to go further. Every article of commerce, whether of food product or not, should be sold only under its own proper name and description. To sell food or anything else otherwise is a fraud upon the public and should not be for one moment tolerated, even when no question of health is involved. When money is exchanged for anything, the purchaser has the undoubted right to get what he wants, what he asks for, and what he pays for. The purchaser has the right to know what food he buys—the contents thereof.

If their article will sell on the merits thereof, if the people really want it, care for it, strive for it, ask for it, buy it, understanding what they are buying, then why should the vendors of the product go to the expense of advertising it as butter, "pure grass butter, pure dairy butter, pure Elgin creamery, Rock River creamery," and such like frauds and deceptions?

In my district it is Lotus butter, Monroe creamery, and other well-known brands of good, pure butter. Such conduct is a confession that the people do not want oleomargarine; that they will not buy it as such—that they must be deceived and tricked into using it. The eye may be deceived; the taste, too; but still it is deception and fraud and wrong.

The evidence is that these manufacturers of oleomargarine encourage their customers to advertise their product as pure dairy cow butter, grass dairy butter, mother's rolls, lowering the high standard of womanhood to get gain. A libel upon the mothers! They also advise their clients to buy and sell their wares, and they will fight the State laws, will protect them in lawbreaking, help them to set the laws of the States at defiance. Let us stretch forth the strong Federal arm of the law to the assistance of the States and curb the greed of these bold defiers of authority.

This law does not go far enough, but it will help some. It is probably as strong as could now be passed. It will at least curb the business, cut down the profits, and lessen the power to advertise, deceive, and swindle. Let us do our duty manfully. Let us vote for purity and honesty and against fraud and wrong.

The first section of the bill in substance provides that all articles known as oleomargarine, butterine, imitation butter, or imitation cheese, or any substance in the semblance of butter or cheese, not the usual product of the dairy and not made exclusively of pure and unadulterated milk or cream, which shall be transported into any State or Territory and remain there for use, sale, or storage, shall upon arrival within such State or Territory be subject to the laws of such State or Territory.

If enacted this law would reach, affect, and control real butter which is colored yellow which is not made exclusively and entirely of pure and unadulterated cream or milk and which is not the usual product of the dairy.

This part of the law is general in its application and reaches, affects, and controls the farmer and dairyman who colors his butter or cheese yellow, or who attempts to put upon the market any butter or cheese not exclusively made of pure and unadulterated milk or cream.

The second clause of the section assists the laws of the several States—simply lends the Federal arm of the law to assist the enactments of the several States.

I can not better close my remarks than with a quotation from Judge Harlan, of the Supreme Court of the United States, in *Plumley vs. Massachusetts*.

These are his strong and ringing words:

And yet it is supposed the owners of a compound which has been put in a condition to cheat the public into believing it is a particular article of food in daily use and eagerly sought for by people in every condition of life are protected by the Constitution in making a sale of it against the will of the States in which it is offered for sale because of the circumstance that it is in an original package and has become a subject of ordinary traffic. We are unwilling to accept this view. We are of the opinion that it is within the power of a State to exclude from its markets any compound manufactured in another State which has been artificially colored or adulterated so as to cause it to look like an article of food in general use, and the sale of which may, by reason of such coloration or adulteration, cheat the general public into purchasing that which they may not intend to buy.

The Constitution of the United States does not secure to anyone the privilege of defrauding the public. The deception against which the statute of Massachusetts is aimed is an offense against society; the States are as competent to protect their people against such offenses or wrongs as they are to protect them against crimes or wrongs of more serious character. And this protection may be given without violating any right secured by the national Constitution, and without infringing the authority of the General Government. A State enactment forbidding the sale of deceitful imitations of articles of food in general use among the people does not abridge any privilege secured to citizens of the United States, nor in any just sense interfere with the freedom of commerce among the several States.

Army Bill.

SPEECH

OF

HON. HENRY S. BOUTELL,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 6, 1900.

The House being in the Committee of the Whole on the state of the Union, and having under consideration the bill (S. 4300) to increase the efficiency of the military establishment of the United States, and the gentleman from Maine (Mr. LITTLEFIELD) having offered the following amendment:

Amend by striking out section 40 of the bill and inserting in lieu thereof the following section:

"Sec. 40. The sale of or dealing in beer, wine, or other intoxicating liquors by any person in any post exchange, or canteen, or army transport, or upon any premises used for military purposes by the United States, is hereby prohibited. The Secretary of War is hereby directed to carry the provisions of this section into full force and effect."

Mr. BOUTELL of Illinois said:

Mr. CHAIRMAN: From my own observation, from the testimony of a great majority of the officers of the Army, and from such evidence as I have gathered from interviews with men in the ranks, I am led to the conviction that this amendment, if carried into effect, would not produce the results that the advocates of the measure expect and desire. The abolition of the Army canteen will not remove from those who are incapable of self-restraint either the opportunity or the temptation to drink to excess.

As we all know, every camp, every Army post in this country and in foreign lands is surrounded by drinking resorts, some of them of the lowest character, where impure liquors are sold at exorbitant prices and in which those who frequent them are surrounded by evils infinitely worse than the temptation to intemperance. On the other hand, the canteen offers no inducement and no encouragement to vice. Provisions, light wines, and beers are sold at the post exchange at reasonable rates and under strict supervision. No spirits or other strong liquors are allowed to be sold.

Now, we have heard a good deal about the opinions of Army officers respecting the canteen, and we have received advice and suggestions on this subject from many who have never even visited an Army post or seen anything of Army life. In my opinion, we ought to get at the views and the wishes of the private soldiers in this matter.

The post exchange is the soldiers' club. Here he finds harmless recreation, and in the simple refreshments that he is able to buy he is permitted to vary the monotony of army life.

A soldier's life is at best a rough one, and Army rations are almost unendurably monotonous.

Let us not by the abolition of the canteen make the lives of our soldiers still more barren and unattractive than they are at present.

But there is a still more serious objection to this amendment. It is an unwarranted attack upon the personal liberty of men who are better able to take care of themselves than any other class of people. Self-control, good order, and discipline are the foundation stones of military service, and very few soldiers are found guilty of abusing the privileges afforded by the post exchange.

The soldier who enjoys his pipe and his glass of beer at the post exchange takes his recreation and amusement under the restraining influences of an orderly environment and in the company of familiar associates whom he respects and who respect him. Abolish the canteen and you will drive many soldiers into evil and disorderly surroundings and among strange and contaminating associates. If this amendment should become a law, I am confident that the evils resulting from its passage would be so great that within a year we would be besieged from all sides to repeal it.

For these reasons, and especially because it is an uncalled-for infringement upon the personal rights and liberties of the great body of well-disciplined, self-respecting, and honorable men who compose the rank and file of our Army, this amendment fails to commend itself to my judgment and I shall vote against it.

Army Bill.

SPEECH

OF

HON. B. T. CLAYTON,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 6, 1900.

On the bill (S. 4300) to increase the efficiency of the military establishment of the United States.

Mr. CLAYTON of New York said:

Mr. SPEAKER: In the consideration of this bill it is generally assumed that provision must be made for retaining troops in the Philippine Islands for some years to come. The exact length of time is a question upon which we differ, and which no man can answer with certainty. The election to office for four years more of the present Administration must be admitted as an endorsement of the present policy. Before election it was well that there existed a wide difference of opinion as to the policy that should be pursued. Men who opposed from sincere conviction the permanent retention of these islands contrary to our past experience and past history were as patriotic in their motives as those who advocated keeping them because of a belief that by such a course they would add to the greatness and glory of this Republic; but now that the election is over there arises only the question of ways and means of carrying out in the most economical and effective way what has been decided upon by the people.

The verdict of the people to continue the present policy makes it difficult to further question the obligations of Congress to provide the large force in these islands which two years' experience shows to be necessary. Whatever may be the ultimate disposition of them, whatever may be the form of the permanent government to be established there, to-day there is no question as to our obligation to complete what has been undertaken by the President and sanctioned by the people and to establish peace and order and stable government throughout the archipelago. Judging from careful consideration of the conditions as set forth in the daily press and in public documents, as well as in many private letters which I have received from a large number of officers and friends now in the islands, and whom I know to be conservative and truthful, I am convinced that a large body of troops will be needed there for a great many years.

Without going into detail, the facts are that our authority has been extended over some 8,000,000 of semisavage people, talking various languages, divided into different tribes, having various forms of government and different customs and methods of living. There is a widespread hatred and suspicion of everything

American. Harmonious union into one orderly government is a new idea to them and will take time to accomplish. Our strength alone has been demonstrated to these people. It remains now to demonstrate our justice, our fairness, and the advantage to them of good government, modern methods, and the use throughout the islands of the American language. If we are to accomplish these objects—and I take it that the American people so decided by the last election—I am fully convinced that a large force of troops must be maintained in the islands for some years to come.

Admitting this necessity, of which there is no doubt in my mind, it is now, in view of the limitations put upon the length of service of the present army of occupation when it was organized, our evident duty to provide another force to take its place. In accomplishing this it seems to me that business principles and patriotic endeavor should supersede political considerations. The army to be organized should be the one most effective as a fighting machine, most reliable in extending and maintaining law and order and civil government, and should be most loyal and subordinate to the laws and wishes of the Government and people of the United States, and should be organized with a view to the greatest economy in men and money. The officers to be intrusted with the execution of this mission should have permanent positions and their status and promotion fixed by law, and thus be relieved as far as possible from the temptation to use their positions for private gain or advancement.

This country is justly proud of her volunteer soldiers. The safety of the Government and the strength of the nation must ever rest upon the patriotism, intelligence, and fighting qualities of the great body of young men whose vocations are those of peace and industry, but who ever stand ready to answer the call of their country if need be; but the business before us now is to furnish a force that must be sent to the other side of the world for a service the end of which no man can foresee. It is not sufficient that we theorize and regret the necessity. It is time now that we meet the question practically and furnish the force which our experience tells us will give the best results.

Some of my colleagues are opposed to the measure because it makes a Regular Army take the place of a Volunteer Army. I do not see the validity of this argument under the present circumstances, because the force to be organized is to be used to carry out a work that is sure to last for a great many years, and the conditions are not such as would justify the Government in asking a man of family or a man established in civil life to sacrifice his time and his prospects of advancement in his ordinary vocation to enter such a service. The service required is not such as properly belongs to volunteers. The service required of our Army in that country is in many respects similar to the service required of our Army in former years upon our Western frontier. I do not mean to say that the Filipinos are like our Indians, but the service required of our troops will be very much like that required of our Army in our own Western country so many years; and it is not good policy to be repeatedly sending an army under a temporary organization to be performing continuous work. It would be neither fair to the officers and men nor to the Government.

Any man who is fit to be intrusted with the responsibility that must devolve upon our officers out there should be relieved from the sacrifices of leaving his home and his business to undertake such arduous duty in a tropical country with a commission that lasts only two years. There is no necessity for such sacrifices, because every reasonable man must know that the work will not be completed at the end of two years; and if a two-year army were organized, another army must be organized at the end of that time to take its place. Only those men should be enlisted who answer to the qualifications required for the regular service. Men who have families or relations dependent upon them should not be enlisted. Only such men as can and would look upon their company as their home should be accepted for this service. Justice to the individual and efficiency in the Government service require these restrictions. Officers who hold commissions which will last for life or during good behavior will be relieved from many temptations that would beset men holding commissions which they know will terminate at the end of two years. And the power and immense pecuniary and property responsibility to be intrusted to this army makes it important that we should safeguard the service in every way possible.

The bill now under consideration is intended to meet the present emergency by establishing an army of about 100,000 men. It is generally admitted that a force less than this would not be sufficient for the present needs. Section 31 of the bill provides the manner in which this force may be reduced to about 58,000 men as soon as the exigencies of the service will admit. It may therefore be considered as a bill authorizing a force of 100,000 men with the declared policy of reduction to 58,000 men when the future necessities of the service will admit; and in view of the greater efficiency and economy, its adoption seems to me to be a wiser course than that of reorganizing and fixing our Regular Army at 60,000 and providing an additional temporary force to meet the

present necessity. The bill has been carefully drawn and as a reorganization measure will work a number of important and advantageous changes.

The increase in the cavalry in greater proportion than in the infantry is one demanded by the impossibility of quickly organizing a temporary efficient cavalry force. The cavalry have demonstrated their ability not only by campaigning in the United States, but by campaigning in the insular possessions now under the United States. Their rapidity of movement reduces the number of troops which would be required in case reliance were placed entirely upon infantry.

The reorganization of the artillery places that corps on a basis for securing efficiency with the greatest economy in the number of troops by giving a flexible organization which will prevent useless troops being kept at any point which in a regimental organization would have to be done unless the regimental organization is temporarily formed. For instance, it allows the assignment to Fort Hamilton or Fort Wadsworth of just the number of batteries required by the armament of the post without regard to the regimental formation, which would require twelve batteries to be under command of one colonel.

It places the submarine mines and torpedo defenses and fixable and movable elements on land and seacoast fortifications by law under the charge of the very troops organized for the purpose of seacoast defenses. It provides that the increase in the artillery shall be gradual, thus avoiding the appointment of officers and men to any grade without being competent for the special duties required by modern scientific appliances in seacoast service. It offers some pecuniary incentive to enlisted men to qualify themselves as first or second class gunners. It is a well-known principle that such incentive is desirable in order to secure increased efficiency. In providing for the reduction and again for the increase in the artillery, infantry, and cavalry, as the exigencies may require, the military principle is recognized that an existing unit may be increased by one-third of its original force without destroying its efficiency. When the Spanish war began the seacoast defenses were increased from about 60 enlisted men to 200, resulting in the destruction of efficiency which has taken months to overcome. Now the efficient military unit can not be indefinitely enlarged, but the existing unit may be increased by adding one-half the number of its reduced size without material sacrifice of efficiency.

The provisions of this bill, which permit the detail of line officers to the lower grades of the staff departments, must result in bringing the line and staff of the Army in closer sympathy and bringing to the aid of the staff departments men whose military training and natural ability cause them to be well fitted to intelligently perform the staff duties, and at the same time allows their immediate return to the line if they show themselves unable to cope with their new duties. If this system of temporary details proves to be as beneficial as its advocates believe it will, we will then have a basis for extension of that system throughout the staff departments based on actual experience. This system of temporary detail for the junior grades has already been in satisfactory operation in one staff department—that of the Judge-Advocate-General. The chief of that department is on record as desiring its continuance, due to the good results which have obtained in his corps.

There have been added to the bill as amendments on the floor of this House certain provisions which I can not approve, but on the whole the bill as reported by the committee has so many good features that I intend to give it my vote on its merits.

Army Bill.

SPEECH

OF

HON. J. D. BOWERSOCK.

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 6, 1900.

On the bill (S. 4300) to increase the efficiency of the military establishment of the United States.

Mr. BOWERSOCK said:

Mr. SPEAKER: I am interested in this anti-canteen amendment because I believe it to be right. I am not one of those who look to law to make men good, or who believes that man must walk in the path I mark out for him in order to be virtuous and happy.

I will make no effort to change human nature and suddenly reform mankind by statutes. I would be conservative, always endeavoring to move toward a higher plane. We can control and

restrain within certain limits; we can avoid a full partnership with evil; we can, and it is better that we should, heed the well-settled desire of the people. The earnest, thoughtful, calm convictions of the people are right, and sooner or later this body must meet these convictions and at least endeavor to give force and effect to them.

I am not here at this time to enter upon a tirade against intemperance or a protest against the manufacture and use of beer and liquor. Good men and true men walk by different paths toward the same goal. I will not now offer lengthy argument upon the evils of the canteen, what it may lead to, or the demoralization it may cause. Civilization has not yet begun the manufacture of pruning knives from swords. Our Government at times needs soldiers and calls for men who may serve temporarily as volunteers and may later enter the regular service. The call is generally responded to with an alacrity and an enthusiasm that brings glory to our land and discomfiture to our enemies. Who respond? The noblest, the strongest, the brightest youth of the nation. We send our boys with all the pride and hope and patriotism and confidence that seems to be the birthright of the American. When these young men go into the Army we know that some may not—will not—return. Climate and exposure will make physical wrecks of too many, and the bullet will too often maim, cripple, disfigure, and kill.

These are accepted as the fortunes of war. But the mothers of these boys ask and plead that the Government place not opportunity and temptation to intemperance, to drunkenness, before their sons in addition to the other evils and dangers that encompass them. They ask—and they have a right to ask—that the Government be not a partner in a traffic of which they disapprove and which they believe is a menace—yea, more, an outrage. And I give you warning: A goodly and respectable number of fathers are of the same opinion and belief.

Congress agreed with these good people not long since, and passed an anti-canteen law. This law was unceremoniously pushed aside. Whether unjustly or not, the people believe unjustly, and think that a subterfuge took the place of reason, and they demand a rehearing and a trial. Is a request made by a few thousand Government employees for a regular vacation, or for more pay, or shorter hours—this body listens and acts. Do half a million old soldiers ask for relief at your hands—they are not turned away empty. They should not be. It is safe to say that a majority of our people want the Government to go out of the canteen business. Provide the reading room, the news room, the billiard room, the place for amusement and recreation, but don't sell the soldier liquor and give as an excuse or palliation that he will get poorer stuff on the outside.

Do you think that this majority of our people will not, sooner or later, secure a reasonable trial of what they propose and ask for? Is there a father that would not prefer—more, insist—that if his son is to have a taste for strong drink and is to be subjected to its influences that it be not chargeable to the Government the young soldier is endeavoring to protect and serve?

I know that a large number of Army officers have put themselves on record as favoring the canteen. Some are on record on both sides. I desire to call attention to the opinions and observations of a few worthy officers of our Army as to this question:

HEADQUARTERS FIFTH ARMY CORPS,
Santiago de Cuba, July 30, 1898.

*** I have always been strongly opposed to the canteen system or the sale of intoxicating drinks of any kind on military reservations, and have opposed it until absolutely overruled and required to establish a canteen at my post. ***

WILLIAM R. SHAFTER,
Major-General, U. S. Volunteers, Commanding.

HEADQUARTERS U. S. FORCES,
Camp Wikoff, Montauk Point, Long Island, September 20, 1898.

*** I am a thorough believer in temperance in all things, and am utterly opposed to soldiers being sold intoxicating liquors, and I believe that every effort should be exercised to remove the temptation of such dissipation from them.

You must recollect that all men are human, and if we can not make everything perfect we must make it as near perfect as possible.

Respectfully,

J. WHEELER,
Major-General, United States Volunteers.

HEADQUARTERS SOUTHWESTERN DISTRICT,
Porto Rico, Ponce, September 15, 1898.

*** I am opposed to sales of liquors of any kind to enlisted men, and the use of the same in hot climates is injurious. A canteen puts liquor (beer and light wines) in front of a man, and induces him to drink, which, with this temptation removed, he would never do.

GUY V. HENRY,
Brigadier-General, United States Volunteers.

HOSPITAL HEADQUARTERS, SEVENTH REGULAR INFANTRY,
Camp Wikoff, Long Island, September 23.

*** What the houses of prostitution are to the youth of the city, so are the canteens of our Army to the soldier.

W. GENELLA,
Regimental Surgeon, Seventh Regular United States Infantry.

HEADQUARTERS FOURTEENTH REGIMENT,
PENNSYLVANIA VOLUNTEER INFANTRY,
Camp Meade, Middletown, Pa., September 23, 1898.

*** There are many ways that a soldier can ruin himself, but I think the canteen is the most damnable of all; I have never allowed one in my regiment, and I never will.

W. J. GLENN,
Colonel, Commanding.

KANSAS CITY, Mo., September 23.

*** I have had good opportunity to observe the effects of beer on the health of the men in the Second Division. I can not say that a limited quantity of beer would have been injurious, but the quantity can not be controlled if canteens are permitted to be open. Many of the regiments found it necessary to close their canteens.

MILO B. WARD,
Major and Surgeon, United States Volunteers.

*** It is particularly important when a large proportion of the troops are recruits that nothing be officially done to create in them any habit of using intoxicants; and this, it is believed, would be the result if, as has been deemed desirable in some portions of the United States, canteens be established in the posts where light wines and beer are regularly furnished. In such circumstances the temptations of sociability and companionship are practically irresistible, and the habit of drinking is readily acquired. (Pages 236, 237, Part I, Report of Major-General Commanding the Army, 1899.)

But opinions of others weigh not so much with me as the broad principle that the Government of the United States should not engage in the liquor business and that the mothers of our soldier boys have a right to a respectful hearing, to an honest and impartial trial of that for which they plead.

Army Bill.

SPEECH

OF

HON. THOMAS M. JETT,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 6, 1900.

On the bill (S. 4300) to increase the efficiency of the military establishment of the United States.

Mr. JETT said:

Mr. CHAIRMAN: The bill under consideration has in contemplation two objects, one of which is to reorganize the Army and the other to provide for an Army. During the Fifty-fifth Congress I had occasion to express fully my position upon the question of a large standing army, and were it not for the fact that we have just come out of a great political contest in which the provisions of this bill were in a measure an issue, I would not think of imposing myself upon this body.

It seems that our Republican friends have taken the result of the recent election as an endorsement of the policy of providing for and maintaining a great standing army. It has never heretofore been the policy of this Government to follow in the footsteps of European nations, but it seems that since the present Administration came into power there has been an absolute change of policy inaugurated, and the tendency has been and seems to be now to adopt the policy of foreign nations in many particular which are, in my judgment, opposed to the institutions of a republican form of government. The bill under consideration provides for a standing army of 58,000, and at the same time gives the power and authority to the President of the United States to increase the Army to 100,000, and this Army is to be kept and maintained in time of peace as well as in time of war. It is understood by all that the Army at the present time is to be increased and that this legislation is demanded that the Army may be raised for the purpose of assisting the Administration in carrying out its Philippine policy.

In discussing a bill of this character there are two principal things to be looked to: First, is it well for a republic to keep and maintain a large standing army, and second, the great expense to which the people will be put in keeping and maintaining such an army; that is, the great burdens that will necessarily be thrust upon the people in supporting an army of 100,000 in time of peace as well as in time of war. I for one have always maintained that a great standing army was contrary to the institutions of our form of government; that a great standing army was a menace to a free people, and while I would not say anything disparagingly of the courage of the regular soldier, yet the truth and the fact is that the great battles of this country have been fought and won by the volunteer or citizen soldiery. And at all times when we are engaged in a war in the future it will be, as it has been in the past, that the volunteer soldiery will be called upon to take a hand in the struggles for supremacy notwithstanding the size of our regular Army. One great objection to the present bill is that it is authorizing a regular army of 100,000, whether in peace or in war, and the taxpayers of this country will be com-

pelled to be taxed to support the great army provided for in and by this bill whether in peace or in war.

Mr. Chairman, it will be remembered that we appropriated and expended upon the Army for the last fiscal year \$127,000,000; that there has been appropriated for the use of the Army for and during the present fiscal year \$115,000,000, and this is \$13,000,000 short of the estimates furnished by the Secretary of War, which said sum of \$13,000,000 will necessarily have to be appropriated before the end of the present fiscal year, making in all \$128,000,000 that we will have expended upon the Army this year. This is an item that should be taken into consideration by the members upon the other side of this House. This great expense has been brought about in carrying out the Philippine policy of the present Federal Administration. Mr. McKinley and his party associates and party advisers are responsible for this great burden that has been thrust upon the people of this country. One \$100,000,000 of this enormous sum expended, as heretofore stated, has been occasioned by reason of the Philippine policy entered upon by the McKinley Administration.

Mr. Chairman, it is well known by all members of this House that we appropriated for the use of the Army before the Spanish-American war annually \$23,000,000 to \$24,000,000, and now, two years after that war is over, we are appropriating more than \$100,000,000 annually in addition to that sum. This is the business proposition the Republican party has inaugurated; this is the investment that the people have had made for them, and one that the gentlemen on the other side of this Chamber think has met with the approval of the people. In this, in my humble judgment, they deceive themselves; upon this particular question I believe, when it is considered in the light of the true facts, and it will finally be, the people will be opposed, and will so record themselves, to the expenditure of so large sums of money in order to carry out the policy entered upon by our Republican friends just to satisfy the whims of the favored few.

Mr. Chairman, this Philippine policy, it is said by the Republican party, must be maintained, and we must keep a large army to maintain such policy for the reason, as they say, to give us a large amount of trade. In this connection I desire to read a statement sent out some time ago from the office of the honorable Secretary of War, Mr. Root:

WASHINGTON, July 8.

The report of the division of the customs and insular affairs, War Department, made public to-day, has an interesting statement showing the total imports at the port of Manila, P. I., for the calendar year 1899.

Merchandise to the value of \$17,450,412 was imported during the year, which, with \$100,935 in gold and \$1,141,392 in silver coin, brings the total importations for 1899 to \$18,701,499. Of this amount \$1,887,000 worth entered free of duty. All imports of merchandise were brought in foreign vessels and entered for immediate consumption. The total amount of import duty collected was \$3,304,000.

The imports by countries show:

From China, \$6,790,769; England, \$3,102,728; Spain, \$2,624,879; United States, \$1,350,364; British East Indies, \$1,219,502.

Can anyone study this report and reach the conclusion that this trade is proving beneficial to us as a people and as a nation? Consider the great expenditures we are compelled to go to and compare them with the volume of business done with the Filipinos as given here and elsewhere, and it will be found that this is a costly investment the Republican party has made for the people. This is the principal part of the entire Philippine group.

And now, Mr. Chairman, I desire to say that I oppose legislation providing for a strong standing army on principle. I fear it will not prove to be for the best interests of our people. Its tendency has been at all times to intimidate the citizen in the peaceful pursuits of his civil rights, and at the end in many cases has undermined and seriously impaired self-government, if not destroyed it. I am, therefore, Mr. Chairman, obliged, believing as I do, to vote against the pending bill. [Continued applause on Democratic side.]

The Army Bill.

SPEECH

OF

HON. WALTER P. BROWNLOW,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 6, 1900.

The House being in the Committee of the Whole on the state of the Union, and having under consideration the bill (S. 4300) to increase the efficiency of the military establishment of the United States—

Mr. BROWNLOW said:

Mr. CHAIRMAN: The United States is an anomaly in the annals of the world. It is the first venture of human liberty to build and fortify a secure and permanent home. It is unlike any other nation in the spirit, temper, ambition, and aims of its people. It is unlike any other nation in its institutions and operations of

government, which are the outgrowth of hope, courage, intelligence, and an unyielding determination to avoid what is pernicious and degrading and to achieve what is honest, pure, and beneficent. In the complexities of its structure it has no taint of feudalism and no

FEATURES OF MONARCHY.

It has no thirst for conquest and no greed for colonies. The conduct of its internal affairs and the policy of its intercourse with other nations are sanctioned by experience and the special favors of the God of Nations. Its "foundation is liberty; its superstructure is peace."

The bare idea of brute force, the domination of the stronger over the weaker, the exacting and overbearing rule of the baron over the cramped and serving poor, is abhorrent to the severe and keen sense of right and justice which has always distinguished the American people. What they are and what they have they have attained through honest and industrious efforts. They have, only when compelled, resorted to the harsher and sterner measures of armed conflict to maintain their honor and integrity and safeguard their rights and interests and to repel the aggressions of the haughty and the brutal upon the helpless and the suffering. They have established and maintained

DOCTRINES, CUSTOMS, AND SYSTEMS

which infuse and foster a proper spirit of lofty independence and expand liberty into the freest expression of thought and action consistent with the rights of others and the general welfare. The consequence is that we have an untrammelled press, engaging the brightest talent of the land and diffusing intelligence among the masses; we have prophets of every school reading the horoscope of the future to suit themselves and no censorship over their predictions, and priests and apostles and propagandists of every creed and organization who ply their vocation without let or hindrance. Ours is a free, progressive, intelligent, and investigating people, rising above partisan passion and narrow bigotry, probing to the bottom the problems of political philosophy and the subtleties of diplomatic craft, and can never be enslaved, degraded, or

OVERAWED BY THE PRIDE OF POWER,

come in what shape it may.

The people of the United States not only have the learning of the schools and the training of newspaper educators, but the more useful discipline of discrimination and experience. A theory that will not stand the test of practice they throw overboard. They have that kind of an education that reveals the value of their opportunities and the sacredness of their privileges and duties. They do not stand aghast at the recitals of peril and computations of expenditure when their own sagacity tells them that the profit will far exceed the loss. When the question of right has been settled negatively they call a halt, or affirmatively their

COMMAND IS, "GO FORWARD."

Our system of government is the same that came from the wise heads, the honest hearts, and pure hands of the fathers; there has always been an idolatrous regard for the counsels and direction of these sages, and the principles of government, and even the details of its operation have only been amplified to meet the increasing demands of our national growth and expansion. The casket has undergone slight changes, but the precious jewel has been left untouched.

Though some pessimists, veiled and hooded in their own self-conceit and in the gloom of their thoughts, may raise the alarm that

THE NATIONAL CONSCIENCE IS WEAKENING,

patriotism waning, and that there is a gradual and steady decadence of all the elements of our national strength, nothing could be farther from our actual condition. Though in the very blossom of youth, this nation has the buoyant virility of matured years.

You can no more divert it from the trend of its progress nor change the destiny of its commercial and territorial development than you can harness a Caribbean storm. In the activity and diversification of its industries, in the variety and abundance of its productions, and in the generosity, intelligence, civilization, aspiration, and wealth of its people, it leads the world and holds a complete

MASTERY OVER ITS MARKETS.

Its area is almost entirely covered with an embroidery of rail and wire. Its people buy and read newspapers, magazines, periodicals, and books by the billion. The enduring grandeur of its cities surpass the emblazonry of oriental dreams. And, best of all, the most promising of all its features of glory and power is the fact that 17,000,000, or about one-fifth of its population, are enrolled in the public schools. Such forces for national aggrandizement can not be thwarted nor subverted.

Should not a nation such as this, leading the van of the world powers, have a respectable and adequate armament on land and sea? The world makes history rapidly—centuries are crowded into decades and decades into months; from morning's dawn to evening's glow

IS AN EPOCH.

Should not our Government be prepared for emergencies that may be born in a day? Such emergencies have happened in the recent past, and may happen again.

Though we had a goodly number of modern battle ships, "our sharp, short, and decisive conflict" with Spain demonstrated the insufficiency of our naval equipment. We had enough to destroy the fleets of the enemy after we had found them, but not enough to blockade the forts, aid the land forces fighting on the shores, and scour the high seas.

THE GOVERNMENT HEEDED THE WARNING.

recognized the peril, and is enlarging the Navy with a splendid line of modern battle ships that will accord with her supremacy as the leading world power.

Why should not the military arm of the Government be strengthened in like manner? If Aguinaldo is dead, as so often reported, he is certainly a very lively corpse, and his deluded followers in the revolt against the sovereign authority of the United States manifest no inclination to surrender. They throng the jungles, defiles, and passes of the Luzon hills, and at every opportunity murder American soldiers. War on that bloody island is a lengthening chain. Luzon is

AN UNCONQUERED PROVINCE.

and will be as long as the Filipinos possess the power and opportunity to shed American blood.

The ports of entry are ours. The gallant marines under good Admiral Dewey have done their work, and done it surpassingly well. Soldiers are now our need. An emergency frightful in its aspects and terrible in its consequences is before us if this bill for the permanent enlargement of the Regular Army should fail to pass. All that we have achieved will be lost, the fruits of the brilliant victory at Manila will turn to ashes, and the death of every soldier in the Philippines

WILL BECOME A CRIME.

To avert this disaster and disgrace, to relieve an already insufficient army being rapidly decimated by slaughter and disease, to protect the lives and property of the friendly Filipinos who deprecate the revolt, to obtain what is honestly ours and what we have paid for, to uphold the flag where it is planted, and to plant it where it should go, soldiers are needed now for the Philippine service.

Is it too much to hope that our Democratic friends on the other side of this Chamber will sink the partisan in the patriot and abandon all opposition to this righteous and God required measure of relief and their leading campaign war cry that "the empire is coming?" Is it too much to hope that a knowledge of the needs of the country and that a crisis is impending in the Philippines, that the honor of the flag and the integrity and prestige of the country, will lead all to seek the only path of safety and patriotic duty, and each member of this body, foregoing all partisan feeling, will vie with all the rest in

MAINTAINING THE SOVEREIGNTY

of the nation over the archipelago.

The Army bill is not a job. There is no mercenary feature connected with it. It affords no shelter for the Army speculator. It is not a plot to provide fat and safe positions for those "with a pull." It is no scheme to render the Administration more popular or to add new luster to the stars on the Republican flag. It is not a partisan measure. It is not an organized raid on the Treasury. It is every whit clean and pure throughout. It is a hearty and prompt response to a call imperatively urgent. It is just what a large majority of the people by their votes said they demanded. It is the popular will declared and recorded under the solemn sanction of a public duty, and should be regarded

AS THE VOICE OF GOD.

It seems to me, and I do not wish to be offensive, that the member who dallies, falters, hesitates, and refuses to give this measure the weight of his influence and the support of his vote has an obscured conception of what he is here for.

This bill is not covered over with political features, though it has in it for the vanquished compensation for the bitter memories of an overwhelming defeat, whilst it commends itself to the approval and support of every true American as the embodiment of the impulses and sentiments of a

PURE, LOFTY, AND UNSELFISH PATRIOTISM.

The man who opposes it will annihilate his future and make for himself a grave so deep, obscure, and unsuspected that the angel of the resurrection, after reading the epitaph on his tombstone, will refrain from breaking his dreamless slumber.

An exigency confronts us, and we can not thrust it aside as we cast away a rotten orange. We must provide against it and meet it. If we fail or refuse to do so, we attempt to arrest the trend of the world's movement, abandon with contemptible cowardice what we have undertaken in the interest of humanity and civilization, retreat from the line that Providence has marked out for

us to pursue, provoke the scorn and ridicule of all nations, recede from our commanding place in the affairs of the world, and make the flag, glorified by unnumbered victories of peace and war,

A SYMBOL OF DISCREDIT AND INFAMY.

The Government has been forced to embark in enterprises that she can not carry forward to successful completion without a large force of trained soldiery. If this bill, or one similar in its provisions, fails of enactment at this session of Congress the armed forces of the Government will be reduced to 27,000 men the 1st of July next. What a pitiable and disgraceful spectacle that would be! What a commentary it would be on the unconcern, recreancy, and unfaithfulness of the law-making power! What a reckless and indefensible defiance of the

RECORDED WISHES AND DECREES

of a vast majority of the American people! Until the machinery of the courts in Cuba, Porto Rico, Hawaii, or other islands now in our peaceful possession are put in operation and government established, and their people have become familiar and satisfied with its spirit, methods, and purposes, the presence of a considerable armed force will be necessary to insure general acquiescence and security. The complications of the Chinese situation are by no means ended; the door to the East is not yet fully opened, and no one can tell with any satisfying degree of definiteness what the future has in store. The Government of the United States

HAS A POLICY OF ITS OWN,

and should be armed with a plenitude of power to enforce it, and not be "cribbed, confined, and confined" that "a damned spot" on its prestige may follow. The revolt in the archipelago is still flagrant, and if there are not reinforcements after the reduction next July the Tagal bandits, under "the Washington of the Philippines," will swoop down from their hiding places in the jungles and fastnesses of the Luzon hills and butcher at their leisure a decimated and insufficient army.

The fact confronts us that the term of enlistment of 26 regiments of United States troops in the Philippine service expires June 30, 1901, and this depletion must be provided against or we must abandon the archipelago. This is a certain fact. We can not evade this exigency. We should not falter, hesitate, and stickle about unimportant matters. We own the Philippines the same as we own Porto Rico, the Hawaiian Islands, and Alaska. The victory of Manila and a subsequent purchase of the islands settled this. The voice of the people—and they

ARE THE REAL MASTERS

of the Army and Navy, the Cabinet, and Congress—has been heard in no uncertain tones, and the Administration and its lines of policy have been fully and unmistakably indorsed; and the commission that every member of Congress, be he Democrat, Republican, or Populist, holds from the people requires him to give full force and effect to their will and demand.

It is no time nor occasion for partisan prejudice and rancor. The honor, good faith, and prestige of our country are at stake. Congress and the President must come up to the full measure of their duty with a spirit that does not quail before any burden or responsibility, and the patriotism and courage of the American people can be implicitly depended upon to do the rest. We must occupy our new possessions

IN FACT AS WELL AS IN NAME.

There can be no consistent, honest, contention about the right of sovereignty over them. The world, save the rebellious and insurrectionary Tagals and their friends elsewhere, acknowledges it. It is our duty to start the people of these regions on the lines of progress, development, education, and civilization by giving them immunity from the despoiler and marauder, the protection of our arms, and the peace, security, and inspiration of

ORDERLY AND STABLE GOVERNMENT.

The bill under consideration, though not all I desire and would ask, is a timely and necessary movement in this direction. It can not be denied that we are still at war, and the people have declared in their own sovereign way that we must remain at war until every armed foe to the flag is crushed or surrenders. To accomplish this the country must have an army. With the present conditions confronting us and the possibility of future complications, the inexorable logic of circumstances and the testimony of men learned in the arts of war, and who have calmly and impartially surveyed the whole field, agree that an army of 100,000 men maximum strength is not too large and burdensome. If the country was on a peace basis there might be something in the contention that this number is too great, but the country is at war and should be on a respectable and

SUFFICIENT WAR FOOTING.

And Congress can not shirk its obligation to make this provision. Expansion is not now an issue. The rising and the setting of the sun, the alternatives of day and night, the coming and going of the seasons, and the law of gravitation are not more fixed and enduring certainties. Whether our new possessions are the

trophies of inglorious conquest or the increment of honest purchase has passed the domain of debate, and he who spends his time and energies in discussing it is engaged in as idle and fruitless a work as if he were pitching straws down against the breast of a cyclone or hurling paper pellets against a solid stone wall.

GOD SAW THE NECESSITY

and made the argument, for expansion, liberty, education, civilization, and Christianity are the inherent rights of every man, woman, and child, whether living in this highly favored land or in the dark regions of the earth. He is determined to overthrow the habitations of cruelty and the citadels of superstition and oppression in His own way and at His own appointed time. He is determined that the fairest and most fruitful parts of His creation shall not be desecrated and impoverished for all time by the savage and the tyrant. He is determined that the dark isles of the Pacific and the benighted regions of the farther East shall feel the pulsing tide and the glow and inspiration of the world's new movement and be renovated and irradiated by the political, moral, and religious principles that make men great

AND NATIONS INVINCIBLE.

He is the same God that liberated the children of Israel; who fashioned a pillar of cloud for their guidance by day and kindled a pillar of fire for their guidance by night, and saved, after forty years' wandering through a wild and barren wilderness, a remnant of His chosen seed, and in His present providences, as far as human agency is concerned, the United States is the honored instrument, without its own seeking, in accomplishing all the parts of His wondrous plans. All opposing law, custom, precedent, and political measures will be swept away

BY THE RESISTLESS FORCES

he has set in motion.

Sordid commercialism and military pomp and power do not enter into the thought, purposes, and calculations of those who support this measure, though our new acquisitions are empires of natural wealth to which the world is entitled. If we had no other justification than these the flag would not be floating over Cuba, Porto Rico, Guam, and other islands, nor would we be fighting in the archipelago. The United States is not a sea pirate nor a land grabber. Her people are honest, well-intentioned, and independent, without envy and greed, as they are without fear; and a party that would advocate territorial extension at the sacrifice of high moral principles and the country's honor and integrity

WOULD NOT SURVIVE AN ELECTION,

and would go down to a grave of ignominy loaded with the deep-voiced execrations of an indignant people. Under the operations of this bill it is possible that an army of 65,000 men will be organized and sent to the Philippines. This army would be composed of the flower of our youth—strong, determined, courageous, and patriotic men—that would

MAKE SHORT SHRIFT

of that flying and fugitive pretender, Aguinaldo, and his following of savage insurrectionists. It would save thousands of valuable lives and millions of treasure. It would inspire, encourage, liberate, and protect the decent and intelligent Filipinos, who are pleased and jubilant over their change of destiny, are loyal to the United States, and pray for the earliest establishment of its peaceful authority over their war-wasted islands. It was ours to break the clutch of oppression and poverty, to feed the starving, clothe the naked, to provide shelter for those whose homes were burned, and to empty the prison hells in those islands, where Spain, without hindrance, had committed

THE MOST HORRIBLE ATROCITIES

for three centuries, and it is still ours to rescue the loyal Filipinos from their unhappy and unfortunate condition. Then a government would be erected in perfect accord with our own; there would be peace, security, and advancement in the islands, and there would be no necessity for an armed force save to guard the seacoast and garrison the military stations, to quell any uprising of the rebellious. My own contention is that Congress

SHOULD PROVIDE 100,000 TROOPS

for the immediate necessities in the Philippines; that this is just what the election of President McKinley and the overwhelming success of the Republican party mean. I am satisfied that this would be the path of safety and economy; that it would save life and money, and be an honorable discharge of our obligations in the cause of humanity and the world's civilization. It would show that we as a nation are terribly in earnest and that there is no immunity for those who resist its authority or challenge the assertion of its rights. Such a movement would be a most valuable object lesson in this epoch-making period.

It is still fresh in the memory that during the recent Presidential struggle we were constantly assured that we were in the shadow of the empire, but the people looked into the Presidential closet, and there they found

NO GHOST NOR SKELETON,

but there an altar shrine of lofty and devoted patriotism and sincere and absorbing sympathy for the helpless and outraged. And now this class of wiseacres and sages tell us that the intention of this army bill is to maintain by military force a government to be erected in the Philippines "antagonistic to our own in form and substance." Has such a fabric of horror been erected in Cuba or Porto Rico, where the natives, though not quite so intelligent or familiar with the robberies of taxation and perniciousness of trusts, yet are just about as

LOYAL AND TRUE TO THE FLAG

as many of our Democratic brethren? Have not these two islands the same Constitution, the same laws, the same kind of a judiciary, the same system and methods of government as our own? They are not outlying provinces, but wards of the nation, and the military is there to preserve order and peace and protect the people in the same liberties we enjoy. These islands are on the same footing, as far as the civil law is concerned, as our interior Territories, and when they are prepared for it by the processes of education and experience

THEY WILL HAVE A VOICE

in our governmental affairs.

As to this charge of imperialism, the cord is frayed, the cruse is broken, and the lamp is dead. Its unavailing service has terminated. There is not a single feature of the policy of the Administration or of the party which it represents that can be construed by any honest and intelligent interpretation into such an abhorrent and monstrous idea and aim.

The Administration, in providing for all the exigencies of the novel situation in these two islands, has been guilty of no act facing in this direction. Now, why should the Administration single out the Philippines for a revival of Caesarism, the horrors of a military despotism—"a government antagonistic to ours in form and substance?" Is that a fit and safe field, with peculiarly favorable conditions and opportunities for any American, however strongly he may be intrenched in the esteem and confidence of the people, to exploit himself as an un-American ruler? Such an idea sinks below the dignity and respectability of good nonsense. It is the idle chatter of the discomfited and crushed, beaten at the game of politics,

WITHOUT HOPE AND WITHOUT A FUTURE,

as they have no live, pertinent, and attractive issue to present to the people. They talk eloquently about the glories of the past, the value of tradition, and the magnificent possibilities of the future, forgetful of the fact that each epoch has its own heroes, sages, and philosophers and makes and writes its own history.

If there be a terror to our own people and a peril to the new citizenry of our "outlying provinces" in the proposition to increase our military establishment; if it be the purpose to subjugate the Filipinos and keep them in a state of vassalage and enslavement by the force of arms, surely this terror, peril, and purpose are not manifest in the civil municipal Philippine code, that follows closely along the lines of the laws of the United States, guaranteeing civil and religious liberty and

PROTECTION FOR PERSONS AND PROPERTY.

Even now, with the distractions and alarms of war, predatory incursions, and the forays of the banditti, the mailed hand and the iron rule of the military are subservient to civil procedures, and civil government is being erected throughout the archipelago, capital is making investments, and the rich and fertile regions are being developed under the ægis of law and order. The Taft Commission is hard at work organizing the country and establishing courts. The great majority of the people recognize American sovereignty and accept the new conditions

OF FREEDOM AND OPPORTUNITY

with delight. Kind treatment, and not musketry and artillery, is winning them over to peace and reconciliation, and they are beginning to give the American authorities implicit faith and confidence. Hundreds of the people, realizing the good intentions of their American friends and rescuers, are convinced that their conditions will be vastly improved under the flag, and they are taking the oath of allegiance. They now see how cruelly they have been misled and deceived by crafty leaders, who made them believe that the American soldiers were incarnate devils and

SURRENDER MEANT DEATH.

Make the war "short, sharp, and decisive" by sending enough of soldiers to hunt down the pestiferous insurgents, who are held together only by the encouragement of the blatant aunts of this country, and at once compel them to obedience or exterminate them, as they so richly deserve. Then tranquility and security will take the place of disorder, misgivings, uncertainties, and fears, and the steady and resistless march of progress and development will go forward and the triumph of intelligence, civilization, and Christianity over superstition, lawlessness, and savagery

WILL BE COMPLETE.

Then the door will be opened to China and we can manage our complications in that quarter with ease and dispatch. Then the door will be opened to farther India, whose teeming populations need and will buy enormous quantities of our productions. The supremacy of American law and systems in the Philippines, with their freedom-giving spirit, industrial infusion, and renovating agencies, will cut the Gordian knot of the Eastern problem, and in a commercial sense the whole Orient will be ours.

Those who oppose this measure of necessary military equipment object to it because it substitutes a regular army for a volunteer army, and insist that it would be an entailment for all time to come, burdening the people with the hardships of excessive taxation, and that it would create and foster a vainglorious and hurtful spirit of militarism such as dominates and enslaves the nations of the Old World. If they are honest, candid, and

SINCERE IN THIS INSISTENCE,

they are woefully and inexcusably ignorant of the widely differing conditions of this country and the monarchies of Europe. There the commonality is fettered and repressed, military service is compulsory, whilst the upper crust of society—the nobility—revel in the pride of power and the pomp of circumstance, and find their chief enjoyment in decorating themselves with the emblazonry of war trappings. The education of the American mind and the trend of American thought do not lead in the direction of martial glory, though when necessary the American people are not slow to rally to their country's banner and attest their valor and patriotism. They are devoted to the peaceful pursuits of industry, honest accumulation, and national aggrandizement.

They abominate the enterprise of war, with its bloody havoc and its gorgeous insignia has for them no attractions. They revere their free, peace-insuring institutions, and the throb of the war drum only quickens their pulses and stirs their hearts to courage and determination when the arbitrament of the sword is the only alternative. To assert that a regular army of 100,000 men—1 soldier to about 760 inhabitants—is a menace to the stability of our free Government is a bold and reckless challenge of the intelligence and patriotism of the American people, and to assert that they will not willingly and cordially meet the expenses of such a war footing is to brand them with the

MOST DISHONORING PARSIMONY.

Millions upon millions are annually spent in paying pensions, on coast defenses, Government buildings, the carrying of the mails, and the improvement of harbors and waterways, and yet the people never call a halt, knowing that the bounty of the Government to the disabled soldiers is a deserved gratuity, and the citadels of our defense and our facilities for communication and the diffusion of intelligence should comport with our increasing greatness as a nation.

Another objection to this bill, urged by those affrighted by the specter of imperialism, is, as they most vehemently assert and strenuously maintain, that it gives the President autocratic authority; that it enlarges his opportunities and possibilities to make himself the paramount factor in the control and direction of the Government, and that he may use the military

TO CRUSH LABOR

in its struggle to maintain its rights against the despotism and aggressions of corporate monopoly. These objectors have suddenly become the guardians of the laboring man and the custodians of popular liberty. From the foundation of the Government the President has been the Commander in Chief of the Army and Navy, and in certain instances is invested with discretionary powers, and this bill in no respect warrants him in going beyond constitutional limits, and no President ever has been or ever will be rash and defiant enough to invade the province of the law-making power. He knows that it would cost him his official head and cover his name with everlasting odium and disgrace.

The bill authorizes the President to organize and maintain one provisional regiment in Porto Rico, to be composed of the natives of that island. It authorizes him, should he deem it advisable, to enlist in the United States service 12,000 natives of the Philippine Islands, to be used as scouts in the war for the suppression of the insurrection in the archipelago.

THIS PROVISION IS WISE AND TIMELY

in that it recognizes the fact that our new territorial acquisitions are a part and parcel of our national domain; that the inhabitants thereof are entitled to the badge of American citizenship; that they should have the opportunity of assisting in their own defense and in the organization and maintenance of their own government.

This bill is a positive and emphatic declaration of the American people that they are determined to follow the lines of progress and duty unmistakably marked out by the indications of Providence, and they heartily indorse and will enthusiastically sustain it, and instead of the meager number of 27,000 in the Army the 1st day of next July there will be a force of soldiery of which they will be proud and which will not disappoint their expectations.

Army Bill.

SPEECH

OF

HON. JOHN J. FITZGERALD,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 6, 1900,

On the bill (S. 4300) to increase the efficiency of the military establishment of the United States.

Mr. FITZGERALD said:

Mr. CHAIRMAN: The pending measure provides for the reorganization of the Regular Army.

It is conceded that some legislation is required at this session to provide sufficient force to carry out the Administration's policy but recently indorsed by the people. Under the existing law the Army on the 30th of June next will consist of about 27,000 men. Unquestionably the country will need a larger Army than that for some time to come. Since the declaration of war against Spain all legislation increasing the Army has been of a temporary character. It has been intended to meet emergencies that demanded larger forces than are usually required by the country. The necessity for a force greater than that sufficient for the ordinary needs of the Government will undoubtedly continue beyond the 30th of July next.

Under the necessity of enacting some legislation the majority of this House propose a reorganization of the Regular Army. Such legislation has been discussed and pressed for some time. Experts in military matters severely criticize the present organization of the Army. With the duties and responsibilities devolving upon this country by reason of recent events, a permanent force of 27,000 men will no longer be adequate for the country.

Did this measure merely propose to increase the standing Army to a size commensurate with the country's needs, and at the same time improve and perfect the organization, I would not hesitate to give it my unqualified support. Unfortunately, however, the measure does not do this alone. By this bill it is proposed to reorganize the Regular Army, increase it as required by what seems to be the demands of the future, and at the same time provide the additional men that the present emergencies require. The reorganization is not made in view of the peace requirement of the country, but a permanent army is provided, based upon the temporary conditions of the present.

Some increase is needed in the standing Army of the country. Porto Rico and Cuba, the Philippine Islands, and, perhaps, the situation in China for many years will require the presence of American troops. In a short time, however, few men will be required in Porto Rico. If the pledges made in the beginning by this country are fulfilled, the day should be at hand when our troops will be withdrawn from Cuba. It is not to be expected that after an independent government is established there that American forces will be retained in the island. The increase in the Army will be necessary for service in the Philippines and to man the coast defenses of the States.

But if 96,000 men are sufficient to meet the demands of the service at the present time, such an army will be unnecessary when the emergencies of the present are past. That time may not be far distant. In his message to Congress President McKinley says:

There are assuring indications that the Philippine insurgents are coming to acknowledge the authority of the United States.

When such a condition is secured the force required to maintain order will be much smaller than that now needed to put down the insurrection.

The peace force of the country will be unnecessarily large if maintained as proposed by the pending bill.

It was never intended, and the people of the country will not indorse a proposition, to rely upon the Regular Army as the chief defense or force when the nation is in peril. The history of our country proves too conclusively that the volunteer is the Republic's reliance. This is not said in disparagement of the regular. He has a place and a glory gleaned from many bloody fields in the past that can never be snatched from him.

Under our free institutions, however, every citizen is equally interested in preserving the integrity of the Government. The people rely upon themselves to protect their rights and liberties with the same success in the future as has been had in the past. In times of peril, from foes within or without, it is the people who respond and arm to preserve their homes and their country. They do not wish, nor will they ever consent, to support a large army in idleness awaiting, perhaps praying, the necessity for their services.

The people of this country have profited by the experience of the nations of the Continent. In Europe the nations are staggering under the burdens of their military establishments. Young

men waste valuable years in the army. The natural resources of the country are to a certain extent neglected, while everything smacks of the camp.

Our policy has been different. It has been most wise. When at peace, as this country happily has been during the greater part of its history, the people devote themselves to the arts and the pursuits of peace. When the country is darkened by the cloud of war, then every man awaits in readiness the call for his services.

Under the provision of this bill the Army may consist of 58,000 or of 96,000 men. Power is lodged in the President to fix it within these limits at will. To me this is unwise. Such a power should not be delegated by Congress to any man. The law should be fixed so that the President would execute it as framed by the representatives of the people. The tendency seems to be growing to leave more and more to the discretion of executive officials. In many instances it is proper that officials be given certain discretion. Unless necessary it is unwise to encourage legislation of such nature.

In justification of the power given in the pending measure to the President to increase or diminish the Army, the gentleman from New Jersey [Mr. PARKER] cited the following precedents in the history of Army legislation. I quote from the speech delivered December 5, 1900:

In the year 1798 there was difficulty, but not war, with France. By an act of May 28 of that year the President of the United States was authorized, "in the event of a declaration of war against the United States, or of actual invasion of their territory by a foreign power, or of imminent danger of such invasion, discovered, in his opinion, to exist, before the next session of Congress, to cause to be enlisted and called into service a number of troops not exceeding 10,000," etc.

On July 16 of that year—remember, there was no war then—the President was given a general authority—a discretionary authority—"to raise, in addition to the present military establishment, 12 regiments of infantry and 6 troops of light dragoons, to be enlisted for and during the continuance of the existing differences between the United States and the French Republic, unless sooner discharged."

In March, 1799, it was declared lawful for the President of the United States, among other things, "in case imminent danger of the invasion of their territory by any power shall, in his opinion, be discovered to exist," to organize 24 regiments of infantry, besides riflemen, artillerymen, and cavalry.

And he was allowed, when it appeared expedient, during the session of the Senate or in their recess, to appoint their officers.

Again, in the year 1800—May 14—when we were not at war, the President was authorized to suspend further military appointments.

Again, March 16, 1802, he was authorized, when he should deem it expedient, to organize a corps of engineers.

Again, in 1803—March 3—he was authorized, whenever he should judge it expedient, to require the executives of such of the States as he might deem expedient, and from their local situation most convenient, to take effectual measures to organize, arm, and equip, according to law, and hold in readiness to march at a moment's warning, a detachment of militia not exceeding 80,000, officers included.

Again, January 2, 1812, he was authorized, when he should have satisfactory evidence of actual or threatened invasion of any State by any Indian tribe or tribes, to raise, either by the acceptance of volunteers or by enlistment for one year, as many companies as he might deem necessary, not exceeding 6, as rangers.

Again, January 29, 1813, it was provided by Congress that there be raised such number of regiments of infantry, not exceeding 20, as, in the opinion of the President, may be necessary for the public service, to be enlisted for one year, unless sooner discharged.

Again, in 1832—June 15—the President was authorized to raise, by the acceptance of volunteers or by enlistments for one year, 600 mounted rangers, as the nature of the service may, in his opinion, make necessary.

Again, May 23, 1836, he was authorized to accept volunteers, either infantry or cavalry, not exceeding 10,000 men, to serve six or twelve months after they arrived at the rendezvous.

Gentlemen may say that these provisions merely give authority to enlist volunteers, and that the enlistment of volunteers is in accordance with precedent. But that is not all. In the year 1846—May 13—it was enacted—

"That the President of the United States be, and is hereby, authorized by voluntary enlistment to increase the number of privates in each and any of the companies of the existing regiments of dragoons, artillery, and infantry to any number not exceeding 100, whenever in his opinion the exigencies of the public service may require the same; and to reduce the same to 64 when the exigencies requiring the present increase shall cease: *Provided*, That said enlistment shall be for the term of five years and no longer, unless sooner disbanded by the President."

Mr. Chairman, the manner in which the gentleman from New Jersey [Mr. PARKER] has arranged his precedents clearly shows that they are not applicable to the present situation. Nearly every act cited was enacted at a time when, if hostilities were not actually impending, yet the signs of the times pointed so unmistakably to difficulty that it was the part of wisdom to prepare while yet time remained.

It will be noticed, too, that practically every act enumerated was at a period in the history of this country when communication was difficult between different sections of the country. The telegraph and the telephone had not been invented. The several portions of the country had not been banded with the irons of travel, and there were no steamboats to swiftly carry messages by the waters of the country.

In those days Congress could not be assembled with the same speed that it can be at present. The representatives from some States could hardly reach the Capital sooner than six months from the time the President issued the proclamation convening Congress in extraordinary session. Under such conditions it was the part of wisdom to clothe the President with some discretion. Only in the act of 1846, however, was the discretion given for a period of five years.

In the days when the majority of the acts cited here passed, the United States did not stretch from ocean to ocean and from the Great Lakes to the Gulf. The hostile Indians were powerful and a continual menace. Yet the power given to the President in this bill, when conditions are so different and such power so unnecessary, was never delegated by Congress in those days. I believe it unwise to do it now. A measure with such a provision can not receive my support.

In my opinion, Mr. Chairman, the Committee on Military Affairs, if it desired to propose a reorganization of our permanent Army, should have done so without complicating the measure with provisions for temporary requirements. Any measure that would properly reorganize the Army and increase it to the requirements of peace would receive my support, no matter what the source of its origin. I am ready, too, to vote every man and every dollar required at present and asked by the President. Since, in my judgment, this bill is unwise and dangerous in its delegation of power to the President, as well as contrary to our traditional policy and custom, which have proved wise and safe, I will vote for the substitute to be offered by this side of the House.

This substitute, Mr. Chairman, continues the law now in force for two years from the 30th of June next; it gives all the men needed and requested by the President. If adopted, time can then be taken to perfect a measure which will reorganize the Army on the most scientific lines and in the most satisfactory manner. Such action will be for the benefit of the Army and will receive the indorsement of the people irrespective of their political affiliations.

Against taxing Oleomargarine 10 cents a pound.

"The power to tax is the power to destroy."—Chief Justice Marshall.

SPEECH

OF

HON. HENRY S. BOUTELL,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1900.

On the bill (H. R. 3717) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine.

Mr. BOUTELL of Illinois said:

Mr. SPEAKER: There are no cows, no steers, no dairies, no oleomargarine factories in the district which I have the honor to represent. I feel, therefore, that I am in a position where I can discuss this measure with the same impartiality and, I trust, with the same impunity with which I have partaken, together with the rest of my fellow-countrymen, of the two articles the production of which this bill aims respectively to prohibit and to protect.

I must confess, however, that I have never consciously eaten oleomargarine, but when the advocates of the compulsory consumption of butter admit, as they do in the legislation which they advocate for the protection of butter, that oleomargarine can only be distinguished from butter by some such means as a label in black roman letters an inch tall, we are justified in assuming that there is little if any difference in the wholesomeness or palatability of the two articles. I dare say we have all eaten oleomargarine and praised it as good butter, and eaten poor butter and condemned it as oleomargarine.

But even if the imitations of some articles surpass, in the opinions of many, their prototypes, I am in favor of every measure that seeks directly to prevent and punish deception and fraud in the sale of all commodities, especially articles of food.

When I pay for maple sirup I do not want to get a flavored preparation of corn cobs and glucose. When I pay for white clover honey I want to get bee-made and not man-made honey. When I pay for pure leaf lard I want to get an animal not a vegetable product. When I pay for Mocha coffee I want to get the Arabian not a Brazilian berry. And so when I pay for butter I want to get an extract of cream and not an extract of suet. I shall therefore support the substitute measure recommended by the minority of the committee, although I believe that it would be wiser to leave to the several States the whole matter of dealing with the prevention of fraud in the sale of commodities.

But the pending bill should, in my opinion, receive our severest condemnation. The grounds on which my convictions rest are briefly these:

First. It is unwise and dangerous to impose internal taxes for any other purpose than that of raising needed revenues; unwise, because there is no limit to which this principle can not be extended; dangerous, because all legislation that seeks to accomplish its ends by indirection tends to bring our laws into ridicule and

disrepute. The enactment of internal-revenue laws not designed for the purpose of raising revenue creates distrust and dissatisfaction with all our methods of taxation.

Public revenues can only be used for defraying the legitimate expenses of the Government. Internal taxation where no revenue is needed assumes therefore the character of a fine or punishment. This method of inflicting a penalty violates the principle that innocence is always presumed until guilt has been judicially determined.

Domestic taxation when no revenue is needed is tyranny.

Can it be contended at this time that the National Government is in need of additional revenues when we are about to reduce our taxes by \$30,000,000 or more annually?

For what purpose then does this bill propose to place a tax of 10 cents a pound on a certain quality of oleomargarine? It is openly avowed by the advocates of this measure that this tax is for the purpose of restricting and, if possible, preventing the manufacture of all oleomargarine that looks and tastes like butter, in order to prevent the fraudulent sale of any oleomargarine for butter. In other words, every honest manufacturer of oleomargarine that looks like butter, who sells it honestly for what it is, must pay a tax for honestly conducting an honorable industry in order that a fine may be imposed upon those who fraudulently deal in a part of the products of his industry.

But not 5 per cent of the oleomargarine product of this country is fraudulently sold as butter. Here, then, it is proposed to tax over 95 per cent of a product honestly dealt in for the sake of imposing a fine upon those who fraudulently deal in less than 5 per cent of the product. The fraudulent sale of all commodities can be prohibited by law. The passage of this bill would be a humiliating admission of the inability of Congress and the State legislatures to promulgate laws adequate to accomplish this result, or of the inability of the National and State executives to enforce such laws.

If we recognize this indirect legislation as right in principle and in harmony with our institutions, what limits shall we set to its application? Nearly all articles of commerce are cleverly imitated, and the imitations are either sold in competition with the originals or fraudulently represented to be what they are not. Shall we levy a tax on the imitations of cane sugar, honey, maple sirup, lard, coffee, tea, spices, tobacco, wines, liquors, kid gloves, gold, silver, and on all the other counterfeit representations of the staple articles of commerce?

And when we have taxed all domestic imitations of domestic goods, shall we then begin the taxation of the domestic imitations of foreign goods? Shall we tax our own manufacturers of table oils for the benefit of the foreign producer of olive oils? Shall we tax the New England packers of fish to prevent their competition with the foreign importers of sardines? And if it is right to endeavor to restrain and prevent fraud by taxation, why not invoke the taxing power to repress vice and crime?

When all these forms of taxation are in force, what a spectacle we shall have! A large part of the revenues of this nation derived from a tax on deceit, fraud, vice, and crime! The principle of legislation embodied in this bill is contrary to our national traditions and the spirit of our institutions. It is no sufficient answer to the objections to this measure to say that we have already made a precedent for legislation of this kind. If we have, let us not enlarge and strengthen that precedent, but rather let us root it up and destroy it.

If in moments of unreasoning prejudice we have strayed aside into the byways of indefensible legislation, let us hasten to retrace our steps and regain the path which alone leads to national safety and honor.

Second. This measure is distinctively class legislation. It discriminates between two rival domestic industries to the great advantage of one and the great detriment of the other. It is a hypocritical measure. On its face it is a bill to raise revenue; in the mouth of its advocates it is a bill to suppress fraud; in reality it is a bill to prevent honest competition.

The design of the framers of this bill was not to tax to death the fraudulent sale of 5 per cent of the oleomargarine product, but to tax to death the competition with butter of 95 per cent of that product.

Can we afford to lend ourselves to such a scheme?

I want to ask my Democratic friends if there is anything in the traditions of their party that sanctions or approves such legislation? Let me call to their minds the opinion of Thomas Jefferson on legislation of this character:

The government which steps out of the ranks of the ordinary articles of consumption to select and lay under disproportionate burthens a particular one, because it is a comfort pleasing to the taste or necessary to health, and therefore will be bought, is in that particular a tyranny. Taxes on consumption, like those on capital or income, to be just must be uniform.

Butter and oleomargarine are so essentially alike that it is as unjust to tax one without taxing the other as it would be to tax beer without taxing ale, or to tax whisky without taxing brandy, or to tax hand-made butter and exempt the product of the cream-

eries. It is absurd to claim that the farmers, especially the small farmers, will be benefited by the passage of this bill. The financial advantages accruing from the imposition of this tax will be reaped exclusively by the butter manufacturers.

Then, as now, they will dictate to the farmer the price of cream and to the consumer the price of butter. It is a reflection upon the honor of the millions of farmers of our country to pretend that they favor the principle embodied in this bill.

Let us not forget that they were nearly all farmers who fought when this nation was born for the establishment of the principle of equal rights for all and special privileges for none.

Third. If we admit that it is right to impose a tax by way of a penalty for fraud, such a tax should only be imposed when we can be absolutely sure that the tax will always be paid by the party guilty of the fraud. But if this bill should become a law, the manufacturer will simply add the tax to the original cost of the product. The bill gives no protection to the consumer. What, then, is the result? The National Government collects from the defrauded purchaser the tax that it has imposed upon the manufacturer for the privilege of perpetrating his fraud.

Fourth. The increase in the price of oleomargarine that would result from the passage of this bill would be an outrage upon those who buy oleomargarine, because at the price at which they can get it they prefer it to butter. Why should the strong arm of the National Government be stretched out to compel a poor man to eat that which in appearance is repugnant to his senses or else take from him 10 cents for every pound of oleomargarine which he eats that is colored to suit his fancy and his palate? This measure ought to be entitled "A bill to abolish the senses of the workingman and the poor, and to tax the use thereof."

The great British statesman and advocate of liberty, Pym, said: "The best form of government is that which doth actuate and inspire every part and member of a state to the common good."

Would every member of this state be actuated and inspired to the common good by such legislation as we now contemplate? Is it not more probable that every man who felt the burden of this unnecessary and unrighteous tax would look with scorn and hatred and contempt upon a government that would stoop to such duplicity in its legislation as to impose a tax that would fall upon all the poor of the country for the purpose of protecting a great and powerful industry?

Could any government go further in the creation and protection of a monopoly?

Fifth. The favor with which this bill is received is another evidence of the absorption by the Federal Government of powers which the founders of our institutions thought could be more wisely exercised by the States individually. Strong a Federalist as I am, I look with grave apprehension upon the rapid centralization of legislative powers that is now going on and the consequent weakening of the influence and dignity of the local legislatures.

It is a sign of danger in a republic when its citizens begin to lose pride and confidence in their local institutions and submit complacently to the loss of those powers and prerogatives which their ancestors would have given up only with their lives.

The longest step toward centralization that we have yet contemplated is this effort to invoke the taxing power of the Federal Government to accomplish by indirection that which ought to be left to the determination of the several States. In my opinion, this step should never be taken; and so, for the reasons which I have briefly outlined, I disapprove of this measure.

The Grout Bill.

SPEECH

OF

HON. ROBERT G. COUSINS,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 8, 1900,

On the bill (H. R. 3717) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine.

Mr. COUSINS said:

Mr. SPEAKER: As I understand it, this Grout bill is a measure designed to prevent a monstrous fraud, not only on the people who by their toil produce butter, but upon everybody who consumes it. The proposition is to tax every article colored in imitation of butter 10 cents per pound. The law would not affect any product unless colored so as to imitate butter. In other words, it would affect nothing but fraud.

In 1886 Congress passed an act requiring every manufacturer of oleomargarine and other imitations of butter to stamp it and label it plainly so that it might not go to any consumer as genuine

butter. Instead of observing and obeying that law, the manufacturers of imitation butter, together with unscrupulous retailers, have adopted every sort of device to evade the law, and they have evaded it. They have evaded it by folding the wrappers of packages so that the name of the article, instead of appearing plainly on the outside, appears on the inside, and then they have evaded it again by instructing unscrupulous retailers how to conceal the stamp or to efface it on the packages.

But the various methods of evasion are unimportant when we have the incontestable fact that in 32 of the States which have passed laws absolutely forbidding the sale of imitation butter 62,825,582 pounds of oleomargarine were sold in the year 1899. These 32 States represent 50,117,440 of the population of the country, according to the census of 1890:

Population.	Population.
New York..... 5,907,853	South Carolina..... 1,151,149
Pennsylvania..... 5,228,014	Nebraska..... 1,058,910
Illinois..... 3,826,351	Maryland..... 1,042,390
Ohio..... 3,672,316	West Virginia..... 762,794
Missouri..... 2,679,184	Connecticut..... 746,253
Massachusetts..... 2,238,943	Maine..... 661,086
Michigan..... 2,063,889	Colorado..... 412,198
Iowa..... 1,911,896	New Hampshire..... 376,530
Kentucky..... 1,858,635	Washington..... 349,390
Georgia..... 1,837,353	Oregon..... 313,707
Tennessee..... 1,766,518	Vermont..... 332,442
Wisconsin..... 1,686,890	South Dakota..... 328,808
Virginia..... 1,655,980	Utah..... 207,005
Alabama..... 1,513,017	North Dakota..... 182,711
New Jersey..... 1,444,933	Delaware..... 168,493
Minnesota..... 1,301,826	
California..... 1,208,130	Total..... 50,117,440

The States and Territories which have not passed laws forbidding the sale of oleomargarine colored in semblance of butter are:

Population.	Population.
Texas..... 2,235,593	New Mexico..... 153,593
Indiana..... 2,192,404	Montana..... 132,156
North Carolina..... 1,017,947	Idaho..... 84,385
Kansas..... 1,457,083	Oklahoma..... 61,834
Mississippi..... 1,280,700	Wyoming..... 60,705
Arkansas..... 1,124,179	Arizona..... 59,629
Louisiana..... 1,118,587	Nevada..... 45,761
Florida..... 891,422	
Rhode Island..... 345,506	Total..... 12,604,790
District of Columbia..... 239,302	

The amount of oleomargarine sold in the thirty-two States forbidding it during the year 1899 was, as I have said, 62,825,582 pounds, and the amount sold in each State is shown by this table:

Yellow oleomargarine sold contrary to law in 1899.

State.	Dealers.	Pounds.

Not only has this grease been sold contrary to the laws of the various States, but also in violation of the Federal statute of 1886.

The secret of the whole matter is this: Oleomargarine can be produced for 10 cents per pound. According to a published statement of Swift & Co., it is composed of tallow, lard, and cotton-seed oil. Then is added milk to flavor it. By a system of hypocrisy and fraud, criminal and piratical, it is sold for 25 cents per pound, or for whatever the price of genuine butter may be at the time. The profit is from 10 to 15 cents per pound. As a leading oleo manufacturer of Chicago said to his trade in a circular letter of date October 22, 1898:

Your profit will be double the amount made from the butter you are now handling.

And while such a profit is possible the temptation to retailers is so great that it is inevitably taken advantage of.

If this measure is passed, it will accomplish one of two things: It will increase the cost of this fraudulent product, colored in semblance of butter, so that retail dealers will not be tempted to handle it, or it will cause the manufacturers to place oleo on the market in its natural color, which will deceive no one, and that is what is desired. If anyone wishes to use oleomargarine, let him buy it without the tax in its natural color and for what it actually is. It should not cost such a consumer to exceed 15 or 16 cents per pound. And if he likes it, let him be happy.

The manufacturers who contend that the production of imitation butter is a "legitimate industry" have had the opportunity to conduct a "legitimate industry" if they would. But they chose to conduct an illegitimate one. They chose to become outlaws, defying not only the laws of States, but the law of the United States, and the patience of the public has been taxed to the danger point. They have had fourteen years in which to realize that Congress does not make laws for fun, and they have had the notice of thirty-two States, by statutory enactments, which have been shamefully and defiantly violated, that oleomargarine, if sold at all, must be sold for what it is.

As for the constitutional objection urged by some against the bill, let them read the opinion of Mr. Justice Harlan, of the United States Supreme Court, in the case of *Plumley vs. Massachusetts*, (155 U. S., 461), in which he said:

And yet it is supposed the owners of a compound which has been put in a condition to cheat the public into believing it is a particular article of food in daily use and eagerly sought for by people in every condition of life are protected by the Constitution in making a sale of it against the will of the States in which it is offered for sale because of the circumstance that it is in an original package and has become a subject of ordinary traffic. We are unwilling to accept this view. We are of the opinion that it is within the power of a State to exclude from its markets any compound manufactured in another State which has been artificially colored or adulterated so as to cause it to look like an article of food in general use, and the sale of which may, by reason of such coloration or adulteration, cheat the general public into purchasing that which they may not intend to buy.

The Constitution of the United States does not secure to anyone the privilege of defrauding the public. The deception against which the statute of Massachusetts is aimed is an offense against society; the States are as competent to protect their people against such offenses or wrongs as they are to protect them against crimes or wrongs of more serious character. And this protection may be given without violating any right secured by the national Constitution and without infringing the authority of the General Government. A State enactment forbidding the sale of deceitful imitations of articles of food in general use among the people does not abridge any privilege secured to citizens of the United States nor in any just sense interfere with the freedom of commerce among the several States.

It seems to me that Uncle Sam has a constitutional right to protect his own constitution.

In the name of tallow, leaf lard, cotton-seed oil, and the Constitution, we are implored by the opponents of this bill to stand by the lawbreaker who greases our bread when we pay him to butter it. It is exceedingly queer how many purposes men try to make the Constitution serve. It has been evoked in behalf of bad ballots, and now it is urged in defense of worse butter.

The only thing fit to butter anything with is butter.

It is urged as an excuse for this fraud that oleomargarine contains no deleterious ingredients. Neither does horse flesh, and if a boarding-house keeper should serve horse meat to his boarders as a pretense for beefsteak, he would be just as guilty as the commercialists who color cotton-seed oil and tallow and sell it as the genuine product of pure cream.

A hair in the butter used to be regarded as an awful thing, but now statesmen would defend it on constitutional grounds, holding that the ingredients of hair are harmless and that its trade between States should be unrestricted.

I should like to board the opponents of the Grout bill for a session or two—not to make money, but just to diet them a while on their own medicine.

You can paint landscapes in any oil colors that you choose. That is fiction, and buyers must take their chances. But when it comes to things that are taken internally they should be properly labeled. When a landlord trusts me I feel that I should trust him, but this confidential relation can never exist while the oleo man is around with his criminal and commercial inducements.

When your physician allows you to eat so much butter per day, how can you know what to tell him when there has been an oleo man in the community?

When a firm sells a favorite brand of axle grease they take great pride in labeling it, even in the smallest packages, but the oleo men "are not so proud as some folks air;" they are willing to live in obscurity until they can amass a fortune and go elsewhere.

If anyone wants to lubricate his griddle cakes with machine oil, that is his business, but let him stand by his colors and convictions and not steal the creamy hue of innocent country heifers.

Mr. Speaker, it is getting so that ordinary boarders have no rights. You should have as much right to pass counterfeit money to the landlord as he has to pass counterfeit butter to you.

It is about time in this country when it should not be necessary to have a coroner's inquest or a chemical analysis of the victuals before asking the blessing.

The time will come in America, as it has come in several other countries, when it will be a crime to adulterate any article of food or drink, and this is the beginning of that time. My vote shall go for the Grout bill. It will pass this body as certainly as the House of Representatives represents the people of this country, and then the Senate will be responsible for its fate.

Reduction of War Revenue.

SPEECH

OF

HON. J. H. BROMWELL,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 13, 1900,

On the bill (H. R. 12394) to amend an act entitled "An act to provide ways and means to meet war expenditures, and for other purposes," approved June 13, 1898, and to reduce taxation thereunder.

Mr. BROMWELL said:

Mr. CHAIRMAN: Under the general authority given by the House to print remarks on the subject of the reduction of the war revenue, I desire to submit the following remarks, which, while not bearing directly upon the provisions of this bill, are yet so connected with the subject of the income derived from various sources of taxation, and particularly with the question of the proposed reduction in the tax upon express packages, as to make it proper to offer them as a contribution to the general knowledge upon this subject:

The matter of parcels posts, domestic and foreign, has been discussed for a number of years past by chambers of commerce, boards of trade, and kindred organizations with a view to securing legislation looking to the introduction of the system generally, not only as between the United States and foreign countries, but as among the several States. Conventions have already been made, by treaty or other agreement, by which parcels to a limited weight are transmitted through the mails at various rates, in all cases cheaper than these parcels could be carried by freight or express. Various bills looking to the establishment of this service have been before this and former Congresses, but up to the present time no action has been had upon any of them.

While personally I am not ready to commit myself to the support of any of these measures, I believe that any contribution to the general knowledge upon this subject which will throw any light upon the workings of the system, so far as it has already been adopted, and upon its value as a revenue producer to the Government in case it should be extended to the domestic service, is worthy of being put in permanent form for the use of members of this House. I therefore append hereto the following carefully prepared statement of Mahlon A. Winter, No. 339 Pennsylvania avenue N.W., being a report made to the Board of Trade of this city about a month ago, and if the facts set forth therein are true as to the difference in the charges made by the express companies for the handling of these small packages and the cost of carrying these packages by mail, the claim that the retention of the war-revenue tax on the express companies will work a destruction of their business must seem to be without sufficient foundation; for if the Government, which it is frequently claimed pays more for the transportation of its mail than a private corporation can afford to carry it for, can thus underbid these express companies on the carriage of these small packages, the only inference to be drawn is that the express companies must make a handsome profit on this business,

and must therefore be able to stand the tax imposed under the war-revenue law without any serious hardship, and the proper thing to do would be not to remove this tax, but to so amend the law that the express companies can not shift the burden from themselves to the individual shippers.

[By Mahlon A. Winter, No. 339 Pennsylvania avenue N.W., Washington, D. C. Copyright 1900, by M. A. Winter. Used by permission.]

PARCELS POST A COMMERCIAL NECESSITY—A CONSIDERATION AND DISCUSSION OF THE PARCELS POST AS AN AID TO THE DEVELOPMENT OF TRADE IN THE SMALLER ARTICLES OF COMMERCE.

America has served notice upon the nations of the earth that she is about to begin a campaign for the commercial supremacy of the world. In preparing for the task so enthusiastically undertaken she has overlooked the fact that she lacks at least one instrument of trade aggression necessary to enable her to carry out her high ambition.

If she is to honorably acquit herself in the struggle thus inaugurated, and achieve and hold that position in the commercial world which "manifest destiny" has decreed she should occupy, she must adopt prompt and vigorous measures to this end.

Much as we need these foreign markets yet to be secured, we are in greater need of cheap and rapid transportation facilities for sending our goods to our foreign customers after they have been sold. We have been slow to recognize the vastly superior advantages the European merchants and manufacturers enjoy over our own for reaching distant markets, but now, right on the eve of a great commercial struggle with well-equipped competitors, we fully realize that we are greatly in need of that very aid which the competing foreigner receives through what is known as the parcels post.

Let us then examine the parcels post and see if we can learn wherein it has become such a valuable stimulant to the commerce of other nations. If we find that it has exerted a marked influence on the commercial growth of other lands, we can not err in establishing a parcels post for ourselves.

WHAT IS PARCELS POST?

It is the object of a parcels post to make it possible to send or receive packages of merchandise of moderate weight through the mails instead of by express, enabling this to be accomplished at a minimum cost for transportation and with the same assurance of quick and reliable service we now enjoy when we post an ordinary letter.

When a package can only be sent to post-offices located within the country in which the package is mailed, the service is called a "domestic parcels post," but when a package can be sent from the country in which it is mailed to a post-office located in a foreign country it is known as a "foreign parcels post," and is created by a treaty between the two countries, known as a "parcels-post convention." A domestic and a foreign parcels post are governed by entirely different, distinct, and separate rules and regulations.

That the people of this country need both a domestic and a foreign parcels post in the broadest sense of the terms can not be denied. At present we have an internal or domestic system for the transportation of packages by mail when not exceeding 4 pounds in weight, for merchandise only, but the high rates of postage—16 cents per pound—and the limited number of pounds that can be sent preclude the use of this method on all except rare occasions, and thus make the use of private express companies necessary.

A foreign parcels post has become an absolute necessity to the people and manufacturers of the United States who have customers in foreign countries. The stringent rules of the Universal Postal Union absolutely close the international mail service as a mode of conveyance for packages of merchandise. The regulations of the union governing this matter, adopted at the Universal Postal Convention held in the city of Washington on July 4, 1891, section 5 of article 5, reads as follows:

"Packets of samples of merchandise may not contain any article having a salable value. They must not exceed 12 ounces in weight."

The interpretations of the Post-Office officials have greatly assisted in stiffening the rigidity of this rule, for it is held that—

"Goods sent for sale in execution of an order, or as gifts, however small the quantity may be, are not admissible at sample rates and conditions."

It has further been held that no complete article can be sent as a sample. In the case of a pair of gloves, for illustration, only one glove may be sent; one-half a suspender, one shoe, one sock, etc. These decisions drive the exporter of small articles to use the private international express companies. The regular foreign letter postage rates of 5 cents per one-half ounce, which amounts to \$1.60 for a 1-pound packet, or \$16 for 10 pounds, is, of course, too expensive a method to be used except in very rare cases.

The mere citation of these prohibitive charges and rigorous rules is quite argument enough to show that the only profitable way to ship packages of merchandise is through the mails, and this can only be done to those foreign countries that have succeeded in securing foreign parcels-post conventions from our Post-Office officials.

HANDICAPS OF THE EXPORTER.

Let us look at the workings of our present mode of transportation as affecting the exporter. As an illustration, I will cite one of hundreds of similar experiences that have come under my personal observation.

There is a business concern located in Washington which has correspondents in every foreign country and which finds great difficulty in holding its own against foreign competitors in the same line of goods on account of not being able to avail itself of the transportation facilities its foreign competitors enjoy, which are afforded them by the parcels post. A short time ago this company received a small order from a correspondent who resides in an interior town in the Argentine Republic. There is no parcels-post convention between the Argentine Republic and the United States, so the only resource for the transportation of this order was via the ordinary ocean express lines. The package weighed only 3 pounds. Upon inquiry it was found that the express charges on this package would be \$6.00. An examination of the British Postal Guide showed that, had this company been conducting its business under the British flag, the package could have been sent through to its destination for 2 shillings 4 pence—the equivalent of 57 cents.

Any Mexican exporter could have sent 11 pounds for only 38 cents, while a German exporter could send an 11-pound package to the same place for 73 cents. In other words, if two articles of commerce identically the same, each weighing 3 pounds, the wholesale price also being the same, were ordered by a person residing at the same place in the Argentine Republic, one ordered from England by parcels post and the other ordered from the United States by the present American system of transportation, these two articles when placed on sale side by side in the Argentine Republic would show that the American-made article would cost just \$5.73 more than the one the product of English skill.

Another incident illustrating the deplorable lack of transportation facilities the American exporter of small articles has to contend with was brought strikingly to my attention in one of our recent consular reports. The case was that of a Birmingham (England) merchant who ordered a bill of goods from an American house in Minneapolis, Minn., and was compelled to pay \$14.35 transportation charges on a small package of merchandise the purchase price of which was only \$9.30. This was due to the fact that the goods were shipped by the American house without arrangements having been made in advance as to the rates. When this is not done, any shipper will tell

you that the ocean express companies and the receiving and forwarding agents will almost always take advantage of the opportunity to make excessive charges for foreign shipments. Need one wonder, then, that the American invasion of the foreign markets of the world is necessarily slow when such obstacles as these are to be met on all sides?

Under our present transportation facilities with South America we are absolutely unable to reach the interior towns. If we desire to send anything to the interior, after first paying exorbitant rates to get our goods to the nearest seaport town of the consignee, which may be a thousand miles from him, the party to whom they are addressed must then send to the coast and get them. On small packages the cost of this overland transportation is very high, and practically prohibits all interior trade in both small and trial orders of goods.

There is a simple and effective remedy for all this. Just give us a foreign parcels post, the same as is enjoyed by our European competitors, and we will then have a cheap, sure, and direct means by which we can reach the interior towns of South America.

The benefit of a foreign parcels post is to be examined in two lights, viz., from the standpoint of its utility to both the consumer and the manufacturer. Both interests are of equal importance. Merchants will carry in stock that for which there is a demand. Nearly all goods are now sold to merchants by sample, exhibited in a personal interview or sent in response to a request. By the distribution of samples through the medium of a foreign parcels post the manufacturer is enabled to create a demand and thus introduce his goods into strange markets. The manufacturer can greatly increase the demand for his goods by sending samples of his productions direct to the merchants of the world and permitting them to determine as to the advisability of carrying his wares in stock.

Again, there are many instances where goods can not be procured from the home merchant that might be obtained direct from the country where they are produced, were we fortunate enough to possess a foreign parcels post.

Nearly all the nations of the earth, both great and small, already enjoy this happy trade blessing, while the citizens of the United States are compelled to confine their trade within restricted limits, unless they pay a wholly disproportionate sum to the international express companies for the most trifling service.

WHY IS OUR GOVERNMENT APATHETIC?

At the present time the United States is the only great nation that does not possess an elaborate system of both domestic and foreign parcels post. This apathy, in my opinion, is due in a great measure to "official courtesy" in the United States Post-Office Department.

It is not generally known, but it is nevertheless a fact, that the Postmaster-General, by and with the consent of the President, has the power to negotiate and conclude a parcels-post convention with any foreign government with which, in his discretion, he may see fit to treat.

This power has been so seldom used that those having commercial and manufacturing interests in this country that would be greatly benefited by an extension of the foreign parcels post have become greatly exasperated.

The President of the United States could, and no doubt would, direct the Postmaster-General to immediately institute negotiations for a parcels-post convention with every foreign government, both large and small, if he but realized the necessity of such action on his part.

The adoption of a domestic parcels post will require an act of Congress; therefore we will have to look to that body for the required legislation.

We all know that the exporter of articles of great bulk, such as steam engines, farming implements, manufacturing machinery, structural steel, agricultural products, etc., is not seriously affected by the question of transportation by parcels post, as he chartered his vessel or makes yearly contracts for the transportation of his goods; but to the exporter of articles of small bulk, of "the little things that count" in commerce, the question of transportation assumes an entirely different aspect. It is a matter of common knowledge that the life of his export trade lies in the cheapness with which he can get his goods to the consumer. Even the manufacturers of the large articles of commerce would use both a foreign and domestic parcels post to great advantage in sending samples, specimens of the material and workmanship of their productions.

It seems almost incredible that this apathy should be prevalent in the face of the many reports of the Postmaster-General of the United States that have been favorable to the adoption of a parcels post, and the indorsement of this system by a number of prominent Superintendents of Foreign Mails in the Post-Office service.

Under Postmaster-General Don M. Dickinson, Nicholas M. Bell, then Superintendent of Foreign Mails, in his report dated August 6, 1888, said:

"The conclusion of a parcels post with Mexico is of special importance, as that country, with its large population and with rapidly developing industries, naturally looks to the United States for extending every possible aid in strengthening the bonds of commercial relations between the two great 'sister Republics,' whose interests are the same, and it will be found that new and hitherto almost inaccessible markets have been opened out to American merchants."

In this same report Mr. Bell further said:

"Parcels-post conventions are now pending with all the Central and South American States, and it is hoped the time is not far distant when the 'three Americas' will be embraced in one grand parcels-post union, which will in its way aid this country in fulfilling its eventual mission, viz., to control the markets of this hemisphere and become the leader in its industrial and commercial progress."

The Hon. John Wanamaker, Postmaster-General in 1890, in his annual report of November 29 of that year said:

"Nearly every country in Europe has established a parcels post and managed it successfully, to the great satisfaction of the people. The conditions of commerce are much the same all over the world, and if there are no objections from business people in the old countries, after years of experience of the parcels post, there would not be objections here after it was fairly tried. It can only be a question of time before it will be undertaken in some better form in this country. * * * I am in favor of a full parcels post."

In his report to the President, dated November 25, 1893, the Hon. W. S. Bissell, Postmaster-General, said:

"The desirability of the enlargement of the parcels post, so as to have it apply especially to European countries and Great Britain, has been brought to my attention. * * * The parcels post seems to me to be of most importance, and it is my purpose to give it early attention."

Yet, in the face of these indorsements by these prominent and clear-headed men, but few steps have been taken toward the active extension of either the domestic or foreign parcels post.

During the time that Nicholas M. Bell was Superintendent of Foreign Mails earnest efforts were made to present to Congress the advantage that would result from the adoption of a domestic and foreign parcels post; but since Mr. Bell's time we have not had a vigorous and healthy parcels-post policy. "Industrial and commercial progress" laments the retirement of Mr. Bell.

THREATENED COALITION.

The German central bureau for the preparation of commercial treaties has just published a book entitled *The Commercial Treaties of 1902*, written by its president, Dr. Voelberg-Rekow, who was also a delegate to the late Export

Exposition at Philadelphia. In this book, which is a practical study of the wonderful commercial development of the United States, with a discussion of its effects upon the commercial powers of Europe, particularly Germany, whose present commercial treaties expire in 1903, are to be found many interesting and startling statements.

Dr. Rekow sees in the commercial growth of the United States a dire calamity to European industries. He quotes figures to show that we are year by year driving our European competitors out of the markets of the world. He shows that by our thrift we are making an industrial dependent of the continent of Europe. On this point he says:

"Europe, with her old-established industries, is so hard pushed by the young American competition that the necessity of uniting in a common customs league against the bold intruder has become a matter of serious consideration."

This condition he would endeavor to remedy by a policy of joint commercial aggression and discrimination against the United States, and the renouncing of the "most-favored-nation clause" with America. The article is withal a deep, frank, and sensible study of commercial conditions in America and Europe, and will prove of great benefit to the United States if we are shrewd enough to apply ourselves to the task of offsetting the impediments which European jealousy will no doubt soon be throwing in the way of our progress.

Dr. Rekow is not slow to see that we have already won the day in our fight to obtain the position of the greatest exporter of agricultural products of the world. He admits, with refreshing frankness, that now the battle must be waged for the world's commercial supremacy of the industrial products. Of our victory in the one case and intention in the other he speaks as follows:

"After the Americans had established their supremacy as exporters of agricultural products, which export they have organized in such a masterly manner as to defy all competition, they immediately turned to exportation of industrial products, not of the finest quality, but carefully finished, and by means of wholesale production, put at so low a price that they will in a very little while conquer the world's markets."

This quick realization on the part of Germany of the point upon which the battle hinges seems to be even ahead of that of some of our own officials here in the United States, who are supposed to have the commercial interests of the country at heart, and whose public duty it is to search out and take advantage of every honorable opportunity to push American commerce to the front.

Reduced to a plain matter-of-fact question, it is this: Shall we develop our right arm of commerce and leave our left wholly neglected? That equality of development necessary to the human form is equally as necessary to every healthy nation. Having secured the agricultural, we must secure the industrial markets of the world as well.

England will not surrender her high position in the commercial world without a severe struggle. This is foreshadowed in a speech delivered by the Earl of Rosebery on November 16, 1900, at the Glasgow University. He declared that the twentieth century would be a period of keen, intelligent, and almost fierce international competition in the arts of peace; therefore it was necessary that England should remodel her state machinery and become more thorough in business and look thoroughly to the training of first-rate men for the struggle ahead, as upon this depended the future of the Empire. He thought that the now antiquated methods had almost resulted in commercial disaster.

The fact that foreign nations are now fighting and will continue to fight their hardest to retain these markets, the invasion of which we have already begun, makes it imperative that our industries be granted every assistance within the gift of our Government. A complete system of both domestic and foreign parcels post will do much to hold the ground we have already gained toward the accomplishment of our object, and will place in the hands of our exporters additional facilities with which to continue the struggle on a more equal basis with our commercial rivals.

CONVENTIONS ALREADY SECURED.

We have already negotiated foreign parcels-post conventions with Mexico and a few minor republics in Central and South America, and the West Indies, and a very much one-sided convention with and in favor of Germany, one of our hardest European rivals in the struggle for commercial supremacy. I shall deal more fully with this particular convention later on. Strange to say, this German parcels-post treaty is the only one we have with any European nation. The result of the conventions already in force have been highly gratifying, and the only cause of complaint has been the limited number of countries to which this wonderful trade promoter has been extended.

If we are to enter upon an era of commercial supremacy and are to find new markets for our products in foreign countries, we must be able to stand at least upon the same footing as our competitors in order to be able to secure and hold the trade they now control.

While it is true that American skill and inventive genius lead the world, and the skilled American workman stands to-day without a peer, still we can not rely on this alone to conquer foreign markets. It is now, at the very inception of our foreign commercial campaign, that our American manufacturing and commercial houses most need this very aid which is denied them. I fear they can not in many cases successfully run the race of keen competition with the millstone of excessive transportation charges tied to their necks, while at the same time their feet are fettered by our own regulations, which ought to render them every aid within the gift of this Government, instead of balk and thwarting their efforts.

Give to Americans that same aid and assistance in securing foreign trade that their competitors enjoy and the products of Yankee workmanship will invade new sections of every country on the globe where trade or larger is known, from the wildest haunts of the untutored savage to the busiest commercial marts of the enlightened Caucasian.

NEED OF A DOMESTIC PARCELS POST.

The need of a domestic parcels post is so evident that it seems hardly necessary to urge reasons for its adoption. There is one point, however, which seems in previous arguments to have been overlooked. This point in itself should be a matter of special consideration.

There are many millions of people in the United States who live at a distance from any express office, and consequently when anything is sent to them they must go for it in person or procure the services of some neighbor or friend. In rural localities, where excursions to railroad stations are not an everyday occurrence, it often proves very aggravating to be compelled to suspend the performance of important duties and make a special trip to a distant express office for one little package, which, perchance, is very much needed.

As is well known, the express companies are very arbitrary in their dealings with their patrons. For illustration, if the package is not called for within a few hours after its arrival, no matter how many miles the person for whom it is intended may live from the express office, the express agent is instructed by the express company to report the same to them, and they immediately send the person or firm who sent the package a form communication, reading about as follows:

"Goods consigned to John Smith reported by express agent at Jonesboro as remaining on hand uncalled for. Please instruct us as to disposition."

The receipt of such a notice by the party or firm sending the goods is very

apt to impair or affect the business standing of the party ordering, who, although having no intention whatever of defaulting in accepting the goods ordered, is confronted by embarrassing and what almost seems actual evidence of such an intention.

If a domestic parcels post was in vogue such a situation could not arise, for the package would be brought direct to the post-office of the consignee. The time, trouble, and expense that would thus be saved to our rural community should constitute no trivial factor in the consideration of this question while we are weighing the advisability of asking Congress to give us a domestic parcels post, for though in a single and individual instance the economy is not conspicuously manifest, the accumulation of such instances rolls up a total that would make the bank accounts of many of our multi-millionaires seem like a parody on wealth. Someone who has taken the trouble to dig for facts in the case and compute results has said that the enormous sum of \$30,000,000 is annually spent by the people of this country who reside in non-railroad communities, owing to the lack of the proper facilities for package transportation. In no event could the adoption of a domestic parcels post be considered as anything but a brilliant stroke of national economy.

The benefits to be derived by the people of this great country by reason of the adoption of a domestic parcels post are so apparent that the following table has been prepared to show the number of express offices in each State and Territory upon which our people now have to rely for the receipt and dispatch of their packages. The table also shows the greater number of post-offices at which the same packages could be received and dispatched if a domestic parcels post was in operation in this country.

For illustration, a careful perusal will show that in the great State of Pennsylvania there are only 919 express offices, whereas millions of packages are received and dispatched annually by the inhabitants of that State. It is shown that there are 5,206 post-offices or places at which the same packages would be received and dispatched under the domestic parcels post plan. What a great saving of time and money this would prove to the residents of Pennsylvania! Apply this illustration to the whole country and you will begin to realize what the parcels post means to this nation.

The table shows the average cost for express packages of 11 pounds from New York City to each State and Territory, compared with what it would cost to send the same package by parcels post, if the German domestic parcels-post rates were adopted. In making the comparisons, don't forget that the express package will go to the railroad station only, while the package sent by parcels post will go clear through to the post office of the person addressed.

It will also be seen that the German and Mexican exporters can reach our post-offices with their 11-pound packages much cheaper than we can, under our present system of private express companies, by means of which we only reach our railroad stations. The table shows the saving on each 11-pound package sent to an American purchaser when sent from Germany or Mexico, under their treaty terms, instead of from places in the United States.

States.	Average charge on 11-pound package from New York City to each State and Territory.	Number of express offices in each State and Territory at which the package can be received.	Number of post-offices in each State and Territory at which the same package can be received were a domestic parcels post established.	Postage on 11-pound package from any post-office to any post-office in the United States if domestic parcels post is established, at German rate.	Saving per 11-pound package by reason of using the mails instead of private express companies, based on New York City shipments.	German goods can now be delivered to any post-office in the United States in 11-pound packages for 68 cents. The following shows how much cheaper the German can deliver per package than we ourselves, based on New York City shipments.	Mexican goods can now be delivered to any post-office in the United States in 11-pound packages for 66 cents. The following shows how much cheaper the Mexican can deliver per package than we ourselves, based on New York City shipments.

To enable you to better realize the immense convenience to the people of this country that would result in their being able to receive their packages at their post-offices instead of at their express offices, your attention is invited to the fact that there is an average of only one express office to each 179 square miles in the United States, while there is one post-office to each 54 square miles. This means that each express office has an average of 3,371 people to serve, who are extended over 179 square miles, while there is an average of 856 inhabitants dependent on each post-office, who are located in 54 square miles.

HISTORY OF PARCELS POST.

Parcels post is not a Utopian scheme devised for the special benefit of any particular class of people possessed of commercial designs. It originated in the fertile brain of that great Englishman, Sir Rowland Hill, whose many and great postal reforms have caused his name to be revered as a public benefactor throughout the civilized world. Sir Rowland desired to institute the parcels post at the same time he introduced the penny post, in 1840, but at that early date English public sentiment had not reached the high plane to which it has since ascended on this subject, and the official public mind could not endure a more violent revolution than that to which he had already subjected it. He therefore refrained from pressing the parcels-post idea at that time, and devoted his whole time and energy to completing and perfecting his penny-post plan, which was then being given its first practical trial. History fully records how well this plan has succeeded. A contemporaneous poet tells us that—

"Every morning, true as the clock,
Somebody hears the postman's knock."

Forty years after Sir Rowland first started the penny-post idea the neglected portion of his plan was taken up and the parcels post was incorporated in the British postal system. It is useless at this late date to further eulogize Sir Rowland and his wise and sagacious plans, for their brilliant and enduring success has raised a monument to his memory that will endure for all time.

The following table shows what it costs to send a package from any post-office to any other post-office in the United Kingdom:

	Cents.
1-pound package.....	6
2-pound package.....	8
3-pound package.....	10
4-pound package.....	12
5-pound package.....	14
6-pound package.....	16
7-pound package.....	18
8-pound package.....	20
9-pound package.....	22
11-pound package.....	24

In Germany it only costs 12½ cents to send an 11-pound package from any post-office to any other post-office. The same low rate also applies on German packages that are sent to Austria-Hungary.

In Switzerland packages are carried from one post-office to any other post-office in the Republic for 8 cents for each 11-pound package.

ENGLISH AND GERMAN EXPERIMENTS.

England's commercial supremacy and Germany's immense foreign commerce are largely indebted to the admirable parcels post conventions they have consummated with nearly every foreign government on earth. At the same time they have not neglected to make their domestic parcels post a boon and blessing to their people. In either country it is possible to forward a package weighing up to 11 pounds with the same ease and certainly as that with which we can send an ordinary letter.

The British postmaster-general's report for the fiscal year ending March 31, 1899, shows that so long as there is a single foreign country with whom Great Britain has no parcels-post convention English vigor and energy will not be abated in their efforts to perfect her system of foreign parcels post, and to this end treaties were entered into during the year with Russia, Formosa, the Banks and Santa Cruz Islands, the Comoro Islands, Kiachow in China, Nigeria,

Guatemala, and Bolivia. This leaves the United States as the only important nation with whom England has yet to make a parcels-post convention. This she has made strenuous efforts to accomplish for the past fifteen years, but without success.

The British postmaster-general's report for the year ending March 31, 1900, contains some interesting information regarding parcels post. No new conventions were concluded for the reason that they have already closed with nearly every civilized country in the world, with the glaring exception of the United States. It shows that in England, Scotland, Wales, and Ireland, where the domestic parcels-post system of Great Britain is in operation, a total of 75,448,000 parcels were sent through the mails. This means about two packages for each inhabitant.

The British post-office authorities have ascertained the fact that whenever a British parcels-post convention is concluded with a foreign country it immediately increases the exchange of parcels between the two countries about 17 per cent.

The returns of the London Board of Trade show the value of the goods exported and imported during the last two years by foreign parcels post to be as follows:

Year.	Imported.	Exported.
1898-99	\$9,165,035.27	\$10,712,764.51
1899-1900	5,444,728.18	20,495,670.02

These facts form an eloquent tribute to the practical and successful operation of the English parcels-post system, both domestic and foreign. In fact, it is easy to see that the British post-office is run on liberal, far-sighted business principles, and this is, no doubt, why it was able to turn into the British treasury during the fiscal year a profit of \$18,070,772.97.

The annexed table shows the operations of the British domestic parcels post for the past fifteen years. It will be noted that the extent of its use has steadily and constantly increased.

Year.	Number of parcels.	Increase per annum.	Gross amount received in postage.	55 per cent paid to railway companies for transportation.	Post-office share.
1884-85	22,910,040		\$2,475,162.89	\$1,249,505.64	\$1,225,657.25
1885-86	26,417,397	15.3	2,882,772.15	1,455,876.70	1,426,895.39
1886-87	32,800,154	24.3	3,502,075.44	1,757,378.46	1,744,696.98
1887-88	36,732,000	11.8	3,953,290.68	1,988,984.03	1,964,306.65
1888-89	39,589,000	7.8	4,278,523.69	2,168,518.80	2,110,205.09
1889-90	42,852,000	8.2	4,636,790.31	2,353,700.22	2,283,090.09

1897-98	67,823,000	6.4	7,941,176.91	3,661,689.69	3,279,487.22
1898-99	71,913,000	6.0	7,295,742.13	3,858,877.29	3,436,864.84

EXPERIENCE OF FOREIGN GOVERNMENTS.

Other governments were not slow to adopt this new method of parcels communication in both its domestic and foreign features. The success of English experiments was hardly assured before Germany, France, Mexico, Spain, Italy, and many other countries began perfecting similar systems for themselves. These governments have followed closely in the footsteps of the British pioneer, with the result that these efforts have wonderfully improved their internal facilities of communication and made accessible to their citizens and manufacturers the people and markets of distant countries.

These countries have been well pleased with the results accruing to them from the adoption of a domestic and foreign parcels post, and the immense volume of business done through this system is an excellent indication of its manifest value to trade and commerce. I append hereto a table, compiled from the latest reports obtainable, showing the total number of parcels transported by the parcels-post method throughout the world and the use accorded both systems by the respective countries of the globe.

Names of countries.	Domestic service, number of parcels.	Number of foreign parcels—	
		Received.	Dispatched.
Argentina	400,052	26,849	8,622

FOREIGN MARKETS.

So long as our Government fails to take hold of this question in earnest and force to a successful conclusion parcels-post conventions with all the foreign governments, and so long as the domestic parcels post shall be delayed, so long will the commercial and manufacturing interests of the United States and the common convenience of its people await complete development.

We were told in one mighty breath during the political campaign just closed, and it is generally believed by the people of this country as being true, that we now have a postal system that is superior to that of any other country on the globe; but they failed to give us any information about the great good that would result from a quick and cheap package communication, neither did they enlighten us as to why such a great trade promoter has been withheld from the people of the United States.

They told us of the untold wealth awaiting us and the distant peoples who want our goods, yet they failed to tell us why we have not long ago invaded these markets that stand with outstretched arms awaiting our coming. We have the goods, and better goods, but we lack the means of putting them on these markets in competition with foreign merchants, whose unsurpassed trade facilities beget our astonished admiration.

I was recently informed by the Second Assistant Postmaster-General that the policy of the Department in entering into parcels-post conventions with the small Central and South American republics, while refusing to conclude them with the great European governments, from whom we would reap a much greater benefit, were due to the fact that these treaties were executed in the spirit of the Monroe doctrine, and hence were looked upon as being governmental acts of grace and charity to benefit and develop these southern countries.

Such paternal solicitude in behalf of our weak neighboring republics is well and good, but we should remember the old saying that "charity begins at home," and also give a helping hand to those interests of the United States which are struggling for a foothold in many markets of the world, and which must exert every faculty to keep up with European competition by reason of our competitors enjoying a foreign parcels post while we do not.

The Hon. GEORGE EDMUND FOSS, acting chairman of the Committee on Naval Affairs, United States House of Representatives, in a recent speech on the subject of the Navy, said: "We are building the Navy for commerce," and "the watchword of the coming century is 'commerce.'" Mr. Foss said: "We will seek the markets of the Orient," and "the Navy will play an important part;" but amid these optimistic commercial prognostications Mr. Foss did not tell us how our goods are to get to these distant markets and be sold in competition with goods offered at half the price we can afford to sell for. The goods, indeed, we could make and sell quite as cheaply as our alert rivals were we not obliged, on account of our having no parcels post such as they have, to pay 300 per cent or more than they for transportation.

OBJECTIONS TO THE PARCELS POST.

Having considered reasons for the adoption of both branches of the parcels post, let us now look at some of the objections that have been offered by those who are opposed to its adoption. No great reform has ever been without its opponents, and this is also true in respect to the parcels post.

We are informed by the gentlemen opposed to a domestic parcels post that there is a reason why it is such a benefit to the people of Europe which is not applied to America. We are told that it is owing to the absence of private express companies such as are in operation throughout the United States, and the resulting restricted facilities for package communication, that the parcels post is there such a popular and profitable system.

Just how much weight should be given to such a statement by an evenly balanced mind can easily be determined after considering the enormous benefits that accrue to the people of Europe by reason of their being able to receive and send their packages from the larger number of post-offices instead of from the smaller number of railroad stations, as is the case here in the United States, as well as a careful comparison of the respective package transportation rates of Europe and America. It will be clearly seen that a

vast difference exists in favor of the parcels post as the cheapest, most rapid, and satisfactory method of parcels transportation. No wonder, then, that there has never been a chance for private express companies to get a hold in European countries.

Yet, in the face of this unanswerable logic of dollars and cents and years of practical business experience, there are those who say it is questionable whether America would find in such a system the economy which Europe reaps. This is the same argument which was used against the reduction of letter postage. When England reduced her letter postage to 1 penny per letter, Lord Litchfield stated in the House of Lords that "of all the wild and visionary schemes I have ever heard or read, this is the most extraordinary." To which Lord Ashburton, in replying, said, "The noble earl, like all post-masters-general, seems to look more to the increase of revenue than to the general convenience of the public." No one will now say that it was a mistake to reduce the postage for letters. Neither will it be a mistake to grant a liberal parcels post, as it will prove as great, or even greater, convenience and saving to the people than the reduction of letter postage.

There can be no doubt that once public sentiment has been thoroughly aroused on this subject and our people come to understand the many virtues of this system of posts and the great benefits it will bring to all, real opposition to its immediate introduction will vanish like dew beneath the morning sun. Lincoln's words, "You can't fool the people all the time," will prove themselves true once more, when the public understand that the only real opponents of a domestic parcels post are a few persons mercenarily opposing the general good. Encouraged by the success of their previous efforts along this line, they unblushingly assert the public to be their legitimate prey and become indignant that anyone should seriously urge the adoption of a domestic parcels post.

In a recent address before the National Association of Merchants and Travelers, in Chicago, Mr. Louis M. Boswell, an opponent of the domestic parcels post, who, by the way, is the commissioner of a large western freight bureau, said:

"Every pound of freight to be transported is the legitimate source of revenue to the railroads. Freight should be transported as such by railroad companies in freight cars, and not by the Government as mail matter in mail cars."

In justice to the railroads in general, be it said, they do not seriously oppose the adoption of a domestic parcels post. The vice-president of "one of the leading Western railroads" is quoted as saying:

"I have long regarded the express companies as unnecessary middlemen. To me there seems no good reason why the railroads should not do a large share of the business which is now done by the express companies. Millions of dollars would be saved annually to the public if the express companies were done away with, and I do not believe the revenues of the railroads would be decreased."

It is not the direct or remote object of the supporters of a domestic parcels post to establish a public express company for the transportation of any and all kinds of packages. The idea of the adherents of a domestic parcels post is the enlargement of the functions of the mail service to include the transportation of packages of a reasonable bulk and weight, which can be done with ease, facility, and profit.

The objection most noisily dwelt upon by the anti-domestic parcels-post faction is that the adoption of this system would open to the large business houses of the cities the opportunity to conduct a mail-order business in all that territory which has hitherto remained the undisturbed field of the local or rural merchant. Their sole desire is evidently to prevent the slightest infringement of their personal interests, regardless of what such reforms would accomplish for the general good. In the address to which I have already referred as having been delivered before the National Association of Merchants and Travelers, Mr. Boswell said:

"It would be a fine thing for the Eastern merchant to have a parcels-post system whereby he could supply the people throughout the country and partake of trade which he could not otherwise secure, but wherein would the Western merchant be the gainer? What encouragement would there then be to the Western merchant to keep up fine stocks and have an extensive variety in his store?"

Note that Mr. Boswell makes no effort to disguise his question or confine his argument to legitimate merits, but plainly asks: "Wherein would the Western merchant be the gainer?" He, and he alone, is to be maintained even at the expense and sacrifice of every other interest.

A clipping from a Western trade journal, in an article addressed to rural merchants, reads in part:

"And what are you on earth for if not to look out for your own interests? * * * A parcels-post bill will doubtless be brought up in the next Congress. If it passes * * * they will make prices that will knock your business silly. * * * You are the one entitled to the trade of your town and neighborhood."

These statements are not only unwarranted and uncalled for, but are based on no foundation of fact. They are apt to create prejudice and engender a commercial spirit of sectional animosity. It is to be deprecated that intelligent and responsible men should resort to such shallow subterfuges to retard the advance of such a meritorious postal reform. The employment of such means but indicates that the opposition is in its last ditch, the skulking traducer of an honest reform.

It can not be denied that a parcels post, either domestic or foreign, will bring consumer and manufacturer closer together; that is its object. But I deny that it will obliterate the country merchant from the mercantile world. On the contrary, it will increase his sphere of usefulness and make his business of greater importance to his neighborhood. Those who are acquainted with rural stores have some conception of the variety of goods they contain, and all realize the fact that the larger the variety of goods carried in stock the greater the usefulness of that merchant to the community. The existing methods of transportation make it impossible for the rural merchant North, South, East, or West to procure goods with any degree of profit unless he obtains them in large bulk. To do this he must not only have the money with which to purchase, but must also have the store space in which to display his stock to good advantage. To the average rural merchant these necessities are generally lacking.

With the adoption of a domestic parcels post these same merchants, with the outlay of less capital and without the need of larger store space, could carry a greater variety of stock in small lots, with the knowledge that the moment an article was in danger of exhaustion his stock could be replenished without long delay or excessive cost for transportation. This presents a feature in the domestic parcels post so beneficial to the rural merchants that they will not be unmindful of the vast advantage it will prove to them. It would practically transfer the burden of carrying stock from the back of the retail merchant to that of the wholesale or manufacturing house, from there to be let out to the retailer as needed. This condition would increase and stimulate his business to an unprecedented degree.

Wholesale or manufacturing houses will never sell to the consumer at the same figure at which they sell to the merchant. The merchant is generally able to buy at a price anywhere from 20 to 60 per cent lower than the customer buying direct, the greater the quantity the greater the discount. For illustration, let us consider that the domestic parcels post is in full operation

throughout the United States, and that John Smith, a resident of a far Western or Southern rural community, after having read a newspaper advertisement, desires to buy a small household article manufactured by a California house. He finds that his own rural store does not keep this article, but the merchant to whom he communicates his desire requests that he be permitted to order it for him, as he can save him money. Smith is a little skeptical as to whether he will get what he has seen advertised as well through the merchant as he will by buying direct, but the storekeeper allays his mind on that score by giving him the following practical talk:

"You want the article referred to here in this advertisement. Its price is \$1."

"Yes, sir."

"Its weight, sent by parcels post, is given as 1 pound, which makes the transportation charges 6 cents (the English postage rate)."

"Yes."

"Then it will cost you \$1.06, will it not?"

"Yes."

"Now, I can save you money on that article, for I can purchase it for less than you can. As I am a merchant, I can get it at 40 per cent discount, or for 60 cents, hence making it cost me just 60 cents plus the parcels-post charges, 6 cents. I can sell it to you for \$1, which is less than you can purchase it yourself, save you the trouble of writing, and at the same time make 34 cents profit for myself."

"But I can do even better than that. I believe a few of these articles will sell well in this neighborhood. I will get a half a dozen of them. I can get a half a dozen at 50 per cent discount. The transportation of them by parcels post will cost 18 cents; consequently, they will cost me just \$3.18. That will permit me to put in my pocket a nice profit of \$2.18, or nearly 100 per cent on the money invested. You therefore see that, besides patronizing your home merchant, you actually save money for yourself."

The moral in this hypothetical case is obvious. This merchant, looking retrospectively (at that time), might also say:

"This I could not do had not the domestic parcels post come into operation. Under the old transportation system (mail) I would have had to pay 16 cents per pound, and as they then carried no packages of merchandise above 4 pounds I could not have ordered the six articles by mail. The same articles by express would have cost for the one 35 cents, for the six \$1.15. By freight the minimum charges would have been for 100 pounds, no matter what the actual weight might be, and then there would have been a question whether you would have gotten the article in time for this or next season's use."

It is no wonder the private transportation companies, who constitute the backbone of the anti-domestic parcels-post faction, should raise such an energetic protest against its adoption; but the monstrous audacity they exhibit in calling to their assistance the very commercial interests they ravish by their arbitrary dealings is an amazing piece of unprecedented effrontery. They know full well the rural merchants form a large percentage of their carrying trade, and so long as the present means of transportation remain in statu quo they can continue their legalized plundering with the impunity of a Mediterranean pirate. They also know that just as soon as a domestic parcels post makes its appearance their plundering must cease. They know that it is only a matter of a short time when the domestic parcels post will be an established fact. In their desperate situation, having no valid reason with which to ward off its coming, they shout the bugaboo of "large mail-order houses" in a vain attempt to "rally India for the subjection of India." However, that wide-awake and progressive class of gentlemen who constitute our smaller commercial interests will not be deluded by the falsity and imposture of such a cry, and will carefully sift the chaff from the wheat ere they take action that will "again curse the serpent that once struck them."

THE POSTAL DEFICIT.

One of the arguments that is being used with much gusto by those opposed to a domestic parcels post is the fact that there is already a large annual deficit in the Post-Office revenues, which, it is claimed, would be greatly increased by the adoption of the proposed system. That there is a present deficiency there can be no doubt; but that this deficiency would be increased by the inauguration of a domestic parcels post is a misdirection of sequences. I believe a complete system of foreign and domestic parcels post to be the proper remedy for our present annual deficit of over \$3,600,000, and that it would soon place our Post-Office Department on a self-sustaining and profit-paying basis. In support of this contention I cite the experience of foreign governments. In Germany, for example, they handle over 150,000,000 packages in their domestic parcels post alone. This means an average of about three packages to each man, woman, and child in Germany. The average weight per package was 9 pounds.

Let us apply these figures to the United States. As we now have a population of over 76,000,000 people, we would handle 238,000,000 packages. At the English rate of postage, the Post-Office Department would receive \$50,100,000. The cost of transportation to the Government would be 55 per cent, or \$27,585,000. This would leave 45 per cent, or \$22,515,000, from which to deduct the increased cost to the Government for handling the same. The balance would be clear profit. But this is not all. Nearly a hundred million of dollars would be saved to the people in actual cash—the difference between the small cost for postage and the large charges that would have to be paid to some private express company—to say nothing of the saving in time, expense, and trouble to the people in being able to receive their packages at their post-offices rather than at some distant express office.

In addition to this there would be a large profit to the people of this country by reason of a large balance of trade in our favor resulting from the exports, based on the experiences of both England and Germany, which would amount to over \$60,000,000.

AS TO COMMUNITY OF INTEREST.

In opposition to a domestic parcels post some effort has been made to discuss the subject of "community of interest" and the chances of local patronage going to points outside the community. The vital antagonistic principle of a "community of interest," i. e., commercial impoverishment without commercial nourishment, is not involved; and the effort to ascribe to it a stupendous "centralization of trade" is equally fallacious. The Constitution of the United States gives to Congress the sole power to regulate commerce between the several States. This virtually decrees the "community of interest" to be in the nation, and not in the State or locality. Therefore any attempt to involve the question of State as against State, or section against section, or locality against locality, or the establishment of internal "Chinese (trade) walls," is an assault against national unity and harmony. There must be no restrictions on commerce or intercourse between the several States, as they must unitedly and in common achieve their joint destiny.

Why are the opponents of a domestic parcels post so anxious to protect the rural merchant from the large American merchants? It seems to me that it would be more patriotic to urge both a domestic and foreign parcels post, so that both the rural and city merchants of this country can get to the home and foreign markets as cheaply as the German and Mexican merchants. The German and Mexican exporters now have access to all parts of the United States at rates for transportation vastly lower than is enjoyed by the American manufacturer himself. That such a condition exists when our

Government by a word could change it, savors of official discrimination against the American manufacturer in favor of the foreigner, and offers to the foreigner every inducement to supersede the domestic merchant in his home market. Our Government officials should not rest until they have placed at the disposal of the American people as good, if not better, parcels-post facilities and rates, both at home and abroad, as those enjoyed by our keenest trade competitors for the world's commerce.

NEWSPAPER OPINION.

That great public benefactor, "the press," has not been slow to see that a complete system of both domestic and foreign parcels post is a national necessity, and to it we owe many thanks for what has been done in behalf of this meritorious postal reform. The newspapers, magazines, and periodicals of the country will become to a much greater extent the means that will be used by manufacturers and commercial houses to advertise their goods when the domestic parcels post comes into popular use. When this much desired end is reached, we may look for a still deeper knitting together of the threads of internal commerce until the smaller articles of commerce may be as readily received at any post-office in any part of the United States as they now are in the large cities or at the place of origin.

EVIDENT RESULTS.

The evident results of the policy now being pursued by the United States Government, with reference to a foreign parcels post, is bound to injuriously affect all our commercial interests until this policy is changed. Of the European countries, Great Britain, France, Belgium, Norway, and others have been seeking parcels-post conventions with us, but to no avail. Mexico, our "natural and political ally and sister republic," and our great Central American friend, enjoys a parcels-post convention with us it is true; but it costs us 74 cents more to send an 11-pound package to Mexico than our German rival and 48 cents more for each 11-pound package than our English competitors. Is it at all strange that the Mexican merchant prefers to buy from Germany or England, where he can buy so much cheaper? Give us the same transportation rates, and you will see that we will outsell the European in Mexico.

With Brazil, also a sister republic and our traditional friend, we have no parcels-post convention whatever. To what is this due? Such a condition is not evidence of official progress in assisting the American merchant to "conquer the markets of the world." The late James G. Blaine said the pressing question in our foreign trade was, "How can you bring seller and buyer together?" He further said, "They do not really know in Brazil what we have to sell and what we are able to manufacture and offer them." These words, so pregnant with instructive warning, uttered nearly a quarter of a century ago by a man devoted to American interests, have never been acted upon, and to-day we are as apathetic as ever, while the progressive European governments reap rich harvests at our very door.

As an object lesson of the self-harm we are doing in neglecting the expedients for trade development resorted to by foreign governments, I quote from a United States Government report—the Monthly Summary of Commerce and Finance—for June, 1899:

"In 1897 Brazil imported goods to the value of over \$105,000,000, of which the United States supplied but about 12 per cent; Uruguay and Paraguay, \$22,000,000, of which 7 per cent was from the United States; the Argentine Republic, \$95,000,000, of which less than 7 per cent was from the United States. On the Pacific coast the importations into Chile were valued at \$24,000,000; Peru, \$8,500,000; Bolivia, \$11,600,000; Ecuador, \$7,000,000, the proportion from the United States being but 10 per cent. Thus the northern coast of South America imported goods to the value of \$36,000,000, of which the United States supplies 25 per cent, the eastern coast \$222,000,000, and the western coast \$51,000,000, the proportion from the United States on each coast being about 10 per cent."

This same Government report also says:

"While exports from the United States to Mexico have grown rapidly, especially since the opening of railway communication, and have experienced a moderate development in the case of the countries bordering upon the Caribbean Sea, the total sales to the countries south of us have not grown with the rapidity which has characterized those of the world at large. In 1865 our sales to the countries lying south of us were 20 per cent of our total exports; in 1878, a little less than 10 per cent; in 1888, a fraction above 10 per cent, and in 1898 but 7 per cent of our total exports."

This commercial treatment of these South American countries in strangling the only feasible means of cheap and efficient package communication is, as we see, obviously designed to create the very condition we have labored to prevent. These countries are driven to commercial dealings with Europe that sooner or later result in strong commercial and social attachments. Their financial interests become centered in Europe, they come under European influence, acquire European habits, sentiments, and ideas which finally develop into a disregard and aversion for the independent American customs we have labored so long to perpetuate, all of which is antagonistic to that great western bicontinental community of interest the foundation of which is the Monroe doctrine.

In order to obtain a better idea of the workings of the Mexican foreign parcels post, I recently made a trip to the City of Mexico. While en route on a mail steamer I was forcibly struck by the parcels-post communication between this country and Progreso and Campeche, small coast towns in Yucatan, where our steamer called to let off mail, freight, and passengers. I saw thousands of packages in the post-office at Vera Cruz from all parts of Europe. The European is not slow to grasp the benefits of this means of parcels communication, and seems to be using it with good effect. Germany, in particular, was well represented, the number of her packages being far in excess of those from the United States, which shows that American enterprise is not without successful rivals at the very borders of our own country.

While in the City of Mexico I sent to my address in the United States a small parcel weighing 3 pounds. The postage on this parcel was 36 cents, Mexican money, the equivalent of 18 cents, United States money. Had I wished to send the same package from Washington, D. C., the capital of the nation, to the city of New York, the cheapest rate I could have obtained would have been 25 cents. Thus you can see a Mexican can ship to any United States post-office by mail cheaper than we can send the same article to any place in the United States either by mail or by private express company. The injustice to the domestic sender under such a situation is self-evident and but another living argument for the establishment of a domestic and foreign parcels post.

It is the unfortunate truth that our commercial and manufacturing industries that seek a world-wide market pay dearly for their Americanism. These industries could locate in a foreign country and obtain the parcels transportation rates afforded by those governments to great financial advantage. Their patriotism, however, is too strong for that, and they remain and pay those excessive charges, suffer the injustice of governmental apathy and the wasting of business vitality that it may never be said that alien soil obtained them for a price.

We have the right to expect that our Government will do everything in its power to provide for our exporters the same or even better facilities, so far as package transportation by foreign parcels post is concerned, than is now enjoyed by our ever-alert rivals. It is not generally understood, but it is a fact, that in all these foreign parcels-post conventions that the country in

which the shipment of the package originates retains the entire charge for the postage. For example, take an 11-pound package that is sent from the United States to Mexico; the postage on the same will be \$1.32. This entire amount goes to the United States Treasury. Our Government conveys the package to the Mexican border, and from there the Mexican Government takes the package to its destination without receiving further pay from the United States Government than the reciprocal privilege of retaining the entire postage charges on such packages as are sent into the United States from Mexico, the United States Government receiving and forwarding the package from the Mexican border to its destination in the United States.

The same arrangement is followed out in all parcels-post conventions. In a great commercial country like the United States, where the balance of trade is greatly in our favor, we have everything to gain by such an arrangement, and it seems to me that our post-office officials should need no urging to give us the lowest possible rates, for, with lower rates to the post-offices of the world, what have we to fear from foreign rivals? It is only while we are handicapped by excessive transportation charges that we really fear competition.

By a careful study of the foregoing table, that shows the number of packages imported into the various countries, in connection with the following table, showing the comparative rates of postage, it will be seen that Germany has been most liberal in giving her manufacturers, merchants, and people the cheapest possible rates—13 cents for 11 pounds—to the neighboring country, Austria-Hungary. Note the results: Austria-Hungary leads the world in the number of packages imported, and Germany leads the world in the number of packages exported. This wise and farseeing policy of the German Government in looking more to facilitating her export trade than in increasing her postal revenues has caused the hum of the workshops and factories of Germany to be heard around the world, many of them making imitation American goods to be sold on the demand we have created but can not supply because the German Government is wise enough to give its people cheap postage transportation, both at home and abroad.

Contrast this policy with our own. Take Mexico for example: Our postal officials, looking for postal revenue instead of commercial extension, compel us to pay \$1.32 for an 11-pound package for Mexico, while England and Germany, located on the other side of the Atlantic Ocean, given their people a rate for an 11-pound package of only 84 cents and 58 cents, respectively. Is it strange that Europe dominates the markets of Mexico?

What would be the results if our Government should wake up and, as a matter of commercial strategy give us the same rate to Mexico that Germany gives to Austria-Hungary, viz, 13 cents per an 11-pound package? Do you believe that Europe would long be a successful competitor in the smaller articles of commerce? If it would work well with Mexico, why not extend these cheap transportation rates to other countries?

The following table will prove both interesting and instructive to those interested in the foreign commerce of the United States. The facts are compiled from the latest obtainable foreign and domestic Government and private publications. The figures are reduced to United States money. In comparing the postage rates with private transportation companies' rates, it should always be borne in mind that wherever a rate is given by a private transportation company it is intended for railroad stations or coast port towns only, while all the parcels-post rates take the package to the post-office of the party addressed. It often costs the resident of a foreign country more to get a package to his residence from the railroad or coast town, where it has been left at his risk and cost by the private transportation company, than from America to this same coast or railroad town.

It is not strange that the foreign importer prefers to receive his packages from an exporter who can send them by parcels post, which not only delivers the same at his post-office, not only saving him the trouble and expense above referred to, but also saving the expense of port fees, custom-house brokerage, etc.

In consulting the following table it should be borne in mind that the private express companies' charges mentioned therein are from Washington, D. C. If from other parts of the United States, the charge from point of origin to New York must be added to the rate mentioned in the table. Also remember that where no rate is given that there was either no service to be had if by parcels post or no rate to be obtained if by private express company. Table showing the postage charges on 11-pound packages when sent by parcels post from England, Germany, Mexico, and the United States (when this can be done) to the various countries and colonies of the world; also showing the charges on the same packages, for transportation alone, when sent from Washington, D. C., by private express companies.

OUTWITTED BY FOREIGNERS.

The story comes from a reliable source about two prominent United States post-office officials who this spring made a tour to inspect the postal systems of some European countries, how while abroad they visited a country which had made a number of efforts through these same officials to conclude a parcels-post convention with the United States, but with no success. They were greatly surprised to behold in a post-office in that country a placard announcing that packages would be received for transmission to the United States by mail. They made up a package and posted it, and when they returned to the United States the package awaited them. An investigation revealed the fact that there was a combination between this foreign country and a private express company in the United States by which this company delivered in the United States packages transferred to it at a foreign seaport. By this arrangement this foreign country is to-day enabled to place its goods in any part of the United States at an insignificant cost, while we, on the other hand, are unable to send our goods there by parcels post, and are obliged to pay the extremely high figures extorted from us by ocean express companies.

For years before the German Government was able to induce our postal officials to conclude a parcels-post convention with her she published in a large Government publication, devoted to giving the transportation rates for parcels posts to foreign countries, a schedule of charges on packages sent by mail to each State and Territory in the United States. Packages thus sent were taken by the German mail steamers to New York City, consigned to a German representative, and by him reshipped by private express companies to the nearest railroad station of the party for whom the package was intended, at prices as cheap or cheaper for transportation in the United States as those "enjoyed" by our own people.

It is needless, however, to say that the American shipper had no such opportunity for cheap transportation to Germany until the present parcels-post arrangement went into effect with Germany. The one-sidedness and injustice of these conditions is apparent to even the ordinary observer, and is but a natural result of the attempt to stifle parcels communication by mail between intelligent and civilized nations.

NEED FOR UNITY OF ACTION.

It now seems that Congress should be earnestly importuned to establish a liberal domestic parcels post at an early date, and that the postal authorities should also be persistently urged to begin negotiations at once with every foreign government for the immediate inauguration of a foreign parcels post service with each respective government. A letter to President McKinley by the manufacturers and exporters, urging this action, would no doubt greatly hasten the early establishment of foreign parcels post with foreign governments. Those who are farsighted enough to see the good bound to arise from the consummation of the ends here sought should heartily join in putting their "shoulder to the wheel" for the general welfare. One common unity of action by those interested in the material development of our country may serve as an intimation to the proper authorities that the time has arrived when every voice is calling for both the domestic and foreign parcels post; and to that end let every business, commercial, and social organization petition or memorialize their Representatives and Senators to do what they can for the institution of this system, and let every voter see that his Congressman knows his views and urge him to their enactment. This he can do by sending him a letter similar to the following:

—, 1900.

MY DEAR SIR: As I am one of your constituents, I take the liberty of addressing you upon a subject which is apt to engage your attention while discharging your Congressional duties.

I refer to the parcels post, and I wish to impress you with my sincere desire for its early adoption. To this end I trust you will give your hearty and cordial support and cooperation, with the result that we shall soon have a liberal system of both domestic and foreign parcels post in full operation.

Trusting that if the initiative along this line is not promptly taken by your colleagues you will do so yourself, I remain,

Yours, very truly,

CONVENTION WITH GERMANY.

Before I close I should like to register a protest against the conduct of our postal officials in agreeing to a parcels-post convention that is remarkable for its discrimination against the American exporter and the advantages given to his German rival. I have been informed that the Superintendent of our Bureau of Foreign Mails is responsible for the terms of this convention; also for the present unbusinesslike and un-American foreign parcels-post policy of the Post-Office Department.

I am not surprised that such a policy has not given great advantages to

the American exporter; in fact, I rather expected and looked for some such result, knowing the character of the men aiding and defending Germany's commercial growth and the high aims which animate them.

Our convention with Germany went into effect on the 1st day of October, 1899. The treaty provides that parcels sent from Germany may be transported at the rate of 1 mark and 60 pfennigs, which is 38 cents, when not weighing over 2.2 pounds, and for all parcels over that weight and not exceeding 11 pounds, 2 marks and 40 pfennigs, which is 58 cents. On the other hand, the American exporter must pay 12 cents per pound straight. The receiver of the parcel in each country pays a "delivery fee" of an amount equal to 5 cents.

As an example of the practical workings of this system of charges, let us examine the German and American cost of the sending of an 11-pound package. The cost from any post-office in Germany for its transportation to any post-office in the United States will be 58 cents and a "delivery fee" of 5 cents, making a total of 63 cents. The cost from any post-office in the United States to any post-office in the German Empire, for its transportation, will be \$1.32 and a "delivery fee" of 5 cents, making a total of \$1.37. A little calculation will therefore show that under this treaty the American exporter of an 11-pound package of merchandise really pays over 100 per cent more for its transportation than his German rival. This, too, while we are declaiming about the commercial supremacy of the world and the protection of American manufactures. Are we to understand by this treaty that an export tax is to be paid by the American exporter for the protection and benefit of his Teutonic competitor?

It should not be understood that American commercial interests do not desire or appreciate a parcels post treaty with Germany, for they do; but the point of their protest is the discriminatory rates between the citizens of the two countries, whereby the German obtains advantages far in excess of those afforded to the American. When questioned on this advantage permitted to the German, after discussing the rates, the Postmaster-General replied:

"It will be seen from the foregoing that senders in the United States have a decided advantage in the case of parcels not weighing more than 4 pounds; that the rates for 5 pound parcels are about equal, while senders in Germany have an advantage in the matter of parcels weighing over 5 pounds."

"The parcels post being intended to provide facilities for the exchange by mail of small parcels, for the transmission of which no provision is made in the regular mails exchanged with foreign governments, it is thought that the lower rates applicable in the United States to parcels weighing less than 5 pounds more than counterbalances any advantage that results from the lower rates applicable in Germany to parcels weighing 5 pounds or more."

This theoretical speculation as to the practical workings of this system of charges may look very well on paper, but a statement made by the head of the department having charge of the foreign parcels post of the business done under this system between this country and Germany from October 1, 1899, when this arrangement went into operation, up to June 30, 1900, the end of the last fiscal year, shows that we sent to Germany 16,247 parcels, while Germany sent here 26,659 packages. This balance of trade in favor of Germany is exactly what might have been expected as the natural result of such a system of transportation rates.

In the 1899 report of the Hon. Charles Emory Smith, Postmaster-General of the Post-Office Department, referring to the convention with Germany, we find the following:

"It will present the most important test which has yet been offered of the feasibility, efficiency, and cost of using the mails for the transmission of merchandise within limited weights, and the result of its practical operation will be carefully watched by the business community as bearing in the most significant way upon the further development of the system."

If we are to have a "test treaty" for the purpose of determining whether it would be expedient to enter into parcels-post conventions with other European countries, let it be a fair test and not such a one as is afforded by this convention with Germany, where manifestly every chance is against the American exporter and in favor of the German importer. Does not this smack of a cunning design by those opposed to the parcels post to procure a Government report against its expediency?

CONCLUSION.

Owing to the fact that advance copies of the annual report of the Superintendent of Foreign Mails have just been given to the press, in which he has treated the subject of parcels post at greater length and with more consideration than he has heretofore seen fit to accord it, I desire, before closing this article, to give him full credit for what he has said therein, by inserting in full that portion of his report devoted to foreign parcels post, and to charge him with what he has left unsaid upon this important subject. He says:

"There can be no doubt that the international parcels post is a great convenience to the citizens of the United States and of those countries with which we have the parcels-post service, as it enables them to exchange quickly, conveniently, and at a moderate cost packages of merchandise which are not allowed to be sent in the regular mails and which if regularly imported would be subjected to freight charges and consular and custom-brokers' fees to an amount which would be prohibitive."

"The great public convenience afforded by the parcels post is at once apparent when it is remembered that no provision is made for the transmission in the regular international mails of articles of miscellaneous merchandise, unless the articles are sent as bona fide trade samples, having no salable value, and unless they are not subject to the custom duties in the country for which they are destined. Packages addressed for delivery in a foreign country are accepted for mailing in the United States if postage thereon is prepaid in full at the letter rate of 5 cents a half ounce, for the reason that when letter postage is prepaid in full on a package the package is supposed to contain a letter, and for the further reason that the Department is not advised whether the articles inclosed are dutiable in the country to which the package is addressed. But the country is at liberty to return the packages to the United States as having been dispatched in contravention of the provision against the transmission in the international mails of articles having a salable value, or to seize them as violating its customs regulations, and for such return or seizure there is no redress. In these conditions the parcels post affords the only channel for the legitimate exchange of packages of miscellaneous merchandise by mail between different countries. It, in fact, gives to persons in different countries substantially the same facilities for the exchange of small parcels as is afforded in our domestic service by the provision for the admission to the mails of 'fourth-class matter.'"

It will be seen that some of these ideas are clothed in such ambiguous language that it is by no means easy to understand all that is written. One fact, however, stands out clearly, there are no recommendations of any kind.

Some of the conclusions we draw from this report are that the Post-Office Department practically admits that the present foreign transportation facilities for packages of merchandise without the parcels post are almost absolutely "prohibitive."

The last sentence of the report quoted above is misleading and inaccurate in the extreme. It gives the reader to understand that the United States has the most liberal postal arrangements of any country in the world for the transportation of packages of merchandise, and that when once the other countries of the world are so fortunate as to have secured parcels-post conventions, they will then, and not till then, be able to enjoy the same

extraordinary liberal and much to be desired postal facilities for the transmission of packages as is now enjoyed by the citizens of the United States, who are much to be envied in this special particular.

It is well known that a citizen of the United States can not send a package of merchandise through the United States mail that weighs over 4 pounds, and that the postage on such a package is 64 cents. It is also known that a resident of England can send a 4-pound package for 12 cents, and even an 11-pound package can be sent to any post-office in the United Kingdom for 24 cents; that a resident of Germany can send an 11-pound package to any post-office in the German Empire or in Austria-Hungary for 12 cents, and that in Switzerland an 11-pound package can go to any post-office in that Republic for only 8 cents.

I believe that I have thoroughly demonstrated the need of a domestic and foreign parcels post, and have impartially covered the serious objections offered to them. Again I wish to urge the need for one general and common unity of action. As we have outgrown the stagecoach and the horse car, so we have outgrown the arbitrary, extortionate, slow, and ill-equipped express companies which with antiquated systems hamper our whole commercial activity. We need cheaper, better, quicker systems, both internally and externally, for parcel transportation, and they are bound to come. If what I have said has aided in my mind that when the day of the domestic and foreign parcels post is reached the United States will become the natural purveyors to both the Orient and the Occident of those articles of commerce that minister to the needs of mortal man.

The Late Alfred C. Harmer.

REMARKS

OF

HON. JOSEPH C. SIBLEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 8, 1900.

The House having under consideration the following resolutions:

"Resolved, That the business of the House be now suspended that opportunity may be given for tributes to the memory of Hon. ALFRED C. HARMER, late a member of the House of Representatives from the State of Pennsylvania.

"Resolved, That as a particular mark of respect to the memory of the deceased, and in recognition of his eminent abilities as a distinguished public servant, the House, at the conclusion of these memorial proceedings, shall stand adjourned.

"Resolved, That the Clerk communicate these resolutions to the Senate.

"Resolved, That the Clerk be instructed to send a copy of these resolutions to the family of the deceased."

Mr. SIBLEY said:

Mr. SPEAKER: It is indeed a privilege to join with my fellow-members in offering tributes to the memory of ALFRED C. HARMER. He was not alone an honor to our Commonwealth and our country, but an honor as well to the whole brotherhood of man.

In the Fifty-third Congress, through my close personal relations with the Hon. W. H. Hatch, of Missouri, I came to know and enjoy those traits of character which endeared Mr. HARMER to his associates. ALFRED C. HARMER and W. H. Hatch were conspicuous for their loyalty to party principles, the one a Republican and the other a Democrat, and yet between them there existed a friendship such as is too rarely found among men. They were as Jonathan and David in their union.

Never had I known two men in many points of resemblance so much alike, both giants physically and richly endowed mentally; but, beyond all else, endowed with large, warm hearts and clear moral perceptions. Personally they feared nothing in this world except to do a mean action. In battle fearless, bold, and rugged, always ready for the rough encounters of daily life, and yet to the last preserving those kindly instincts and human sympathies which were as easily awakened as those of the gentlest woman, producing such characters through the blending of loftiness and simplicity as we by common consent ascribe to those knights of old who graced the round table of King Arthur. Mr. Hatch, in the absence of Mr. HARMER, has talked to me for hours about his friend HARMER and his rare virtues, and, as a mutual friend of both, HARMER would tell me how the world was blessed by a man like Hatch.

Mr. Speaker, from this mundane sphere of activity both have passed to that higher sphere, to that truer, better life, where we may fondly trust the union between such friends is now complete and abiding. In these few words I join again these friends, for together I learned to know, respect, and love them. What new member of Congress that was not indebted to them for kindly words of counsel and for kindly acts performed? They lived not to themselves alone, but they lived for others; and many lives were brighter, many homes and hearts were blessed, because of the lofty purposes, the noble impulses of these two men.

ALFRED C. HARMER died the "Father of the House." W. H. Hatch died a private citizen, after conspicuous public service of many years. No eulogies upon Mr. Hatch have, consequently, been presented in this Chamber, but on this occasion I trust it is not amiss to thus refer to one of Mr. HARMER's friends and colleagues who first gave me to know the grand traits of character of ALFRED

C. HARMER, who, through an innate modesty and natural reserve, did not reveal altogether to the casual observer his strength, his nobility, and his real worth as a private citizen and a legislator.

The memory of ALFRED C. HARMER will forever be cherished by those who, like us, have had the opportunity to know his real value to his friends, his Commonwealth, and his country.

War-Revenue Reduction.

"Let us be true patriots and wise statesmen, fearing not to right a great wrong, but, boldly taking up our duty, give to the people a just and equitable revenue measure."

SPEECH

OF

HON. JAMES A. NORTON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 15, 1900.

On the bill (H. R. 12394) to amend an act entitled "An act to provide ways and means to meet war expenditures, and for other purposes," approved June 13, 1898, and to reduce taxation thereunder.

Mr. NORTON of Ohio said:

Mr. CHAIRMAN: In the history of governmental transactions and legislation along the line of revenue production a stamp tax has always been regarded as an emergency measure, an unusual course to raise money for an extraordinary purpose, and it has always been argued whenever this unequal and unjust legislation has been proposed that as soon as the necessity passed by, the law would be repealed; but again and again history has repeated itself over and over and a long-suffering people have borne the burden of special taxation that a few might be benefited and prospered beyond measure.

This war-revenue tax is no exception to the long record of past experience. The framers and advocates of the measure expressly promised in unequivocal language that the act would be repealed at the close of the war. "If the war closes in six months, then in six months the bill will be repealed," were the words of its able champion, the lamented Mr. Dingley, and yet two years ago the war closed, and the war tax we still have with us; at least, we are told that there is no war; that it closed when the treaty of peace was signed and we paid out \$20,000,000 to Spain.

To-day our troubles in the Orient are simply neighborhood quarrels, and our brave boys are only acting as police squads, trying to preserve the peace, so of course there is no occasion for emergency taxation or the continuance of a war-revenue tax, and it should be repealed. But there is opposition. Why does it exist, and from whence does it originate? It is not always easy to delve deep in psychological springs of action, but sometimes, when the connection between cause and effect is so apparent, it does not seem difficult of solution. Mr. Chairman, I fully realize that the expenditures for war purposes were of great magnitude, and that incident to the war there is a continuing of indebtedness or continuance of need for great outlay to meet the enforced conditions consequent to the conduct of even a brief war; but, sir, a prudent business man adapts himself to the occasion and practices economy, and our nation should do the same. We have piled up an immense surplus. For the fiscal year of 1902 the Treasurer estimates a surplus of \$26,000,000, notwithstanding the enormous increase in national expenditures wholly due to imperialism.

At the extra session of Congress the Dingley tariff bill was enacted into a law. It was supposed to be the product of the financial and commercial genius of the nation's representative men, and as the result of the wisdom and business acumen of its creators we were told to build high our expectations of unexamined prosperity; that from the moment of its enforcement abundant revenues would flow into the coffers of the Government, mills would be opened by the thousands; that there would be no spot under the protecting fold of our flag where the hum of industry would not be heard; but this is all ancient history. You all know how bright and fair was the picture drawn, and how loud were the assurances given of the reality of their iridescent prophecies; and yet I need not to tell you what is written in your hearts and branded on your memory—how the Government failed to realize on the pledges made by those who had been nourished by its favor, fostered and protected by its care; how their promises were false, and proved to be the Dead Sea fruit of disappointment and failure. How reads the record?

Did the balance sheet of the Government, as made up by the Treasury officials, show that our "coffers were full," we had "riches untold?" Nay, not so! From the very first down through

every summing up, at the close of every month's business down to the present time, the Dingley tariff bill has been a deficit producer, and it is only by the mighty drain upon the resources of the people, through the far-reaching effect of the war-revenue bill, that we as a nation have been able to pay our bills. Do you say, then, that if this is the only source of sufficient revenue, why not continue it? We are supposed now to be on a peace basis, and our people are entitled to the enjoyment of all the blessings of peace, and our revenues and expenditures should now be so harmonized that this beneficent result could be attained. There is a vast field for legislation ready to be cultivated. The present tariff bill is the fertile parent of many a trust which fails to bear its fair and just share of taxation. I admit that if to-day the receipts from this war-revenue bill were cut off we could not pay our running expenses, but we can so legislate that even the mighty expenditures of the present can be met and the burden be more equally and justly divided.

Revise the tariff bill and pass an income tax and the Government will have a full treasury.

This bill is a step in the right direction, but it does not go far enough. The whole war-revenue bill should be repealed, but this Republican majority propose to manipulate it to suit the purposes of the few people who control and dictate the policy of the Administration.

In the matter of the beer tax this bill is unjust and discriminates against a legitimate industry. It is out of all proportion when considered with other commodities. If it were equal—if other industries of equal importance and extent were taxed to the same limit, while the tax would still be an onerous one, there would be no complaint; but this bill selects out this one industry, and because it has always met the demands made upon it for revenue in cases of emergency in the past, it now seeks to continue the double tax upon beer products.

We hear about rich brewers, with their fine residences and magnificent surroundings, as if out of all the business interests in the nation they were the only ones who had been fortunate. We hear no charge against them, though, of profiting by illegitimate schemes, but only that by close attention to business and watching expenses they have by frugality and care amassed a fortune. Let me ask, Are there not other rich classes? How about the Standard Oil people? How about the wire and steel magnates? How about all the multimillionaire members of the huge trusts that overshadow the land? Are none of these people wealthy, having fine homes and palatial country places? Why should not these be taxed as well as the brewers, or why should not the brewer be exempt if the steel king pays no special tax?

Then, in this connection, there is another glaring injustice in the existing law which should be, and justice demands must be, removed. In the placing of a five-dollar stamp upon every barrel of wine bottled there is a tax of 33½ per cent upon the valuation of the wine, and a blow is struck against the largest single industry in my district that is almost fatal. Our Government is based on liberty, equality, and justice. Why not be true in our legislative acts to the basic principles of our nation?

Let me read what the wine growers say upon this proposition:

HON. JAMES A. NORTON:

We, the undersigned wine growers, do strenuously protest against the continuance of the war tax or internal revenue on domestic bottled wine.

This is one of the most important products and industries of this country, although still in its struggling infancy and battling for life against the imported products and the prejudices in favor of the foreign products, and should be relieved of this burden as soon as possible and consistent with the demands and necessities of the National Government; and not only this, it needs all the fostering care and protection that our National Government can give to it, for with due nurture and protection this industry is destined to be second to none in importance to this country and the tide of importation changed to exportation, for we can, and do already, grow the finest grapes in the world, and there is no reason why we should not, to a great extent, supply the world with "the best wine in the world." A good, pure wine is the Creator's gift, while whisky and beer is the concoction of man.

We trust you will give this matter your prompt, persistent, and untiring attention and demand to the utmost of your ability and influence the removal of this burdensome tax.

The Sweet Valley Wine Co., per W. H. Reinhart, president; The Diamond Wine Co., per Pelz; The Engels & Krudwig Wine Co., Hugo F. Engels, secretary; A. Schmidt, Jr., & Bro.; The B. P. Sexton Co., C. L. Blatz, treasurer; A. Pentor, manager; Jno. G. Doon; The M. Hommel Wine Co., per M. Hommel, president; C. H. Strube Bottling Works; Edw. P. Moos; The Duroy & Haines Co., E. J. Haines, treasurer; E. L. Sleut; Aug. Guenther.

The truth of the matter is that the Republicans think to curry favor with a class of people who arrogate to their possession the entire morality of the nation by laying this burden upon the brewers and appealing to their patriotism to bear it. The express companies are equally able to bear as heavy a tax as the brewers, but they are left out. The intention of Congress, in passing the war-revenue bill at the outset, was that the express companies and the telegraph companies should pay the stamp tax, as the railroad companies do; but the wealthy people at the head of the express and telegraph companies, people who also live in fine houses, said no, they would not bear any share of the burden of government,

and from the outset have evaded the provisions of the stamp act by compelling their patrons to pay the tax.

Taxation should be so regulated as to rest equally upon all. To secure the protection of government, government must be maintained, and those who profit by the protection and care of government ought to aid in its maintenance. Accumulated wealth is under as great, aye, greater, obligation to do its proper share as is the laboring man who pays his tax from his meager earnings; but all taxation should be based upon justice and be uniform in its application. Further than this, taxation should not be oppressive, nor so heavy as to create a large surplus in the government treasury. I realize the trouble the Administration leaders are confronted with. All through the last campaign they cried "Prosperity is here," and promised the nation a continuance of prosperity if their party was successful; that President McKinley held the magic wand which alone could maintain "prosperity." Some of their party organs still keep up the cry, and even when the young speculator in Chicago forced the price of corn up to 50 cents a bushel last month the farmers of the West were told that "McKinley did it."

Here on the floor of this Chamber, however, the leaders are beginning to hedge, and the able member from New York [Mr. PAYNE] says: "We can not tell what may happen. We can not predict a uniform prosperity in this country during the next four years." And so they wish to continue this burdensome, vexatious war tax on through the years, so that when the inevitable business depression comes, and it is bound to come, this Administration may not be in the condition of the Cleveland Administration, which was confronted by a large and continuing deficit under the operation of the McKinley tariff. They state that this bill will cause a reduction in the revenues of \$40,000,000 a year. This is not enough.

From the receipts under the operation of this bill, if it passes Congress and becomes a law as it is, there will be a surplus on the 30th of June, 1902, of over \$146,000,000, exclusive and wholly independent of the Treasury redemption fund of \$150,000,000. Now, the people of this country need this money to use for themselves instead of having it piled up in the Treasury, the target for assault from all manner of syndicate schemers.

This tax was imposed for the purpose of carrying on a war with Spain. That war was long since over. Let us, then, now repeal the whole act, and not continue the grievous burden for the purpose of either carrying on war with China or with the Filipinos, neither to aid and abet syndicates and trusts to profit by their opportunity to plunder under existing laws. Let us be true patriots and wise statesmen, fearing not to right a great wrong, but, boldly taking up our duty, give to the people a just and equitable revenue measure.

Repeal of War-Revenue Taxation.

SPEECH OF

HON. JOHN W. MADDUX,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 14, 1900.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 12394) to amend an act entitled "An act to provide ways and means to meet war expenditures, and for other purposes," approved June 18, 1898, and to reduce taxation thereunder—

Mr. MADDUX said:

Mr. CHAIRMAN: I desire to call the attention of the House to some remarks made by the gentleman from Ohio [Mr. GROSVENOR]. The newspapers report him this morning as saying that—

The Republican party while in power had never shown a deficit of the Treasury. When questioned about the old story that ex-Secretary of the Treasury Foster was preparing to issue bonds just before Cleveland's Administration came into power, General GROSVENOR said that the bonds were ordered prepared after consultation with Senator, afterwards Secretary, Carlisle. Subsequently Secretary Foster changed his mind, and the preparation was discontinued.

I also understood the gentleman from Ohio to say yesterday that when the newspapers had announced that Mr. Cleveland was elected for the second term, the receipts of the Treasury immediately began to fall off. I want to call the attention of the House to some figures from the Treasury Department, to show exactly what did happen.

The receipts of the Treasury in excess of expenditures for 1888 were \$111,341,273, in 1889 they were \$87,751,090, in 1890 they were \$85,040,271. During 1891, the year after the passage of the McKinley bill, the receipts in excess of the expenditures were \$26,838,541. In 1892 they were \$9,914,453, in 1893 they were \$2,341,674.

So now it will be observed from the reports of the Treasurer that this falling off of the Treasury receipts did not begin on the event of Mr. Cleveland's election.

During the year 1894, in which the McKinley bill was still in force, the expenditures exceeded the receipts \$68,803,260, although the expenditures were \$16,000,000 less than the year previous.

On the 1st day of March, 1889, the beginning of President Harrison's Administration, the funds in the Treasury actually available, exclusive of the \$100,000,000 gold reserve, were as follows: Agency accounts, \$64,502,445.02; net balance in Treasury, \$165,846,471.10—a total of \$230,348,916.12 in the Treasury when President Harrison began his Administration.

Mr. GAINES. That was net.

Mr. MADDOX. That was left by Mr. Cleveland.

On the 1st day of March, 1893, at the beginning of Mr. Cleveland's last term, the funds in the Treasury actually available, exclusive of the \$100,000,000 gold reserve, were as follows: Agency account, \$38,365,832.90; net balance in Treasury, \$24,084,742.28; making a total of \$62,450,575.18.

From the 1st day of March, 1885, the beginning of Mr. Cleveland's first term, to March 1, 1889, the public debt was reduced \$341,448,449.20; and from March 1, 1889, the beginning of Mr. Harrison's term, to March 1, 1893, the public debt was reduced \$236,527,666.10.

In addition to the ordinary receipts of the Government, there was covered into the Treasury during the Administration of President Harrison \$54,207,975.75, which was a fund held in trust for the redemption of national-bank notes.

From March 1, 1885, to March 1, 1889, the entire income of Mr. Cleveland's first term was \$1,451,666,346.74.

The amount received during Mr. Harrison's Administration, from March 1, 1889, to March 1, 1893, was \$1,539,723,590.58.

The amount expended during Mr. Cleveland's Administration, exclusive of bond purchases and the premiums thereon, was \$1,063,233,202.93.

Under Mr. Harrison's Administration, exclusive of bond purchases and the premiums paid thereon, the total expenditures were \$1,330,394,780.53.

The receipts under Mr. Harrison's Administration exceeded those under Mr. Cleveland \$88,063,343.84.

The expenditures of Mr. Harrison's Administration were greater than those of Mr. Cleveland's Administration by \$267,171,577.62.

Yet Mr. Cleveland retired nearly \$110,000,000 more of national debt than did Mr. Harrison, and still left an available surplus to Mr. Harrison of \$88,000,000 when he took charge of the Government.

Now, with regard to the receipts beginning to fall off immediately after the newspapers announced the election of Mr. Cleveland, I want to call to the attention of the House the testimony of Mr. Foster before the Ways and Means Committee.

Secretary FOSTER. Now, I want to say to you these estimates are based upon conditions existing prior to the late election [1892]. What effect the expectations of the public will have upon the revenues I do not undertake to estimate. For the first time, this month begins to show that effect. The revenues for the present month [February, 1893] will be about what they were last year [1892].

That evidence showed conclusively that the receipts in the month of February, 1893, were what they were, according to his testimony, in 1892. Now, these facts will show that the receipts in the Treasury began to fall off—that is, in comparison with the expenditures of this Government—down to \$2,000,000, or a little over \$2,000,000, available funds was in the Treasury when President Cleveland took charge of the Government. Or we may say that so far as the receipts were concerned there were \$30,000,000 excess in the Treasury, which consisted of subsidiary coin, and not available funds. We are told by gentlemen on the other side that it was the election of Mr. Cleveland that brought this condition of affairs about in this country, when the Treasury returns show for themselves upon their face that they declined from year to year.

Now, what else? On the 20th day of February, 1893, Mr. Foster ordered a print of bonds, as the record of his own order shows. On the 25th of that month he appeared before the Ways and Means Committee and advised them to raise the revenue at least \$50,000,000, when no Democratic Congress had convened, when President Cleveland had not been sworn in, and when for sixteen months thereafter had the revenues been affected by any Democratic legislation.

Mr. GAINES. If the gentleman will permit me, I want to state right in that connection that Mr. Secretary Foster ordered these bond plates on the 20th of February, and on the 25th, when he appeared before the Ways and Means Committee, he said nothing about ordering the bonds or the bond plates.

Mr. MADDOX. That is true: he said nothing about it. Still they were anticipating this deficit, and yet when Mr. Cleveland was inducted into office the Treasury was practically bankrupt and ready to go into the hands of a receiver. Still we are told that his administration produced a panic. So much for that.

Now, Mr. Chairman, as to this present bill I want to say for myself, speaking for myself alone, I do not see very well how this bill that the gentlemen present to us to-day could be bettered; that is, viewing it from your side of the House. I do not know that I would have changed it any if I had been in your position. The truth about it is, gentlemen, you are going to find it just as necessary to have a standing war fund in the Treasury, under your policy, as to have a standing army of a hundred thousand men. [Applause.]

Now, as the gentleman from New York said the other day, while he talked about European war and the effect that it might have upon this country, you will understand that when we started out in 1898 for the purpose of relieving those people down in Cuba, or the so-called purpose of relieving them from the cruel Spaniards, and began to intermeddle and to attend to other people's business, right then peace was at an end in this country; and I want to say now, for myself, that I am one of the few men on this side of the House, and possibly the only man—in fact I believe the only man—that protested against that war. I have heard it said upon this side that the Democrats took you by the slack of the breeches and nape of the neck and plunged you into that war. If there is any honor or credit attached to that, I claim none of it. I did not want to go into that war, but protested against it; and we would have been relieved of embarrassments and complications to-day if we had attended to our business and let other people's alone.

Sir, we have got to meet these issues as they are, as practical men, as sensible men, and we have got to keep funds enough to meet the demands of the country if we are to carry on this wholesale process of murder and slaughter in the Philippine Islands—[Applause.]

[Here the hammer fell.]

War-Revenue Reduction.

SPEECH

OF

HON. JACOB RUPPERT, JR.,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, December 15, 1900.

On the bill (H. R. 13304) to amend an act entitled "An act to provide ways and means to meet war expenditures, and for other purposes," approved June 13, 1898, and to reduce taxation thereunder.

Mr. RUPPERT said:

Mr. CHAIRMAN: The time has come when, in the judgment of the Ways and Means Committee of this House, it is feasible for us to reduce the extraordinary tax which was rendered necessary to defray the expenses of the war between this country and the Kingdom of Spain. It was not deemed advisable at the last session of Congress to make any changes in the internal-revenue law, but it is now admitted that a reduction can be made without jeopardizing the best interests of the country. In reducing taxation it is the part of wisdom and sound financial policy for us to examine into those taxes which are imposed and choose from them such as are most unequal and which impose the greatest burden, and any reduction should have for its object not only the lessening of revenues, but the equalization of burdens.

It is with some reluctance, Mr. Chairman, that I participate in the discussion upon the pending measure. Many statements of a misleading nature, however, have been made in this House about an industry with which I am familiar. In order that the House may have before it, in a proper manner, information and facts which I believe of importance in connection with the proposed reduction of the war-revenue tax on malted liquors, I desire to submit the following observations.

If the members of this House will carefully examine the provisions of the war-revenue law, they will find that the largest percentage of taxation levied for purely war purposes was placed upon beer.

The tax upon beer levied during the civil war, when that commodity was retailing at \$12 per barrel, was doubled under the war-revenue law, although the price of beer had decreased to \$5 per barrel.

At the time this tax was placed upon beer it was done for the reason that the tax on beer had been more promptly paid into the Treasury than any other tax, and it was believed that in an emergency a tax upon beer would raise a maximum amount of money with a minimum amount of time and expense in collecting. Had the brewers at that time raised a protest and fought this tax, as did other manufacturers in some other lines, it would probably never have been passed. But believing that the Government required

this money for a temporary purpose and that when the need was at an end the tax would cease, the brewers were willing that it should be imposed.

They assented to this tax with the understanding that when a reduction should be possible that reduction should be made for their benefit. While there was no compact or definite agreement to this end, it was nevertheless generally understood and assented to.

It would seem that an equitable obligation rested upon the Government of the United States to restore the former rate of tax upon beer. Beer is the most heavily taxed of any article subject to taxation. There is a peculiar reason why the rate of taxation upon beer should be lower than upon any other article. That reason rests in the fact that in addition to the value of the product of the breweries as a commodity, there is a system of laws in the several States which under the police power impose heavy taxes upon the brewing and allied interests. The constant tendency of these regulations is to increase the burdens upon the brewers. This necessitates a much larger capital than would be required if the business was not thus handicapped.

Congress has nothing to do with these State regulations, but the fact that they exist is one which must of necessity be considered in order to arrive at a just and equitable conclusion concerning the rate of internal-revenue taxes which should be placed upon beer.

It has for many years been the policy of this country to build up its manufacturing interests by means of protective laws. Congress has, in determining upon revenue laws, taken into consideration the needs of American manufacturers, and has as far as possible so fixed its schedules of taxation as to enable the manufacturers to successfully compete with foreign industries. The brewers have not asked for and have not obtained their share of this protective policy. Instead of free raw materials granted to most manufacturers, the raw materials used by the brewers have been heavily protected. Notwithstanding this fact, the American brewers have paid higher wages than are paid in foreign countries and have constantly improved the quality of their beer.

American brewers have taken a just pride in the reputation which their products have secured throughout the world. During the two past years the exports of beer have more than doubled. The exports for the ten months ending October, 1898, were \$711,540; for the ten months ending October, 1900, the exports amounted to \$1,845,421. It cost the American brewers more money to make their beer, but the increase in trade was caused by the superior quality of American goods. The exportation of American beer is in its infancy.

If the brewing industry were treated as other industries are treated, the United States would in a few years lead the world in this line of manufactures. There has never been a line of legislation placed upon the statute books with the object of benefiting or protecting this great and growing industry. The brewers are not asking that they be treated upon terms of equality with other manufacturers and be governed by the principles which are applied to all other industrial concerns. They appeal to Congress now not for any special privileges nor for equal opportunities, but they appeal for relief against a discrimination which will seriously cripple their business.

There is now invested in American breweries a little over \$700,000,000; of this amount, about \$50,000,000 is foreign capital. It has been necessary since the war tax was placed upon beer for the brewers to organize and assist each other in order to keep the industry from falling to pieces.

The production of beer shows a decrease during the first year of the tax and a slight increase during the last twelve months. It is necessary in order to maintain the reputation and the trade of American beers for the brewers to provide the market with as much beer as they have been in the habit of producing. If the trade which has cost the American breweries many millions of dollars to establish were to be neglected, or if the quality of American beer were allowed to deteriorate, it would take much time and vast expenditure of money to again secure the ascendancy. As a matter of self-protection, therefore, the large breweries have steadfastly declined to cheapen their beer or to greatly decrease their production. They have not considered it necessary, because they have felt satisfied that the first reduction of war taxes would be made upon beer. If they find that they are mistaken in this belief, they can no longer hold the smaller breweries, which have been losing money during the last two years, and a widespread bankruptcy must result. The large brewers will not go into bankruptcy, but they will be compelled to so regulate the production of beer and the price at which it is sold as to prevent actual loss.

The growth of the brewing industry will be effectually stopped. Thousands of men will be thrown out of employment, the retail price of beer must be raised, with the inevitable result that there will be a decrease in the consumption of beer and a corresponding increase in the consumption of spirituous liquors.

At the last four conventions held by the United States Brewers'

Association this question has received the most careful study by men who have spent their lives engaged in this business, and in their reports there is no attempt at eloquence or fine writing, but clear-headed, honest statements of fact from a conservative standpoint. I desire to quote from each of these four reports.

In the report of the convention held at Buffalo in 1897 the following statement was made:

Although repeatedly urged by the importers of raw materials used in brewing to join them in a remonstrance against the proposed increase in the rates of import duties, your trustees themselves refrained from and on various occasions unequivocally deprecated any opposition to tariff legislation. In this course they were guided by a twofold consideration. Knowing that the revenue deficiency absolutely required measures for raising additional income, they could not but conclude that, in accordance with the avowed policy of the dominant party, the increased revenues would necessarily have to be derived from import duties; and while they appreciated at its full weight the additional burden which higher duties upon barley, malt, hops, cork, tin foil, etc., would impose upon the trade, they could not consistently oppose such measures. It was believed possible at that time (the beginning of the present session) that a proposition would be made to increase the old war tax on malt liquors, and even if such an apprehension had been entertained it could but have strengthened our determination not to remonstrate against increased import duties.

With this determination firmly fixed in our minds and impressed and urged upon those local associations and members who sought our advice on the subject, we remained absolutely passive, allowing the importers to carry on their fight as might seem best to them.

At the beginning of the month of April the trade was startled by the news that the Senate Committee on Finance had determined upon raising the beer tax to \$1.44 per barrel, thus confirming rumors that had industriously been circulated during several weeks previous to this action, which rumors, it appears, had been carefully prepared and set in motion by a clique of manufacturers, who selfishly sought to influence legislation in their favor at any cost. It is a singular coincidence, to say the least, that the same gentlemen who first advocated an increase of the beer tax four years ago, published in the Forum an article again urging this increase at just about the time when these rumors began to assume a more definite shape. We refer, of course, to Mr. D. A. Wells. In the argument which we published against Mr. Wells's proposition four years ago we clearly demonstrated—

1. That Mr. Wells, when, as special revenue commissioner, he was in a position to judge of the matter from his own observation and experience, advocated the very opposite policy, citing innumerable evidences of the most convincing character to the effect that the tax on beer was as high as it could or should be, and that in order to make it a permanent and steadily increasing source of revenue the Government should let the brewing industry alone. This was thirty years ago, when the price of beer was twice as high as it is to-day and labor very much cheaper.

2. That Mr. Wells's recantation of his former view involved him in a dilemma from which there was no escape except by formulating and advocating a fiscal policy which ought to bring a blush to the face of every civilized man. Although there are thousands of products from which the Government derives no income whatever, Mr. Wells holds that, inasmuch as the brewer already pays and himself collects for the Government a tax of \$1 per barrel, the easiest way of raising additional revenue would be to increase that tax, the easy collectibility of any tax being in his opinion the only and paramount consideration that should guide the lawmakers' course.

We do not think it necessary to enter into a detailed discussion of this question, but for the sake of completing our record, we produce here a summary of the reasons we urged against the proposed increase, viz:

1. Because it is unjust to saddle additional burdens upon an industry that has uninterruptedly and uncomplainingly borne the old war tax ever since its first imposition (aiding the Government in devising and maintaining means for its prompt collection), while all the other internal war taxes have been totally abolished, except as to ardent spirits and tobacco, in which latter instances the rates of 1865 have been considerably reduced.

2. Because when the war tax of \$1 was imposed beer sold at \$12 per barrel while to-day, the tax remaining the same, less than one-half of the amount is the average price, wages and the ordinary operating expenses of breweries and the capital required in the business having vastly increased in the meantime.

3. Because when this tax was first imposed the burdens borne by the traffic in the shape of local taxes or license fees did not exceed in any State the sum of \$300, while at the present time in some States these local taxes range up to \$2,000 for each saloon, the total sum of such local taxes and license fees throughout the country amounting to probably \$60,000,000, a disproportionately large share of which enormous sum must be and is borne by beer, as may be seen from a single example in point, to wit, the State of New York, where, out of a total of over \$11,000,000 derived from the traffic, the beer interests paid about \$7,000,000. In the present condition of the market the brewer would be compelled to raise the price of his product, and the dealer, on his part, in order to make up the difference, would have to reduce the size of his measures.

4. Because neither from an economic nor from an ethical point of view does it appear justifiable to increase the war tax on beer while native wines are totally exempt from taxation.

5. Because as a revenue measure the increase is based on erroneous premises, for while it is true that under the present system, which imparted to the industry an exceedingly valuable element of stability, the production has steadily increased, it is more than probable that the increased tax will produce a decline in the business.

6. Because the increase would be a most potent incentive to the formation of trusts, and would most assuredly drive out of the business a large proportion of the smaller brewers. The significance of this will be appreciated if you state the undeniable fact that one-half of the beer produced in this country is manufactured by about 100 large brewers, while the other half is made in about 1,000 smaller establishments.

7. Because, although a tax may at first be borne by the brewers, to be used as a means of competition by the stronger trade rivals, it will in the end have to be paid by the consumer in one way or another, and this we deem not only unjust but extremely unwise from a temperance point of view, for beer, whatever fanatics may say to the contrary, has become and is to-day one of the necessities of life to a large part of our people, and as such has a strong tendency to enhance the well-being of the consumers and to modify drinking habits in the direction of true temperance.

8. Because the increase is calculated to place a double burden upon the consumer, inasmuch as it is imposed in order to offset a loss of revenue which would inevitably be caused by the proposed prohibitive duties on other articles of daily consumption, the price of which would thus necessarily be enhanced, to the great disadvantage of the consumer and for the benefit of certain domestic industries.

9. Because, instead of creating a "minimum of industrial disturbance"—a consideration which is urged by one of the foremost advocates of the in-

crease as a paramount requirement of any change in the tax system—the increase will most assuredly unsettle and injuriously affect the brewing industry.

The reasons thus clearly and succinctly set forth by the brewers' association, given in opposition to the placing of the extra one-dollar tax upon beer, are even stronger when used to favor a proposition to remove the tax from beer. There is not a single statement made by the brewers' association in the memorial from which I have quoted that actual experience has not carried out. The history of the beer trade during the past three years has shown that the men who examined into that question before the imposition of the one-dollar tax were absolutely correct in each conclusion which they reached. Within the past few months a large number of small brewers have been driven into bankruptcy. Some of the large brewers have conducted business at a loss, others have barely paid expenses, and none have made a fair interest upon the capital invested. The losses to those who hold stock in the brewing association have been far greater than the amount realized by the Government from the tax. If dividends are paid at all they are very much smaller than they formerly were, and few of the companies have paid any dividends.

This matter has been discussed in each annual meeting of the United States Brewers' Association, and among all of the members of that organization not one could be found who could hazard any suggestion that would point to a feasible way of restoring the brewing business to its former prosperous condition except the single method of securing the abolition of the extra one-dollar tax placed upon beer by the war-revenue law.

These facts have been urged at each session of Congress, but heretofore it has not been deemed advisable to reduce the receipts of Government under the war-revenue tax. It is now conceded that these receipts should be reduced, and the only industry which is able to show any great detriment to its interests by reason of the war tax is the brewing industry. In all fairness and justice the petition of these gentlemen ought to be granted. Their reasons for such a petition were so strongly presented in a letter to the Ways and Means Committee written last month that I incorporate that letter with my remarks:

To the honorable Committee on Ways and Means
of the House of Representatives.

GENTLEMEN: At the kind invitation of your chairman we have had the honor, on the 25th day of April, 1900, to appear before your honorable body for the purpose of submitting to your kind consideration several statements showing the deplorable condition of the brewing industry, caused by the war tax of \$1 per barrel superimposed upon the old war tax of an equal amount, and praying for the immediate repeal of that part of the war-revenue act.

The statements then submitted by our representatives form part of the records of your honorable committee, and we therefore refrain from a detailed recital of the facts therein set forth. We desire, however, to state that since then the destructive effects of the double war tax have been augmented and aggravated to such an extent that a very large proportion of the smaller establishments have been forced into bankruptcy and out of business, or compelled to seek escape from utter ruin by combining with other breweries, equally hampered and harassed by a tax representing 40 per cent of the market price of their product and entailing losses which, for reasons explained in our previous statements, they can not recoup in the ordinary way in which any tax upon consumption is usually recovered.

Since April, 1900, no less than fifteen combinations of from three to twelve once prosperous establishments have been formed under the distressing pressure of the double war tax, and this baneful tendency toward the destruction or the absorption of the smaller manufactories and the combination of large numbers of establishments whose profits have been either wiped out or reduced to an infinitesimal minimum is not confined to the smaller cities, but embraces such large brewing centers as Boston, Baltimore, Pittsburgh, and others. But even these combinations offer no appreciable relief; they are mere makeshifts of a transitory character. The best proof of this lies in the fact that of the companies whose stocks are quoted in the trade papers scarcely 20 per cent can pay any interest even on their preferred stock.

If you would kindly consider what an immense cash capital it requires to place the finished product into the market, exclusive of the vast sums of money expended in the purchase of material, the payment of workmen, and the storage and distribution of malt liquors—not to speak of the interest on the capital permanently invested—you will readily perceive why the smaller brewer, whose establishment represents the savings of a lifetime, and who has no accumulated available capital to draw upon, must necessarily succumb in an industrial struggle which the imposition of a double war tax has rendered almost hopeless even to those manufacturers who possess a considerable reserve of cash capital.

This is only one side of the question; but it is the one which shows the pernicious effects of a most unjust tax in the most glaring light and appeals to other sentiments besides that of justice in the abstract. In our opinion it should not, however, require such appeals in order to bring about the immediate repeal of the entire war tax, superimposed upon the old war tax. There was no equitable justification for it at the time of its imposition, because the brewing industry had up to the time uninterruptedly paid the old war tax of \$1 per barrel, while all other manufactures, products, professions, and occupations embraced in the original revenue system as organized between the years 1862 and 1864 have not paid a single dollar into the Federal Treasury since the termination of the civil war, and do not even now contribute one penny toward the Federal revenue.

Is it unfair or unpatriotic to ask why one American industry, consuming almost exclusively those highly protected American products which are a source of wealth to the American farmer, should pay a double war tax amounting to 40 per cent of the market value of its product while all other American industries remain untaxed? It will not be deemed to be presumptuous, we trust, if we ask what justification there was for imposing, or what good reason there is for continuing, a tax of \$2 upon a barrel of beer costing \$5, in the face of the fact that at a time (thirty-five years ago) when the market price of beer was \$12 a Republican Administration and a Republican Congress asserted and maintained that a standard of \$1 "was fully up to the revenue standard and should not be increased." (See Report of the Special Revenue Commission for 1885-86, p. 27.)

We maintain, gentlemen, that common justice imperatively demands the immediate repeal of the additional war tax upon malt liquors. In the entire war-revenue act of 1898 there is not a single tax item excepting our own that is unjust or inequitable in itself; none, excepting the beer tax, that has caused or is likely to cause widespread industrial ruin; none, again with the same exception, that must be borne by a comparatively small number of citizens for the exclusive benefit of all those numerous and immensely wealthy industries which, while protected by wise tariff laws, contribute not a single dollar to the internal revenue; and, finally, none that must ultimately affect such large masses of the poorer people.

Even if the market price of beer were higher than it was thirty-five years ago, instead of being not even half as high, we would still maintain that so long as all other manufactures, professions, and occupations remained untaxed the imposition of a war tax of \$1 in addition to the old war tax of an equal amount can not be justified, though it may be excused, perhaps, on the ground of the sudden and pressing emergencies of an unlooked-for complication threatening the honor of the nation.

The most striking evidence of the correctness of our contention as to the inequality and injustice of the present tax rate lies in the fact that in 1896, when the receipts from internal revenue reached the highest point, viz., \$310,906,984, the three revenue items which have remained in force (at reduced rates as to the spirits) since the civil war only yielded \$50,129,877, of which the sum of \$5,115,140 was derived from malt liquors, then selling at \$12 per barrel. The remainder, amounting to \$250,777,107, came from sources of revenue the greater portion of which are not mentioned in the act which imposed upon our product an additional war tax of \$1.

Mr. Chairman, I think that injustice has unwittingly been done the brewers by reason of the fact that the beer business is very little understood by those not engaged in it, and the brewers, feeling that it was the part of true patriotism not to fight very strenuously against war taxes, have not been loud or persistent in their demands upon the Ways and Means Committee. It is a fact, borne out by the official records, that the beer tax has been the most cheerfully paid and the least evaded of any tax provided for in the war-revenue law. I think it is true that this has influenced the opinion of some of the members that it was therefore a tax which was not burdensome. This is far from being the case. It is the most burdensome of any of the war taxes. It is the highest of the war taxes and upon a business which is not able to stand it by reason of the sharp competition from other countries. It is certainly not the intention of Congress to reward those who have sought to evade their just share of the responsibilities of government and punish those who have borne their burdens cheerfully and without complaint.

I want the members of this House, before they vote upon this question, to read carefully the reports of the Brewers' Association and the memorials now on file. They will find them candid, fair, and impartial. They will find neither demands nor threats. They will find no theories or vagaries. They will find only plain, straightforward statements of fact, and from those statements any reasonable man must conclude that this extra tax is beyond the revenue point and constitutes an actual confiscation of the profits of those engaged in the brewing business. They will see that, with the facts as they exist, this great industry is seriously crippled and that its growth in the future will be an impossibility under the present rate of taxation. This is not a party question, nor is it a theoretical question. We do not seek to reach the prejudices of any man. We want the subject considered as a plain, common-sense business proposition, and when it is thus considered we have no fear of the result. Those engaged in the brewing business are proud of the record achieved in the past, and they hope to surpass that record in the future. They can realize that hope if their business is treated upon the same terms as other occupations. Their business must decline if it is to be singled out as a revenue producer beyond its ability and unjust and unequal burdens placed upon it.

Reapportionment.

SPEECH

OF

HON. JOHN F. RIXEY,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 5, 1901,

On the bill (H. R. 12740) making an apportionment of Representatives in Congress among the several States under the Twelfth Census.

Mr. RIXEY said:

Mr. SPEAKER: While Madison and Hamilton, authors of the Federalist, can not be said to have had any idea that this country would stretch to Mexico and the Pacific, it may be of some interest to know what they said as to the number of Representatives.

In No. 55 of the Federalist, urging the adoption of the Constitution, it is stated:

In general, it may be remarked on this subject that no political problem is less susceptible of a precise solution than that which relates to the number most convenient for a representative legislature. * * * The number of which this branch of the Legislature (House of Representatives) is to consist

at the outset of the Government will be 65. Within three years a census is to be taken, when the number may be augmented to 1 for every 30,000 inhabitants; and within every successive period of ten years the census is to be renewed, and augmentations may continue to be made under the above limitation.

It will not be thought an extravagant conjecture that the First Census will, at the rate of 1 for every 30,000, raise the number of Representatives to at least 100. * * * At the expiration of twenty-five years, according to the computed rate of increase, the number of Representatives will amount to 200, and of fifty years to 400. This is a number which, I presume, will put an end to all fears arising from the smallness of the body. I take for granted here what I shall, in answering the fourth objection, hereafter show—that the number of Representatives will be augmented from time to time in the manner provided by the Constitution. On a contrary supposition, I should admit the objection [to the smallness of the number of Representatives] to have very great weight indeed.

Evidently it was expected that the country would not only grow, but that the number of Representatives would be increased to keep pace to some extent with the population.

There are three plans presented:

The Hopkins bill, providing for 357 members.

The Burleigh bill, providing for 386 members.

The Crumpacker bill, providing for 365 members.

Which shall we adopt, and under what ratio shall the Representatives be elected for the next ten years?

It was the theory of the founders of the Republic that the Senate should stand as the representative of the States, and the House, a larger body, as the representative of the people. The ratio up to 1860 never exceeded one for every hundred thousand, the table in full being as follows:

	Ratio.	Whole number of Representatives.
Constitution, 1789	30,000	65
First Census, 1793	33,000	105
Second Census, 1803	33,000	141
Third Census, 1813	35,000	181
Fourth Census, 1823	40,000	213
Fifth Census, 1833	47,700	240
Sixth Census, 1843	70,680	223
Seventh Census, 1853	93,423	233
Eighth Census, 1863	127,381	243
Ninth Census, 1873	131,425	293
Tenth Census, 1883	151,911	325
Eleventh Census, 1893	173,901	356

After every census the membership of the House has increased, except in one instance, and never in such cases less than 10. In the eleven apportionments following the new censuses there are only four instances in which the increase was less than 31. The present ratio of 173,901 is greater than it has ever been in the history of the Government. The Hopkins bill raises this to 208,868, whereas the Burleigh bill raises it to 194,182. Which is most equitable to all concerned?

In but three instances in the one hundred and eleven years of our enumerations did the increase in the ratio exceed 20,000. As late as 1870 it was only 4,044. The increase under the Hopkins bill is 34,967, which is greater than in any former reapportionment. The increase under the Burleigh bill is 20,381, which is far more than the average increase, as there are but three instances out of the eleven in which a greater increase was made.

The Burleigh bill, upon precedent, is nearer right, and in practice works no injustice to any. The Hopkins bill does injustice not only to Maine, Nebraska, and Virginia, but to others, as shown by the minority report. With but a single exception there is no precedent for the Hopkins bill, to have no increase in membership after a census showing a large increase in population. Under a popular form of government increase in representation should go with increase in population.

The Hopkins bill is based upon the idea of limiting the number of Representatives to the present number. The reason assigned being, first, economy; second, dispatch of business, and third, lack of accommodation in the House. Should a Congress which appropriates over a hundred million dollars annually for the Army and one hundred and forty-five millions for pensions, with a total of seven hundred millions for expenses, hesitate to provide for 29 additional Representatives at a yearly cost of \$200,000?

To the objection that the House would become unwieldy by the addition of 29 Representatives, the reply is that under the rules now prevailing numbers constitute no impediment to business. It is well known that under the rules of the House all the business of a long session could, if necessary, be railroaded through in one month. The House has to wait for the smaller body, the Senate, and not the Senate for the House.

But if the reason alleged were sound, it would be effective also against the present number, 357. In England the House of Commons, with a much smaller constituency, consists of 670 members, and in France the House of Deputies, also with a much smaller constituency, consists of 684 members. In Germany the popular branch consists of 357 members.

But it is seriously urged, as a final reason, that the House can

not well accommodate more than 357 Representatives. This is not true, however. With the present arrangement, which is awkward enough, there is ample room, according to the Architect of the Capitol, for the reasonable addition provided for under the Burleigh bill. Such a reason, however, is unworthy of a great government which can bear the expenditures of \$1,500,000,000 by one Congress. Such a government can well afford a shelter for the Representatives of the people. On this point the Philadelphia Inquirer of December 20, 1900, aptly says:

THE PROBLEM OF REAPPORTIONMENT.

We were not mistaken in supposing that the plan of reapportionment which by the majority of a single vote was favorably reported by the House Committee on Census would encounter a vigorous opposition. This plan fixes the ratio of representation at 208,868, the reason for the adoption of this figure being that an enlargement of the membership of the House would thus be avoided. There are reasons why that is desirable, but there are no reasons why it should be regarded as so desirable as to render it an absolutely controlling consideration.

It is said that the Hall of the House of Representatives is so small that it is already uncomfortably crowded, and that it would be difficult to make room for any more members. But surely it will not be seriously maintained that the number of Representatives whom the American people shall send to the popular branch of Congress shall be determined by the seating capacity of the room in which they assemble. To state that proposition is to refute it, for its ridiculous character becomes at once apparent. A more weighty argument is made by those who contend that the capacity of a legislative body for the dispatch of business decreases in proportion to its numerical magnitude.

So it does, and a body half the size of the present House would be more efficient. But some sacrifice must be made to the principle of popular representation, and there is no reason to suppose that a moderate increase in the membership of the House would appreciably interfere with the discharge of its duties. What is a moderate increase? The second of the plans most generally discussed places the ratio at 197,787. With this figure as a basis the membership of the House would be raised to 377. That increase is less than moderate—it is small; yet it would do very well but for the fact that its adoption would deprive each of a member the four States of Kansas, Maine, Nebraska, and Virginia.

Now, it will be admitted that it is not desirable that the membership of any State should be reduced, and it is less desirable as regards those named, because, as their delegation is already small, any reduction means a great proportional loss. Thus, Maine only elects 4 members. She loses a fourth of her representation if she is to be allowed only 3. The third plan under discussion places the ratio at 182,676, which would elect a House of 387 members. Is this increase, an increase of 30, anything more than moderate? We don't think so. It would leave the House of Representatives a much smaller body than any other legislature of corresponding importance. There are over 600 members in the British House of Commons, and nearly as many in the French Chamber of Deputies, and no one has yet proposed the reduction of either body.

But let us not entirely ignore the Crumpacker bill. Our silence might be construed as contempt for the measure. It gives no ratio, and does not propose to base representation upon population. It is unfair in character and intolerant in sectionalism. It is intended to minimize the influence and punish the South for providing for good local government. The author of this bill very lightly disposes of restrictions in other States than the South, and does not seek, for that reason, to cut down the representation of any State north of Mason and Dixon's line. He says, page 123 of report:

Other States than those mentioned have restrictive qualifications upon manhood suffrage, but they are of such a character and apply to such conditions that it can not be said that in any particular State they directly and necessarily disfranchise a sufficient number of citizens to materially affect the basis of representation. In a number of States it is doubtless true that there is a large suppression of the vote, but it results from the maladministration of the law rather than from its requirements.

Under the Crumpacker bill Virginia would lose none, but Louisiana would lose 2, North Carolina 4, South Carolina 3, and Mississippi 3.

The cause of our Southern States is the cause of Virginia. Their people are our people. Where they go we will go. Their bed shall be ours. Virginia will stand firm to resist, at a loss to her own prestige, every such indignity offered a sister Southern State, and no political or other advantage shall swerve her from her devotion to her kith and kin.

It seems to me there can be but one explanation for this bill. Its author must expect to be a candidate for the nomination of the Republican party for President, and this bill must be intended as a bid for the Southern delegates to the Republican national convention, but I would remind the gentleman that history and experience both show that he is bidding too long in advance. See these gentlemen later, would be my advice.

Under the Hopkins bill the following States (8 in number) would lose a Representative: Indiana, Kansas, Kentucky, Maine, Nebraska, Ohio, South Carolina, Virginia. Not because they have not increased in population, for they have—only one State, Nevada, showing a decrease, and that State is not affected, having only one Representative.

Virginia has increased in population nearly 200,000, or about 11 per cent, in ten years. A good, healthy growth, but not enough, under the Hopkins bill raising the ratio to 208,868, to hold her present representation.

I can now sympathize with those cities, which, not realizing the population their imagination had conceived, have cried fraud or incompetency in the count. I have listened to such claims with much incredulity, but I am now convinced that there may be

some truth in their wailings. Virginia's increase, while healthy, is much more than is given.

The Eighth district, which I have the honor to represent, lies just across the Potomac, and fronts for a hundred miles on that historic stream. That district, under the census, shows but a small increase. Anyone familiar with the conditions must be convinced of the incorrectness of the census. Within the past ten years hundreds, I will say thousands, of people have moved into and settled near the lines of the railroads which permeate the district. Hundreds of officeholders live there but claim residence in other States. What, then, is the reason for the small increase reported?

I reply by asking another question.

How can a just enumeration be expected when some of the best enumerators are not paid as much as \$50? One enumerator, whose district was in a fine agricultural section, wrote me:

My district was about 12 miles one way and 15 the other. I took down 1,640 living persons, 180 farms, 21 manufacturing establishments, 26 deaths, and 3 deaf and dumb. Time actually employed, thirty-six days two hours. I received from the Government \$79.25, which was about what my horse and board would have cost me.

Another, whose district was in a good-sized town, wrote me, under date of June 15:

Having understood through Mr. Grimm, whose son was appointed enumerator for this district, that the supervisor, Mr. Campbell, and yourself had called upon the Director of the Census and had the per capita raised to 2½ cents, I desire to state that, so far as I know, I am the only one in the county who was compelled to sign a contract at 2 cents per capita. The niggardly compensation, at best, is contemptible in consideration of the duties performed, being compelled to expose myself to all kinds of low and dirty diseases to obtain the desired information.

I answered this letter, and under date of July 3 he again wrote me:

In reply I would state that I have made two hundred and seven hours and thirty-five minutes. The compensation will be, according to agreement, \$44.21. As I understand the law governing the pay, it was not to be less than \$3 per day, or 3 cents per head.

I forwarded this letter to the Director, who replied that—

After a careful examination of the returns I find that Mr. ——— averaged \$1.43 per day, and made a total of \$39.78. The law required me to establish the rates of compensation at least two weeks prior to the enumeration, so that you will realize that I can not at the present time make any change in the rates of compensation established for the enumerators, even though I desired to do so.

Is it any wonder, therefore, that in the county in which this enumerator served, at a total compensation of \$39.78, and where the other enumerators were doubtless as poorly paid, a county which in fertility has no superior in Virginia and in attractiveness none in the United States, should show a decrease of 1,326 since the census of 1890?

Can a fair enumeration be expected under such circumstances? Before the enumerators began their work I requested a per diem compensation for them, but could not get it. In sparsely settled sections the enumerators could scarcely be expected to discharge their duty for the small compensation allowed. They should have been paid not less than \$100 in every instance, and I would like the Committee on Census to report such a bill.

If the committee does not want to increase the membership, why not take the ratio for 350 members? The additions would soon bring the membership to the present number, 357. If the ratio for 350 is taken the following States would lose 1: Georgia, Indiana, Iowa, Kansas, Kentucky, Maine, Michigan, Nebraska, Ohio, South Carolina, Tennessee, Virginia.

The reason is apparent. The States interested could easily defeat such a proposition. Virginia would lose but 1, but there would be 11 other States in the same category. Why take a ratio which gives but 7 more members, but takes out of this list the States of Georgia, Iowa, Michigan, and Tennessee? Is it to gain votes? It is unjust discrimination under the disguise of limiting the membership of the House to the present number.

The Burleigh bill is fairer. It injures none and credits all with their reasonable due. I am glad of an opportunity to support a bill which will give to North Carolina an additional Representative, making her equal to Virginia. Her wonderful development in population, and her great material development—manufacturing in cotton alone more than she produces of the raw material—entitles her to this testimonial to her progress and development. She has earned it, and I will not be the one to withhold it from her. An additional Representative should be hers. May her star never shine less brightly. And Missouri, whose sons upon this floor so proudly acclaim her "Imperial"—the Empire State of the West, whose past is but a favorable augury of her future greatness—shall we not concede to this great giant of the middle West the additional Representative as provided in the Burleigh bill? We are equally gratified at the additions to the representation in other States. Increasing largely in population, they are entitled to additional representation. Let us pass the Burleigh bill. It cuts down the representation of none, and accords justice to all.

Reapportionment Bill.

SPEECH

OF

HON. ADOLPH MEYER,
OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 9, 1901,

On the bill (H. R. 12740) making an apportionment of Representatives in Congress among the several States under the Twelfth Census.

Mr. MEYER of Louisiana said:

Mr. SPEAKER: I do not propose to discuss at length the question whether the membership of this House shall be so increased as to avoid the reduction of representation accorded to States which have fallen behind others in the growth of population. It seems to me, however, that this policy of so enlarging this body is open to grave objection. That some States should increase more rapidly than others is inevitable. It will always be so. If, therefore, the rule to be adopted be that no State shall ever suffer a reduction of its representation even for a decade the result will be that this House will go on increasing every ten years until ere very long it will become as large as the French Assembly or the British House of Commons. Such a body could not be properly accommodated in this Hall if all the members should have seats and the desks be retained.

Already it is exceedingly difficult, if not impossible, for members sitting on the rear rows in this Hall to keep in touch with the business of the House and to know what is going on. This is a very great evil already, and it would be magnified by every increase of the aggregate membership of the House. In precisely the same proportion you would diminish the study and observation of the proceedings of the House, which is the primary essential of intelligent and responsible membership. Absenteeism is already a great evil. It would be increased rapidly when members found themselves unable to watch the proceedings of the House.

Members even more than now would depend upon their fellow-members for getting the cue how to vote, and the number of independent, self-reliant, and conscientious members would be seriously diminished. If there was a full attendance of members the House would be, in all probability, more turbulent and disorderly than we have ever seen it. It would be more difficult for the presiding officer to maintain order. There would be more of personalities, interruptions, applause, hisses, and all forms of disorder which discredit legislative bodies and impair their efficiency, popularity, and usefulness. These are not mere prophecies, resting on what we know of the tendencies of the human mind in certain conditions.

We have object lessons before us already in the disorders and violence of the French Assembly. The House of Commons has frequently had a similar experience. Its only escape from these admitted evils has been the increase of the Speaker's power till it has become almost autocratic. I ask you, What value is possessed in the State's right of representation if the power of the Speaker is to be increased until all the rights of the individual member are gone? Have we not already traveled as far in this direction as it is prudent or safe to go?

One of the consequences of a very large House of Representatives will be the virtual abolition of the ye-a-and-nay vote. In the British House of Commons the settlement of all public questions is by tellers or a division. The votes of members are counted, not officially recorded. I think our own present system preferable by far. It tends to greater responsibility. I think all candid observers of our parliamentary system will concede that the power of committees, both in the House of Representatives and the Senate, is as great as it ought to be. Many persons believe that it is already much too great. In the French Assembly, I believe, they have very large committees, and much of the public business is settled there. Surely it is not desirable to increase the numbers of our committees to twenty-five or thirty members, and still less is it expedient to augment the power of these committees. Yet if we are to go on every ten years increasing the membership of the House these consequences must be the result.

Our rules are already very artificial, and in order to understand them they require a special study. Some of the gentlemen who have been most eminent members of this House in the past have candidly admitted that they knew nothing about the rules of the House. Is it not probable that if the House becomes a much larger body the rules will become even more arbitrary in order to expedite the public business? Some think that this is no evil. But would not this change tend to lessen the individual responsibility of members; to substitute the rule of the caucus for the wise, thoughtful action of the House?

I think, sir, that we ought to consider very seriously the danger, lest by making this House a large, cumbersome, and unwieldy body we diminish its relative rank in the Government, and, what is of more consequence, its value to the people. It ought to be, and was probably intended by the fathers of the Republic to be, the most important guardian in our whole system of the individual rights, liberties, and property of the people. Its members are directly chosen by the people. If there is anything wrong in any Congressional district, the people can easily correct it. The Representative lives among them, according to our custom. We must meet them face to face. If he be an incompetent or faithless public servant, they can turn him out in two years.

In the early period of the Republic the greatest men of the country sought a membership in this body. I need not remind you how Madison, Randolph, Clay, Jackson, Webster, Calhoun, Hunter, Silas Wright, Fisher Ames, Edward Livingston, James A. Bayard, Josiah Quincy, John Quincy Adams, Langdon Cheves, and many more great minds in later times were among its members. At that time and down to a recent period the House of Representatives had at least equal influence and consideration with the Senate. Now all this is changed. The Senate is commonly regarded as a sort of promotion. It is spoken of as the "Upper House."

How this change has come about it might be difficult to explain, but one cause will partly account for it. The Senate has a simple set of rules. It is limited in numbers, not crowded. It is pre-eminently a deliberative body, perhaps the grandest in the world. The House has gone on increasing in numbers, but losing in the capacity to examine, discuss, and shape public measures. The fault is not in the personnel of the members. It has a number of very strong men. It is in the system. Beyond all doubt there is a point where the great representative feature and merit of our system is impaired by weight of numbers. There are features in the decaying power, reputation, and influence of this great body upon which it would be almost painful to dwell. The remedy is not to be found in an increase of membership. The admitted evils of the system have gone on increasing with the growth of the body.

For these, and other considerations, I shall feel it my duty to support the bill reported by the majority of the committee as the wisest solution of the important question of representation. I favor it as an alternative to a dangerous and unsafe proposition, and as a step toward a policy which shall tend to place this body upon the highest possible plane of statesmanship and influence.

In what I have said I am free from the imputation that my State gains or loses in her number of Representatives by the adoption of one proposition or the other. I am glad to say that she will gain a member both under the committee bill and under the proposed substitute, or Burleigh bill.

PROPOSED REDUCTION OF SOUTHERN REPRESENTATION.

Mr. Speaker, I now desire to refer especially to the proposition made to reduce the representation of certain Southern States upon the pretext or ground that these States have limited the suffrage by imposing some new qualifications. A demand has lately been made to this effect in a number of public journals belonging to the Republican party, and the suggestion has been repeated by various gentlemen prominent and influential in public affairs. In the first session of the Fifty-sixth Congress a bill was introduced by a distinguished Representative from the State of Indiana requiring the Director of the Census to furnish Congress with statistical information to be used in the apportionment of Representatives, and it was then understood that this information, when obtained, was to serve as a basis for the proposed reduction.

This bill did not pass Congress and, as I understand, no such information or statistics as those contemplated in this bill has been embraced in the last census. Notwithstanding this, fact the same eminent Representative has undertaken to offer a bill at this session, which, in the absence of any official information or statistics, arbitrarily reduces the representation of my own State of Louisiana from six to four members, Mississippi from seven to four members, North Carolina from nine to four members, and South Carolina from seven to four members. These reductions are purely arbitrary and no reason for them is assigned in the bill. The reductions made are much in excess of the reduction of qualified electors in Louisiana, Mississippi, and South Carolina. In North Carolina the new constitutional amendment does not go into operation until the year 1902; but without waiting for any statistics or for the new suffrage provisions to take effect, more than one-half of the present representation of North Carolina is summarily abolished.

This bill proceeds upon lines and principles that it is hardly possible can be passed into law: but there is enough of misconception existing on this subject in the Northern States to make it appropriate for some one to state the actual situation in the South and to develop the actual facts, at least in part. When these facts are known and studied, I can not but hope that candid men will regard the steps taken by the States I refer to as not only in con-

formity with the Federal Constitution, but as a wise and necessary policy to secure the best interests of all classes of our people. I profoundly deprecate any attempt to curtail the representation of the Southern States as uncalled for, harsh, savoring of persecution, and, above all, as tending to revive the sectional bitterness and estrangement which it is the highest duty of patriotism to extinguish as speedily as possible.

I shall hail the day when nothing of this feeling shall remain in the land. For one I ask no privilege for Louisiana, either on this question or any other, that I would not gladly accord to every other State in the Union, both North and South, and I can conscientiously affirm that in all my votes and public course on this floor I have tried to serve every portion of the common country. I shall continue to do so. I have no duty to my own State or section that would lead me to assail any other locality of the Union, and if there be a legitimate public interest or object elsewhere I shall seek to promote it. I am sorry to note the existence of any other spirit or purpose among those who are charged with the great trust of legislation, and I hope it may soon pass away.

The recent centennial celebration of the removal of the national capital to this city and the eloquent addresses delivered on that occasion have impressed on every American citizen in a vivid manner the wonderful advance of the country in population, the industrial arts, manufactures, commerce, and wealth. It is indeed a great record of material progress. Much of this history is a proud one, and yet the period embracing the past forty or fifty years contains in its history some pages which many of us would willingly efface.

The fact that for the union of hearts and hands which bore our fathers through the trials and struggles of the Revolution, held the States together in the hard days of poverty and depression that followed, and made possible that noblest product of the human mind—our Federal Constitution, with its early and almost contemporaneous amendments—there should have been substituted in later years sectional bitterness, distrust, and hatred, followed by a desolating war for four years, with all its frightful losses and suffering and the final conquest of fifteen States, including six of the thirteen States that formed the original Confederacy, ought to be inexpressibly painful to every true American.

I do not propose now to discuss the merits of that dreadful conflict or to impute blame to either side; but I will say this much, that if the Northern States had been content with the attainment of the objects of the war with which they set out, they would have found the Southern whites not only ready to acquiesce in all those demands, but to acquiesce also in the abolition of negro slavery, notwithstanding the enormous property loss and dislocation of social order involved in this policy to them and them only; but the South would also have been ready to cooperate frankly and fully with the Northern States in support of the authority of the National Government and in all just, beneficent, and patriotic designs. This, however, was not deemed sufficient by the dominant party which then swayed Northern opinion and controlled the Government.

The idea of offering an olive branch to a defeated, humiliated, bankrupt, and suffering section was not seriously considered. Measures and policies of disfranchisement, repression, humiliation, distrust, and reconstruction followed one after the other. This long catalogue of severe measures need not be narrated. It would be beyond my powers to portray the poverty, suffering, the shock to society, to social order and peace, to law, order, and property, and to the rehabilitation of our industries which were the natural, the inevitable consequence of this harsh, unfortunate, and senseless policy. Protests were unavailing. Appeals for mercy were not listened to. Passion dominated the hour and was so furious that it would not stop even to consider the suggestion that the interests of the victorious section would be best promoted not by measures of hate and repression, but by broad, generous, kindly acts of statesmanship and conciliation.

This grand truth was obscured in those evil days and is just now beginning to be fairly discerned. Public journals of great ability at the North have lately commented very kindly and fairly upon the fact that despite all obstacles and discouragements the South has made great progress and that her condition is one of advancement and development in the arts and industries; and it is even admitted that this is not due to outside aid and foreign capital, but to the energies of her own sons. It deserves to be considered that this partial restoration of her old prosperity has required some thirty-five years for its accomplishment. Nor ought I to omit to say here that this rehabilitation of the South has been in exact proportion to the relaxation of measures of repression and injustice; and above all, to the regaining by the white people of the local self-government which lies at the basis of all the liberty and most of the progress of this great country. This principle, so important in Massachusetts and Connecticut, is not less important in Mississippi, Louisiana, and South Carolina.

I have referred to these harsh measures of the reconstruction epoch not to revive old animosities, but to show how senseless and

unwise they were, how cruel in their operation, and how unfortunate it would be now to revive and continue the spirit that then shaped Federal legislation. I am glad to recognize the fact that there has been a marked abatement of sectional feeling going on from year to year. It has been very slow—painfully slow for the States which had to suffer from this sectional feeling, and which have yearned and prayed for a better day. Much progress has been made toward a broad national feeling which is able to take in the whole country in the scope of its statesmanship and to study the best methods to benefit and bless every portion of the land. Good men everywhere are rejoicing at this improved, patriotic spirit and this restoration of a real Union.

Are we to be told that this policy of peace is worthless, and that it must be discarded for another measure born of the old days of passion, an act of humiliation and insult, a fresh measure of reconstruction, coercion, and punishment, to be passed in cold blood, without any of the excuses of excitement, misapprehension, and ignorance which may be pleaded in some degree to palliate the legislation that followed the civil war? Sir, I am glad to believe that the politicians who harbor such a scheme do not rightly apprehend the present temper of the public mind, and that they are merely taking counsel of their own perverted passions. If they persist, it will not be long before they will find their mistake. I have no idea that there is in the great Northern States of the Union any demand for vindictive sectional legislation. It is out of date.

Of all the series of harsh measures which were passed in the reconstruction epoch there was not one which bore so hardly upon the Southern people as the forcing of negro suffrage upon them. Some measures were equally humiliating, but not one bore such bitter fruit or entailed such loss and injury to society. The military governments passed away one by one. The carpetbagger was after a while dethroned. Our best and leading citizens had been disfranchised. Some of them were relieved by statute and a still greater number were relieved by death. Other evils and mischiefs were mitigated as time wore on, but the mischiefs which were the result of negro suffrage continued and grew greater year by year.

In a government like our own, resting upon popular suffrage, and embodying the doctrine of local self-government by States, counties, and municipalities, and those embracing most of the subjects pertaining to government, and therefore most intimately affecting human society and happiness, it is of vital consequence that the ballot should be given to all of those who are fit for it, and that it should be denied to those who by ignorance, vice, passion, or other cause, are not qualified to exercise suffrage with safety to society. If these rules prevail, free popular government and representative government is possible and will long endure. Such a government may be, and usually is, eminently conservative. It affords the best guarantee for order, stability, and progress. Capital, labor, property, and all great interests are rendered more secure than under kingly rule. I admit that long before suffrage was given to the black race you could find in every part of the Union a certain percentage of the white race who were uncertain or dangerous votes, but they constituted only a small fraction of the body politic, and it was an easy matter for the more orderly and conservative classes of society to control the elections.

Prior to the civil war hardly anyone ever thought of suggesting that the entire mass of the negroes should have the ballot. It was claimed by many persons that slavery was an evil, a great evil; that it ought not to be extended, but restricted by the agency of the National Government to its existing bounds; but no party proposed to confer suffrage upon the negroes. It was not until after the war had closed that in an hour of passion and folly this fatal policy was determined on. To appreciate the meaning and consequence of this measure of negro suffrage I would remind you that its operation did not affect the North except to a very slight degree. There may have been in some of the Northern States 1 or 2 per cent of the whole population who were blacks. It was an experiment on which the North could enter without any fear of the consequences to themselves.

It was far different with the Southern States. There in a number of States the negroes constituted a very large element of the population—in some States perhaps a fourth, in others over a third, in others half, or even a majority. In South Carolina and Mississippi the negroes constituted a decided majority. In my own State of Louisiana they constituted, in 1870, over one-half of the population. If you assume, as I think you may, that 5 or 10 per cent of the white population in some States, both North and South, are unsafe depositories of political power, you have, with this large addition of negroes to the ballot, as great a danger to the best interests of society as can well be imagined.

A union of the worst class of the whites and of the whole mass of the blacks is always to be feared, as experience has demonstrated. This union means not infrequently the absolute possession of the political power of the State, the passing of bad laws, the defeat of

good measures, the abuse of the taxing power, the squandering of the public revenues, debt, extravagance, and corruption in every form, the prostitution of the executive power to bad ends, and the sale or maladministration of justice. Peace under such a régime is impossible. Public order, domestic security, the safety of property rights, economy and purity in government, all these are impossible under such a system. I say "impossible," and I say it deliberately. Poison the stream of power at its fountain head and bitter waters are sure to flow. No one can expect a different result.

These dire results follow not only in the State governments, but in the governments of the cities, towns, and counties. And here let me say that even in the States where the white race is in a majority, as in Alabama, Arkansas, Virginia, and North Carolina, you will find a number of counties, with every natural advantage, where the blacks predominate by two to one, or sometimes four or even six to one. Here a good county or local self-government, as it used to exist all over this Union, is no longer practicable. Probably some of those at the North who favored the extension of the ballot to the blacks had an idea that the blacks would divide just as the whites divide in the Northern States—some blacks going with one party of the whites and some going with another—but this division has very rarely, if ever, happened. The general tendency of the negroes has been to vote solidly as a race and to vote always against the class of whites who by their superior intelligence, social position, character, and property would in any well-constituted society be its natural political leaders.

Putting together all these elements, which go to make up the situation, you have a natural conflict—I had almost said an irrepressible conflict—between the races. On the one hand you have the forces of ignorance, lawlessness, vice, communism in fact and purpose if not in theory, and, to sum up, irresponsibility—all menacing the property, lives, and happiness of white men, women, and children. On the other hand you have the people of intelligence, of substance, of industry, and friends of orderly government; in short, the forces of everything that is conservative. That this last class will tamely submit to the rule of the blacks and the consequent danger to their property, families, and homes is not to be expected by any rational human being. There is not a State in the whole North that would submit to negro rule or that would consent to share political power and local self-government with the negroes if their numbers were as large as with us. There is not a county or a city or a town or village in any Northern State that would submit to such a state of things. Northern men have been going to the South as immigrants ever since the close of the civil war.

With the exception of the greedy adventurers who went South in the first year or two after the war closed, the Northern men who have gone there have acted with the great body of the Southern whites in respect to local and State elections. They did this whether they were Republicans or Democrats. They caught on to the actual situation very quickly. They had no use for Coffee as a ruler, or a civil governor, or mayor, or alderman, or an administrator of justice. They were not willing to have him impose taxes on their property—property acquired by honest industry or lawful trade—nor were they willing to have him disburse the public moneys. They discarded all fanciful ideas of the brotherhood of man and acted on the good old maxim that "self-preservation is the first law of nature."

I believe, sir, that many of the Republican politicians of this generation are now satisfied that a great mistake was made by their predecessors in conferring suffrage by wholesale on the blacks at the close of the civil war. In private this fact is by them often freely admitted. They have been disappointed in the political power that they hoped to secure by it, and I believe that they now see that they have inflicted a serious mischief upon the Southern people without deriving any corresponding advantage, material or political to themselves. Such is clearly the fact, whether they see it or not. The trouble is that political commitments and party pride often stand in the way of a frank acknowledgment of error. If this could be had—if men would recognize the truth of the situation in political conditions and act on it—many of our worst difficulties would speedily vanish.

I owe it to candor to admit that a large class of citizens in the North of conservative opinions and temper supposed that the evils of negro suffrage would be most potent at the beginning of the experiment, and that the blacks would by experience soon learn how to exercise the ballot with safety to the community and themselves. Some of our own people also hoped that as time passed this evil would become less mischievous and dangerous. But this has not been the case. It is now thirty-three years that the South has been forced to undergo this experiment and to bear this frightful burden—at first amid jeering and taunts, then with indifference, and only lately with any degree of sympathy and appreciation.

All this while the negro has not improved as a voter. I mean the average negro, and more especially the large, ignorant, facile,

and vicious class of negroes. Negro crime has not diminished, but on the contrary has greatly increased. This is a fact of grave consequence to all. The homes and families of the whites are to-day in more danger than at any time since 1865. Prior to the civil war and during that struggle there was no danger whatever to homes or an unprotected woman. It may be said that some of the blacks possess not only habits of order but of thrift. In these cases it may be that the possession of the ballot has wrought no mischief, but it is not true that the ballot has produced this result. Long before the act of emancipation there were cases of free negroes living in the South who were industrious and thrifty people. Naturally there are negroes of this sort to-day. Nobody desires to debar this class from the ballot. Their presence and example are of great value to a community.

At this stage of my argument I desire to emphasize the fact that the Southern people have done nothing in their history for over a hundred years to impede the improvement of the blacks, but on the contrary, much to develop his best attributes. Transferred as a slave by Northern and British traders from a condition of absolute savagery and cannibalism in Africa to the Southern planter he became under his new ownership, an orderly, peaceful, useful member of society. No class of laborers in the world were more free from violent or serious crimes than were the Southern slaves prior to their emancipation. After their emancipation they were in every Southern State provided with educational facilities, and this chiefly out of funds arising from taxes imposed on the white race.

The whites are mainly responsible for this system of education. They hoped by it to make the negro a better member of society. In a more important matter they have had the favor of the white race. Every branch of labor in the South has been thrown open to them—labor on the farm, the great plantation, in the work shop, and the mechanic arts. Every negro willing to earn an honest living has enjoyed the good will, assistance, and encouragement of the whites. On no occasion has the poor white man blocked the road to labor by the black man. How has it been at the North up to the other day—in Illinois and, in fact, all the States? How is he treated by the trade unions of the North? Into how many branches of industry at the North is the negro free to enter and to earn his bread? He needs bread quite as much as he needs the ballot.

Sir, I am not afraid to compare the treatment of the negro race by the North and by the South, either before or after their emancipation. We have never closed upon him the door of honest employment. As a slave the negro never lacked for bread, or clothing, or shelter. If he has ever suffered for bread in the South since his freedom began it was not because plenty of people were not ready to employ him. In the courts of the South he has been accorded all his legal rights. I think many of the negroes would prefer a jury of whites to try them to a jury composed of their own color. The experiment of negro education has been fully tried for over thirty years at the expense of the whites. It has been a costly burden upon a people who were greatly impoverished for many years past.

It is true, indeed, that the whites of the South, after the negro was emancipated, deprecated and opposed negro suffrage. They voted it down about that time by large majorities in many of the Northern States, though there were so few negroes in their midst that their social fabric could not be seriously imperiled by the addition of 1, 2, or 3 per cent of African votes. But logically these Northern States who thus voted down negro suffrage had much more than race prejudice as a basis for their action. They had spread before them the history of the negro race in Africa, the West Indies, and in North America. At no time in the history of Africa had the blacks ever shown the slightest aptitude for self-government or for the arts of industry and peace. Wars, raids, rapine, theft, slavery, polygamy, all forms of lust and vice, superstition, voodooism, cannibalism, all the lowest stages of savagery had marked the history of this race in Africa for thousands of years without exception. From the dawn of history this was his record.

Carried as a slave to New England or to the Southern plantations and subjected to the elevating influences of white civilization and Christianity, the negro had greatly improved in the order of human beings; his moral nature had been developed and his evil passions repressed, but there had been nothing in his history whether at the North or the South to indicate or prove that he ought to participate in the functions of government. The free negroes of New England had possessed considerable educational advantages and much friendly aid, but the people of that section had not deemed it safe to confer a responsible office upon a single one of them.

In Haiti the negroes had revolted and conquered the island. They were then absolute masters. They owned an island second in fertility and natural advantages to none in the world. They had succeeded to a prosperous, well-ordered civilization. They

destroyed it absolutely root and branch. They went back to wars, revolutions, savagery, idleness, superstition, and voodooism. Now was the grand opportunity of the African. Has he shown there the slightest aptitude for governing himself? Has he shown there any fitness to share the rule of an empire or a republic with the white race? Is not the story of Haiti the story of every other West India colony where negro emancipation has been supplemented by negro suffrage and negro supremacy? Do you ask for witnesses? They are legion. Read Froude, or Spencer St. John, or any of them.

I ask you, in the face of such an unvarying experience, whether those Northern States—Republican States—were not right in rejecting negro suffrage as they did? How much more abundantly justified were the Southern States, where the negroes constituted so large a proportion of the entire population. They knew the history of the negro race in Africa and the West Indies quite as well as did these Northern communities, and they had also a far broader and more intimate acquaintance with the limitations of the black race than any other people in the world. They did not cherish any animosity toward the negro, for if he had been the occasion of the civil war he had been the perfectly innocent occasion of it, and was in no wise responsible for what had happened. No clamor or appeal from him incited that dire conflict. The Southern master did not dismiss his old faithful, aged, and worn-out servants when they were emancipated in 1865, though they were a burden to him. He had for all of them kindly feelings, but he did not believe them to be a safe depository of political power. He knew them to be unfit. The South therefore resisted negro suffrage as far as she could.

It was forced upon her finally—how I will not say. She yielded to the coercion of superior force because she was helpless and in order to escape other and, if possible, worse evils. It was a trying, a dreadful hour for these bankrupt and impoverished communities to have such a system forced upon them, but nothing remained to do but to accept it and try to bear up under this fearful burden.

For thirty-five years the South has had to carry this burden. This is more than the usual span of a generation. The history of the experiment in the South shows that with this black cloud hanging over the people immigration is impeded, capital repelled or driven away, property and progress constantly imperiled, crime developed and multiplied, the work of good government embarrassed, and race conflict made a permanent feature of our daily life.

In view of such conditions and such an experience, can any man fail to appreciate the patience, fortitude, and patriotism which has all these years led the Southern people to endure, to forbear, and to hope for final relief? The fifteenth amendment to the Constitution, I have said, and every candid man will admit, was forced upon the South; but it has been accepted there as the fundamental law of the Union, which can not be changed save according to the usual constitutional forms. And this change, however desirable it may be, has not been regarded as capable of attainment. The amendment must needs be obeyed. It reads as follows:

The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

This amendment can not, I repeat, be infringed upon by any Southern State. The Federal courts, we know well, will maintain it to the fullest extent. But while the suffrage can not be abridged on account of race or color, it may be abridged for felonies, for a failure or refusal to pay lawful taxes, for a lack of sufficient intelligence, for a lack of voting age, or on account of sex, or for any good and sufficient cause applying to both races. Now, I assert that it is the right and duty of any State in this Union which finds the suffrage there extended in such a wholesale manner as to be a constant danger and actual injury to the community to limit that suffrage, provided this be done in a legal, orderly, deliberate manner and in strict conformity to the Federal Constitution. So far it can not be pretended that any of the changes made lately in the State constitutions or laws affecting the suffrage have been made without a careful observance of the forms of law. If the fifteenth amendment be violated, the courts will declare the constitution or law invalid; but up to this time no Federal court has so decided.

The first State to move in respect to this suffrage question was the State of Mississippi. A convention was called there, elected by the people, and assembled in the summer of 1890. They adopted a new State constitution on the 1st of November of that year which contained many admirable provisions. On the subject of the ballot there were two important provisions, which have been well summed up by an eminent lawyer of this body as follows: First. To be a qualified elector one must have paid all taxes which have been legally required of him for the two preceding years, and this payment must have been made on or before the

1st day of February of the year in which he offers to vote. If he owns no property, he must pay a poll tax of at least \$2 if he desires to vote. This poll tax is not a lien on property exempt from taxation, and as very few negroes own more property than is exempt, as to them its payment is purely optional.

Experience has shown that the effect of these tax provisions, though legally applicable to both races, has considerably curtailed the negro vote. Yet these provisions are obviously fair, and tend to confine the suffrage to the industrious and thrifty citizen, though poor, instead of including the idle and worthless class, who pay no tax whatever to the State. There is another provision limiting the suffrage. The elector must be able to read a section of the constitution of the State, or if he can not read he must understand it when read to him, or be able to give a reasonable interpretation of it.

This constitution was sharply criticised in the United States Senate, but was vindicated in a most triumphant manner by Senator George, of Mississippi, who had been the author of the suffrage clauses. He reviewed the constitutions of the New England and other Northern States, and proved by the record that Mississippi had simply followed the precedents they had set. It was an absolute vindication. None of his antagonists has ever attempted a reply from that day to this. This speech of December 31, 1890, by Senator George, deserves to be studied by everyone who cares to understand the history of this question or to form a judgment upon it.

The "understanding" clause, however, was the one principally assailed, but investigation has shown that more blacks than whites have registered under it. The whole question of this constitution came before the United States Supreme Court in the case of *Williams vs. Mississippi*, and was decided April 25, 1898, the court, by a unanimous vote, sustaining the validity of the Mississippi constitution and deciding that it did not conflict with the Federal Constitution. (See vol. 170, U. S. Reports, 213.)

In connection with this adjudication it may be well to recall the fact that for years there was more clamor directed against the Mississippi constitution than against any of the other changes made in the election laws of the Southern States. There is authority for the statement that with the adoption of this new constitution there has been an era of peace, contentment, good order, and progress in Mississippi, and it was stated in debate in the Senate about a year ago that in the very year following this restriction of the colored suffrage, some 10,000 negroes came voluntarily to the State to reside. This was the State of all the South they selected for settlement. There was plenty of work there, kind treatment, and very little politics. What a light does this throw on the question under consideration!

I may remark, also, that the poll tax of \$2 imposed on every voter is appropriated by the State constitution exclusively to common schools; that the negro gets his share of the benefit, and that it is almost his only contribution to this fund.

The State of Mississippi suffered under this experiment of wholesale negro suffrage for about twenty-three years before she changed her State constitution so as to provide an intelligence and tax test for all voters. My own State of Louisiana suffered more from this cause than any Southern State except possibly South Carolina, but it was not until May, 1898, that she modified the suffrage clause of her constitution. She bore the evils of this cruel experiment for over thirty years. I am very sure no one can find in this long-suffering and patient endurance of a great evil any evidence of a disposition to run counter to the sentiment of the dominant party, however erroneous it might be, or to infringe, even in appearance, upon the prohibition of the Federal Constitution.

There is no infringement of the United States Constitution, no denial of suffrage in it anywhere on account of race or color. There are intelligence, property, and tax tests, but these are applicable to both races and to all men. The male citizen of Louisiana in order to become an elector, must possess certain qualifications. He must have been an actual bona fide resident of the State for two years, of the parish for one year, and of the precinct for six months preceding the election. He must be a registered voter. He must be able to read and write. He may use English or his mother tongue. If not able to read and write, he can register and vote if he possesses property assessed at \$300.

If it consists of personal property, the taxes must have been paid. It is further provided that no male person who was on January 1, 1867, or at any date prior thereto, entitled to vote under the constitution or statutes of any State of the United States wherein he then resided, and no son or grandson of any such person not less than 21 years of age at the date of the adoption of the constitution, and no male person of foreign birth naturalized prior to January 1, 1898, shall be denied the right to register and vote by reason of his failure to possess the educational or property qualifications thus prescribed, provided that he shall have resided in the State for five years next preceding the date at which he shall apply for registration, and shall have registered in accordance with this article prior to September 1, 1898. A special regis-

tration is prescribed for this class of voters and all persons not applying before September 1, 1898.

The principal complaint made against the Louisiana suffrage clauses is directed against this clause. It has been developed that of the comparatively limited number of persons who have availed themselves of the privilege it offered were persons who were able to read and write or who possessed property, but who registered under it to induce others to do so.

It is further provided that all persons under 60 years of age desiring to vote must have paid a poll tax for the two preceding years of \$1 per annum, to be used exclusively in aid of common schools. No one is allowed to pay the poll tax of another person, and this offense is justly treated as bribery. Careful provision is made for the right of appeal to the court by anyone denied registration, without cost to the applicant. All votes are by ballot. The sale of liquor on election day or at primaries is prohibited within 1 mile of the voting place.

These provisions of our State constitution make no distinction of race or color. I may ask, Where do they work any injustice to any voters of any race? They, indeed, tend to limit the suffrage to that portion of the population best fitted to exercise it—to orderly citizens who have a stake in the community and to the intelligent classes. The constitution is conservative in its scope, not aggressive or destructive. Is there any fair or thoughtful person who would say that the criminal class—the ignorant, the indolent, shiftless, vagabond element, who never pay taxes—have an absolute, indefeasible right to the elective franchise and to say or prescribe the taxes to be paid by others? Is it not the interest of all the members of the community, good and bad, that the political power of the State should be in the hands of the better and more conservative elements of the population?

More than two and a half years have elapsed since this constitution was ordained and went into operation. There has been ample time, I apprehend, for any person who feels that he has been unlawfully denied the right of suffrage and that in his person the fifteenth amendment to the Federal Constitution has been violated to test the matter in the courts. The State courts are open to such a person. It is his right also to apply to the United States courts. It is noteworthy that no reputable negro or white man has thus applied.

The only case in which an attack is made, even indirectly, on the Louisiana constitution, is a proceeding by a negro named Wright, who was indicted in December, 1899, for the crime of "breaking and entering a dwelling house in the nighttime, armed with a dangerous weapon, and making an assault upon a woman therein residing, with intent to commit rape," a crime made punishable by death under section 850 of the Revised Statutes of Louisiana. Wright was regularly tried and convicted, and, after vainly applying for a new trial, he was sentenced to be hung. Wright, by his counsel, has sought relief through the Federal courts from this penalty, and the case is now pending before the United States Supreme Court.

The ground relied on by his counsel is not any exception to the suffrage clauses of the new constitution, but that the whole constitution of 1898 was and is invalid because it was not submitted to the popular vote for ratification. It is deemed altogether improbable that the Supreme Court will affirm this contention, and even if it should do so, the suffrage clauses are not involved in the decision upon the case. I doubt if any case will ever be brought before the United States Supreme Court to test the constitutionality of the suffrage clauses I have described, but if such a decision should be made by this august tribunal I am confident that the people of Louisiana will promptly conform to it. That the clauses prescribing an intelligence qualification or the payment of taxes as tests will be annulled by this tribunal is hardly within the limit of possibility.

The condition of Louisiana under the new constitution is one of contentment, improved order, and visible progress. I venture to predict that the next ten years, under the new constitution, will develop a better condition of affairs and more improvement than any period since 1865, and it will be due largely to the new State constitution. Why should anyone wish to hinder such a beneficial consummation? Is it not the interest of the whole Union that we should have a good State government in Louisiana?

There has been a great deal of discussion in Congress and in the public press upon the constitutional amendment adopted by the State of North Carolina last summer. This amendment simply affected the suffrage clauses and did not apply to the general features of the old State constitution. It was submitted to the people for ratification, and at a fair, free, and full election it was adopted by a very large majority. I believe, sir, that it was voted for by many Republicans. The complaint made against it is that there is a hereditary clause similar to that of Louisiana, and that under its operation, while some negroes could vote, a much larger number of whites could do so.

This may be the case, but I apprehend that it would be found on trial, as with us, that no very considerable number of persons

would be the beneficiaries of this privilege. This constitutional amendment will not go into operation before the year 1902. There is a requirement of course for registration of all voters. There are also qualifications pertaining to sex, age, citizenship, residence, and freedom from conviction for felony. Section 4 of the amendment says that the person offering to register shall be able to read and write any section of the Constitution in the English language and shall have paid his poll tax on the 1st of March or earlier of the year in which he proposes to vote.

Section 5 provides that no male person who was, on January 1, 1867, or at any time prior thereto, entitled to vote under the laws of any State in the United States wherein he then resided shall be denied the right to register and vote by reason of his failure to possess the educational qualification. But he must register prior to November 1, 1898, and he must also have paid his poll tax. There has been a large majority of white votes in North Carolina for many years past, but in a number of the best counties in the State, and in the commercial city of Wilmington, there has been absolute negro supremacy and a disgraceful condition of affairs under it, to which no New England State would have submitted for an hour. The action of the people of North Carolina was long deferred, but my information as to the conditions that obtained there and my knowledge of what black supremacy involves to the white race convinces me that the people of North Carolina were abundantly justified in the course they have pursued, and that great good to the State will be the result.

These three States—namely, Mississippi, Louisiana, and North Carolina—are the only ones of the South where there have been changes made in the State constitutions affecting the suffrage. In the State of South Carolina complaint has been made of the registration and election laws, but not of the State constitution. This instrument, it is conceded by all, makes no discrimination. Very recently action was brought in the United States circuit court at Charleston against the board of managers of the general election to recover \$2,500 damages for denying the right of Daniel Wiley to vote for a member of the House of Representatives on November 6, 1894. The case came up on appeal to the United States Supreme Court, and was only recently decided. The constitution and laws of South Carolina require voters to be duly registered. It did not appear in the complaint that the plaintiff had ever registered or even applied to be registered.

The Supreme Court consequently decided that because of this omission the complaint did not state facts sufficient to constitute a cause of action. The legislation complained of in this action goes back as far as 1882. The State statutes were revised in the year 1893. It is noteworthy that in all these years only one action has been brought to test the validity of these statutes, and that action was dismissed by a unanimous judgment of the Supreme Court. This fact speaks volumes. Yet by the last Crumpacker bill this State is deprived of three members of this House.

Mr. Speaker, the South is not alone in her dread of the evil of giving suffrage to an inferior race and in her desire to limit its evils. I beg leave to remind you of the policy adopted by the general voice of the American people in respect to the Chinese. As an industrious, orderly people, they compare most favorably with the African. They give little trouble to the policemen. They do not commit murders, rapes, or violent crimes. In this respect they constitute no terror to a community or to domestic life. Their intelligence is far superior on the average to the negro. Yet you have denied him the ballot and the privilege of being a citizen. This legislation was adopted at the very time negro suffrage was forced on the South. There was not then, there is not now, any great number of Asiatics in this country. So intense is the feeling of aversion that they are not even allowed to come to the United States as laborers.

Look at the course of Great Britain toward India. There you have 300,000,000 Hindoos, a race much superior to the blacks in intelligence, good order, and industry. They are not allowed any share in the control and government of their own country. One or two hundred thousand Englishmen govern India. There are many harsh features in this British rule to which this people protest, but they are dominated all the same—300,000,000 human beings. Yet we have England constantly paraded before us as an example for our imitation.

Where does the black man come in in South Africa in British dominion or those of the German Emperor? How often does the native vote in Egypt?

Why this unwillingness to accord self-government to the Filipinos and suffrage to everybody in Cuba or Porto Rico? Is it not the result of an idea that the inferior races can not safely be invested with the ballot?

Prior to the year 1874 the blacks voted for years in this District under the eyes of those who had enfranchised them and given them the ballot. They constituted about a third of the voters, not two-thirds, as in a number of counties in the Southern States. The experiment of suffrage worked so badly, the blacks showed

themselves so unfit for it, that, in order to secure decent, orderly government, both parties in Congress combined to abolish the whole system and to substitute a city government by three commissioners. Everybody knows that this was not done on account of any objection to the whites voting, but to get rid of the blacks voting.

There was a universal feeling of disgust at the working of the experiment. The negroes here are far better educated and more intelligent than their brethren of the South, but you will not find the white Republicans of this District or in Congress willing to let them vote. Propose it to them and they would start back in horror. Yet every fair man must admit that this system is safer here, involves less peril, and is more easily restrained than in the States of the South, where many districts are sparsely settled and the work of police proportionately more difficult. Is it too much to ask the Republican Congressmen who own property in this District to weigh the case of the property owner and taxpayer in Louisiana?

It is pretended by some persons that a State should have her representation proportioned to her actual number of voters. How the number actually entitled to vote can be precisely ascertained I am not aware. I know no mode. There may be one. The vote polled at an election furnishes no guide. In the Northern States it often happens that the vote falls off for some cause or other. In 1890, as I see it stated, the State of Massachusetts cast 285,000 votes, but had a vote of 665,000. I could multiply such examples.

The doctrine of the American Revolution of 1776 was that taxation and representation should go together. Under your revenue system taxes fall according to the population. You tax everybody—black, white, rich, and poor. You do not propose to reduce taxation as you reduce representation. I am not willing to see any State punished, whether it be Massachusetts or Mississippi, for an attempt to shut out an ignorant or criminal class from the ballot box. A State that does that makes herself a better member of the Union, and deserves praise instead of chastisement.

We do not fear an investigation of alleged disfranchisement of negroes in the South, if fairly conducted and on nonpartisan lines. The South has nothing to lose by the truth. The Northern people have only been fed on lies and misrepresentations.

I consider that it is almost criminal to thus hold out to the States a premium to debauch and degrade the franchise. Suppose you had in this country a man of talent and power enough to lead public opinion, and that this man was hostile to the great experiment of free government and at heart wanted to substitute a monarchy. How would he go about it? A candid proposal to abolish our form of representative government would be understood and scouted. His best plan, his most effective and ingenious method, would be to induce the people to degrade the franchise, to give the ballot to everybody and anybody, to the ignorant, the vicious, and dangerous classes, and thereby to make free representative government so contemptible in its practical operation that men would be willing to give it up as a failure. Shall we be told that there is no danger of this? Do we not hear on every hand men of force and observation asserting that municipal government in our great cities is already practically a failure?

I believe the people of this country ought to recognize the fact that in this great and vital matter of suffrage each State is the best judge of its own condition and necessities. I should hesitate greatly to criticize any local or suffrage regulations or changes that Maine or Massachusetts or Ohio or California might feel called upon to adopt. I should feel that those people knew far more about the subject than I did. In the South this is preeminently the case. No one who has not lived there can fairly appreciate our condition. It is no simple matter for us to deal with the great problems before us. We have a right to your sympathy, best wishes, and generous aid, instead of hostile and unfriendly criticism.

Let me remind you that here in this country we have, excepting the little mountain land of Switzerland, the only real republic in the world. Nominally there are some others, but practically they are governed by the strong hand. They differ little from monarchies. In view of this fact we should cherish a union of sentiment and affection as well as a mere formal bond, and realize that only by mutual cooperation and good will can this great experiment of self-government be made a lasting success. If it fails, let it not be because of our folly and strife.

I believe and am glad to believe that the spirit of this observation, if not its actual words, is felt by the distinguished man who now fills the executive chair, and that his great influence will be wielded to cement the sections and to leave the country more united than when he first took the oath of his high office. I do not think there can be any doubt as to his position on this subject, though I do not profess to speak for him. I appreciate the kindly and patriotic feeling that prompts him in this regard, and I honor the worthy ambition it displays—an ambition to close his public career with the spectacle of a united people.

War-Revenue Reduction.

SPEECH

OF

HON. OSCAR W. UNDERWOOD,

OF ALABAMA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 13, 1900.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 12394) to amend an act entitled "An act to provide ways and means to meet war expenditures, and for other purposes," approved June 13, 1898, and to reduce taxation thereunder—

Mr. UNDERWOOD said:

Mr. CHAIRMAN: When the war-revenue bill was enacted it was contended that we had neither the time nor the opportunity to revise and readjust with proper care our present system of taxation and to equalize the burden bearing upon the people; that we were engaged in a war with a foreign nation; that the Government needed additional revenue; and it was contended by gentlemen on the other side of the Chamber that immediate action of some kind must be taken, and that the best bill which they could then bring before the House was the bill that would most surely produce the revenues needed for the Government.

That argument at that time, Mr. Chairman, was logical and was sustained by the deficit in the Treasury, but to-day the war with Spain has ceased for two years. We have peace at home and peace abroad. There are no political elections to embarrass the party in power. There is a plethora of revenue in the Treasury of the United States. I ask, has there ever been an opportunity, a better opportunity, for the Congress of the United States, at its leisure, carefully and deliberately to reduce and readjust our revenue so that the taxes will fall equally and justly on the people of this country? I think not. I think with a surplus in the Treasury of \$30,000,000, with the conditions now existing in the country, that they warrant us—nay, more, make it our plain duty—to consider now the entire question of raising revenue, so that the equitable adjustment that was promised to our citizens in the last election may not fail, and that they will not be required to pay unduly in proportion to what others pay.

Now, no question can be raised by anyone that the bill now on the statute books known as the war-revenue bill does not distribute the burdens of taxation throughout the country either in proportion to the wealth or the ability of the citizens to pay. In the first place, it falls on the active, energetic, producing wealth of the country, and what you might term the idle or unproducing capital of this country under the bill remains practically untaxed.

Now, I do not believe in laying the burdens of taxation upon one class to the injury of others. I believe under the laws enacted by Congress every man should bear some part of the burdens of the Government, and that the taxes should be so adjusted that all classes of citizens may bear their fair share. But, Mr. Chairman, if I had the power to write a revenue law, and was compelled to discriminate between the active, producing wealth of the country—between the capital that gives employment to other people and develops the resources of our country—and that class of capital which is unproductive and gives employment to none—the class which does not develop the country, does not add to its resources, does not open up the avenue of wealth in the country, and is merely beneficial to the owners of the property itself—I would discriminate in favor of letting the active, producing capital go untaxed, and lay the burden of taxation on the idle and unused money which is of service to no one but to the owner. I think it would be better for the country if we should discriminate to that extent in our legislation in reference to taxation, and I believe that in doing so we would succeed more nearly in an attempt to do justice than by any other process.

But how is it with the bill now under consideration? There is hardly a tax levied in the war-revenue bill that does not fall on the active business capital of the country. If a man wants to take his surplus means, tie it up in a napkin and bury it under the ground, so far as benefiting his fellow-citizens is concerned by its use amongst them, he practically escapes taxation, and the great millions, invested merely for the purpose of safety in order that their owners may enjoy their profits, pay none of the taxes and escape all of the burdens. It is true that the millionaire when he goes to his bank must put a 2-cent stamp on his check for \$10,000, but he pays no more on that sum than does the humble merchant who draws his check for \$100 or less, because he must pay the same tax on the smaller sum.

It has been said that a great many of the taxes levied under the bill fall upon the productive wealth of the country and that the great bulk of the unproductive wealth is absolutely untaxed.

That is true. When you come to the class of citizens developing the country, conducting its business, they can hardly turn around in their offices that they are not required to remember that they have a Government of the United States which requires them to affix a stamp to some taxed article. While the productive wealth of the country pays the great bulk of the taxes, the unproductive wealth receives the greatest protection.

Mr. Chairman, I do not propose to seriously criticize the majority of the Committee on Ways and Means in the reductions they have advocated in the pending bill. They propose to reduce the taxes raised by the war-revenue bill to the extent of \$40,000,000. They do not attempt to remodel the tariff schedules or the internal-revenue taxes, and as to such taxes as are left unrepealed in the war-revenue bill they make no attempt to arrange upon a more equitable basis, but merely propose to repeal in full a part of the existing taxation without attempting to fairly distribute the burdens that remain.

Now, if we propose to limit our legislation in the pending bill to a mere horizontal reduction, we should at least attempt to make the bill harmonious in all of its features. It seems hardly fair to say that one industry or one commodity shall pay the bulk of the taxes and others shall be entirely relieved. It is hardly fair to say that some shall be left to bear the burden of this unjust taxation and others bear none. If that is the policy you are going to adopt, then I admit that it is merely a matter of selection on your part.

I am willing to admit that there is no principle involved, if that is what you are trying to do. I agree that if it is merely a question of personal choice on the part of each member of the House of Representatives as to who shall remain to be taxed and who shall go free of all burdens, that selfishness and personal interest will control. When we come to make this selection it is but natural that every man should vote to let his own constituency, or those of his constituents in whom he is most interested, go untaxed and leave the burden of the taxation on others. That is only human nature. We should probably vote the same way on this side of the House if we merely proposed to make this horizontal reduction of \$40,000,000 and go no further.

But the criticism that I have to offer to the pending bill is, first, that the majority of the committee have made no attempt to equalize or adjust the burdens of taxation throughout the country, and next, that they have not reduced the amount of taxes to the extent that the revenues of the country justify.

Now, the gentlemen on the other side contend that we have no better means of fairly and equitably distributing our taxes than those that we find in this bill. I do not think that can be seriously contended. Some of us favor an income tax, and would be glad to see this entire bill repealed and such revenue as is necessary to raise to take the place of the taxes in this bill, if any is necessary, raised by an income tax, whereby the unproductive wealth of the country may bear a portion of the burdens of taxation. But the gentlemen on the other side of the House, when we make a proposition of this kind, say that an income tax is unconstitutional; that the Supreme Court has declared that we can not raise revenue by that means, and that it is idle for us to suggest that we will now raise revenue by a means that the Supreme Court of the United States has said could not be effective.

Well, I will say in answer to that, Mr. Chairman, that when that decision was first rendered the Supreme Court of the United States decided that at least a portion of the income tax enacted under the Wilson bill was constitutional; that it was only after a rehearing and by the decision of one judge that they declared it unconstitutional. I believe that it is a fair and equitable way by which to adjust the taxes of this country, and I do not believe that the American people will be content until they once more at least require the Supreme Court of the United States to render another decision as to the constitutionality of an income tax before recognizing that that means of raising revenue has gone from us.

But if my colleagues on the Republican side of the committee are unwilling to adjust taxation by means of an income tax, then I say they recognize in their report that we do not require more than \$60,000,000 under this war-revenue bill in order to maintain sufficient revenue to prevent a deficit. They recognize the principles of an inheritance tax, because they have properly left it in the bill, and the Supreme Court of the United States has declared that that inheritance tax is constitutional and is a proper means of raising revenue. Well, now, when my friends say that we must continue to resort to these unequal and unjust modes of taxation, I wish to call their attention to the fact that to-day, under the English system of inheritance taxes, the British Government is raising a revenue of \$67,000,000. It is not complained of. It is paid in that great nation. It is paid by the wealth of that great nation as its share of the burdens of the Government. To-day our inheritance tax, as we have written it, only produces a little over \$3,000,000. This country is as great in its wealth and its wealth-producing capacity as are the islands that constitute Great Britain.

We can produce in this country as much revenue from an inheritance tax as the British Government can produce from an inheritance tax, and that form of taxation falls on the unproductive wealth of the country.

No man has the inherent right to the property of another. The people who inherit legacies in this country inherit them under and by virtue of the laws of this country. A man may have a natural right to what he produces, but he has not a natural right to that which was produced by others. Therefore, if we put this inheritance tax on the legacies that are left, we do no injustice to anyone, and we merely make the people who pay it pay their fair share of the burdens of government.

Now, there is no question that the gentlemen on the other side of the House, at this hour to-morrow, when the question comes to a vote in the House, have the power in their hands to wipe out every vestige of the war-revenue bill and substitute an inheritance tax that will produce the amount of revenue that they contend is still needed by the Government. If that be the case, and it undoubtedly is, I ask why should they continue any of these vexations, unjust, and unequal taxes? I can understand no reason, unless it be that they fear the great wealth of this country, and would rather legislate to let it go untaxed than they would to relieve the plain merchant and the plain farmer and the average citizen of the United States from the unjust burdens under which they are now suffering.

Mr. HENRY of Connecticut. Does not the gentleman understand that many of the States are now levying heavy, burdensome inheritance taxes?

Mr. UNDERWOOD. Why, certainly, I understand that.

Mr. HENRY of Connecticut. Does the gentleman believe in oppressive duplicate taxation?

Mr. UNDERWOOD. I will state to my friend from Connecticut that I understand that fully. I do not believe in duplicate taxation. I do not believe in oppressive taxation; but I say when you put the great burdens of taxes on the poor, and allow the accumulated wealth of the country to go untaxed, then you are levying unjust taxation.

We can not control the forms of taxation by the States. The taxes levied by the State governments have nothing whatever to do with the taxes levied by the National Government.

Mr. HENRY of Connecticut. Right there. Many of the States have been levying this tax for a long term of years, have they not?

Mr. UNDERWOOD. I admit that many of the States do levy this tax.

Mr. HENRY of Connecticut. The National Government now steps in and duplicates that taxation. Does the gentleman think that fair taxation?

Mr. UNDERWOOD. We have in many of the States this form of taxation.

Mr. HENRY of Connecticut. But it is prior to the Government tax.

Mr. UNDERWOOD. I do not know that the State of Alabama or the State of Connecticut can preempt the right of taxation from the Government of the United States, and I have never heard of any such theory as that advanced. If it is a just tax in the State of Connecticut that men should pay on their wealth and property in proportion to that which they have, then I say the principle is the same as to the United States Government. If it is just that the great wealth in your State should bear its proportionate share of the burdens of taxation, I say that it is just in the United States at large that the great unproductive wealth of this country should bear its proportionate share in the taxation also.

Mr. HENRY of Connecticut. I do not suppose the gentleman would take the whole of the legacies?

Mr. RICHARDSON of Tennessee. The State can relieve its citizens.

Mr. UNDERWOOD. Why, certainly, as my friend from Tennessee suggests, if the State thinks that its citizens are being unjustly dealt with, it can remove the State tax after we have levied the national tax.

Mr. RICHARDSON of Tennessee. Only 21 States have levied it.

Mr. UNDERWOOD. Only 21 out of 45 have levied it. They have a right to recede if they think the burden is too great. If they do not think it is equitable and just they can reduce it in their State.

Mr. RICHARDSON of Tennessee. And the United States could reach 45 States.

Mr. UNDERWOOD. We will reach all the citizens of the United States by the same means that they are reached in the State of Connecticut.

Now, the other question and the other proposition, with which we disagree with the report and bill brought in here by the majority of the Ways and Means Committee, is that there is no reason why this war-revenue tax should be continued at all as to the great number of items that are in it. There are some kinds of taxation that we find in the war-revenue bill, such as the inher-

ance tax, that we do not think should be repealed at all. We think they should forever stand upon the statute books as part of the means by which we should raise the revenues of this country; but I do not see why the great bulk of the taxes, the vicious and vexations stamp tax as a whole, should not be removed. The gentlemen who represent the majority of the committee contend that it is impossible to reduce the revenues of this country more than \$40,000,000, and to sustain themselves they refer to the report of the Secretary of the Treasury of the United States, in which he contends that we will only have a surplus in 1902 of \$26,000,000.

Well, now, Mr. Chairman, I have not been able to satisfy myself how the Secretary of the Treasury can reach that conclusion. In the first place, he states that the amount of revenue now produced by what is known as the war-revenue bill is \$105,374,000 and that for the present year—when it is not an estimate, but is an accomplished fact—the revenues raised by the Government will be \$669,595,000 and that the expenditures will be \$590,068,000. This leaves a surplus for this year of \$79,527,000. Now, that is the estimate for the present year, contemplating the expenditures as given by the Secretary of the Treasury himself. For next year (1901) he estimates the revenue at \$687,773,000 and the expenditures at \$607,773,000, leaving a surplus at the end of next year of \$80,000,000. Now, there is an accumulating surplus in the next two years of \$160,000,000 in addition to the \$140,000,000 that we now have as a surplus in the Treasury of the United States. When he comes to the year 1902 he admits that the revenues will increase, and he estimates that the revenues of the Government will be \$716,623,000, but he also estimates an enormous increase in the expenditures by the Government, stating that our expenses for that year will be \$693,374,000, or an increase from 1901 of \$87,000,000. Mr. Chairman, I do not understand how it is possible for the Secretary of the Treasury to come to that conclusion.

Mr. WILLIAMS of Mississippi. Has the Secretary of the Treasury ever stated what the items were that would constitute that increase?

Mr. UNDERWOOD. In his report, on pages 11 and 12, he states what the expenditures will be in the two different years. In one case, for 1901, he bulks them; in the other case he separates them, so that it is impossible from his report to ascertain exactly where the increase comes in.

Mr. WILLIAMS of Mississippi. He renders us no itemized account of the increase?

Mr. UNDERWOOD. The gentleman from Mississippi states it correctly.

Mr. RICHARDSON of Tennessee. He does not include anything for the sinking fund?

Mr. UNDERWOOD. He does not include anything for the sinking fund. I have taken my pencil and figured it down, and as far as I can ascertain I find that he estimates that the increases of 1900 are \$10,868,000 for the Navy of the United States, and he estimates that there will be a decrease of \$26,431,000 for the military establishment of the United States, making a total decrease in the combined expenditures of the Army and Navy of the United States of \$16,000,000. As I understand, the distinguished chairman of the Ways and Means Committee in making his opening argument in this case the other day in answer to some questions, he stated that we still had an army in the Philippines, and that we had to carry an army there and bring it back.

But I say that the army that is there now of 100,000 men will cost no more to maintain, or cost no less to maintain, than the army that will be sent there if we need regulars. Regulars eat no more and produce no more expense than volunteers, and more than that, the Secretary of the Treasury has made his estimate for carrying that army there and bringing that army back. He has made the estimate, as I have stated, that the military and naval arms of the Government, both taken together, although one increases and the other diminishes, as a whole, there will be a decrease of something in the neighborhood of \$16,000,000.

Now, Mr. Chairman, that being the case, I ask where he gets his increase of \$87,000,000 in expenditures? It must come from the civil side of the Government. The civil establishment of the Government must make this increase of \$87,000,000, if not more, because we find a decrease in the military arm of the Government. Is there any reason, any good reason, why this Government should expend \$87,000,000 more of the people's money in 1902 under the civil expenditures than it did this year? I see none. I understand that he estimates, among other things, that there will be an increase in the pension list of \$3,000,000; but on the other hand, the interest on the public debt will decrease \$1,000,000. Indian affairs expenditures will amount to a decrease of \$1,749,000; the postal service an estimated increase of \$13,000,000. But taking all that into consideration, where does he get his warrant for the miscellaneous increase that brings this amount up to \$87,000,000? I can not find it in the figures, and I do not think it is justified.

It is true I find from the Secretary's report that he wants \$50,000,000 carried in 1902 to provide for a sinking fund to redeem the bonds of the United States. Well, now, I do not state it as a

fact, but a suggestion may not be out of place, that possibly in figuring this enormous increase of expenditures, the Secretary believes that at the end of the fiscal year, if we find the money in the Treasury, he will be allowed to pass it to the credit of the sinking fund for the redemption of bonds. I will say that I am not opposed to a sinking fund for the redemption of bonds. I believe the bonds issued by the Government ought to be paid off in a reasonable and equitable way. I do not believe in a public debt of the United States if it can be paid off. But I do say that it is unjust to the people who bore the burdens of the war, the people who uncomplainingly went into their pockets and paid to keep our Army and our Navy in the field against the foreign enemy, to say to them, now that peace has come, you must continue to bear these burdens in order that you may not only pay the Spanish war debt, but that you must go back and pay the civil war debt. I do not believe that this is just and I do not believe that it is equitable, but it is the only warrant that I can see that justifies the Secretary of the Treasury in saying that the expenditures of this Government will increase \$87,000,000 in 1902.

I hold in my hand the estimates that are prepared by the clerks of the Committees on Appropriations of the House and Senate. These estimates are the basis on which we write the great appropriation bills for the Government. The House of Representatives in the past has always considered that these estimates were reliable, and those gentlemen understand their business, and know what are the needs and wants of the Government. Now, in sustaining the proposition that I have contended for, that there is no reason to believe that there is going to be an increase of expenditures of \$87,000,000 in 1902, I want to call your attention to what this estimate, as made for the House and Senate to base its appropriation bills, says. It gives the comparison of the estimates of the regular appropriation bills and the annual appropriation bill for 1901 and 1902. It estimates an increase in the Agricultural Department of \$336,793; for the diplomatic and consular service, \$1,790; District of Columbia, \$1,422,930.63; fortifications, \$732,225; Indian affairs, \$2,450,044.57; legislative appropriation, \$380,239.52; Military Academy, \$343,457.19; Navy, \$12,926,921.61; pensions, \$15,000; Post-Office Department, \$10,489,549; rivers and harbors, \$5,136,258.69; making a total estimated increase of \$34,261,239.21.

But now listen to the estimated decrease. They estimate a decrease in the Army of \$14,693,089.34, and in the sundry civil appropriation of \$6,694,594.41, but for the permanent annual appropriations a decrease of \$8,354,000, making a total decrease in the estimates for 1902 of \$29,741,683.75.

This subtracted from \$34,261,239.21 leaves a total increase, as estimated by these gentlemen, for next year, the fiscal year of 1902, of only \$4,519,555.46.

Now, when these gentlemen, these experts, who have prepared the tables from which the appropriations are made in the House and Senate, after carefully compiling the data before them, estimate the annual increase of our revenues and the annual decrease in the necessary expenditures, you find that they state in this circular that the total increase for 1902 over the estimates of 1901 will only be \$4,519,555.46.

There are the figures, gentlemen, upon which your appropriation bills are to be based. In considering this question of a reduction of revenue, the wiping out of this unjust taxation, are you going to take as your guide the estimates of the Secretary of the Treasury, or are you going to base your judgment, as you have in the past, and as you will when the appropriations are actually before the House, on the estimates which are made by the experts who prepare our appropriation bills? I have no doubt that when the appropriation bills come in you will say that these estimates are all right. Why should you not say so to-day when the question is one of reducing taxation? If there is to be only a general total increase throughout the country of between four and five million dollars, with a surplus this year of \$79,000,000 and a surplus in 1901 of \$80,000,000, with a surplus in the Treasury to-day that has come over to us from the past of \$140,000,000, why is it that you can not make a reduction in this war-revenue bill of more than \$40,000,000? I say, Mr. Chairman, that in view of the statements which are made to us, we could, without any difficulty, and with entire justice to the people of the country, who have borne these war taxes, we could wipe out every single item of the war-revenue bill, except the inheritance tax, and not jeopardize the Treasury balance a particle.

Mr. LINNEY. If the gentleman is willing to wipe it all out, what objection can he have to wiping out \$40,000,000?

Mr. UNDERWOOD. None whatever. Let me say to the gentleman from North Carolina that because I can not have my way in all that I think is right, I am not going to refuse to travel with you on your road as far as you will let me, and if we can not adopt an amendment making this reduction of taxation more than \$40,000,000 I expect to vote to take off the \$40,000,000 of unjust taxation from the backs of the American people.

Mr. LINNEY. Will the gentleman vote for this amendatory bill taking off \$40,000,000?

Mr. UNDERWOOD. The gentleman from North Carolina has evidently not read the views of the minority of the committee, otherwise he would have seen our statement that we propose to vote for the reduction of \$40,000,000 if we could not get something better. What I am contending for now is that neither justice nor right nor equity warrants the position taken by the majority of the committee. The last resort behind which you have hidden is the condition of the Treasury of the nation. You have lifted up that here, and by a manipulation of figures you undertake to make a bugaboo of it: you undertake to make the people of this country believe that it is necessary to maintain these great and burdensome taxes because of natural and ordinary expenditures, when, as I affirm, there can be no real purpose behind this legislation except an effort to make those who bore the burdens of the war pay the burdens of the war debt as well.

Reapportionment.

SPEECH

OF

HON. E. J. BURKETT,

OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 5, 1901.

On the bill (H. R. 12740) making an apportionment of Representatives in Congress among the several States under the Twelfth Census.

Mr. BURKETT said:

Mr. SPEAKER: Listening to one speech that has been made a person would almost conclude that the Burleigh bill was for the relief of the State of Maine, while some other exhibitions on the floor would impel the idea that the whole matter was for the relief of pent-up animosity between members, engendered on other and different occasions.

Maine is concerned in the bill, but the bill concerns a whole lot more than Maine. That State, together with Nebraska, Kansas, and others, may lose a member in this body, but to my mind the whole American people are a great deal more concerned about the larger and more important principle that the whole matter contemplates.

The members could be lost to the State and the State retain its prestige in this House, but strike at the tiny underlying principle and the whole symmetry of Congressional legislation is affected. There is a correctness in all things that must be considered. The incongruities and inequalities of both bills have been ably exposed and ingeniously defended. Each alike are based on what is, to my mind, a wrong theory of figuring.

Considerable controversy has developed as to how the Representatives should be apportioned among the people. As I have listened to the debate as to this method of apportionment I have thought that the farmers of the States of Maine, Nebraska, and Kansas could have given a method that in all instances would have proven equitable and just, for it is a system they have used in every precinct and county convention; that is, apportion the Representatives on a certain number of population, with a Representative for every multiple of the basis taken and one for each major fraction. But instead of this simple and familiar way for the apportionment of members, since 1850 a complicated and unjust, and, in fact, I might say an inadequate, method has been used; that is, by fixing the size of the House and dividing the whole population of the United States by that number and using the quotient derived as a common divisor into the population of the various States, then by giving to the States, in the order of their fraction, an additional member until the whole number of members first designed had been attained.

This, as has been so well shown, oftentimes leaves a majority fraction unrepresented. It may be well to state in passing that the first time this method was used was in the act approved May 23, 1850, an act providing for the Seventh and subsequent censuses and for the fixing of the membership of the House of Representatives and for their future apportionment among the several States.

It will be noticed that the act was passed before the census had been taken and, accordingly, before Congress was able to make an apportionment, and the only thing at that day that Congress could do was to fix upon the number of Representatives in the next House as it did and then provide in the same act that the Secretary of the Interior should apportion the Representatives in the manner that I have previously discussed.

Since that time this method has been followed in the main, although in not a single instance has it been followed entirely and exclusively, for in no case has a State ever been compelled to have a majority fraction go unrepresented.

Two things are done by the bill of the majority of the Committee on Census which attract especial attention. One of them never was done before, and the other but once. The one which was never done before is that in the make-up of the bill of the majority three States are given no Representative for a majority fraction of the ratio. Without exception, Congress has always given representation to every majority fraction. Also, the bill of the majority reduces the representation of some of the States below that which they now enjoy. With one exception, this has never been done before.

As an illustration of the unfairness of the system of figuring upon which the majority bill has been based, attention has already been called to the States of Colorado and Maine. The first of these States, for example, would be entitled to 3 Representatives in a House of 350 members, 351, 352, 353, 354, 355, and 356 members; but when the House was made 357, then, by their system of figuring, Colorado would only be entitled to 2 members; while if the House were raised 1 more, or to 358, they would then be entitled to 3 members.

Maine, for example, would be entitled to 4 members if the membership of the House were 387 or 388, but she would be entitled to only 3 Representatives with a House of 389 or 390 members. Yet upon this inadequate, unjust, unfair, and unsatisfactory system, condemned by all men at all times, the "holy" apportionment of the bill of the majority is computed.

This incongruity has been observed before, and has heretofore been termed the "Alabama paradox." In a letter to the Superintendent of the Census, transmitting to him some tables and computations exhibiting the apportionment of the Representatives among the several States, as ascertained in the Tenth Census, which letter bears date October 25, 1881, the chief clerk has this to say:

While making these calculations I met with the so-called "Alabama paradox"—that Alabama was allotted 8 Representatives out of a total of 299, receiving but 7 when the total became 300.

Such a result as this is to me conclusive proof that the process employed in obtaining it is defective, and that it does not in fact apportion the Representatives among the several States according to their respective cases.

Also, I would call the attention of the House to a point in the report of the Census Committee ten years ago. From page 3 of that report I read:

The old and new methods of computation were used. These methods are explained elsewhere in this report, and tests were made until a number was found with a given ratio that in application would secure each State against any loss in its representation and in no instance leave a majority fraction. This number was found to be 356.

This indicates two things: First, the determination of the House not to reduce the representation of any State nor to leave any majority fraction unrepresented, and second, that an apportionment based upon the new method alone was unjust, and computations by that method alone were deemed to be insufficient and inadequate for the occasion.

The Burleigh bill apportions the members as the committee did ten years ago, with both methods in view; and I might add that by giving a Representative for every 194,000 population and one additional member for each majority fraction thereof the results would be exactly as the Burleigh bill apportions it, with the exception of the State of Iowa, which, under that figuring, would be entitled to one more Representative than the Burleigh bill gives.

It is safe to say that after all the trials and the attempts to do justice there is no figure at which the two systems of computation will attain so nearly the same result as the number 386.

The objection to the Burleigh bill by those who oppose it is only one, of course, that it makes the membership too large, and this objection is based on three reasons, and only three.

First, that the size of the Hall will not permit an increase of membership. Second, that increased membership increases expense. Third, that an increased membership means an unwieldy body.

Let us consider them in their order. First, the size of the Hall prevents an increase of membership. We are unwilling to admit that the popular branch of a popular Government of 76,000,000 of people, growing in size, in influence, and in power, should be limited by the inanimate walls of wood and stone; and were the statement true that the additional members could not find accommodations in this Hall, which is not true, as the plans provided by the Architect of the building demonstrate, still we would maintain that it is only begging the question to insist that the proportion to which the people shall be given representation must be determined by the size of the accommodations provided in advance. The additional members can still be provided for and still leave room unoccupied. If it were necessary, several thousand feet of cottonwood lumber and other kinds of lumber, made into desks, might be removed with good effect as to decorum in the House. A great many changes could be made to give more room, but it is unnecessary, for on the 12th day of last month we had seated comfortably in this Hall, with the desks as they now are, 700 people.

The second objection is that it would increase expense. Yet some of the members who are opposing the measure on the ground

of expense would still vote to erect a dam across "Mosquito Creek" in their district at five times the cost, that a sand barge could do business for a mile or two on the backwater. If the people are entitled to this representation the item of expense fades into insignificance, comparatively speaking.

The third objection is that an increased membership makes the body unwieldy. Unwieldy to whom? To the members, or to those who would manage the members? As has been demonstrated in the past, as the membership of the House increases new methods must be called into requisition for doing business, and as we read the history of the House we have found that methods adequate have always been found. It is necessary at times to limit the number of dumb animals that can be put in one shed or one corral for their own safety, but it is a reflection on the genius of man and the qualities that differentiate him from the lower animals to believe that they can not commune together in unlimited numbers and accommodate themselves to the changed conditions of changed surroundings.

The bill of the majority will leave the size of the House the same as before. It changes the apportionment and, as I have observed, it takes from the agricultural States and adds to the commercial States. Aye, the additions are to the commercial ends of the commercial States. It is the city that is profiting by the apportionment. The power of numbers is being transferred from the rural to the urban parts of the country. Some one replied to me the other day, in response to this suggestion, that if the cities increased it is right that their representation should be increased. I admit it. When cities grow their representation should and will grow; but the unfairness of the bill of the majority is that it imposes a penalty on the agricultural portions of the country at the same time it rewards the commercial districts. We are willing that New York should be rewarded for her increase in population, and that Chicago, that young giant of the West, should be rewarded for her magnificent growth; but we do object that Maine, Nebraska, Kansas, Virginia, and other agricultural States should likewise be punished. In short, we are willing that New York and Illinois should gain, but unwilling that these other States at the same time should lose. We are willing that New York should be rewarded for her gain by an increase in her representation of 5 per cent, but we are unwilling that for her growth Maine should be reduced 25 per cent and Nebraska 16½ per cent.

We do not like to see Nebraska, with 10,000 more people than she had ten years ago, have one less member of Congress to represent her simply because she has not grown as rapidly nor in the same volume as New York City and Chicago.

One of two things must be done—either the size of this House must be kept abreast with the onward march of the increasing population of the United States or the representation will finally be corralled in the cities. There is every apparent evidence of this, not only at the present time but in the past. Only a few years since the State of Maine had 8 Representatives; to-day she has left 4, and the advocates of the majority bill would see her even further reduced. Connecticut once had 7; New Hampshire, 6, and Vermont 6. Iowa ten years ago was given 11 members on 11 full measures of the ratio; but to-day she gets her eleventh member on a majority fraction slightly in excess of a moiety. Thus, while Iowa is apparently losing nothing, in fact she is. But a distinguished leader from one of these large cities said to me the other day: "What is the difference? Your States occupy the same relative position in the House." But the statement is not correct. Maine with 3 members in a House of 357 has 1 for every 119, while with 4 in a House of 386 she has 1 member for every 96. Nebraska with 5 members in a House of 357 has 1 for every 71 Representatives, while with 6 Representatives in a total membership of 386 she has 1 for every 64.

There is a limit to the population of a purely agricultural State, while the same is not true of commercial States or States in which there are large cities. If the former would retain their power in a considerable degree they must insist that they be not punished for their failure to grow in the same degree that commercial States grow.

There is another matter to which I would like to call attention. I glance into the Congressional Directory and I find that on the Rivers and Harbors Committee, which we are told will soon bring in a bill appropriating about \$60,000,000, aside from Minnesota and Texas, there is not to be found a single member living between the Mississippi River and the Pacific coast. On the Committee on Pacific Railroads there is not a member west of Iowa, except the Representatives from Texas; on the Appropriations Committee there is only one member west of the Missouri River, and on the Ways and Means Committee there are only three States represented west of the Missouri River, while, on the other hand, on the Committee on Public Lands there is scarcely any one east of the Mississippi River.

I call attention to this not to suggest any improper apportionment in the organization of the committees, for doubtless every

man appointed on any of these committees is entitled to that appointment for some very good reason. I call attention to it to suggest that each portion and section of the country should be represented on these great committees. And yet there are not enough members to adequately represent every portion of the country on every one of these committees. The legislation of the House is done by committees. When the Committee on Appropriations brings in a great bill, carrying millions of the people's money, we vote it through knowing very little of the bill. It is impossible for one not a member of the committee to understand the bill thoroughly. How important it is, then, that each section should have a member on that committee. Then, too, since the legislation is done by committees, it is all the more necessary and proper that the committees should be larger. Instead of 17 members we should have 25 or 30 members, to the end that all important legislation may have careful consideration by representatives not only from every section of the United States, but of diversified interests, inclinations, and ideas.

I maintain that the committees, instead of being too large at present, are too small; in short, that too small a section of the country gets an opportunity to do effective thinking and legislating on any of this great part of national legislation.

But after all this has been said and done the question that appeals to us squarely is, Is it right? Is it for the greatest good to the greatest number? We have a popular Government, and the only place that we can really say that the Government touches the people is in the House of Representatives. The Executive Department is far removed in every-day life from the great mass of the American people. The judiciary is unknown and unheard of to the most of them. This end of the legislative branch is the only point where it can be said that the Government touches the people. It is the people's branch; the popular branch.

A person on coming to Washington inquires for "our" Senator, but he says "my" Representative. He shakes hands with his Representative, greets him cordially, and asks for a letter of introduction to the Senator from his own State. This is the people's end of the Government. Shall we take it from them?

The question is, Shall we make this body more exclusive? Shall we draw it farther from the people? In short, shall we take from the people of any State that which they already have? Is it politic? Is it proper? Is it right? Merely for our own ease and comfort, for our own convenience in transacting the people's business, shall we withhold from them that further opportunity which is their due—to be close to this, their branch of the Government?

The country will not stand still in commerce, in power, nor influence. Her people progress intellectually and morally and increase in numbers. Added numbers makes added needs. With more intelligence and better morals, their wants are multiplied. We must keep abreast with the procession and respond to the demands for better representation. This can not be done by adding more work to fewer people. The Burleigh bill is only in keeping with past legislation along this line, and should pass.

The Grout Bill.

SPEECH

OF

HON. HERMAN B. DAHLE,

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Friday, December 7, 1900,

The House having under consideration, as in Committee of the Whole, the bill (H. R. 3717) to make oleomargarine and other imitation dairy products subject to the laws of the State or Territory into which they are transported, and to change the tax on oleomargarine—

Mr. DAHLE said:

Mr. SPEAKER: I am here before you as a member of the subcommittee of the Committee on Agriculture, before which committee the Grout bill was placed, and representing the Second district of Wisconsin, which is a part of one of the 32 States of our Union which have passed laws against the sale of colored oleomargarine. I stand here as one of the number who will vote for the reduction of the tax on oleomargarine for the poor and will vote for a tax of 10 cents a pound on colored oleomargarine for the well-to-do. I stand before you representing the patrons of the 250 or more creameries of my district. I stand before you as one of the representatives of the 5,000,000 or more farmers who are interested in their butter product having fair play and not being crowded out, as it is now in many instances, by the unlawful sale of colored oleomargarine. What we propose and wish to do is to reduce the tax on uncolored oleomargarine to one-fourth of a cent a pound, for the benefit of those who may work hard and yet not have

much to buy with, and to have a tax of 10 cents a pound on colored oleomargarine, making the cost of a good quality oleomargarine made in imitation of butter somewhat near the average price of good creamery butter, the average price of such butter ruling somewhat higher than the cost of oleomargarine with the 10-cent tax added.

There are many points at issue in this bill that have been considered by our Committee of Agriculture and are now for us to consider here.

IS OLEOMARGARINE SOLD ACCORDING TO LAW?

I will first talk on the subject, Is oleomargarine now sold according to law? and if we find it is not, then it is certainly our duty to pass some bill, so that it will be sold according to law by manufacturers, wholesalers, and retailers. This we should do for the protection of the manufacturer and consumer of butter alike. On this subject Mr. John Dadie, representing W. J. Moxley, Chicago, Ill., a corporation for the manufacture of butterine, stated:

I join issue with the statement that large quantities of oleomargarine are sold as butter; the records of the Internal Revenue Office show that out of the 80,000,000 pounds marketed in the United States last year only 1 per cent of it was sold in violation of law.

Representative NEVILLE asked: All that has been sold by the retailers with the manufacturers' sale amounted to only 1 per cent of the total amount sold?

Mr. DADIE, Yes, sir.

On this subject Mr. W. E. Miller, representing Armour & Co., Kansas City, Kans., said:

It has been represented to this committee that a large per cent of the butterine manufactured is sold for butter. This is a mistake, and can not be proved by facts. Much publicity has been given to the sale of a few packages of butterine for butter, the wrappers of which were branded oleomargarine, but this is not conclusive evidence that all dealers in the United States are practicing the same deception.

We acknowledge that a small per cent of butterine is sold fraudulently, but this is no reason why its sale should be prohibited altogether, simply because one unscrupulous dealer in a hundred may give it to a purchaser when he calls for butter.

Dealers do not sell butterine promiscuously for butter, as is claimed, and if the promoters of this crusade had taken the time and trouble to investigate in the various markets they would have found such was the case. We furnish all dealers selling our butterine with signs. They do not find it necessary to practice deception.

We urge our trade to sell butterine for just what it is, and never encourage or countenance violation. All original packages are branded oleomargarine, and all of our regular brands which are sold under wrapper are also branded oleomargarine. In addition to this the retail dealer must brand the word "oleomargarine" on the outside of the wrapper.

I will also read to you on this subject from the statement of C. N. Lavery, representing Swift & Co., oleomargarine manufacturers, Kansas City, Kans.:

We, as manufacturers, wish to refute in the most emphatic terms the claim that oleomargarine is placed on the market and sold for butter. We, as manufacturers, are encouraging the handling of oleomargarine strictly in compliance with the revenue regulations, furnishing free of charge all necessary stamps for marking packages, signs, notices, etc. That the people want oleomargarine is clearly demonstrated by the fact that the sale in the United States increased from 21,513,573 pounds in 1888 to 83,145,081 pounds in 1899. This increase is not due to the public being deceived and sold oleomargarine for butter, but to the fact that the consumers have learned the value of oleomargarine and ask their dealers for it.

We find that the three representatives of the oleomargarine factories that appeared before our committee, each and every one of them, very freely expresses himself that oleomargarine is placed on the market and sold to the consumer for what it is, Mr. Dadie allowing 1 per cent as being sold for butter by the retailer, Mr. Miller allowing one dealer in 100, Mr. Lavery, as a representative of the manufacturers, refuting most emphatically the claim that oleomargarine is placed on the market and sold for butter, and further claims that the manufacturers are encouraging the handling of oleomargarine strictly in compliance with the revenue regulations.

We will examine a little further into the testimony given by these parties. By so doing I expect to be able to show you that these parties know somewhat differently than first stated by them; that such information leaked out in cross-questioning by members of our committee. We find that Mr. Dadie, in answer to Representative NEVILLE, acknowledges that the firm he represents issued the following notice to the trade, dated April 5, 1899, which letter is as follows:

In nearly every section of the country there is a difference in the color of butter, and even in certain seasons of the year there is a change, as you will have noticed. In winter butter is of a lighter color than in summer; in many sections this is the result of the difference in feed or pasture. We can give you just what you want at all seasons if we know your requirements.

I have manufactured separator creamery butter for many years, but I have never found it necessary to send my customers such circulars. We can imagine that it might benefit an oleomargarine manufacturer to send out just this kind of a letter to all sections of the country where there are laws against the sale of colored oleomargarine, as well as to other sections where colored oleomargarine can be legally sold, if such manufacturer wants his goods sold everywhere, whether legally or illegally.

We find that Mr. Miller states that the present tax and regulations are sufficient to control the sale of this product, and that butterine is an up-to-date product and possesses sufficient merit to sell successfully throughout the world for just what it is. We need only to take the Nebraska instance to prove the inconsistency of his arguments. Starting out, as he does, by stating that

the present tax and regulations are enough, he then has to acknowledge that his firm disposes of their product in that State where they know it must be sold illegally.

Mr. Miller is questioned by Representative NEVILLE as to whether he sells oleomargarine in Nebraska:

Mr. MILLER. Yes, sir; we sell some there.
Representative NEVILLE. Do you not sell a good deal of it from Kansas City into Nebraska?

Mr. MILLER. Well, it could not be called a great deal, because it is not a very large market. We sell considerable, yes.

Representative NEVILLE. Now, is it not true that every pound of colored oleomargarine that is sold in Nebraska is sold in violation of law?

Mr. MILLER. Well, that may be—yes.

He says that "oleomargarine possesses sufficient merit to sell successfully throughout the world for just what it is." Let us take him at his own word. If oleo is a product that has merit, and people want it, let us place the additional tax on it, so that the price of both will be about the same, there will be no temptation to sell it for butter, and those who prefer it can get it and know what they are getting.

We will now consider the statement of Mr. Lavery. We find that he shows our committee samples of wrappers for packages of oleomargarine, calling our attention to the fact that the word "oleomargarine" is plainly printed on each of those wrappers, the size of the largest letters in the brand being in compliance with the internal-revenue regulations.

But we find, when he is questioned more closely, that it is not all of their rolls and prints that are put in such wrappers; we learn that some are placed in a cloth wrapper, which wrapper is not branded at all; and it looks to me that the reasonable conclusion is that these manufacturers do not care a whit for the law; they simply want to sell their goods. In the States where the sale of colored oleomargarine is unlawful, as well as in the States where it is lawful, we find that Mr. Lavery, on being cross-questioned, stated—and I think very thoughtlessly—that they have salaried representatives all over the country. Gentlemen, that does not sound to me as though these manufacturers of oleomargarine care to live up to the law, when we remember that 50,000,000 of our people are living under law prohibiting the sale of colored oleomargarine.

If these manufacturers and their customers, the retail dealers, want to sell the goods for what they are, then good and well, put the rolls or prints in properly-marked paper wrappers, and if the same parties wish to sell these goods for something they are not, but for something they are made to imitate, namely, pure butter, then do as Mr. Lavery informs they do with a part of their product, put it in plain wrappers without any mark whatever on the roll or print or the wrapper.

Along this line Mr. Lavery answers Representative ALLEN by stating:

We have some trade which does not care for the printed wrapper for reasons of its own. Of course we are in business to give the people what they want, and we do not refuse to fill their orders for plain-paper prints.

This reminds me of the samples of oleomargarine that were brought from Chicago before our committee. The word "oleomargarine" was so indistinctly printed that not any one of the members of our committee could make out the word "oleomargarine" on some of them; and I can state that I saw with my own eyes in Chicago, boxes containing assorted, colored, sized, and shaped rolls, put up to imitate butter as nearly as possible.

I can imagine, if this product was put up by the manufacturers to be sold for oleomargarine, and not for butter, that the rolls or prints would have been of the same color, style, and size. If, however, more than one size had been desired, there might, at most, have been two sizes and not a large number of sizes, just as there always are in the ordinary roll butter of trade. This, however, was not roll butter, as roll butter was at the time worth more wholesale than was asked for this product at retail.

Representative NEVILLE questions Mr. Lavery as follows:

In those States which have laws prohibiting the coloring of oleomargarine in imitation of butter, will you explain how you sell oleomargarine as such, and yet colored as butter, without violating those laws?

From what Mr. Lavery started out declaring I would naturally expect that he would not give any answer at all to this question. And here we also must remember that Mr. Lavery stated a short time previously "that we have salaried representatives all over the country;" and in answer to Mr. NEVILLE he said:

I can only say that the people want oleomargarine even in the anti-color States, and regardless of the fact that there are laws on the statute books prohibiting the sale of the product colored yellow there is such a demand for it that in a great many of the States there is very little attention paid to the enforcement of the law.

When I think over this answer of Mr. Lavery, I can only conclude that these manufacturers know all about the transgression of our oleomargarine law, and more than that, that they, through their salaried representatives all over the country, are the worst and most guilty violators of the law themselves.

We have heard the testimony of the representatives of the oleomargarine industry, three in number, all starting their testimony with great courage, as though all right and justice were on their side and as though these manufacturers all lived up to our present law; but, upon being cross-questioned, every one of them breaks

down, so that we must conclude from their testimony that parties engaged in this industry are all transgressing the laws of our Commonwealths.

Upon this same subject we have the testimony of Commissioner of Internal Revenue Wilson. I can not say that I found the Commissioner was especially favorable to our point of view. He did, however, state that "we have had considerable complaint from some of the dairy associations about the failure to enforce the law." He further states that this law is, as with respect to collecting the tax, better enforced than any other internal-revenue law, but with respect to the individual matter so far as the pure-food law is concerned, no.

Among others who appeared before our committee in the interest of oleomargarine was W. B. Cheek, vice-president of the Live Stock Exchange of Omaha, Nebr.; yet, in answer to our chairman as to whether he knew anything about the retail sale of oleomargarine in his city, he answered:

Yes; it is sold openly in the groceries and butcher shops as oleomargarine. For instance, in my shop where I buy meat is a table, and on that table is butterine in boxes and tubs and stacked up outside of the boxes, marked all the way from 12½ cents to 18½ cents.

And in this State, we must remember, every pound of oleomargarine sold is sold in violation of law.

Now let me read from the statement of B. F. Kimball, of Philadelphia, who appeared before our committee and stated that—

At present in Philadelphia about nine-tenths of the oleomargarine sold is sold as butter.

Mr. ALLEN. Do you know that from personal knowledge?

Mr. KIMBALL. I know it from contact with customers and seeing the product in the stores. We have it in our store for examination. We know that the butter trade has fallen off because of the sale of oleomargarine fully 50 per cent.

Mr. DAVIS. In the State of Pennsylvania there are 11,000,000 pounds of oleomargarine sold, and about nine-tenths of it is sold as butter. The only State which sells more is Illinois.

Mr. KIMBALL. The butter merchants of Philadelphia are largely interested in creamery products and have no objection to the sale of oleomargarine itself as such. We object to the selling of oleomargarine at butter prices as butter. It is sold at the price of butter, and the sale of colored oleomargarine is unlawful in this State.

We will next hear from Mr. C. Y. Knight, secretary of the National Dairy Union. He says:

In the city of Chicago the city is overrun by people who are selling oleomargarine for butter and for 10 or 15 cents a pound more than it ought to be sold for. Every man who buys butter is not a chemist, and if they want oleomargarine they should buy it for oleomargarine, price 12 or 13 cents per pound. The only reason they pay 20 cents is that they think it is butter—

And the same law in regard to the sale of colored oleo is on the statute book of Illinois.

Let me next read from the testimony of Hon. W. D. Hoard, of Wisconsin, president of the National Dairy Union. He says:

These manufacturers—

The oleomargarine manufacturers—

are assuming to override all law. They stand behind all infraction of State and national laws and furnish money for the defense of their agents when arrested.

I wish to say that I have received letters from very many of the most prominent dairymen of my district asking for the passage of the Groat bill, because we find that the following-named States, with a population of 50,000,000 people, have anti-coloring laws, and yet we find that there were over 5,000 dealers of oleomargarine in these States who unlawfully sold 62,000,000 pounds of oleomargarine last year. Here are the States and figures:

State.	Dealers.	Pounds.
Alabama	21	226,033
California	74	74,923
Colorado	95	1,123,337
Connecticut	5	134,255
Delaware	48	40,455
Georgia	61	495,004
Illinois	2,020	18,638,021
Iowa	3	79,922
Kentucky	217	1,490,577
Maine	17	102,274
Maryland	58	1,701,860
Massachusetts	108	2,083,880
Minnesota	30	1,813,313
Missouri	231	3,133,313
Nebraska	73	1,024,865
New Hampshire	19	443,383
New Jersey	296	5,875,953
New York	14	222,788
North Dakota	18	7,710
Ohio	1,005	8,830,069
Oregon	3	41,250
Pennsylvania	717	11,433,341
South Carolina	24	258,150
South Dakota	4	55,432
Tennessee	83	714,640
Utah	—	8,450
Vermont	—	2,000
Virginia	121	1,150,400
Washington	5	63,345
West Virginia	172	1,206,865
Wisconsin	23	714,742
Total	5,492	62,825,582

I have so many of these letters that I must not take up your valuable time by reading them. Besides these letters I have also received many others from some of the most responsible and trustworthy butter dealers of Philadelphia, Buffalo, Boston, Cleveland, Chicago, St. Louis, Baltimore, Pittsburg, and New York, which are all of the same voice and carry out the same idea. I here beg leave to read the following:

PHILADELPHIA, December 4, 1900.

DEAR SIR: We presume you are aware of the fact that in Pennsylvania there exists an anti-color law, which up until recently has been a dead letter, and even now is to a certain extent, as violators of the law, through eminent legal ability, are always able to find some technical point by which they can prevent guilty sellers from going to jail. Of late we have endeavored to interest the agricultural elements of our State in this matter, and have partially succeeded, but the great trouble we find is that the manufacturers of butterine and oleomargarine are able to counteract any efforts we are able to make in some manner or other, and it is certainly very discouraging with such a state of affairs existing.

We can see no way in which the evil can be reduced to a nominal extent except by national legislation, and we are firmly of the opinion that the Grout bill will cure this evil. We would like you to understand that we are not biased against the sale of the commodities in this market. We believe that oleo should be sold on its merits, but when this is attempted it can not be disposed of to advantage. The trade here wants butter or a substitute that looks like it, and when it comes through in its original color it is practically impossible to dispose of it profitably.

Yours, very truly,

HON. HERMAN B. DAHLE,
House of Representatives, Washington, D. C.

MOFFIT, WENTWORTH & CO.

PHILADELPHIA, November 16, 1900.

DEAR SIR: I know of no better means of regulating the sale of oleomargarine than the Grout bill, except to prohibit the manufacture of the article entirely.

This State has tried both prohibitory and license laws regulating the sale, and neither law has prevented the sale of it as butter. Of the sales of oleo, as high as 11,000,000 pounds in a year, I might say all was sold or consumed as butter.

The State laws to regulate the sale of oleomargarine after it leaves the factory have proved to be very hard and very costly to enforce; the easiest and best way is to regulate the sale of it at the factory as proposed by the Grout bill, which allows the manufacturer to supply the poor man with oleo in its natural color and at its legitimate price, not as a counterfeit and at butter prices.

With the passage of the Grout bill the sale of butter in this State ought to increase at least 10,000,000 pounds a year, taking the recent sales of oleomargarine as a basis.

Very truly, yours,

HON. HERMAN B. DAHLE,
Mount Horeb, Wis.

JOHN JAMISON.

BUFFALO, N. Y., November 14, 1900.

DEAR SIR: The passage of the Grout bill (H. R. 3717) should be effected at this session of Congress, for without some such law the people of the United States will continue paying tribute to the ring of oleomargarine manufacturers, and will continue eating an imitation at the price of pure butter. In this State we have stringent laws, but they are not enforced. What is needed is a national law that will be enforced. The people at large are paying tribute to the extent of 6 or 8 cents a pound on millions of pounds of the imitation, which profit goes into the pockets of a few manufacturers and unprincipled dealers. The imitation of butter is so good that only a chemist can detect it. A law is needed that will compel manufacturers of the imitation to make the imitation in such color or form that people can not be deceived in it.

Let the oleo be sold for what it is; then there can be no objection to its being sold and there won't be much of it sold, for few will buy it knowingly. It is the experience of nearly all who retail to families that they can only sell oleo by representing it to be pure butter. If the people don't want to be defrauded, why should not Congress come to their relief and protection by passing a law that will give them the protection so much sought for? We earnestly hope you will take special interest in the bill and help to pass it.

Yours, truly,

HON. H. B. DAHLE,
Washington, D. C.

POTTER & WILLIAMS.

BOSTON, November 16, 1900.

DEAR SIR: No doubt but what there is a great deal of oleomargarine being sold in this State to consumers as genuine butter; therefore we see no reason why, by doing away with this substitute or making them sell it for what it really is, it will not benefit the whole butter or dairying interest, tend to raise prices, and do away with a big deception.

Yours, truly,

HON. HERMAN B. DAHLE, Mount Horeb, Wis.

HINCKLEY & CO.

BOSTON, MASS., November 21, 1900.

DEAR SIR: We think it an outrage on the dairymen that oleo should be manufactured and sold as butter to such a large extent as it is. In our Eastern towns and cities there is more oleo sold for butter than you would have any idea of. The competition in these places is so severe that one retailer to compete with his neighbor is taking chances of selling oleo. In our opinion, under present law he is not taking many chances, because if he is arrested he is allowed to resume his business again, and his trial is put off from time to time, and the public get oleo just the same, when they should have butter, for they pay prices of butter, or nearly so, and thus it has its effect on butter. If oleo was sold to the consumer for what it is, and at prices that it would be sold at if known as oleo, he would then derive a benefit in using it, for he would buy it at about 10 cents a pound less than what he now pays, thinking he is getting butter, and would also have the satisfaction of knowing he was eating a substitute.

A neighboring State is a great distributing point of oleomargarine. It is sold throughout the cities of that State quite openly, and a dealer from one of their largest cities recently told us that probably seven-eighths of it was sold as butter, besides large quantities being shipped to other cities.

Respectfully,

HON. HERMAN B. DAHLE.

PATCH & ROBERTS.

CINCINNATI, November 30, 1900.

DEAR SIR: We are very much interested in the passage of the Grout bill, as it is a just bill to all and everybody. Thus far three-fourths of the oleo sold here is sold as butter and butter prices paid for same, whereas if it would sell in its original color, people would buy it for less money and for what it really is.

Very respectfully, yours,

HON. HERMAN B. DAHLE, M. C.,
Washington, D. C.

TELKER & DUNKER.

CLEVELAND, OHIO, November 30, 1900.

DEAR SIR: We are in perfect accord with the oleomargarine bill that will soon come before your honorable body for action. We believe it is due the dairying interests of this country that there should be some law regulating the selling of oleo for just what it is, and that people will not be deceived when buying the goods, and we urge upon you the importance of using your influence in the passage of this pending bill.

Yours, truly,

HON. HERMAN B. DAHLE, Washington, D. C.

D. MARTIN & CO.

CHICAGO, November 30, 1900.

DEAR SIR: For nearly two years my time was given almost exclusively to the work before the State legislature here securing the passage of a State law similar to the one which you have in Wisconsin, and in endeavoring to have the law enforced. After a great struggle the law was secured, but we have never been able to enforce it.

The great strength of the oleomargarine business is in and about this city. The bulk of the manufacturing for the United States is done here, and great wealth has been accumulated by those manufacturing it, and they are quite ready to expend that wealth in protecting what they are pleased to term their business interests. A great many arrests were made, but the oleomargarine people succeeded in getting a hearing before certain judges, who, contrary to all precedent, decided the law to be unconstitutional, and tied up the prosecution in such a manner that it was impossible to get the case before the State supreme court, and notwithstanding several efforts have been made to get different cases before the supreme court we have, up to the present time, been unable to do so.

The writer has held the position of president of the Illinois Dairy Union, of which Mr. Knight is secretary, for several years, and we have pushed the prosecution as vigorously as it has been possible to do, and with but very small results.

Oleomargarine, or butterine, is sold openly in this market as butter, and we have not been able to prevent it. In fact, this is the only way in which they seem to be able to successfully handle it. If the trade was confined entirely to selling it as the product that it really is there would be but very little cause for complaint on the part of the dairymen or of the consumers, but innocent purchasers buy the greater part of the product when they are supposed to be buying butter.

We think that the Grout bill now before Congress is admirably adapted to the situation, and is one to which the friends of pure food should rally all their strength.

Yours, very respectfully,

HON. HERMAN B. DAHLE,
Washington, D. C.

GEO. W. LINN COMPANY,
GEO. W. LINN,
President and General Manager.

CHICAGO, ILL., November 19, 1900.

DEAR SIR: It is a well-known fact that fully 90 per cent, if not more, of all oleomargarine sold by retailers is not sold for what it is, but palmed off to the consumer for the genuine article—butter. Thus deception continues to be practiced upon the people, and the present law governing the manufacture and sale of oleomargarine is, instead of benefiting the masses of the people, distinctly and undeniably detrimental to their interests. It is clear that if a retail dealer in oleomargarine sells the article for what it is he can not get the price and the profits he desires. He therefore charges, in nearly all cases, as much for the spurious article as for the genuine. What is known as the Grout bill, as we understand it, places a 10-cent tax on colored oleomargarine.

Very respectfully,

HON. HERMAN B. DAHLE,
Mount Horeb, Wis.

P. H. BOLTEN & CO.

CHICAGO, ILL., December 3, 1900.

DEAR SIR: There is no question but what butterine, or oleomargarine, is sold on this market every day for pure creamery butter; in fact, the writer knows of several places where this is done, and the people that are doing it seem to gloat over the fact that they are able to sell the counterfeit as the genuine. The merchants here, as well as in other sections of the country, we do not think would complain at all if this was not the case. But it is the case, and it is detrimental to the butter interests of the United States, and we certainly favor the Grout bill in every particular, and sincerely trust that you can give it your hearty support and use your influence in gaining friends for the bill. We think it is one of the most important bills that is to come up during this session of Congress. We hope that you can present the merits of this bill so strongly to your friends in Congress that there will be no doubt as to its passage.

Yours, very truly,

HON. HERMAN B. DAHLE, Washington, D. C.

EARL BROS.

ST. LOUIS, MO., November 15, 1900.

DEAR SIR: In regard to the sale of oleomargarine in this city, I have kept close observation for a good many years. I am free to say that the retailer is selling 95 per cent of colored oleomargarine as butter, for he positively could not sell it as oleomargarine, as people do not want it. As a result he is bound to charge butter prices or cut butter prices very slightly in order to undersell the honest dealer who sells pure butter. Pure butter in our market to-day is selling at 23 cents per pound to the consumer. The oleomargarine dealer on Union Market, and scattered throughout the city, offers his goods at 23 to 27 cents per pound, and the consumer is misled by this cut in price and thinks that he is buying the same class of goods as the honest butter dealer sells, only saving 1 or 2 cents per pound on the price. This has been the practice for a good many years. There are hundreds of thousands of pounds sold in this city per month, not only by the retail dealers who keep established stores, but unscrupulous scoundrels, disguised as countrymen and farmers, peddle the same around among the families as pure butter and charge extra prices for it on account of, as they allege, "it being just from the country."

This has had the effect of driving many formerly honest dealers in butter

into the sale of oleomargarine in self-protection, so they may hold their trade for groceries and meats. The violation of the color law in the State of Missouri has become so flagrant that our board of agriculture has practically thrown up its hands in despair, as the oleomargarine dealers, with the protection they receive from the manufacturers (and which protection is guaranteed to them in case they get into trouble), have succeeded in frustrating every attempt to bring these violators of the oleomargarine law to justice. Our State courts are totally incapable of dealing with the subject, and adroit lawyers have so tangled up the judges on the bench that we have no further hope of being able to obtain the slightest relief in that direction; so all that is left to us is that the Grout bill must pass or we will all be obliged to sell oleomargarine, and it will then be only a question of a very short time before pure butter will be one of the things of the past.

I have before me a statement made by George Aldredge, made before the Committee on Agriculture, in which the gentleman tells the story about the "Quaker's prayer when the stars fell," in which the Quaker says, "Oh, Lord! this is to be judgment day, and Thou knoweth that hell won't hold half of us." The said Quaker had possibly been an oleomargarine dealer or some other malefactor. Now, I desire to add to this that there are not penitentiaries enough in this country to hold all of the violators of the oleomargarine law if they could all be reached and convicted. The fact that these violations against the State law are openly committed and that no prosecution has been able to convict one of them as yet is evidence enough that these laws are not effective and must be supplemented by something more strong.

The oleomargarine industry has ruined thousands of thriving farmers who were on the high road to prosperity. I am well satisfied that the farming community would be more than willing to buy out the entire manufacturing plants of the oleomargarine people and throw them into the fire if they could thereby obtain relief, but the source of profit to the manufacturers of oleomargarine has been so great that they will not sell out at any price. The tax as proposed in the Grout bill is no hardship upon anyone, nor will it interfere with the sale of oleomargarine as oleomargarine, but it may possibly interfere with the sale of oleomargarine if offered as butter. On the other hand, the reduction of the tax from 2 cents per pound to one-fourth of a cent per pound will certainly benefit the consumer, who, by the oleomargarine manufacturer, is supposed to be a poor man, which, however, is not always borne out by the fact. Well-to-do people buy it under the impression that they are getting butter.

I hope that the Grout bill will pass, and that it will be very soon. If the present condition of affairs is allowed to continue very much longer, it will drive not only the dairy interest out of business, but all who have so far stood up for purity in food products in the line of butter and cheese.

Should the sale of colored oleomargarine be, by this law, curtailed, it will not raise the price of pure butter but very little, as then the dairy interest of this country will take on such a boom and increase as will prevent any extreme values. Besides, the 10-cent tax does not prevent the sale of colored oleomargarine. It only places pure butter again in competition with an imitation, which it is now not able to assume.

The butter dealers, consumers, and grocers of this city feel under many obligations to yourself and companions for the noble fight you are making in their behalf against the most outrageous fraud produced in the nineteenth century.

Very respectfully,

HON. H. B. DAHLE,
Mount Horeb, Wis.

F. W. BROCKMAN, President.

BALTIMORE, MD., November 30, 1900.

DEAR SIR: Oleomargarine is sold on this market in nearly every case for and as butter. If the sellers of oleomargarine were to offer the stuff under the true name, they would not be able to do any business here. We sincerely trust that you and the other Congressmen favorable to the dairy interests will do all in your power to have the Grout bill passed. If at any time the Baltimore merchants can be of any service, we would be glad to have you call on them.

Very truly, yours,

HON. HERMAN B. DAHLE,
Washington, D. C.

G. M. LAMB & BRO.

NEW YORK, November 15, 1900.

DEAR SIR: In regard to the Grout bill, I think it is one of the best bills that has come before the House, and should be passed. While the bill is not stringent enough, I think it is the best that has been so far offered. Another thing, would say if it was not for the fraudulent sale of oleomargarine this country could consume about all the product of genuine butter, and would not have to depend on the export trade, at least only for a limited amount.

Hoping that you will meet with success in your endeavors, I remain,

Respectfully,

MESSRS. DAHLE BROTHERS,
Mount Horeb, Wis.

CHAS. H. ZINN.

NEW YORK, November 20, 1900.

DEAR SIR: I am satisfied that if the dairy interest of the United States is worth the consideration of Congress (and I think it is, as it is certainly the largest one interest in the country, and more capital involved than any other) the Grout bill should be passed.

It is simply ridiculous to consider the argument that the consuming public buy oleomargarine knowingly. There is no doubt that the retailer buys it knowing what he is doing and for the purpose of selling it to the public for butter. Why? Because there is a much larger profit in it for him, and there would be no incentive for him to violate the State laws if people knew what they were buying and he was only making a reasonable profit.

The passage of this law will immediately stimulate the dairy interests, as it will make an increased demand for butter at better prices, and an increased demand for such means an increased demand for cows and the spreading of the dairy industry in the present dairy States, as well as in other States of the Northwest.

Yours, truly,

HON. H. B. DAHLE, Mount Horeb, Wis.

STEPHEN UNDERHILL,
Per C.

NEW YORK MERCANTILE EXCHANGE,
CORNER HUDSON AND HARRISON STREETS,
New York, December 3, 1900.

At a meeting of the members of the New York Mercantile Exchange, held December 3, it was unanimously resolved that a personal appeal be made to each member of Congress of this State, urging him to support and use his best efforts toward effecting the passage of the "Grout bill," considering it a matter of vital importance to the dairy interests of the country and merchants dealing in pure butter in New York State.

You will be called upon December 6 to decide between two measures—the Grout bill and the Wadsworth bill. Every interest from the producer to the consumer favors the Grout bill.

Very truly, yours,

F. C. BARGER, President,
HOWARD D. REYNOLDS, Secretary.

One of these letters comes from Ash & Baldwin, Pittsburg, Pa., inclosing price list issued by a wholesale firm located in one of their neighboring villages, quoting solid-packed Elgin creamery butter at 3½ cents per pound less than the present value of such butter. The fact is the value of creamery butter is as fixed as the value of gold dollars. If, for instance, Elgin butter to-day is quoted at 25 cents in Chicago and 25½ cents in New York, the idea of offering such goods at 3½ cents a pound less than its market value is as reasonable and at about the same ratio as selling gold dollars at 90 cents.

This circular states that these goods are not made by any creamery interested with a combine and speculators, who are asking for their products on established brands a great and outrageous profit. If these parties are selling genuine fresh creamery butter, they can no longer continue same than they could continue disposing of gold dollars at the price just named; yet these parties claim to have been carrying on their business in butter for the last seven years. Is it any wonder that honest dealers who come into competition with these dishonest firms want all the protection they can get?

When I read this circular claiming that its product is not made by a creamery interested with a combine and speculators, who to-day are asking for their product on established brands a great and outrageous profit, it reminds me of the fact that millions of farmers to a great extent themselves are proprietors and owners of creameries, and those creameries that are not run by the farmers themselves are owned and operated by private individuals or partnerships. I am informed by our National Dairy Union that by far the greater part are owned by the farmers themselves, who are not in position to form a trust or combine if they wanted to. Of all classes of producers of our Union I regard the farmer the hardest for us to protect.

NEW YORK.

DEAR SIR: Referring to ours of yesterday, we forgot to mention one point that we had in our mind to make, and that is the great interest the manufacturers of oleomargarine have exhibited in furnishing a cheap butter for the poorer people. They make a great handle of this, but as a matter of fact—and nobody knows it better than they do themselves—oleomargarine is sold invariably to the poor man for butter and at butter prices. Every man who handles it or handles butter knows this to be a fact, and furthermore, that it can not be sold even to the poor man unless it is sold and represented as butter. It is well understood that the production of oleomargarine is almost entirely in Chicago, and by the large packing houses.

No doubt there are large profits in the business, and these people have never lacked for money to spend to protect themselves. They are men of large influence, and naturally they may control the Senators and Members of the House from Illinois. While the manufacturers claim it to be an honest business and that they sell it for what it is, they know as well as anybody that it can only be sold to the consumer as butter—not at the price of cheap butter, either, but at butter price. If they offered it to the poor man at a cheap price, it would create a suspicion in his mind. The class of people that they impose on are the poor and ignorant—a class of all others that ought to be dealt with honestly and have the best value for their money. If the poor man wanted oleomargarine he ought to have it at a fair value and at a fair profit; but, as every dealer knows, it is no object to sell it unless he can make a greater profit than he can make in selling butter, and the only inducement for the retailer to handle it and palm it off on his poor and ignorant customers is the fact that he can get three or four times as much profit out of it as he can out of butter.

Nobody knows this better than the parties who manufacture it, and that unless the retailer can get three or four profits out of it he would not handle it. It is very well understood that the manufacturers encourage this business, and have even guaranteed to protect the retailers in case suits were brought against them. In our judgment the men who are manufacturing the stuff, even if they do sell it for what it is, are no more honest than the man who retails it to the consumer as butter and at a butter price. The manufacturer knows perfectly well that the retailer is going to do this when he buys it. No doubt the oleomargarine interests will make a strong fight against this bill in the Senate, and, as we have said, they have lots of money to spend and no doubt control more or less influence; but we sincerely hope that the Grout bill will go through. If there ever was a righteous measure before Congress, this is one of them.

This letter has been dictated by our senior, who has had more or less to do with all previous legislation on the subject in our own State, as well as the previous legislation by Congress.

Very truly, yours,

HON. HERMAN B. DAHLE,
House of Representatives, Washington, D. C.

J. S. MARTIN & CO.

I will now quote from the discussion which took place in our committee room, when Mr. John C. McCoy, of the Kansas City Live Stock Exchange, appeared before our committee. In the course of the remarks Representative BAILEY gave us his experience in the market place of our city of Washington as to the oleomargarine and butter trade. This is what he said:

Representative BAILEY. Let me give a little personal experience on that subject. I have spent parts of two days in this market here. I have made two trips down through it for the purpose of getting information on that very point. I went down there absolutely incognito; and I tried my best to buy oleomargarine for butter. I went to this place and to that, and did my best to do it, without their knowing a thing about it—

Representative LAMB. What did you ask for?

Representative BAILEY. I asked for butter. I would say, "What do you sell your best creamery butter for?" "Thirty-five and 40 cents." "What have you got some other grade for?" They would say that they had a cheaper

grade down to 23 cents, and I think the lowest butter I saw or had priced to me was 25 cents. When it got below that it was oleomargarine or butterine every time.

Now, I was unable in that market to buy a single pound of it, and I could not get a single man to admit to me down there that it was sold—not a single man. Now, I want you to go down there, Mr. LAMB. I will tell you what I will do. I will bet you a five-dollar bill that, if you choose to try it, you can not get one of those men to sell oleomargarine to you for butter.

After hearing this discussion I concluded also to investigate as to what was going on in that market. I partook of a meal in the restaurant of this market place and took a sample of what was served there as butter. I had the same analyzed in the chemical department of our Department of Agriculture, and, would you believe it, it was not butter, but oleomargarine.

So it appears to me from the testimony I have here quoted, not alone from the most prominent dairymen all over the land, but from the unwilling testimony of the oleomargarine manufacturers themselves, we have gleaned the facts that not alone is oleomargarine sold for that which it is not—butter—but that it is sold also in violation of existing laws.

Before leaving this question entirely let me here introduce the testimony of Mr. Fred. Oliver, representing the cotton-seed oil interests of North and South Carolina, and then let us briefly consider his speech and his answers given to questions concerning this question before us. He claims that the bills introduced to legislate the manufacture of oleomargarine are always originated and introduced by a special class of the country's population, the dairy farmers (the manufacturers of dairy butter); not as a unit, however, for there are many honorable, conscientious, justice-loving dairy farmers who do not approve of such class legislation.

Gentlemen, as I have stated before, I can not see how this can be class legislation. It is simply our aim to pass some laws protecting producer and consumer alike, and the most urgent appeals for the passage of this law come from the manufacturers of our best creamery butter and consumers, who wish to know that they are getting butter when they demand same, from all over the land. If Mr. Oliver is a fair representative of South Carolina, then I must say that that State is certainly way behind the times in understanding the situation as to who are now looking for the passage of some law that will better protect the manufacturers of pure butter from the competition of a substitute illegally sold. This party claims that it is only the producers of low-grade butter, who find their wares shelved, who are always agitating the taxing of oleomargarine, making its sale prohibitory.

I have been a dealer in butter since before oleomargarine was invented, and my experience is that there never was a time when low-grade butter fared as well as it now does by reason of the invention now made use of by which all such goods are made over into what is now known as process butter. I certainly do not agree with this gentleman when he claims that large quantities of adulterated butter or oleomargarine is made by the small country butter makers in every State of the Union, as he has it, wherever there is a smart Aleck of a farmer that can make butterine, and any man can make it.

Gentlemen, I have lived amongst farmers all my life, amongst producers of butter. The production of this article is one of the leading branches of industry in my district, if not the leading one, and although a dealer in this product since childhood, and my father before me, never but once did either of us find any adulteration. When I was a small boy an old lady brought a few small rolls of butter to my father's store. He cut one roll open and inside of same found a dirty mixture of lard, tallow, or some such material. This woman immediately wrapped her goods up and was ready to start home with same, after my father admonished her of her criminal deed, which he told her he, least of all, expected from an old woman walking the brink of the grave.

When this gentleman speaks of the manufacturers of oleomargarine submitting to all the vexatious regulations necessary to sell the same—and this he mentions after telling us about the small farmers who can produce oleomargarine, selling same as homemade, pure country butter without tax or restriction, and that this is the class of dairymen and producers of dirty, unscientifically made, pure butter asking for tax and sale restrictions on oleomargarine—gentlemen, I am pleased to know with myself and to feel that the great majority of you, my fellow-members, feel and know that just the opposite of what this gentleman claims is the true situation. The small farmer is the innocent one, and the vexatious regulations that he speaks of are those that the manufacturer of colored oleomargarine and their agents meet when they go to dispose of their product in the very many States that have passed laws against the sale of such product.

We also find that the Commissioner of Internal Revenue informed our committee that the law regarding payment of the 2-cent tax on oleomargarine is better complied with than taxes on other commodities.

We find that Mr. Oliver predicts that if any one of the proposed 10 cents per pound tax or anti-coloring bills be enacted it will prohibit the open manufacture of oleomargarine, but that an increased number of farmers and moonshine manufacturers, in

defiance of the laws and without paying taxes, will then spring up. In answer to this I would say that I have no doubt but what the very rapid growth that there has been to the oleomargarine industry will be checked, and we want the illegitimate sale of it checked.

I do not, however, believe in the great increase in the manufacture of homemade oleomargarine in the future, any more than I believe it has taken place in the past. In answer to this, Internal-Revenue Commissioner Wilson says:

I do not think we can have "moonshine" oleo. There has never been any evasion of the law with respect to paying the tax on oleomargarine, except in a very incidental and limited way. Neither the special tax (although it is high) nor the 2-cent pound tax have ever been evaded. We have no trouble in collecting them.

Our farmers will never become as skillful in evading these laws as this gentleman's people—that is, the people of North and South Carolina—are in evading the liquor laws. He further states, We earnestly protest against the passage of the proposed bills as being unnecessary and very harmful to our business, to the country's business at large, and to the morals of many farmers and others. It will be a temptation that a great many present law-abiding farmers will not be able to resist, and they will become the same as a great many western North Carolina moonshiners for the manufacture of oleomargarine.

Gentlemen, again let me state that I feel that the reason we have to pass the Grout bill or some similar bill is simply because the manufacturers and dealers in oleomargarine are not living up to the present law, and I feel that the nature of these different classes of producers are apt to be the same in the future as in the past, and that is that the producer of butter is the one who is now living up to the present laws, and that the transgressor is the manufacturer and vender of oleomargarine. This speaker claims that he at one time, seventeen years ago, knew a man near Paterson, N. J., who lived in the country and made oleomargarine on a very small scale; that seems to be all the evidence that this gentleman can produce.

WHO ARE ASKING FOR THE PASSAGE OF THE GROUT BILL AND WHY IT SHOULD PASS.

On this subject, as to who is asking for the passage of the Grout bill, we will consider the speech of Mr. George N. Aldredge, representing Oil Mill Association, of the State of Texas, delivered before our committee. He starts out by stating that it is not the best butter makers that are in the fight against oleomargarine, that they do not compete with the Elgin people, and that the Elgin people do not complain of the oleomargarine manufacturer, claiming that there are rich people all over the country who are going to have butter and pay for it, and that oleomargarine is not in competition with this class of butter, but that it is the low grades that come in competition with oleomargarine, and that the people handling the same are the ones who are complaining to-day; that the best butter makers of this country are not in this fight against oleomargarine, but it is the men that want to offend the nostrils and vitiate the taste and poison the stomachs of men with inferior butter that are clamoring here before Congress to shut out a perfectly pure, clean product with which they find they can not compete; that is the situation as he claims it.

Mr. Speaker and fellow-members, let me assure you that this man from Texas is entirely mistaken as to who are in the fight against oleomargarine. In the place of such parties as he mentions we have had Mr. H. C. Adams, the dairy and food commissioner of our State, spending much time with our committee trying to get a favorable report from same on this bill. As I previously stated, there are 250 or more separator creameries in my district, and I have heard from nearly all of the proprietors or managers and from hundreds, yes, thousands, of patrons of these creameries and consumers who wish pure butter, all asking that we pass this bill, and I learn from other members of our committee that they have had the same experience; not alone members of our committee, but all members from butter-producing districts and from such places where the consumer wants to know that he is receiving the pure article when he pays for the same.

I understand that there are concerns in the United States dealing in low-grade butter, making same over into what is called "process butter." Mr. Aldredge informs us that these dealers in such low-grade butter are the ones complaining, but let me assure you that as a member of Congress or as a member of the Committee on Agriculture I have not, that I know of, received a single complaint from any one of such parties.

We find this party claims that there are rich people all over the country who are going to have butter and are willing to pay for it, and that oleomargarine is not in competition with the class of butter they buy. Gentlemen, there are people all over the country who want to buy pure butter and are willing to pay for it. Under the present conditions the profit to the party who sells oleomargarine for butter is so large and the temptation is so strong that we find it is true that dealers do fall, and it is for the protection of such parties, who want the genuine article, we should pass

the Grout bill. Oleomargarine is in competition with this class of butter—in fact, is more in competition with this class than it is with the lower class.

He further states that butter is higher than it was forty, twenty, or ten years ago, and that the producers can not supply the demand; that New York is short of butter all the time. In another place in my speech I introduce figures showing the market on butter many years past, proving the error of this statement. The gentleman is also mistaken when he states that New York is short all the time. I happen to have some butter myself that I would like to dispose of, so that I would be very glad if the gentleman was correct in his assertion; but to my sorrow I find he is not. He further claims that these dairymen are already immune from smallpox, and they ask the Government to give them immunity against competition. This, you can all see, is not so when we reduce the tax on the uncolored to one-fourth of a cent a pound.

He further states that we come before you claiming that 32 States have adopted this butter law, and that it has not had any effect. "They can not stop it. Why is that? Can Congress do more? Why is it they can not stop it? I will tell you," he says. "The world has never yet found anything that it wanted that it did not get in some way. No man can throttle a world's wants. The world has tried oleomargarine, etc. It is just what they want, and all legislation on earth can not prevent their getting it." Taking the speaker at his words, there is but one thing to do and do justice to everybody, and that is to impose the extra 8 cents a pound tax on the colored oleomargarine, so that the price of this product will come up nearly to the average price of the best creamery butter, so that the consumer can have his choice at about the same price.

The gentleman further states:

We will have to regulate the ladies. Why, they use paint, they use powder. One of them steps out of her home into the street or to the parlor, and she has these yellow ribbons on. That is the thing that makes these dairy people so awful hot, and her shape is perfection. Visions of the Greek Slave and all lovely statuary rise before you as she ambles down the street; she is perfection. And yet they are not all built that way. Some of them are fearfully and wonderfully made. Now, the Government ought to take a hand in that and stop that kind of deception which they practice on us men.

Why, sir, the wearing of clothes is a deception and disguises a man's deformities. Congress must step in and make every fellow go naked and grow hair like a hog. That is the way to be natural. Now, gentlemen, the fact is that if the Government is going to regulate all the domestic affairs and poke its nose into butter and everything else, then the Government has to quit everything else. Why, sir, a lot of people would like to put this Government to grinding coffee and toting out slops. That is their idea of government; that is their idea of what government is, for what business has the Government fooling around here in butter.

In answer to the above, let me here express my opinion as to what I feel that my duty is, and I must say that I judge that my duties are entirely different from the ideas of this speaker. I do not believe in the Government trying to regulate domestic affairs, but I certainly do believe that our Government must poke its nose, as the speaker has it, into butter, and I would feel ashamed to go home and meet my constituents, whether producer or consumer, if I had not done this very thing. I just read from this gentleman's speech where he asks, What business has the Government fooling around here in butter? Gentlemen, we are simply compelled to, when we find, as stated by this gentleman, that in 32 of our States, in which over three-fourths of all the oleomargarine manufactured in our country is sold, it is sold against State laws. Therefore these people come to us for help, and it is our duty to help them by passing this measure.

INVESTMENTS OF OLEOMARGARINE FACTORIES AND CREAMERIES, AND LOSSES SUSTAINED SHOULD THIS BILL BECOME A LAW.

Statement of W. E. Miller, esq., representing Armour & Co., Kansas City, Kans.:

GENTLEMEN: The passage of a law such as the Grout bill would destroy an industry in which there are \$15,000,000 invested and 25,000 men employed. It would deprive the Government of over \$2,000,000 annually, and practically destroy the cotton-seed oil industry of the South, in which there are millions of dollars invested and many thousands of men employed.

The injury to the cattle and hog industry is almost beyond estimate, although it has been conservatively stated that the depreciation would be \$62,000,000 annually.

Representative HAUGEN. What is the number of pounds or gallons of cotton-seed oil used in the oleomargarine output?

Mr. MILLER. How much do we use, do you mean?

Representative HAUGEN. What is the amount used in the aggregate by all the factories?

Mr. MILLER. I think it is in the neighborhood of 10,000,000 pounds.

Representative HAUGEN. Per annum?

Mr. MILLER. Yes, sir; for the reason that if they could not use these 10,000,000 pounds of the refined oil in the manufacture of butterine, they would have to sell it in its crude state, and it would place a ban upon what little export business they had and kill that; therefore it would practically ruin the industry.

Representative HAUGEN. You state, then, that you have no knowledge of the number of gallons or the number of pounds of cotton-seed oil produced in this country?

Mr. MILLER. No, sir.

Representative HAUGEN. And yet you make the statement that this bill would destroy the cotton-seed industry of the South?

Mr. MILLER. I make the statement as I got it from the cotton-seed oil people.

Statement of John C. McCoy, Kansas City Live Stock Exchange:

This bill is aimed at the life of a great commercial industry, that of oleomargarine. We believe it will, if enacted into a law, seriously cripple one by comparison with which both oleomargarine and that of its opponent, butter, pale into significance. I refer to the live-stock industry. The Government reports show that on January 1, 1900, there were in the United States 43,902,414 head of cattle. By the enactment of laws prohibiting the use of oleomargarine each head of those cattle other than milch cows would have a depreciation in value, as shown above, of \$2 per head, or a total of \$87,804,828. If the leaf lard of the hogs of the United States had to be used for lard by the death of oleomargarine, it would mean a depreciation in value of 20 cents per head, a total of \$7,780,326. Thus it will be seen if these measures become laws, at that instant \$95,585,154 will be taken directly from the farmers and stock raisers of the country.

Representative DAHLE. Mr. McCoy, do you make any allowance for the amount of oleo oil that is exported or that may be exported in calculating as you do the loss to the farmers in case this bill should be passed? As I understand only a small part of the oleo oil which is made in this country is used here and the largest part is exported, I can not see where you make such allowance. Do you?

Mr. MCCOY. No, sir.

Representative DAHLE. Would it not be fair to make such an allowance, knowing, as we do, that by far the larger part is exported? Is not that the case?

Mr. MCCOY. That is my understanding, that the larger percentage of the manufactured oleo product is exported.

Representative STOKES. Without attempting or anticipating the gentleman's answer, I would like to supplement the question by this inquiry: Is it not a fact, which is generally recognized with regard to all export commodities, that the price of the exported part is really the part affected in determining local prices?

Mr. MCCOY. As a general rule that is the case. This seems because it is the only way of getting rid of our surplus. I can not tell except from a statement I have seen. I may be wrong in my recollection of it, but I think I saw it stated that 132,000,000 pounds were exported in 1898.

Representative DAHLE. If 83,000,000 pounds of oleomargarine were manufactured in that year, then only a small fraction of the total amount of oleo oil made was used here at home.

Mr. MCCOY. Exactly.

W. R. Cantrell, secretary of the Williams & Flash Company, New York City, exporters and commission merchants of cotton-seed oil products, stated:

The exports in 1899 were 50,627,213 gallons, or 1,021,514 barrels, which amount, taken at the average price of that year, represents a value in dollars and cents of \$13,163,076.94. If the outlet we now possess in oleomargarine is destroyed and a surplus thus created, it would cause the decline in value of at least \$2 per barrel, which, taken at last year's production of 2,000,000 barrels, means a loss to the farming interests of the South and Southwest of \$4,000,000.

The following is another statement of Mr. Lavery:

Representative COONEY. This is what I want to get at. Mr. Lavery, you state that a slaughtered steer will contain about 50 pounds of this fat out of which you make oleo oil?

Mr. LAVERY. Yes, sir.

Representative HAUGEN. I would like to continue the question which has been asked you. You claim that the manufacture of this product makes \$2 per head of difference on cattle?

Mr. LAVERY. Yes, sir.

Representative HAUGEN. On what ground do you base your claim? What is the number of cattle slaughtered, according to the Government reports or estimate which you have?

Mr. LAVERY. In the United States?

Representative HAUGEN. Yes, sir.

Mr. LAVERY. I have not those figures at hand.

Representative HAUGEN. I think it is about 5,000,000 head, is it not? According to the Agricultural Department report it is 4,654,000. According to the reports there were 24,491,760 pounds of this oleo oil consumed.

Mr. LAVERY. Yes, sir; here in this country.

Representative HAUGEN. In manufacture?

Mr. LAVERY. Yes, sir.

Representative HAUGEN. That would amount to less than five pounds to each head of cattle, would it not?

Mr. LAVERY. Well, you understand that, as I stated a while ago—

Representative HAUGEN. I am referring now to whatever this bill refers to. It has nothing to do with the oleomargarine shipped abroad. This bill does not affect the exports. It refers to what is consumed here at home or what is colored. Now, this would amount to less than 5 pounds to a head, would it not?

Mr. LAVERY. I have not figured that out.

Representative HAUGEN. Well, it is necessary, in view of the statements and assertions that you have made, to figure it out in dollars and cents and in pounds.

Mr. LAVERY. Yes, sir.

Representative HAUGEN. Now, then, if there are 24,000,000 pounds used or consumed and 5,000,000 head of cattle slaughtered, that is less than 5 pounds to each head of cattle killed.

Mr. LAVERY. Yes, sir.

Representative HAUGEN. You stated a while ago that there was a difference of 4 cents a pound between the prices paid for this fat for the purposes of tallow and oleo oil; now, then, 5 pounds of fat at 4 cents a pound is 20 cents, or less than 20 cents, for each head of cattle killed, according to your own statement, is it not?

Mr. LAVERY. Well, taking only the amount of oil consumed in this country it would probably be that much less than \$2; I consider that this bill would affect more than our own country.

Representative HAUGEN. We will come to that later, but I wish to make this point clear.

Mr. LAVERY. It would be much less than \$2 on that basis.

Representative HAUGEN. Are my statements correct, then?

Mr. LAVERY. It is simply a question of figures; I have not figured it out. Representative HAUGEN. It is necessary to use figures to arrive at the result.

Mr. LAVERY. That is simply a question of figures.

Representative HAUGEN. You claim that the 10-cent tax would practically kill your industry?

Mr. LAVERY. I certainly do; yes, sir.

Representative HAUGEN. What is oleomargarine worth to-day uncolored? What is the average price for the year?

Mr. LAVERY. The average price to-day is, say, 11 to 14 cents wholesale; there is no difference between the cost of the colored and the uncolored product.

I now read from communication of Cattle Raisers' Association, presented by Mr. S. H. Cowan, of Fort Worth, Tex.:

The enactment of such laws would completely destroy a business which has been recognized by law, which now furnishes a large revenue to the Government (\$1,956,618 in A. D. 1899), which provides employment for thousands of men, and in which citizens of the United States have invested fortunes. It would seriously affect the cattle industry, as the manufacturers of oleomargarine have created a demand for oleo oil made from the choice fats from the beef at a price at least \$3 per animal greater than it would be worth if it had to be used, as before the advent of oleomargarine, for tallow, thereby entailing a loss on the producers of millions of dollars annually. No law can make more stringent requirements to protect consumers than those now in force, and the fact that the output is yearly increasing shows that there is a demand for oleomargarine as such in spite of all hostile agitation and legislation.

THE CATTLE RAISERS' ASSOCIATION OF TEXAS.

I will now read from resolution presented by Mr. Cowan, passed by Cattle Raisers' Association of Missouri:

The butter fat of an average beef animal for the purpose of making oleomargarine is worth from \$3 to \$4 per head more than it was before the advent of oleomargarine, when the same had to be used for tallow, which increased value of the beef steer has been added to the market value of the animal, and consequently to the profit of the producer. To legislate this article of commerce out of existence, as the passage of this law would surely do, would compel slaughterers to use their fat for tallow, depreciate the value of the beef steer of this country \$3 to \$4 per head, which would entail a loss on the producers of this country of millions of dollars.

THE SOUTH ST. JOSEPH LIVE STOCK EXCHANGE.

Statement of J. A. Hake, president of Live Stock Exchange, South Omaha, Nebr.:

The probable loss to the beef producers of this country, should this measure (the Grant bill) become a law, has been estimated by different persons to be about one hundred millions, to say nothing of the confiscation of about fifteen millions invested in the manufacture of oleomargarine and butterine, and the loss of employment to about 25,000 men.

Mr. Speaker, we find in the statement of Mr. Miller that he claims investment of \$15,000,000 by the oleomargarine manufacturers. Permit me here to give you the result of my investigation as to the correctness of that statement. The following is a list of the oleomargarine factories of the United States. They are 26 in number, as follows:

Name.	City and State.
Oakdale Mfg. Co.	Providence, R. I.
Vermont Mfg. Co.	Do.
Goshen Mfg. Co.	Do.
Friedman Mfg. Co.	Chicago, Ill.
Swift & Co.	Do.
Wm. J. Moxley.	Do.
Braun & Fitts.	Do.
International Pkg. Co.	Do.
Chicago Butterine Mfg. Co.	Do.
Arthur Jordan Co.	Indianapolis, Ind.
Kingman & Co.	Do.
The G. H. Hammond Co.	Hammont, Ind.
Armour Pkg. Co., W. A. Miller.	Kansas City, Kans.
Swift & Co., C. M. Labrey.	Do.
Harrison Butterine Co.	Do.
Falls City Dairy Co.	Louisville, Ky.
The National Dairy Co.	Washington, D. C.
R. C. Dotson.	Do.
Dold Butterine Co.	Kansas City, Mo.
Grovedale Co.	Camden, N. J.
The Gillette Butterine Co.	Jersey City, N. J.
The Capital City Dairy Co.	Columbus, Ohio.
The Union Dairy Co.	Cleveland, Ohio.
Holland Butterine Co.	Pittsburg, Pa.
Henke & Pillot.	Houston, Tex.
Illinois Dairy Co.	East St. Louis, Ill.

So that the average investment in each one of these factories would amount to about \$500,000, or near \$600,000.

Amongst the parties that appeared before us was Mr. G. M. Waldron, director Kansas City Live Stock Exchange, who said:

You gentlemen are all busy men. I take it that you are very much interested in this problem before you. Would it not be wise for you as business men to understand the subject from personal observation? What I mean by personal observation is to go to the centers of this great industry and investigate its methods, its manufacture, etc. My purpose simply is to invite this committee as a whole, or a subcommittee that you may appoint, to go to these great centers of this manufacturing interest—Chicago, St. Louis, Kansas City, and other points in your country—and go through the institutions and learn about the manufacture of this product.

As advised by him, I went and saw R. C. Dotson's oleomargarine factory, this city, and after having seen what an insignificant thing this firm is I concluded to further investigate as to the value of other plants, machinery, fixtures, etc., through our mercantile agencies, through which all business houses find out as to the financial and other standing of their customers when they ask credit. In the place of each concern having an investment of \$500,000 or more I found the following concerns quoted as follows:

The Fall City Dairy Company, Louisville, Ky., stock, fixtures, and machinery, is rated as worth \$3,000.

Capital City Dairy Company, Columbus, Ohio, incorporated for \$30,000.

Purity Butterine Manufacturing Company, Chicago, machinery and fixtures, \$1,500.

Illinois Dairy Company, East St. Louis, Ill., company's investment, \$5,000.

Union Dairy Company, Cleveland, Ohio, authorized capital, \$50,000.

Goshen Manufacturing Company, Providence, R. I., incorporated for \$25,000.

Vermont Manufacturing Company, Providence, R. I., machinery and buildings, \$43,000.

Gillette Butterine Company, Jersey City, N. J., plant, machinery, and stock, \$2,500.

Elgin Butter Company, Indianapolis, Ind., machinery, factories, and teams, \$3,000.

R. C. Dotson, Washington, D. C., machinery, \$3,775.

Holland Butterine Company, Pittsburg, Pa., plants, machinery, etc., \$60,000.

W. J. Moxley, Chicago, according to last statement given by their bookkeeper, plants, factories, and machinery, \$30,850.63.

In the place of these 12 concerns being worth \$6,000,000 or nearly \$7,000,000, I find that all their machinery, factories, etc., is worth \$257,628, or what is less than 5 per cent of what is claimed as their investment. In contrast to this I find that there are 252 creameries in my district of Wisconsin, according to report of our dairy and food commissioner, worth on an average \$2,700, making a total value of \$680,000, while in the State of Wisconsin there are 951 creameries, worth, at same valuation, \$2,567,700. When we compare these figures with the figures of oleomargarine concerns just read, then you can readily see the insignificant sum invested in the imitation business as compared with the legitimate industry.

We find that Mr. Miller, in speaking of the losses sustained by the passage of this bill, claims the practical destruction of the cotton-seed oil industry with its millions invested and thousands employed, injury to the cattle and hog industry beyond estimate, depreciation \$62,000,000 annually. Mr. McCoy claims the depreciation in value of live stock of \$2 a head or \$55,220,108; loss on hogs, 20 cents a head, amounting to \$7,730,326. The instant this measure becomes a law \$62,950,434 will be taken directly from the farmers and stock raisers of the country.

Mr. Cantrell, of New York, claims a decline in the value of cotton-seed oil of at least \$2 a barrel, making a loss to the farming interests of \$4,000,000 on that product. Mr. Lavery claims a difference of \$2 per head on cattle, making a loss on cattle, according to Agricultural Department, as stated by Mr. HAUGEN, of between nine or ten million dollars. Mr. Cowan, of Fort Worth, Tex., claims the loss of millions of dollars annually. Mr. Hake, president of the Live Stock Exchange of South Omaha, however, takes the cake in his statement, the probable loss to the beef producers estimated at one hundred millions, besides confiscation of about fifteen millions invested in the manufacture of oleomargarine.

We will now briefly consider the stupendous amounts claimed by these parties. We agree that there was 83,000,000 pounds of oleomargarine manufactured last year. We will figure this to cost 8 cents a pound, that is, without internal revenue added. This figure I know to be high, but I wish to be on the safe side so that my opponents can not claim of me such tremendous exaggeration as they have used in their statements touching on all points at issue. Now, we find that 83,000,000 pounds at 8 cents a pound amounts to \$6,640,000; so that, if the oleomargarine factories had been closed down December 31, 1898, and that the material that it took to produce this oleomargarine had been left on the hands of its producers and that they could not have realized one solitary dollar from its sale for the year 1899, then the total loss would only have been \$6,640,000 in place of the sixty or more millions that these parties named.

The above amount, \$6,640,000, stands not only for the material itself that it took to make this oleomargarine, but also for the work of manufacturing same, so that in getting at the loss, if any there be, to the producers of the materials that goes into the oleomargarine manufactured, we must subtract from above amount all that the packing houses could realize out of the lard and tallow that they furnished, and the cotton-seed oil mills the cotton-seed oil they furnished. As to the two products furnished by the packers, when we think it over carefully and in a business-like way, how very small this difference in price could be as to the latter.

I understand that the amount of cotton-seed oil used in oleomargarine is from 10 to 15 per cent, so that the total amount used last year was from eight to twelve million pounds. We find that Mr. Cantrell, of New York, advised us that the cotton-seed oil exports in 1899 were 50,000,000 gallons, so that the eight to twelve million pounds consumed is equal to 2 or 3 per cent of the amount exported. Now any business man realizes that such an insignificant percentage as this can not cut any large figure in price of same. I can not spend much further time talking on these figures, but you will notice from the statements that I have read from these parties that appeared before us how the figures dwindle down, like, for instance, Mr. Lavery's figures when Representative

HAUGEN got after him, and they got the figures on the \$2 difference on cattle claimed by Mr. Lavery down to 20 cents a head. I only wish that my effort along this line may have helped to make it clear to my opponents that the Grout bill is all right and ought to be passed.

HEALTHFULNESS AND DIGESTIBILITY.

As to the healthfulness and digestibility of these two products, I have been taught and do believe that the product of milk is easier and more quickly digested than any mixture of lard, tallow, oleo oil, etc. Especially was I strengthened in this faith at one time when I went to the Battle Creek Sanitarium, Battle Creek, Mich., especially on account of my digestive organs. My study there was to learn as much as possible as to what articles of food should be eaten and what should not be eaten; that is, to find out which foods are digested the quickest and easiest.

Their mode of procedure was to have us eat certain articles of food to ascertain whether we could digest them or not. Then they would apply a stomach pump and pump it out again after proper time had elapsed. In this way they ascertained what particular foods each one of us should make use of, and the doctors at this sanitarium, every one of them, very strongly commended butter over any substitute, and always served it. I have not heard anyone present any way of deciding as to the digestibility of these articles that seems so effective to me as the above way.

Dr. Harvey W. Wiley, Chief Chemist, Department of Agriculture, appeared before our committee last winter. His opinion is that butter requires less effort to digest than oleomargarine.

Dr. WILEY. This is exactly what I said in my testimony before the Senate committee. They asked me if I thought oleomargarine was as digestible as butter. I do not think so. I do not think it digests as well as butter because it contains more of the higher series of acids and practically none of the lower series, which are more easily decomposed under the influence of ferments.

The ACTING CHAIRMAN. You would say, then, that butter is more quickly digested than oleomargarine?

Dr. WILEY. I believe it is more easily digested; that it requires less effort.

The CHAIRMAN. You think that is the reasonable inference?

Dr. WILEY. From a chemical study of the composition of butter, it is reasonable to infer that it requires less effort on the part of the vital organs to ferment the butter, and that is the reason why I say that I believe butter is a more digestible substance, more easily digested, more quickly digested, than oleomargarine.

I will also quote from a speech delivered before our committee last winter by our ex-governor, W. D. Hoard, president of the National Dairy Union, who has spent a great deal of time and money investigating this question. He says:

There are reports in great abundance to the effect that oleomargarine is harmful.

The friends of oleomargarine generally find satisfaction in the following statements made by the different professors. I will quote Prof. S. C. Caldwell, of Cornell University, Ithaca, N. Y.:

While not equal to fine butter in respect to flavor, it nevertheless contains all the essential ingredients of butter.

The situation is that the friends of pure butter do not find any fault with oleomargarine on account of its taste.

I brought with me here to Washington five samples of something that I did not know whether it was butter or oleomargarine. One day I met our State dairy commissioner, Mr. H. C. Adams, and Mr. F. J. H. Kracke, assistant dairy commissioner of New York. I asked these gentlemen to examine these samples and inform me which was butter and which was oleo. They looked and smelled and tasted and disagreed, and finally gave it up, stating that they were not sure what they were without having the same analyzed.

Now, then, when we find that our dairy commissioners can not judge, then I conclude the professor has not helped the oleo industry by making the above statement.

Prof. Charles P. Williams, professor in the Missouri State University, says:

It is a pure and wholesome article of food, and in this respect, as well as in respect to its chemical composition, fully the equivalent of the best quality of dairy butter.

This professor compares it with best dairy butter. Now, if he had meant that it was as pure and equivalent to creamery, which is the grade of the great bulk of butter nowadays, I judge he would have said so, and not said dairy butter.

Go down town here and investigate and you will find, as I did, that dairy butter is a thing of the past. In my district, away West in Wisconsin, where we do not have many Yankees, but have Germans, Norwegians, and Irish tilling the soil and milking the cows, not even these foreigners and their descendants make dairy butter. We have 250 creameries in that district alone and over 900 creameries in our State. I can not imagine that we produce 1 per cent of dairy to what we do of creamery.

Prof. C. A. Goessmann, of Amherst Agricultural College, says:

Oleomargarine butter compares in general appearance and in taste very favorably with the average quality of the better kinds of dairy butter in our markets. In its composition it resembles that of ordinary dairy butter, and in its keeping quality, under corresponding circumstances, I believe it will surpass the former, for it contains a smaller percentage of those constituents which, in the main, cause the well-known rancid taste and odor of a stored butter.

We find the Professor starts out by comparing oleomargarine butter with better grades of dairy butter. When he speaks of oleomargarine butter it puts me in mind of the man who spoke of cast-steel steel. In composition he states it resembles. I would expect him to state that in looks it might resemble, while in composition it compares with butter. I judge this professor does not wish to compare it with our best butter, viz, creamery. If he would so have wished, he had done so.

Prof. Henry E. Alvord, formerly of the Massachusetts Agricultural College and president of the Maryland College of Agriculture and now chief of the dairy division of the United States Department of Agriculture, says:

The great bulk of butterine and its kindred products is as wholesome, cleaner, and in many respects better than the low grades of butter, of which so much reaches the market.

What does this professor mean when he speaks of oleomargarine and its kindred products? I am a member of the Committee on Agriculture, as before stated, and I have not there heard about kindred products. Can it be that this professor made a guess that there are some such products and wishes to include them? He then goes on, stating that oleomargarine and its kindred products are as wholesome, cleaner, and in many respects better than the low grades of butter, of which so much reaches the market.

Why does he not compare with the staple creamery butter, and not the low grades which he speaks of? We must conclude that he does not wish to compare the products he names with the butter of to-day, and I do not blame him. Probably it was the wisest thing to say, as he did, low grades of butter.

The one subject brought up before our committee was that of cleanliness. On this subject Mr. Dadie, of W. J. Moxley, Chicago, stated:

We have heretofore refrained from attacking butter and the methods of its manufacture.

And then goes on quoting a letter from Mr. Edward Chadwick, manager of a large creamery at Osgood, Iowa, published in the Chicago Dairy Produce:

A good deal of milk is brought in dirty, because not strained at home and no effort made to keep straws or filth out of it. Some of the cans are seldom or never properly washed, and a thick coating of sticky filth may be scraped off them, both inside and out. I can strain the milk, run it through the separator, and remove a large part of the dirt, but no butter maker on earth can remove the tainted and filthy smell that milk gets from staying in unclean cans in bad-smelling barns.

Some of our patrons would be horrified if they saw the dirt and filth I remove from my strainer and separator. Does anybody think that a bar of soap or chunk of stable manure, potatoes, parsnips, dish rags, or hair pins soaking in your cans over night or longer will improve the flavor of the milk? I have found all of the above, and more, in the strainer of the weigh can. How can good butter be made from such milk? When you send your jar to the creamery for butter for your own use, what would you say if I should put some of the dirt I find in your milk on top of the butter in your jar? You would return that butter to the creamery and be mad besides. If the butter maker would return your dirty milk to your home he would be doing his duty, although it would make you mad.

I agree with Mr. Chadwick that some of his patrons would be horrified to see the dirt and filth he removes from his strainer and separator. I would judge that anyone, proceeding the way he does and continued in the same place long enough, might find the things he claims he has found. I operated one of the first separator creameries in my county. It has happened that we have received sour milk, which condition is generally brought about by carelessness and uncleanness. I instruct my creamery man to be very careful to refuse such milk, and the farmer does not need to have his milk refused many times before he knows as well as the creamery man that he must practice cleanliness, and so the farmer learns, if he does not know it or practice it beforehand, that care and cleanliness are essential to success, and the creamery man who does not practice and teach the same to his patrons is wholly unfit for such position.

COLORING OF BUTTER AND OLEOMARGARINE.

On this subject Mr. W. E. Miller, representing Armour & Co., said:

The first butterine manufactured was of very high color, while butter at that time was almost universally sold in its natural state. The dairymen were quick to see that the high color pleased the public, and they immediately commenced to color their product also. As regards the much-discussed question of color, I would say that we use exactly the same as that sold to a majority of all the creameries in the West, and in about the same proportion. In order to sell our product we must color it now the same as we did when we commenced its manufacture. If we had started out using no coloring whatever, we would doubtless have had as large a business established on uncolored to-day as we have on colored butterine. However, as the trade have become accustomed to colored goods, we could not at this late hour get them accustomed to the uncolored product. Why should color be prohibited from butterine and not from butter? The same color is used in similar quantities in both articles.

We see from the statement of Mr. Miller that he claims that butter was almost universally sold in its natural state at the time when butterine was first manufactured, while the butterine was of a very high color. This I know from experience to be entirely without foundation; not one word of truth in it. The situation was then as it is to-day—that the natural butter during that time of the year when the cow feeds on green grass was yellow, and that the consumer then as now preferred a uniform color the

year throughout, wherefore coloring was resorted to years before we knew anything of oleomargarine. The opponents of this bill have acknowledged or advised us that carrots were used for butter coloring before liquid color or oleomargarine was discovered.

We also find that Mr. Miller claims that about the same proportion of coloring is needed for butter as for oleomargarine. I think that any man with common sense that knows anything about the natural color of butter, and knows anything about the natural color of lard and tallow, which are the principal ingredients of oleomargarine, will know that it does not take as much color to color butter at such times when it is the product of green grass, and even in the dead of winter, when the producers of butter are now feeding their cows ground feed, which helps along to give color to winter butter, but not enough but what some coloring must be used. In contrast to this we have the natural color of the principal ingredients of oleomargarine, which are lard and tallow, and which we know are about as white as snow at all times of the year.

I find Mr. Miller states that if we had started out using no coloring whatever we would doubtless have had as large a business established on uncolored to-day as we have on colored. In answer to this I must state that my views are that the manufacturers of oleomargarine started in and have ever since been manufacturing their product to look as much as possible like unto butter. I find the following inscription on the front of Mr. Dodson's oleomargarine factory, which is situated within sight of our Capitol here, "The cow herself couldn't tell it." Why such a sign as this in front of an oleomargarine factory if the proprietors do not wish to convey the idea to the trade that they have a substitute so good, so exact, that the cow herself could not tell it?

C. N. Lavery, representing Swift & Co., said:

We claim the same right to color oleomargarine yellow that a creamery claims to color butter, and most respectfully ask this committee not to vote to prohibit the use of a harmless coloring in one in favor of the other. It is a well-known fact that the manufacturer of oleomargarine first conceived the idea of giving his product a uniform color, thereby rendering it more pleasing to the eye by the use of a harmless coloring. The creameries throughout the country, taking advantage of the idea suggested, adopted the same color as their standard. They found it improved the appearance of butter as well as of oleomargarine. Now these same creameries come before Congress and ask to have a law enacted to force the manufacturer of oleomargarine to abolish the use of coloring, claiming that they have the exclusive right to its use. The creamery interests have no more right to say we shall not color oleomargarine than we have to say they shall not color butter. It has been said that if Congress forbids the coloring of oleomargarine it should also forbid the coloring of butter. This is wrong. Congress should not forbid the coloring of either, but should encourage the coloring of these products in order to enhance the value and sightliness of both.

We find that Mr. Lavery also advances the idea that oleomargarine was the first to use color, and that the creameries throughout the country took advantage of the idea suggested and adopted the same color. Let me here read to you a message from Wells, Richardson & Co., Burlington, Vt.:

HERMAN B. DAHLE,
House of Representatives, Washington, D. C.

Have manufactured butter color for over twenty-five years. Sold first in bottles, later in bulk.

WELLS, RICHARDSON & CO.

This I know to be true, because I have sold it myself to producers of butter, who bought it for their butter because we told them to use it.

I am the son of O. B. Dahle, who has been a merchant in the town of Perry, Dane County, Wis., from 1853 to 1896, and I know that many of these parties who have sent me the different letters and messages concerning this bill remember him since away back. He handled butter since I was a small boy. It is now between twenty-five and thirty years since we found it necessary to induce our customers to use butter color for their butter during that portion of the year when the cows could not feed on grass, because the parties to whom we consigned our shipments informed us that they could realize a better price for the same when it bore the same color the year around.

I myself have dealt in or have been a manufacturer of butter the last twenty-three years when I have been in business, and have found the same rule existing up to the present time—that consumers wish butter to have the same color the entire year; wherefore we have to use color when the cow, according to the laws of nature, must subsist on dry feed.

Besides this, let me read you a letter that I received from John S. Martin & Co., one of the oldest and leading butter houses of New York City, which letter I believe fairly, squarely, and truthfully explains the situation as to whether butter is colored to imitate oleomargarine or vice versa:

NEW YORK.

DEAR SIR: We learn that the oleomargarine interests are representing that butter was and is colored in imitation of their article. One can scarcely believe that any sane individual would make such a statement or accept the responsibility for such an untruth, and still those engaged in the butter business (we have been established nearly fifty years) know there is no statement so wild or untrue that will not be made by the supporters of this miserable fraud on the consumer.

In fact, the entire history of oleomargarine from its very inception has

been one gigantic misrepresentation, and it remains to be seen whether the few manufacturers who have made enormous profits out of the business shall be allowed to continue to humbug the public and at the same time destroy one of the most prominent of our agricultural interests. While the majority in the Senate may not be as pronounced as in the House, we can not but believe that its passage is probable.

We are, dear sir, very truly, yours,

JOHN S. MARTIN & CO.

P. S.—Dealers in butter know full well and will affirm that coloring has been, and is now, used solely to establish uniformity in the productions of the different seasons of the year.

HON. HERMAN B. DAHLE,
House of Representatives, Washington, D. C.

Next we will hear from Mr. L. S. Taylor, secretary of Elgin Board of Trade, the organization which, according to a statement made before our committee by a party not friendly to this bill, is the corporation which makes the price of butter for the United States. I agree to a considerable extent with the parties who made such assertion. The situation being thus we can accept their statement with confidence and full reliance. This is what they say:

HERMAN B. DAHLE,
House of Representatives, Washington, D. C.

Elgin Board of Trade was organized in 1872. Ever since then members have used butter color, and it was used by creamery men and farmers before that time.

L. S. TAYLOR, Secretary.

I will now read you a statement from the president of the Chicago Butter and Egg Board:

HERMAN B. DAHLE,
House of Representatives, Washington, D. C.

Have handled butter in Chicago market for twenty-eight years, and during all that time it has been colored.

Next I will read from the president of the Illinois Dairy Union, Chicago, Ill.:

HERMAN B. DAHLE,
House of Representatives, Washington, D. C.

I have been handling butter on this market over thirty years, and during all this time much of it was colored.

GEO. W. LINN.

Next let me read you from one of the principal houses in New York City, which has been in the butter trade since 1855, and this is what they say:

NEW YORK.

DEAR SIR: Have sold colored butter for forty years, long before oleomargarine was made. This is literally true. This house has been in the butter trade since 1855, and one of the original members is still connected with it. During our connection with the trade butter has always been colored. Oleo has been colored to imitate the appearance of butter in order to deceive the consumer.

Yours, truly,

EGBERT & CASE.

HON. HERMAN B. DAHLE.

Mr. Speaker, I have now read to you expressions from what I consider the very best and most reliable authority touching on this particular point, and I know and feel perfectly sure and certain with myself that what these parties have here advised are facts, pure and simple.

Mr. John Dadie, representing W. J. Moxley, of Chicago, Ill., said:

Now, the contention advanced by the parties interested in the passage of this bill is that they do not want oleomargarine colored in imitation of natural butter, and I want to say most emphatically to the members of this committee that oleomargarine is not colored to represent natural butter, and further, that practically speaking no such thing as natural butter is offered for sale in any market; it is all artificially colored; and further, that if not artificially colored six months out of the year, it could not be sold other than at a sacrifice. Why are these people not honest in their statement, and why is it they attempt to conceal the fact that butter is artificially colored and is not natural, as they falsely represent it to be? Why should the producers of butter—who are the framers of this bill—attempt to secure to themselves the exclusive use of color, when the manufacturer of oleomargarine is responsible for its introduction as an article of commerce? Their answer is, to prevent oleomargarine being sold as butter.

Well, then, I say let the producers of butter discontinue the use of artificial color and sell their butter in its natural state, and no one will be deceived in purchasing oleomargarine. Is it not as fair a proposition to say that butter should be sold free from color as to deny its use in a rival product? Is this question not pertinent when it is remembered that the article of color is the property of the oleomargarine manufacturers by right of priority and constant use? The producers of butter were quick to see the advantages derived from the use of this color, and it is now used in common by oleomargarine and butter makers alike. From this it would appear that if any rights are to be protected by legislative enactment, in so far as color is concerned, the makers of oleomargarine are entitled to such protection, and we emphatically protest against the passage of any law that gives to the dairy interests exclusive rights on color and denies that right to ourselves.

Gentlemen, I solemnly protest against unwise and vicious legislation of this kind, and I appeal to your business judgment when you deliberate on this question among yourselves. I protest against the passage of the Grant bill. It is an invasion of our rights; it is practically a confiscation of our property interests, and unjust to the producer and consumer alike. Everybody knows that on a farm, before oleomargarine was ever invented, people used to grate carrots and used other things to color their butter, but it is a fact that butter had not been colored to any extent until after oleomargarine was manufactured and colored, and that the introduction of color is the result of the introduction of oleomargarine as an article of commerce.

Mr. Dadie expresses himself most emphatically, declaring that oleomargarine is not colored to represent natural butter. Since I have spoken on this subject it is not necessary to go over that again. He then asks why are these people not honest in their statements, and why is it that they attempt to conceal the fact

that butter is colored. In answer to same let me here again announce that butter is colored to suit our own—that is the consumers—fancy at such times as the natural product is not of high enough color, and the producers of butter do not deny that.

Mr. Dadie states that the passage of the Grout bill is an invasion of their rights, practically a confiscation of their property interests. When I think of this I can not but think of the statement of the one of these oleomargarine representatives advising us of the fact that they—that is, the oleomargarine manufacturers—having agents all over the United States disposing of their goods, so that the factory which Mr. Dadie represents, according to last statement given by their bookkeeper to one of our mercantile agencies, claimed plants, factory, and machinery worth \$30,850.63, and I then think of Mr. Dadie's statement made July 1, 1898, to one of our mercantile agencies claiming a surplus for his firm of \$100,000, and on November 6 of the following year claims a surplus of \$200,000.

Mr. Speaker and fellow-members, if there is any confiscation of the rights, that confiscation is now and has been perpetrated by the manufacturers of oleomargarine, having agents all over the United States, the majority of which now have passed bills against the sale of colored oleomargarine, so that this very representative, Mr. Dadie, can one year claim a surplus of \$100,000 on no larger plant than they have, according to their own statement, and then the very next year claim a surplus of \$100,000 more.

Mr. Hobbs, editor of National Provisioner of New York and Chicago, stated:

The French colored oleomargarine, too, before the American dairyman found that this coloring evened up his rich and poor butter to one selling standard, then finding the deception a good one the dairyman desires the sole right after stealing the hues of Napoleon poor-man butter to use coloring in butter. Our dairies will not, as a rule, pasteurize or sterilize their cream because it kills that sacred flavor; without being so treated cream has a lurking evil positively dangerous in its original raw and tuberculous state, coming as it does from uninspected cows grazing anywhere, drinking any sort of water, sleeping in filthy and foul influences, and existing in insanitary surroundings and uncouth barns.

Ask the agricultural experiment stations of this country, when they have examined milk and the cattle that give it, to what extent are the milk cows infected with dangers to our system. Ask the question not only in our own land, but in all other countries. The answer as I heard it is simply appalling, and yet the butter people stand up before Congress with their inviolated product, produced from the milk of uninspected cows, and ask that the product made from sterilized cream and the purified oils of Government-inspected stock be driven from the market for the unclean thing which we eat and whose assassination of us we excuse simply because it smells nice.

Does Congress desire to form and wield together a butter trust? Creameries now get higher prices for commercial butter than ever before in the history of the industry; then, too, in face of the fact that methods are cheaper to work out, machinery is cheaper, milk is no dearer; butter is, however, dearer; the milk farmer gets about \$1.10 per 100 pounds of 5 per cent cream milk. About 15 cents' worth of milk makes 1 pound of butter, for which the groceries have paid as high as 30 cents a pound wholesale. This year it is lower now. The creamery folks made 15 cents a pound, and the grocer got 2 cents a pound, even after a lot of the water, for which he paid 30 cents a pound also, had evaporated after the butter reached his store.

No wonder the butter factories do not wish to let the grocer sell butterine. Will Congress step in, on top of all this, and put the requisite 10 cents per pound additional tax on butterine, wiping the product from the market, and thus cement the structure of the butter combine? The good sense of Congress is not yet ready, I feel, to mark up prices to the consumer, to mark up still higher the steep profit of the butter factory, and in doing so imperil millions upon millions illegitimate fields affected by oleomargarine and the manufacture of it.

How about pure winter butter as a counterfeit and a fraud upon the consumer in the guise of rich summer butter and at the price of it? The winter butter of any cow is 30 to 40 percent poorer in butter fats than is the product from her rich summer cream. Butter color is used instead of grass to cover up the difference in rich quality. By these simple dyeing processes the low-grade, whitish, winter, waxy stuff is made to look like a superior summer substance, and to sell for the same price, so this 40 per cent counterfeit is evened up and shoved out into the current of trade as the simon-pure, virgin article. It is a fraud. If a light buff, summer product, its natural color, would be placed alongside of the white, winter, waxy on the same counter, the housewife would severely let the poor white stuff alone. Yet some people ask Congress to tax a pure and wholesome product that the dairies might get higher prices for their deceptions. The few noisy dairymen and others that are not real dairymen who go to form what is swung in under the high-sounding name of the National Dairy Union are a curious lot. They come together as a combine in convention and protest as a crowd, and they go home and protest again as separate concerns; then they stand out by themselves and protest as businesses. Finally they write individual protests to Congressmen.

I would judge from this man's testimony that he ought never to eat any of the butter of trade nor oleomargarine, since he claims that the ordinary cream from which butter is made has a lurking evil, positively dangerous, and since oleomargarine, especially the best of it, contains the product of just the same kind of milk as butter does. I know that it is claimed that we may contract certain diseases from infected milk. At the same time we all know that the very large majority of our people use unsterilized milk; and Mr. Hobbs must not understand that the friends of the Grout bill wish in any way to inflict any hardship or injustice to parties wishing to use oleomargarine, whether colored or uncolored, because even the colored, with the additional 8 cents tax, will not average in cost with the jobbing price of creamery butter. We members of Congress who are friends of this bill do not desire or wish to form and weld together a butter trust, as is charged by him, and I absolutely deny that the passage of this bill can have that effect. I notice that Mr. Hobbs states that the creameries now

get higher prices for commercial butter than ever before in the history of the industry. I will here introduce butter prices for sixteen years, so that you can all see the situation:

Butter prices for sixteen years.
[In cents per pound.]

Month.	1885.	1886.	1887.	1888.
January.....	20½ to 27½	16½ to 26	20 to 27½	19 to 27½

It seems that this man absolutely knows nothing about what he speaks of. He states "that methods are cheaper to work out." Can any butter man explain to me what this means? Machinery is cheaper—I have myself been buying creamery machinery ever since we got separator creameries in my county, and I can not find that any such condition exists. "Milk is no dearer; butter is, however, dearer." I find that the price of butter in every case governs the price of milk. The creamery is very often operated by the farmers themselves, in which case necessary expenses are deducted from the net amount received for butter manufacture, and the balance is divided up among the farmers, or else the creamery owner, where the creameries are running that way, has a certain pay for manufacturing the butter, in which case, of course, the patrons' net receipts depend upon the price of butter.

He then states that the farmer gets about \$1.10 per 100 pounds of 5 per cent cream milk. I wish that you all knew how far from the fact this is. About 15 cents' worth of milk makes a pound of butter, according to Mr. Hobbs's statement, for which the grocer has paid as high as 30 cents a pound, the creamery folks thus making 15 cents a pound, and the grocer getting 2 cents a pound profit. Fellow-members, I wish you all knew what exaggeration this is. As I have stated before, I was the first party in my neighborhood to go into this business, and I certainly could not expect to be elected by these same people to represent them here in Congress if I committed such a tremendous injustice toward my patrons as the charging them with one-half of the price of the butter I manufactured for my work. Mr. Hobbs's next statement is:

No wonder that butter factories do not wish to let the grocer sell butterine. Will Congress step in on top of all this and put the requisite 10 cents a pound additional tax on butterine, wiping the product from the market, and thus cement the structure of the butter combine? The good sense of Congress is not yet ready, I feel, to mark up prices to the consumer, to mark up still higher the steep profit of the butter factory, and in doing so imperil millions upon millions illegitimate fields affected by oleomargarine and the manufacture of it.

I do not expect that there is much necessity of answering this last clause. We friends of the Grout bill do not expect to prohibit

the manufacture and sale of oleomargarine to those who want it, but since we find that the easiest way of selling colored oleomargarine is to mark it and sell it a trifle less than the honest dealer can sell pure creamery butter, this is the reason we have so many that are selling it illegally, and these are the fellows that we are after. I sincerely trust that everyone who will read the balance of Mr. Hobbs's speech will agree with me that he knows nothing about what he is speaking of—for instance, when he tries to ridicule the National Dairy Union. Allow me to inform you that I know several members of this union, and I have received letters from many other members of this union; but not one of them is as flighty or have I found to be as flighty in his own imagination as Mr. Hobbs himself. I have found that both the president, Governor Hoard, of my own district, and Mr. Knight, secretary of the association, have been doing very good, able, and just work for the organization which they represent; and Mr. Charles Y. Knight informed our committee that he had been the secretary of the National Dairy Union the past three years, an organization of farmers who keep cows, and others engaged in pursuits allied therewith, which organization at present comprises about 30,000 members who are farmers scattered all over the United States.

The organization has for its aim the protection of producers and consumers of dairy products against fraud. Its officers serve absolutely without further compensation than their actual and necessary expenses incurred in the discharge of their duty. No officer has ever received one cent salary, but upon the other hand they have spent hundreds of dollars in expenses while working in the interests of the cause, for which no account has ever been rendered the organization. Mr. Knight further states that "I have had charge of the work of organization and the collection of facts regarding the oleomargarine traffic of this country, and it is the enormous illegal and fraudulent growth of the business during the past two years, in the face of the best restrictive laws the States have been able to devise, that has brought us to Congress as a last resort to ask for relief."

CONGRESS OUR LAST RESORT.

We must all believe that our present oleomargarine law, when it was passed, was passed in the hope and with the idea that it would be lived up to; that oleomargarine would not only pay duty or internal revenue to the Government, which it does, but that it would be properly branded and marked and sold to the retailers, and by them to customers, for what it is. In this we can see how greatly the framers of the law have erred. Let us not now take any more risks; let us pass this bill. Then the poor man who needs and wants something cheaper to eat can get it, and then the rich man can also be supplied with oleomargarine if he wishes it in preference to butter, or butter in preference to oleomargarine, and feel sure he gets it.

Reapportionment Bill.

SPEECH

OF

HON. EDGAR D. CRUMPACKER,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 7, 1901.

The House having under consideration the bill (H. R. 12740) making an apportionment of Representatives in Congress among the several States under the Twelfth Census—

Mr. CRUMPACKER said:

Mr. SPEAKER: The measure under consideration is one of more than ordinary consequence. It is always important to have the political power of the Government justly divided among the States, but in view of the distribution of population it is impossible to do exact justice between them. All plans for the apportionment of Representatives must be more or less arbitrary. The question between the bills presented for consideration is one of little importance, viewed from a business standpoint. If the number should be changed twenty-five or thirty either way from the existing standard, it would not appreciably affect the character of the House as a legislative body. There is more objection to the Hall and its present arrangement than to the size of its membership. It is difficult to conceive of a more unsatisfactory place in which to transact public business.

The character of the House depends altogether upon the rules and the personnel of the membership, and everyone here knows that if the membership were increased to 400 under the existing rules business would be dispatched with the same facility that it is now. This body is relatively smaller than the popular branch of the legislature of any of the great governments of civilization, and nominally smaller than most of them.

I am profoundly impressed with the fact that the House is

undergoing a radical change in character and function. It is losing the position the fathers intended it should occupy as the great forum of the people. Its independence is being destroyed by Executive suggestion on the one hand and Senatorial encroachment upon the other. It is being ground to death between the upper and the nether millstones. Whenever a measure of any importance is proposed the first question asked is, not whether it is just and right, but what does the President think of it, does he favor it? If he has been consulted and his approval obtained, the next question is, will the Senate consent to it? If so, it may receive consideration, otherwise not. The duties of the House under the Constitution are of secondary importance. It does its work at the bidding of others, and yet the people hold it responsible.

It is the duty of the House to pass such measures as it deems necessary for the welfare of the country, and if the Senate does not concur, the people will know where the responsibility belongs. If the President does not believe any particular measure to be wise or just, the Constitution very clearly points out a method by which he may effectually express his disapproval, and the people will then know where the responsibility lies. The existing system is the expression of party instead of parliamentary government, and it has resulted in destroying not only the independence of the House as a legislative organ, but in repressing the independence of the members as well.

But, sir, I have no disposition to criticize the President or the Senate for a custom that has its origin in conditions near half a century old. The blame rests with members of the House and with the people. They, and they alone, have the power to administer a remedy.

But enough upon that subject. As between the bill reported by the committee and the measure known as the Burleigh bill, I am in favor of the latter, because, among other things, it provides for an enlargement of the House to correspond in some degree to the growth of population in the country. Then, the method of apportionment pursued in the committee bill is unjust, and therefore it is wrong. It is said to be scientific, but it can not be, because it is both complicated and unfair.

Under that theory, with a membership of 350, the State of Colorado is given 3 members, but with a membership of 357 it only gets 2. If that State is entitled to 3 as its relative share of 350 members, equitably apportioned, with an aggregate membership of 357 the right of Colorado to 3 members would be strengthened. That proposition is self-evident, yet upon the theory of the bill an increase in the aggregate membership of 7 decreases Colorado's representation 1 vote. And they tell us that the theory is eminently scientific. It is preeminently absurd and unjust.

If Colorado is justly entitled to 3 out of 350, it is a gross injustice to give her only 2 out of 357. If she is entitled to only 2 out of 357, it is an injustice to the other States to accord that State 3 out of 350. It must be wrong and unjust in one instance or the other. Upon that theory of reckoning the State of Maine is entitled to a representation of 4 out of a total membership of 383, but increase the membership to 390 and Maine only gets 3. But the theory is scientific, and the bill is designed more to vindicate the theory than to equitably apportion Representatives among the several States.

Why not adopt the plain, simple, old-fashioned method of the people? Determine upon a ratio and then give each State one member for each full unit of population and one for every fraction over half. That is the plan employed by the people, and it is just and generally understood. The committee bill deserves defeat on account of its theory—a theory full of paradoxes and absurdities; a theory that is palpably unjust.

The Burleigh bill is said to proceed upon that ridiculous "scientific" theory up to a certain point, but I have examined it in detail and find that it does justice to all the States. It accords each State one Representative for each unit of 194,182 population and one for each major fraction.

Mr. HOPKINS. Will the gentleman allow an interruption?

Mr. CRUMPACKER. I will.

Mr. HOPKINS. Under a House of 386 members, does not Pennsylvania have a major fraction of more than 120,000 without representation?

Mr. CRUMPACKER. Not upon our theory.

Mr. HOPKINS. Oh, yes. And does not New York have a major fraction of more than 115,000 without any representation?

Mr. CRUMPACKER. Not upon our theory.

Mr. HOPKINS. But upon a House of 386 members it is a fact, is it not, that my statement is true?

Mr. CRUMPACKER. Well, I am not prepared to answer hypothetical questions.

Mr. HOPKINS. There is nothing hypothetical about it. The Burleigh bill, which you now speak of, says that the membership of the House, under that apportionment, shall consist of 386 members. Now, that bill, with 386 members, leaves a major fraction of more than 120,000 in Pennsylvania that is not represented and a major fraction of more than 115,000 in New York that is unrepresented.

Mr. CRUMPACKER. I submit not.

Mr. CORLISS. And Michigan.

Mr. HOPKINS. And, as the gentleman from Michigan says, and Michigan also.

Mr. CRUMPACKER. Oh, no.

Mr. CORLISS. Indeed it does.

Mr. CRUMPACKER. I beg to differ. The bill accords a member to every major fraction.

Mr. PEARSON. That is on a total of 384.

Mr. HOPKINS. But on the bill you make the membership 386. Turn to the tables of 386 and you will find my statement to be absolutely correct.

Mr. CRUMPACKER. That may be true, but for the last fifteen minutes I have been undertaking to impeach the integrity and fairness of your tables. That is what I complain of. Your tables are wrong.

Mr. HOPKINS. It is conceded by the friends of the Burleigh bill that their bill is predicated upon those figures, and if you impeach the figures then you impeach the Burleigh bill.

Mr. CRUMPACKER. No, sir; here is the difference. Take a ratio of 194,182 and give each State a Representative for every unit and one for every majority fraction and it makes a total membership of 386. That is the theory of the Burleigh bill. The aggregate membership is ascertained by the calculation after having fixed upon the ratio, while under the other theory the membership is first settled and the ratio ascertained by dividing the whole population by the fixed number of members. That theory, in nine instances out of ten, will leave several States with majority fractions unrepresented. That is illustrated in the committee bill. The States of Colorado, Florida, and North Dakota have such fractions, but they receive no representation on account of them.

I have already shown that under the theory of the distinguished chairman of the committee, with a total membership of 350, Colorado would have 3 Representatives, and by increasing the aggregate membership by 7 that State would have only 2. The larger the House the smaller the apportionment to Colorado!

THE CONSTITUTIONAL PLAN.

But, sir, neither of the pending bills conforms to the constitutional requirements for the apportionment of Representatives among the States. The constitutional plan is contained in the second section of the fourteenth amendment, which I will read:

Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the legislature thereof, is denied to any of the male inhabitants of such State, being 21 years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in such State.

It will be observed, Mr. Speaker, that the Constitution bases representation upon population entirely, but if any State shall have disfranchised any of its male inhabitants 21 years of age who are citizens of the United States, except for participation in rebellion or other crime, the basis of representation of such State "shall be reduced"—note the word "shall"—in the proportion that the disfranchised citizens bear to the whole number of male citizens 21 years old in the State. Let me illustrate: If a State with a population of 1,500,000 should disfranchise 40 per cent of its male citizens 21 years of age, except for crime, its basis of representation would be reduced in the same proportion, and it would be accorded representation upon a basis of 900,000 instead of 1,500,000.

It is as much a part of the constitutional plan to reduce the basis of representation wherever there have been disfranchisements to any considerable extent, as it is to base representation upon population at all. The provision is plain, clear, and mandatory, and can not be ignored except by the arbitrary will of Congress. The importance of that provision of the Constitution can not be overestimated. The power of establishing qualifications for suffrage rests exclusively with the States, subject only to the limitation that the right to vote shall not be denied on account of race, color, or previous condition of servitude.

A State may fix an age limit so high that it would disfranchise 50 per cent of its male citizens, or impose a property qualification that would operate in the same manner, or establish a literary standard for suffrage that would disfranchise all who are unable to read and translate the Greek language, without violating any Federal law. The only repressive force under the control of Congress to prevent abuses of the vast power in the respective States over the control of suffrage is the reduction of representation. Abnormal local conditions might incite a State to so circumscribe the elective franchise that its government would be republican in form only. Shall the only corrective power for such abuses that resides in Congress be abrogated by passive nullification?

Congress is bound to know the facts of current history in all the

States and disclosures made by State laws and the public records of the country. I make the assertion that there is not a member of this body that does not know to a moral certainty that States in the Union have disfranchised male citizens to such an extent as to deprive them of several Representatives under the constitutional plan of apportionment.

Mr. RICHARDSON of Tennessee. Will the gentleman allow a question?

Mr. CRUMPACKER. I will with pleasure.

Mr. RICHARDSON of Tennessee. I understand the gentleman has a bill which reduces the representation in accordance with the theory which he is now advancing. I want to ask him if he has included in that bill a provision for a reduction of the representation of all the States that have reduced the suffrage.

Mr. CRUMPACKER. I will say in reply to the gentleman, the only States not included in the bill that I have any doubt about are Tennessee and Florida. I carefully analyzed the situation in all the other States, and in none has there been sufficient disfranchisements by the direct and necessary operation of law to justify a reduction of membership. I do not include the suppression of votes by the unfair administration of the law.

Mr. RICHARDSON of Tennessee. I want to ask further of the gentleman. Does he think that as to every State that has reduced the suffrage—reduced the number of voters—under the constitutional requirement, that his bill should go to the extent of reducing the representation of every such State?

Mr. CRUMPACKER. Most certainly.

Mr. RICHARDSON of Tennessee. Now, take Tennessee. We have a limitation of the suffrage, first by requiring persons to pay poll taxes before they can vote. That is devoted exclusively to school purposes, without regard to race. In addition to that, we have a limited registration in certain towns and counties; and in addition to that, we have a modified Australian ballot. Does the gentleman think it practicable, or possible, to ascertain with any degree of certainty how many people are disfranchised by those suffrage qualifications?

Mr. CRUMPACKER. I have no doubt that it can be ascertained with practical certainty, but the gentleman should bear in mind that there is a wide distinction between regulations calculated to secure the orderly administration of elections and the purity of the ballot on the one hand and a repression of suffrage on the other.

Mr. RICHARDSON of Tennessee. I would be very glad to hear the gentleman on that distinction. In my poor judgment, I can not see how you are going to avoid the express language of the fourteenth amendment, which says, as the gentleman has quoted, that where a State denies suffrage for any reason except for participation in rebellion or other crimes representation shall be reduced.

Mr. CRUMPACKER. It says if the right is denied or abridged. I interpret that expression to mean a denial of the right to vote, as distinguished from the limitation of its exercise in the interest of fair and orderly elections.

Mr. RICHARDSON of Tennessee. That is what I want to hear the gentleman upon, if he makes that distinction.

Mr. CRUMPACKER. Well, the gentleman from Tennessee must allow me to make my own speech—

Mr. RICHARDSON of Tennessee. Of course, I appreciate the gentleman's legal ability, and I want to hear him upon that point.

Mr. CRUMPACKER. That general observation is all I have to make upon the point at this time. I will discuss it later.

Mr. FOX. Before the gentleman from Indiana proceeds I would like to ask him a question.

Mr. CRUMPACKER. Very well, if it is only a question.

Mr. FOX. I would like to ask the gentleman, Mr. Speaker, if there is any clause in the constitution as to male inhabitants in the State of Mississippi whose right of suffrage is denied or abridged that is not also in the constitution of Massachusetts? In other words, if the franchise clause in the constitution of the State of Mississippi is any more restrictive than the franchise clause in the constitution of Massachusetts, and if so, in what particular?

Mr. CRUMPACKER. Let me say to the gentleman that admitting for the sake of the argument the proposition as he puts it, by operation of the law in the State of Mississippi over 42 per cent of the male inhabitants 21 years of age who are citizens of the United States are disfranchised, while in the State of Massachusetts not exceeding 3 per cent are disfranchised.

Mr. FOX. Will the gentleman permit me another question? Is the gentleman aware that under the census of Massachusetts, taken in 1895 under the authority of the Massachusetts State law, there were nearly 800,000 male inhabitants over 21 years of age subject to a poll tax, and in the Congressional elections last November there were only about two hundred and eighty-odd thousand votes polled?

Mr. CRUMPACKER. I will answer that question by asking the gentleman another. Is he willing to have the question settled by the vote actually polled? If he is, I will consent.

Mr. FOX. That is not answering my question.

Mr. CRUMPACKER. I do not attach so much importance to the vote as I do to my ability to demonstrate, almost to a mathematical certainty, the number of voters disfranchised in the State of Mississippi and the State of Massachusetts by the necessary operation of laws. There is 6.6 per cent of the male population in Massachusetts 21 years of age illiterate, and about half of that is composed of foreigners who have never been naturalized. Representation shall be reduced on account of the disfranchisement of citizens, not aliens. An investigation of the facts discloses that Massachusetts has not disfranchised a sufficient number of citizens to affect a reduction of representation.

Mr. FOX. Just one further question and I will not interrupt the gentleman further. While that is a proper construction of the Constitution, is it not a fact that notwithstanding these aliens, who have not been naturalized and are therefore not citizens of the United States, are enumerated in the census and go to make up the population?

Mr. CRUMPACKER. Yes; that is exactly according to the constitutional scheme of apportionment.

It has been argued in the course of this debate that the fourteenth amendment was abrogated by the adoption of the fifteenth. While it is true that both of those amendments were originally designed for the protection of the negro, their provisions are general and they apply alike to all classes of people. There is no repugnance between them. Prior to their adoption States had the power to disfranchise citizens for any reason with perfect impunity. Under the original method of apportionment representation was distributed according to the number in the respective States, counting all free persons and three-fifths of the slaves.

No slave was allowed to vote, and after their status had become that of freemen, under emancipation, they were all counted in apportioning Representatives. It was not at first expected that they would be given the right of suffrage, and the fourteenth amendment was intended to give them citizenship and leave the question of their political privileges entirely with the States, but if any State should disfranchise them its representation should be reduced accordingly.

That was the original plan of reconstruction. It was supposed that the importance of an increased share of political power in the Government that would result would induce the insurrectionary States to prepare the negro for suffrage and accord him the right as rapidly as they could do so without injury to their local affairs. But the fear was still entertained that the negro would be held in political bondage, notwithstanding the provisions of the fourteenth amendment, and in the light of unjust and barbarous laws enacted by some of those States, aimed at the colored race, that fear was well founded. The result was the fifteenth amendment. That amendment provides that—

The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

While, as I have said, both amendments were primarily designed for the protection of the negro, they are general in their provisions and include citizens of all races and colors. Both amendments are active and operative. No State may disfranchise citizens on account of race, color, or previous condition of servitude, but they may disfranchise on any other account. But, sir, if they restrict the right of suffrage of male citizens 21 years of age by raising the age limit, by educational laws, by property qualifications, or by any other method within their constitutional authority, except for crime, the basis of representation must be reduced accordingly.

We hear it said that it is not possible to ascertain the exact number disfranchised by the operation of law in any State. Suppose that were true, shall we suffer the constitutional liberties of 8,000,000 citizens to be destroyed because absolute exactness can not be attained? What law operates with exact justice upon all citizens? Practical certainty is all that can be achieved in the most important affairs of the people. If we wait, sir, until we can embody absolute truth, absolute justice in our laws, we would as well close the doors of this Hall and go about our business. But there is no difficulty in ascertaining with reasonable certainty the number of disfranchisements occasioned by educational and property laws. The facts can all be gotten from public records. The census reports show the number of illiterates and other statistical records show other essential facts.

QUALIFICATIONS AND REGULATIONS.

But gentlemen who oppose the enforcement of the reduction provisions of the Constitution tell us that it will involve an endless amount of work and then the result must be more or less speculative. It is well to bear in mind the distinctions between qualifications which restrict the right of suffrage and regulations prescribing the method of exercising that right. The Australian system of voting, the official ballot, registration laws, whether a fee be charged the voter for registration or not, primary laws and requirements of the same general character which affect the mode of exercising the right of suffrage rather than the right

itself are mere regulations for the orderly administration of elections and to protect their purity, and though they incidentally abridge and occasionally deny a voter the right of suffrage, they are not disfranchisements and do not disqualify voters within the meaning of the Constitution.

Restrictions upon the exercise of the elective franchise, reasonably necessary for the integrity of elections, are not denials or abridgments of the right itself within the meaning of the law. The people, in adopting the fourteenth amendment, intended it to have a practical operation, and it must be construed in conformity with the custom and necessity for holding elections under reasonable safeguard to secure correct and honest results. Nor, sir, are provisions in State constitutions and laws denying the right of suffrage to idiots, insane persons, and persons under guardianship limitations upon the right of suffrage. The act of voting involves the exercise of the will, and that class of persons are presumed to have no will in the sense of the law. They are disfranchised by misfortune and would have no power to vote in the absence of any disqualifying provision. They are disfranchised by their own want of power to perform the act of suffrage. They are prohibited from voting by the common political law of the country.

A residence requirement exists in every State in the country, and while the periods are not uniform, they are substantially the same in all the States. This requirement is closely akin to a mere regulation, because a settled prior residence or domicile is absolutely essential to the protection of elections against fraud and imposition. But grant that it is a qualification, it is such a universal requirement that all the States would be affected substantially in the same degree by it; therefore, it is of no practical importance and does not constitute a denial or abridgment of suffrage within the meaning of the Constitution.

Whether the payment of a poll tax as a prerequisite to voting is a regulation or a qualification the authorities are not together upon. The late Justice Cooley in his book, *The Principles of Constitutional Law*, says:

To require the payment of a capitation tax is no denial of the right of suffrage; it is demanding only the preliminary performance of public duty, and may be classed, as may also presence at the polls, with registration or the observance of any other preliminary to insure fairness and protection against fraud.

Much may be said upon the other side of the question, but in any event it is extremely difficult to ascertain the effect of such a requirement. It can only be done by the aid of legal presumptions. The law presumes that every citizen will discharge his public obligations; that every elector will vote, and if onerous conditions are attached to the elective franchise, and electors fail to vote, the presumption will be that the failure is the result of the conditions.

But regulations may be carried to such a degree as to seriously impair the right to vote; and when they are, they become qualifications. In the State of Tennessee, in certain counties and cities, they have what is called the "Dortch law," which provides the Australian system of voting, but forbids assistance to illiterates in the preparation of their ballots. There is no direct educational requirement in the State, but no illiterate can vote under the Dortch law because he can not mark his ballot to designate his choice of candidates. Florida has a similar law. The supreme court of Tennessee has sustained the validity of the Dortch law, but the decision is in conflict with the current of judicial authority in the country.

The effect of educational laws, the most important of all as bearing upon this question in view of the conditions surrounding them, can be determined with mathematical precision. But let me repeat, Shall we consent to the nullification of the imperative mandate of the Constitution because of the difficulty in being exact? Shall we allow the highest privileges of citizenship to be taken from several million people because we can not tell exactly how many in addition have been treated likewise?

Do you say, Mr. Speaker, that this provision of the organic law should be ignored on the ground of expediency; that we should overrule the Constitution, that we all solemnly swore to support, because it would be for the best interests of the country to do so? Will our treatment of this great question on that ground inspire respect for law upon the part of the people? If we do that, we can not complain if men organize into lawless mobs and usurp the functions of courts and juries. No frenzied mob ever lighted the faggots around a trembling, pleading wretch that did not justify its action on the ground that it was subserving the best interests of society.

If the lawmakers of the country override the highest law of the land, what right have they to expect that municipal functionaries will not abrogate all laws and rules that do not measure up to their standard of ethics and convenience?

Mr. FITZPATRICK. Will you disfranchise Maine?

Mr. CRUMPACKER. I am not in the disfranchising business. I leave that to the gentleman from Kentucky. [Laughter.]

LOUISIANA.

The State of Louisiana, in the year 1898, adopted a constitution which establishes an exceptionally high educational standard for suffrage—the highest in all the country. Registration is required preliminary to voting, and the applicant must demonstrate not only his ability to read and write, but to make arithmetical calculations as well in the presence of the registration officer.

Mr. KLUTTZ. Will the gentleman allow me a moment?

Mr. CRUMPACKER. No. I must decline to be interrupted.

Mr. KLUTTZ. Is the gentleman referring to the constitution of North Carolina?

Mr. CRUMPACKER. No. I am discussing the constitution of Louisiana.

As I have said, Louisiana has the highest literary qualification for suffrage of any State in the Union, and the percentage of illiteracy in that State is higher than in any other. The expenditure for public education in that State last year was 71 cents per capita, while the average expenditure throughout the country was \$2.55 per capita. You will find, Mr. Speaker, that in States where the least money is expended for public education and the rate of illiteracy is the largest the highest intellectual standards for suffrage have been exacted. I will read the sections of the Louisiana constitution upon the suffrage question:

SEC. 3. He shall be able to read and write and shall demonstrate his ability to do so when he applies for registration, by making, under oath administered by the registration officer or his deputy, written application therefor, in the English language or his mother tongue, which application shall contain the essential facts necessary to show that he is entitled to register and vote, and shall be entirely written, dated, and signed by him, in the presence of the registration officer or his deputy, without assistance or suggestion from any person or any memorandum whatever, except the form of application hereinafter set forth: *Provided, however,* That if the applicant be unable to write his application in the English language, he shall have the right, if he so demands, to write the same in his mother tongue from the dictation of an interpreter; and if the applicant is unable to write his application by reason of physical disability, the same shall be written at his dictation by the registration officer or his deputy, upon his oath of such disability. The application for registration, above provided for, shall be a copy of the following form, with the proper names, dates, and numbers substituted for the blanks appearing therein, to wit:

I am a citizen of the State of Louisiana. My name is ———, I was born in the State (or country) of ———, parish (or county) of ———, on the ——— day of ———, in the year ———. I am now ——— years ——— months and ——— days of age. I have resided in this State since ———, in this parish ———, and in precinct No. ——— of ward No. ——— of this parish since ———, and am not disfranchised by any provision of the constitution of this State.

SEC. 4. If he be not able to read and write, as provided by section 3 of this article, then he shall be entitled to register and vote, if he shall, at the time he offers to register, be the bona fide owner of property assessed to him in this State at a valuation of not less than \$500 on the assessment roll of the current year in which he offers to register, or on the roll of the preceding year, if the roll of the current year shall not then have been completed and filed, and on which, if such property be personal only, all taxes due shall have been paid. The applicant for registration under this section shall make oath before the registration officer or his deputy that he is a citizen of the United States and of this State, over the age of 21 years; that he possesses the qualifications prescribed in section 1 of this article, and that he is the owner of property assessed in this State to him at a valuation of not less than \$500, and if such property be personal only, that all taxes due thereon have been paid.

SEC. 5. No male person who was on January 1, 1867, or at any time prior thereto, entitled to vote under the constitution or statutes of any State in the United States, wherein he then resided, and no son or grandson of any such person not less than 21 years of age at the date of the adoption of this constitution, and no male person of foreign birth who was naturalized prior to the 1st day of January, 1898, shall be denied the right to register and vote in this State by reason of his failure to possess the educational or property qualifications prescribed by this constitution: *Provided,* He shall have resided in this State for five years next preceding the date at which he shall apply for registration, and shall have been registered in accordance with the terms of this article prior to September 1, 1898, and no person shall be entitled to register under this section after said date.

The applicant for registration must not only be able to read and write, but he is required to fill out a blank application, without the aid of memorandum or suggestion by any other person, giving his name, the day, the month, and the year of his birth, his exact age in years, months, and days, the place of his birth, the place and duration of his residence, and the number of the precinct or ward in which he is a voter. In addition to all this, he must have paid a poll tax of \$1 a year, on or before the 31st day of December, for two years prior to his registration. The tax provision does not apply to persons under 23 nor over 60 years of age.

These extraordinary requirements are by indirection made applicable to the colored citizen only. No person who was a voter on the 1st day of January, 1867, or his son or grandson over 21 years of age, is subject to the qualifications. Every white man was a voter on that date and no colored man was. Was there ever a more unblushing attempt to evade the Federal Constitution? Can the highest rights of American citizenship be overthrown by such a flimsy subterfuge? The avowed purpose of the law was to disfranchise the negro. It carries on its face the stamp of dishonesty. Does anyone claim that the Louisiana system was devised to protect the ballot against illiteracy and ignorance? Why, if that were its purpose, was it not directed against ignorant and illiterate whites as well as negroes? But that was not its purpose. The president of the convention that framed the constitution, in the closing speech, said in relation to the instrument:

What care I whether it be more or less ridiculous or not? Doesn't it meet the case? Doesn't it let the white man vote, and doesn't it stop the negro from voting, and isn't that what we came here for?

A MEMBER. When was that?

Mr. CRUMPACKER. At the conclusion of the labors of the convention in June, 1898.

I submit in this point in my remarks the vote of Louisiana by Congressional districts in the year 1896, under the old constitution, and the vote at the general election in 1898, under the new constitution.

The vote by Congressional districts in that State at the general election in 1896, held under the old constitution, was:

First district	15,412
Second district	16,848
Third district	15,968
Fourth district	16,148
Fifth district	15,264
Sixth district	16,482
Average	16,020

The vote by Congressional districts in 1898 under the new constitution was:

First district	6,318
Second district	7,856
Third district	5,903
Fourth district	5,900
Fifth district	4,805
Sixth district	2,494
Average	5,546

Of the male citizens in that State 21 years of age 43.74 per cent are illiterate and disqualified from voting, and the basis of the State's representation should be reduced in that proportion. There is no speculation or guesswork about these statistics. They are taken from the records in the Census Office and are reliable. But we are reminded of the provision authorizing all citizens of the proper age to vote if they are taxed with property at the assessed valuation of \$300. In the light of the proverbial impetuosity of the Louisiana negro, but few can register under that provision. It is entirely safe to say that more will be denied registration who are returned as literates, under the extraordinary test required, than will be admitted under the property provision.

And aside from this the requirement of the payment of a capitation tax two years in advance is not only unusual but unreasonable, and it doubtless deprives a number of citizens of the right of suffrage, who are otherwise qualified.

MISSISSIPPI.

The State of Mississippi adopted a constitution in 1890 which contains this provision:

On and after the 1st day of January, 1892, every elector, in addition to the foregoing qualifications, shall be able to read any section of the constitution of this State, or shall be able to understand the same when read to him, or give a reasonable interpretation thereof.

In addition a residence of two years in the State and one year in the election district is required. The voter must also have paid all taxes assessed against him on or before February 1, before the election, including a \$2 capitation tax.

The most difficult section of the Constitution is made the test of qualification, and it is safe to assume that no one who is unable to read the constitution because of his illiteracy can understand it when read to him or give it a reasonable interpretation. A vast and dangerous discretion is given to registration officers. They pass upon the qualifications of the voters and administer the tests. But the "understanding" scheme has been entirely eliminated from the constitutional provision by the election law, which provides the pure Australian system of voting, and no illiterate is allowed assistance in the preparation of his ballot. No one can vote who can not read the constitution.

Mr. FOX. I would like to correct the gentleman, because I know he does not want to make a misstatement. I want to call his attention to the fact that the statute does provide that any illiterate who can not mark his ballot can have it marked by a third party. I myself, as a member of the State senate, was the author of that provision in the statute. I am sure the gentleman from Indiana does not wish to make a misstatement of fact. The provision is that anyone who is physically unable to make out his ballot, or, being an illiterate, is unable on that account to do so, may have the assistance of any one of the managers whom he may select.

Mr. CRUMPACKER. I will say that I obtained my information from high authority—from a speech made by the distinguished gentleman from Mississippi [Mr. WILLIAMS], which was published in the RECORD last week. He said that the Mississippi law did not permit assistance to an illiterate in the preparation of his ballot.

Mr. FOX. I do not care who may have said it, it is a mistake, as the statute itself will show. Any gentleman here who has ever read that statute knows that my statement is correct.

Mr. CRUMPACKER. I have in support of my statement the authority of Mr. WILLIAMS in his speech published in the RECORD.

Mr. FOX. Mr. WILLIAMS of Mississippi?

Mr. CRUMPACKER. Yes, sir.

Mr. FOX. I guarantee that my colleague from Mississippi [Mr. WILLIAMS] will not make such a statement, because it is not true as a matter of law.

Mr. CRUMPACKER. Then he ought to expunge the RECORD, because it is there in cold type.

Mr. FOX. I can not help it. I am the author of the statute myself, and it is in the law of Mississippi.

Mr. CRUMPACKER. The Mississippi constitution was framed and adopted for the avowed purpose of disfranchising colored citizens. It is no longer a secret in that State, and the law is construed and administered with that view. Its purpose is not to protect the institutions of the State from illiteracy and vice, but to reduce the negro to a condition of absolute political subjection. The supreme court of that State so declared in effect in a recent judicial opinion. In the case of *Radcliff vs. Beale* (74 Miss., 247) the court used this language:

Within the field of permissible action, under the limitations imposed by the Federal Constitution, the convention swept the circle of expedients to obstruct the exercise of the franchise by the negro race. By reason of its previous condition of servitude and dependence this race had acquired or accentuated certain peculiarities of habit, of temperament, and character, which clearly distinguished it as a race from that of the whites—a patient, docile people, careless, landless, and migratory within narrow limits, without forethought, and its criminal members given rather to furtive offenses than to the robust crimes of the whites. Restrained by the Federal Constitution from discriminating against the negro race, the convention discriminated against its characteristics and the offenses to which its weaker members were prone.

Mr. GAINES. Will my friend yield for a moment? That very opinion is quoted in the Williams case, which was decided by the Supreme Court of the United States, reported in 170 United States Reports, and notwithstanding that language of the Mississippi court, Judge McKenna, for the whole court, held that the constitution of Mississippi did not infringe any rights guaranteed by the Federal Constitution.

Mr. CRUMPACKER. I am familiar with the decision in the Williams case. The Supreme Court of the United States held that nothing appeared on the face or in the text of the constitution of Mississippi in conflict with the Federal Constitution. Nothing appeared in the record to show that it was not fairly administered. The court intimated that if such disclosures had been made its decision would likely have been different.

The convention swept the field of expedients. What for—to protect the people against ignorance and vice? No; but to obstruct the exercise of the elective franchise by the negro race. It could not strike at the negro as such, but it could accomplish the same thing by striking at his well-known race characteristics. The “furtive offenses” of the negro, such as bigamy, larceny, and obtaining money by false pretenses, are made the basis of disfranchisement, while the more “robust crimes” of the whites, such as robbery and murder, do not affect political rights.

Mr. FOX. To settle the controversy between the gentleman and myself, will he allow me to read the Mississippi statute?

Mr. CRUMPACKER. Yes. I do not want to be wrong on any proposition of fact or law.

Mr. FOX. I am sure of that. Section 3666 of the Mississippi statute reads as follows:

3666. Any voter who declares to the managers of the election that, by reason of blindness or other physical disability, he is unable to mark his ballot, and whose declaration is not palpably untrue, shall, upon request, have the assistance of one of the managers in the marking thereof, and the officer shall note on the back thereof that it was marked with his assistance, but shall not otherwise give information in regard to the same. (Election ordinance, section 14.)

The next section reads as follows:

3667. A voter who declares to the managers of the election that by reason of inability to read he is unable to mark his ballot, if the same be true, shall, upon request, have the assistance of a manager in the marking thereof; and the manager shall designate one of their number for the purpose, who shall note on the back of the ballot that it was marked by his assistance; but he shall not otherwise give information in regard to the same.

Mr. CRUMPACKER. That is “by reason of inability to read.”

Mr. FOX. Yes.

Mr. CRUMPACKER. The statute is the best authority that has been submitted, and I commend it to the honorable gentleman from whom I obtained my information.

I quote from a speech made by him on Friday last, printed on page 620 of the RECORD:

It is the pure Australian ballot, as we have it in Mississippi, whether a man be allowed to vote when he can read or not, as a matter of fact he can not vote unless he can read, because he must read the names of those for whom he desires to vote, and he must put the mark opposite the name on the ticket.

Mr. CURTIS. Is he not assisted by the judge or clerk?

Mr. WILLIAMS of Mississippi. Not in Mississippi, unless he is blind or has lost an arm, or is otherwise physically unable.

Mr. CURTIS. In Kansas such voters are assisted.

Mr. WILLIAMS of Mississippi (continuing). In short, can not see to write or feel to write.

Mr. HENRY of Mississippi. My colleague will allow me. If he is disqualified by reason of any physical disability, then he is assisted.

Mr. WILLIAMS of Mississippi. If any physical disability renders it impossible for him to do the work required, he is assisted. That is the pure Australian ballot as it at first came here.

At the time of the adoption of the constitution the colored voters in Mississippi outnumbered the whites about 20,000, and yet the convention that framed the instrument was composed of 134 members, of whom 133 were white and 1 was colored.

Mr. HENRY of Mississippi. And that 1 colored member signed the new constitution and voted for its adoption with the ordinances. He was a member of the franchise committee.

Mr. CRUMPACKER. That may be true; but, sir, the complexion of that convention would indicate that there was very little danger of negro supremacy in Mississippi even before the new constitution.

Over 42 per cent of the male citizens of Mississippi 21 years of age are shown by official reports in the Census Office to be illiterate. They are disfranchised by the direct and necessary operation of election laws, and the basis of representation in that State should be reduced in the same proportion.

I submit at this place in my remarks tables showing the vote by Congressional districts in that State at the general elections in 1898 and 1900.

The vote in 1898 was:

First district.....	2,468
Second district.....	3,175
Third district.....	2,661
Fourth district.....	4,551
Fifth district.....	5,105
Sixth district.....	6,071
Seventh district.....	3,005
Average.....	4,000

The vote in 1900 was:

First district.....	6,778
Second district.....	8,048
Third district.....	3,202
Fourth district.....	9,552
Fifth district.....	9,389
Sixth district.....	8,080
Seventh district.....	6,179
Average.....	7,319

NORTH CAROLINA.

At a general election in August, 1900, the people of the State of North Carolina adopted a constitutional amendment, sections 4 and 5 of which I will read:

SEC. 4. Every person presenting himself for registration shall be able to read and write any section of the constitution in the English language, and before he shall be entitled to vote he shall have paid, on or before the 1st day of March of the year in which he proposes to vote, his poll tax, as prescribed by law, for the previous year. Poll taxes shall be a lien only on assessed property, and no process shall issue to enforce the collection of the same except against assessed property.

SEC. 5. No male person who was on January 1, 1867, or at any time prior thereto, entitled to vote under the laws of any State in the United States wherein he then resided, and no legal descendant of any such person, shall be denied the right to register and vote at any election in this State by reason of his failure to possess the educational qualification prescribed in section 4 of this article: *Provided*, He shall have registered, in accordance with the terms of this section, prior to December 1, 1900. The general assembly shall provide for a permanent record of all persons who register under this section on or before November 1, 1900, and all such persons shall be entitled to register and vote in all elections by the people in this State unless disqualified under section 2 of this article: *Provided*, Such persons shall have paid their poll tax, as required by law.

It is not to be in force until July 1, 1902, but the next general election in that State will occur in August, 1902, so for all practical purposes the amendment is operative now. It requires voters to be able to both read and write any section of the constitution and to have paid a poll tax on or before March 1 of the year in which they intend to vote. This State, like Louisiana, has the grotesque “grandfather” provision. It exempts all who were voters on the 1st day of January, 1867, and their lineal descendants, from the operation of the law. It exempts all the white citizens of the State. Why was that done? There are 50,000 white male citizens in North Carolina 21 years of age who can neither read nor write, and yet every one of them will be voters under the new constitution if the discriminating provision is valid. It is manifest that it is the purpose of the constitution to suppress the negro vote, not on account of its alleged illiteracy, but on account of prejudices against the colored race.

What justification is there for such discrimination in the State of North Carolina? It can not be in danger of negro supremacy, for only about 30 per cent of the population of that State are colored. The boasted superiority of the whites in character and intelligence ought to hold that fragment in control.

But, sir, the discriminating provisions in the constitutions of both Louisiana and North Carolina are such palpable evasions of the Federal Constitution that they will be held invalid by the courts and the standard of qualifications be applied to all alike, without regard to race or color. Talk about protecting the ballot against ignorance and vice! Why did the States attempt to allow the ignorant and vicious whites the privilege of the ballot?

North Carolina has a straight educational and poll-tax standard of suffrage, and 34.03 per cent of the male citizens 21 years of age are unlettered and unable to vote under the new constitution. The basis of representation in that State should be reduced according to that percentage.

Mr. KLUTTZ. Will the gentleman yield a moment?

Mr. CRUMPACKER. Yes.

Mr. KLUTTZ. I will ask the gentleman if those are the statistics of 1890?

Mr. CRUMPACKER. The statistics of 1890; the only available statistics.

Mr. KLUTTZ. You are not going to try us on those statistics now in advance of those of 1900, are you?

Mr. CRUMPACKER. They are current until we get returns under the census of 1900. It is not to be presumed that the percentage of illiteracy has materially decreased in the face of the fact that North Carolina expends only 53 cents per capita a year for public education as against an average of \$2.55 in all the States.

Mr. KLUTTZ. If the gentleman will permit me just a moment—I do not want to inconvenience him—I understand that he proposes to assume in advance that a certain proportion of the population of North Carolina are disfranchised before the constitution goes into effect.

Mr. CRUMPACKER. We know the number of illiterates, and under the constitution we know that illiterates can not vote. So there is no difficulty whatever in arriving at the disfranchisement in the State of North Carolina by the operation of her constitution.

Mr. BREAZEALE. Will the gentleman yield to me for one question?

Mr. CRUMPACKER. I will, with pleasure.

Mr. BREAZEALE. I have a very high opinion of the legal ability of the gentleman, and have discussed this matter with him frequently. I want to know if he makes any distinction in the scope and operation of the fourteenth amendment between an absolute disqualification of the right of suffrage imposed by a State constitution, such as that based upon insanity, and a conditional qualification, such as the prepayment of a moderate poll tax, which is within the power of the would-be voter to comply with? What does the gentleman consider to be the legal aspect of that with reference to the power and scope of the Federal Constitution upon these questions?

Mr. CRUMPACKER. Of course, I make a distinction, Mr. Speaker, because without any constitutional provision no insane person would be entitled to vote. Insanity implies the overthrow of the will. The act of voting involves an exercise of the will, and it is erroneous to suppose that statutes can disqualify the insane. Constitution or no constitution, an insane person would be disqualified by his misfortune. So that it is no disfranchisement to provide in a constitution that no insane person shall vote.

Mr. BREAZEALE. The gentleman did not refer to the second proposition.

Mr. CRUMPACKER. I must insist on going on. I thought I had answered the gentleman fully.

Mr. FINLEY. May I ask the gentleman a question?

Mr. CRUMPACKER. I beg the gentleman's pardon, but my time has been largely taken up in answering questions.

SOUTH CAROLINA.

South Carolina adopted a new constitution in 1895, the principal provisions of which in relation to suffrage are these:

Up to January 1, 1898, all male persons of voting age applying for registration, who can read any section of this constitution submitted to them, or understand and explain it when read to them by the registration officer, shall be entitled to registration and become electors.

Any person who shall apply for registration after January 1, 1898, if otherwise qualified, shall be registered: *Provided*, That he can both read and write any section of the constitution submitted to him by the registration officer, or can show that he owns and has paid taxes collectible during the previous year on property in this State assessed at \$300 or more.

The convention that framed the constitution was created by an act of the legislature. The convention sat with closed doors, its members were not sworn, no stenographic or other report of its proceedings was allowed, and when it concluded its work it declared the constitution in force without submitting it to the people for approval or rejection.

Mr. WM. ALDEN SMITH. In what State was that?

Mr. CRUMPACKER. South Carolina.

Mr. SPIGHT. Will the gentleman allow me to ask him a question?

Mr. CRUMPACKER. I must be excused. My time will not permit.

The SPEAKER pro tempore. The gentleman declines to be interrupted.

Mr. CRUMPACKER. The South Carolina constitution, while it authorizes illiterate citizens to vote who pay taxes upon property valued at \$300 or over, is but an unqualified educational law in its operation. The election laws of that State require eight separate ballot boxes at general elections, and the voter must deposit the ballot in the proper box with his own hands. If a ballot is found in the wrong box it is rejected. Each box is labeled, and the law requires the election officers to announce to electors the character of each box, but it does not require them to instruct the voter what ballot shall be deposited in a particular box. One who can not read can not select the proper ballots for the respective boxes. What the constitution failed to do is accomplished by the election law.

The average vote in Congressional districts in that State at the

general election in 1898 was 4,524. The total vote in the State at the last Presidential election was 50,808, an average of 7,258 to the Congressional district. According to the official reports in the Census Office, 43.71 per cent of the male inhabitants of South Carolina 21 years of age are illiterate and unable to vote, and the membership of the State should be reduced from 7 to 4.

Like the other States to which I have referred, South Carolina adopted the new constitution, not for the purpose of elevating the standard of suffrage, but to disfranchise colored citizens. I will read to the House a few extracts from remarks made by conspicuous members of the constitutional convention which were published by special order, for the purpose of illustrating the spirit of the convention toward the colored race.

Hon. B. R. TILLMAN, now a United States Senator from that State, among other things, said:

It has always been my cardinal doctrine as a public man that all white men, as far as the enjoyment of the privileges of government and the emoluments of office are concerned, should be equal in this State, and that the majority alone should govern.

Hon. J. W. Gray voted against the suffrage provisions, and in explaining his vote said he voted no "because the reform faction which dominates this convention, and of which faction I am a member, is pledged not to disfranchise any white man except for crime."

After the convention had completed its work and just before its final adjournment Hon. G. D. Tillman, an influential member of the body, delivered what might be aptly termed the farewell address. In the course of his remarks he said:

Mr. President, we can all hope a great deal from the constitution we have adopted. It is not such an instrument as we would have made if we had been a free people. We are not a free people. We have not been since the war. I fear it will be some time before we can call ourselves free. I have had that fact very painfully impressed upon me several years. If we were free, instead of having negro suffrage, we would have negro slavery; instead of having the United States Government, we would have the Confederate States Government; instead of paying \$3,000,000 pension tribute, we would be receiving it; instead of having many things that we have, we would have other and better things. But to the extent that we are permitted to govern ourselves and pay pension tribute to our conquerors we have framed as good an organic law, take it as a whole, as the wisdom and patriotism of the State could have desired.

The address was received with "prolonged applause."

These are few of many expressions of similar import from leading men in those States, illustrating the feeling toward the colored race and foreshadowing the policy to be pursued.

THE RECONSTRUCTION AMENDMENTS.

But we are told that the fourteenth and fifteenth amendments to the Constitution were the outgrowth of a period of abnormal conditions, and that time has demonstrated their unwisdom. In what respect are they unwise? They were originally designed for protection of the negro, who had been rescued from slavery at an awful sacrifice of blood and treasure. It was thought at that time to be both unjust and unwise to allow States representation in the House and the electoral college based upon a population that was given no voice in the politics of the country.

I say it was thought unjust and unwise at that time. Does anyone claim that it would be just and wise now? The population basis for apportionment finds its support in considerations of sound public policy, but there are exceptions to all rules. It emphasizes the representative character of the voter and charges him with a sacred trust to be executed in behalf of all the people. The bonds of society firmly knit all interests together, and the welfare of the nonvoter is based upon considerations that appeal with tremendous power to the conscience and affections of all.

But there are exceptions to the general order. If a community is composed of two distinct races, between which the ties of blood and sympathy do not exist, neither race could hope for representation and protection through the other. This is the situation in some of the Southern States to-day. The antagonism between the races is such that the disfranchisement of the negro deprives him of that humane consideration in the policies of the country necessary to his proper development.

The fourteenth amendment supplies an additional bond; it links the interests of the two races together. A full allotment of political power is of the highest importance to every State. If the dominant race in the South understood that by the disfranchisement of the negro its share of national power would be reduced, it would operate as a powerful deterrent. The effect would be to prompt the States to educate the negro and prepare him for the duties of citizenship for the purpose, on the one hand, of protecting their local affairs, and, on the other, of receiving full representation in national politics. Who doubts the soundness of that philosophy? The fourteenth amendment welds the two races together by affecting a common interest, and it is the most powerful agency in the hands of Congress to accomplish the elevation of the colored man.

I know, sir, that the development of a race must come through the slow and tedious processes of natural evolution. It can not be accomplished by an act of Congress or the decree of a court, but

it may be promoted by setting in motion helpful and fostering forces in the place of influences that tend to repress and retard.

I am surprised at the sentiment against the fifteenth amendment. All of the evils involved in the reorganization of the Southern States are unjustly laid at its door. That amendment did not confer the elective franchise upon the negro. That was done by acts of Congress restoring the insurrectionary States to their natural relations with the Federal Government. The negro was no more fitted for the indiscriminate and unqualified exercise of the right of suffrage than children.

But the mistake is not chargeable to the Constitution. It is a mistake, however, to charge all of the vice and corruption of the melancholy days following reconstruction to negro suffrage. The Southern States had been dismantled and devastated by civil war. Their reconstruction involved the entire reorganization of political and social forces upon a new basis, and following the wake of war with its demoralizing effects there would have been mistakes and corruption under the best regulated suffrage. It was a period when corruption was epidemic, and the demoralization was aggravated by the irresponsible suffrage in the South.

What is the import of the fifteenth amendment that it invites so much criticism? It simply declares that no State shall disfranchise citizens on account of race, color, or previous condition of servitude. Every safeguard for the elevation of the standard of suffrage may be established, but no citizen shall be discriminated against merely on account of race or color. Who dare advocate to the intelligence and conscience of the country that which that amendment forbids? Merit must be made the standard, virtue the measure of excellence, instead of the accidents of race or color.

Just educational and property qualifications may be enacted, laws that erect barriers against ignorance and vice, and though they operate to disfranchise a larger percentage of one race than the other, they are unobjectionable. Laws that are blind to race and color, but which strike at evil wherever it may be found and encourage virtue wherever it may exist are not only constitutional, but commendable from every standpoint. My suspicions are always aroused against a State that opposes that policy. Gentlemen protest that the Southern States are the friend of the negro, and yet they insist on the right of discriminating against him without regard to merit.

It is the wise policy of the Federal Constitution to encourage universal manhood suffrage in all the States. The strengthening and uplifting influence of the ballot are beyond calculation. Those who bear the burdens of Government and fight its battles ought to have a voice in shaping its laws and policies.

MOB LAW.

It is no secret that the negro has been denied the right of suffrage in most of the Southern States by force and fraud for the last twenty-five years. The old methods of violence have been largely superseded by election systems so craftily contrived that they accomplish the same result with a smaller expenditure of energy.

This policy has the approval of the leaders of political thought and action in that section, and, as is always the case where law is not respected, it has resulted in a sad condition of political demoralization. If the negro is not entitled to protection in the exercise of his political privileges, is he entitled to protection in the enjoyment of any other rights? If he can be handled as a political quantity without regard to the law, why may he not be treated as a social factor in the same manner? The violation of his constitutional rights in one particular suggests it in others, and it has come to be the fashion to burn, shoot, or hang him without the sanction of the law for offenses of all kinds. When respect for law shall have been destroyed, anarchy must reign. It is but one step from the oppression of the negro to the oppression of the white man.

I charge it as a sociological truth that the outrageous execution of colored men by lawless mobs is the direct result, in a large degree, of the systematic and persistent evasion of the election laws.

But, sir, I am reminded that lynchings occur in other States, and particularly in the great State which I have, in part, the distinction to represent. I am reminded that not more than four weeks ago two colored men were forcibly taken from the custody of the law by a frenzied mob in Indiana and hanged to a tree. It is with a deep sense of humiliation that I am compelled to confess the truth of that assertion. I have less respect for the perpetrators of such outrages against civilization in Indiana than I have in South Carolina, because the occasion is less. But they can not be justified in any State.

Judging from current literature, including messages of the governors of the several States, the inference would be justified that the American people are still far from a perfect civilization. But all this does not affect the truth of the assertion I made in respect to the cause of lynchings. They spread like contagion. When a shocking crime is committed by a negro, the still small voice of

suggestion prompts the outraged community in which it occurs to administer summary punishment. That has come to be the fashion, and Indiana, even, can not afford to be old-fashioned.

When a mob gets possession of a trembling miscreant, the first question is, What shall be done with him? How are such creatures disposed of in other localities? They are shot, hanged, or burned according to the state of frenzy of the crowd. A suggestion is all that is needed and the work is done. Sir, you might as well undertake to pollute one-half of Lake Michigan with the expectation that the other half would remain pure amidst all its agitations and lashings as to demoralize one-half of this country in the belief that the other half would be unaffected.

THE NEGRO AND EDUCATION.

I have no objection to literary restrictions upon the elective franchise, provided they are reasonable, honestly administered, and applied to all races and colors alike. I have already said enough to show that the educational laws in some of the Southern States are but a pretext, a makeshift, to disfranchise the colored race. Those in Louisiana and North Carolina carry indubitable proof of that assertion on their face. And what will be the next step? The best thought in the South is persuaded that the negro is not capable of elevation. His equality politically, socially, or industrially will not be tolerated. The tendency of existing conditions is to reduce him to a position of absolute subservience in all the relations of life.

It is claimed, sir, that the educated negro becomes discontented with his lot and is inspired with ambitions to advance politically and industrially. Traditional proscription will not tolerate that, and he fails in his aims and resorts to crime. They tell us that education demoralizes him, it makes him refractory, and lessens his value as a laborer, therefore he must not be educated. If the signs of the times point to any destiny for the negro, they point unerringly to his complete political subjugation and his intellectual bondage. This is no false alarm; forces are at work that can have no other result unless they are checked.

It must not be expected that the colored man will achieve the American standard of civil life without patient sacrifice and embarrassment. A virtue that comes without a struggle is of no value. Let the negro learn by experience what it costs to be a man, an American citizen in the real sense, but give him at least an opportunity to have the experience.

Only a few weeks ago Senator Bell, of Georgia, introduced a resolution in the State legislature directing the committee on education to inquire into the propriety of limiting the education of negroes to manual training only, and in a speech in the State senate in support of the resolution he said his purpose was to elevate the negro; that thirty years' experience had convinced the people of Georgia that the negro was unfitted for intellectual training; that it demoralized him. The resolution was defeated by 6 or 8 majority, but its introduction and discussion furnishes food for reflecting minds. This is a novel way of elevating a race. First political subjection, then mental darkness. It has the merit of cheapness, at least.

At a conference held at Montgomery, Ala., in May last, to discuss the race question the Hon. Hilary A. Herbert, in the course of an able speech, used this language:

The result of the expenditure of millions on negro education has been so unsatisfactory that some good people are advocating the abandonment of the system.

At that same conference Hon. A. M. Waddell, a distinguished citizen of North Carolina, spoke upon the same phase of the question with greater elaboration. I will read an extract from his address that I regard as highly significant:

The Southern people, amidst all the calamities that have befallen them, have expended about \$100,000,000 for the education of the negroes since the year 1870, and yet, with every succeeding year, they have become, as a race, less fitted for the duties of citizenship and more and more a menace to civilization and good government. These are not wild and exaggerated statements, but facts capable of proof.

The true remedy for it is to be found in the repeal or modification of the fifteenth amendment. I know that this suggestion will be regarded by most persons as one the realization of which is beyond reasonable hope, but there can be little doubt that the mind of the country, North and South, especially since the acquisition of Hawaii, Porto Rico, and the Philippines, is in a more favorable condition to consider such a proposition than ever before. The repeal of the amendment would not necessarily mean the total disfranchisement of the negro.

It is stupid and criminal to force both races to live together with equal rights and privileges to each, because such a condition means, first, strife and disorder, and eventually the expulsion or annihilation of the weaker race. What does humanity, what does statesmanship—which is common sense applied to public affairs—dictate as the best and wisest course to be pursued under such conditions? Why can not the American people display the courage of their convictions on this subject? Do you tell me that education will be the cure-all for this state of things?

I yield to no man in my estimate of the supreme importance of popular education, although I know that in the country where it was developed first, even by a compulsory process, there has been and is despotism and military aristocracy; but the experience of nearly forty years in the Southern States has demonstrated that any other than industrial education for the negro simply means, in the homely phrase of Uncle Remus, "the spilling of a field hand," if not the creation of a social misfit or something worse. I do not hesitate to express the opinion that (while I would not apply the test to white

men), if it can be done by any constitutional method, it would be much wiser to require a property qualification than an educational one for the negro voter.

That statement, Mr. Speaker, expresses the philosophy of the whole situation. Southern sentiment will not tolerate the equality of the negro in any of the relations of life. If the races dwell together, the weaker one must occupy a position of complete subservience. If it grows in knowledge and character, it will assert itself and claim rights in virtue of its manhood. It must be kept in ignorance, ambition must be stifled, hope suppressed, or there will be conflict and struggle for supremacy.

The whole current of Southern thought runs in the same channel. I received through the mails yesterday a booklet written by Mr. A. F. Thomas, of Lynchburg, Va., containing a discussion of questions that will come before the Virginia constitutional convention, which will soon assemble. It contains a thoughtful discussion of the suffrage question.

The author displays exceptional ability in the treatment of the subject and a thorough familiarity with all of its aspects. But through it all, and overshadowing every idea, is the hereditary conviction that insuperable barriers preclude the possibility of the colored man occupying any other position in our civilization than that of complete subordination—a "mild form of slavery," as he expresses it. He doubtless reflects the prevailing views of thinking men who share his traditional prejudices in most parts of the South. I quote somewhat at length from his work:

Race prejudice or antagonism is a natural law, as unchangeable as the law of gravitation. Its purpose was to preserve the integrity of the species by placing in the breasts of every distinct creation antipathy to all the rest. Without this safeguard we believe the human races would long since have degenerated into a conglomerate mass of mongrels, which would have deteriorated until extinction would likely have purged the earth of such monstrosities.

Whatever the final outcome may be, it is against all analogy to suppose that amalgamation will eventuate. Both races remaining free, the tendency will be toward preservation of their parity of blood. Will education soften the rigors of this law? No; it intensifies them. The negro has progressed wonderfully—his relative position is much nearer the white man's standard of civilization now than thirty years ago, yet the fact is apparent that the races are farther apart than they were the day the negro was emancipated. The nearer the negro approaches to the white man's standard of civilization, the less love there is between them. Looking backward to the time when our black mammys were, in our esteem, second only to our mothers, and when we played in perfect harmony with the negro children, and contrasting it with the clearly defined relations that exist between the races to day, we readily see the difference.

A black man who has never committed a crime, who has always lived up to his highest ideals, who has cultivated his mind, whose moral character is roundly developed, who has been frugal and industrious, and has accumulated wealth, goes to a soda fountain to slake his thirst; he offers in exchange his money, but is refused for no other reason than that he is black and belongs to a different race. A man, in the land of his nativity, with the money to pay for the goods, can not, on account of race, buy the articles that are publicly offered for sale. This condition exists to-day, thirty years after the United States Constitution had proclaimed the civil and political equality of all of its citizens.

If we take the view that the negro will remain here indefinitely, then the only solution consistent with existence is entire subordination. If this be true, it is the greatest folly to educate him further than education may make him more efficient in the sphere which he must occupy. Viewed from this standpoint, he should be educated not with a purpose of lifting him to a higher plane, but to increase his power to do those things which would make him most useful to his masters. It should be an education of the hand rather than the head. This condition, however much freedom the race might nominally have, would be practically a mild form of slavery.

It may be true that there is an absence of that affiliation between the races that is necessary to political and industrial fusion, but it does not follow that the negro must be returned to slavery as the only solution of the question. If the races can not cooperate in promoting the ends of civilized life, they may be able, each acting independently in a measure, to direct their respective energies to a common purpose. I have no doubt, sir, that the negro is capable of improvement; that if given an opportunity he will ultimately become a helpful factor in society, capable of appropriating the benefits of free institutions and participating in their maintenance.

The race is yet only in the childhood of civilization. The prejudice against it now is largely due to its want of manly virtues. With time, education, and experience will come the rugged qualities of honesty, industry, frugality, which form the basis of true manhood, and these will appeal with irresistible force to the conscience and esteem of the whites. The development of those qualities will require time and patience, and it will be attended with sacrifices and embarrassments on the part of both races; but the dangers and embarrassments attending the policy of subjection will be infinitely greater.

I quote from a special dispatch from Raleigh, N. C., to the Washington Post, published recently, in relation to the introduction of bills in the pending legislature in that State upon the subject of negro education:

Three bills were introduced to amend the constitution so that school taxes paid by whites shall go entirely to white schools, those by negroes to negro schools. A law was once enacted of the same tenor, but the supreme court declared it unconstitutional.

Representative Thompson, when asked whether this bill had any backing,

replied: "There is in the rural districts, among white taxpayers, a great clamor against further education of negroes by whites. The people claim they have done enough for the negroes, and want to cut loose from them. They do not want negroes educated, as an educational qualification has been made, and if the negroes are educated this will amount to nothing."

Some leaders in the house declare the bill will never become a law.

The policy behind Mr. Thompson seems to be to keep the colored citizen in ignorance, so he will not be able to vote. He says, in effect, "What is the good in adopting an educational standard against the negro so he can not vote, and then educating him so he can comply with the law?" His education will destroy the purpose of the constitution.

I have said enough, Mr. Speaker, to warn the House and the country that the situation is rapidly crystallizing into a policy of complete subjugation of the colored race in all the fields of activity. Ignorance and illiteracy are necessary to the consummation of that policy, and slavery is its inevitable result. If that policy is to be acquiesced in, it is a confession that the civil war was a crime and emancipation a blunder.

POLITICS IN THE SOUTH.

I have been admonished that if the race question were let alone and the Constitution were ignored the "solid South" would go to pieces politically and a white Republican party would be built upon the ruins. A white Republican party in the South is only possible by universal assent to the practical enslavement of the negro. If that imaginary party should at any time show any friendship for the colored man or any sympathy with his struggles to better his condition, it would at once fall under the ban of the hereditary prejudices, and social and business proscription would be its fate.

If the country will consent that the 8,000,000 colored citizens shall be deprived of their rights, that lynchings may go on without let or hindrance as a necessary part of the process of subjugation, there may be a white Republican party in the South, but not otherwise.

But can we afford the price? A white Republican party! Shades of Lincoln and Seward, of Sumner and Chase! A white Republican party only a little over a generation after the death of the great emancipator! It is an impossibility. The Republican party is the party of human liberty and equal rights. It is based upon manhood and not upon race or color. The old Whig party forfeited its conscience and lost its character temporizing with wrong, injustice, and human oppression over half a century ago. The Republican party will never make that mistake. Let the South continue to be "solid" if it will, let the Republican party go down in defeat if it must, but it will never surrender the great principles of human liberty of which it was the born champion.

SECTIONALISM.

Whenever an attempt is made to consider any measure that affects the race question in the South, the unworthy cry of "sectionalism" is raised. I am only insisting upon the enforcement of the plain mandate of the Constitution, and for that I make no apology to any person or State. Is the Constitution sectional? Are human rights local? If they are, I am justly subject to the reproach of "sectionalism." Gentlemen who recently talked themselves into a frenzy of passion over fancied transgressions of the charter of government, ought to willingly assent to the enforcement of its plain provisions in their own States. Gentlemen who hysterically urged the intervention of the Government to protect an inferior race against tyranny and oppression in the distant islands of the sea, should not protest so vehemently upon the suggestion that an inferior race be accorded its plain constitutional rights at home.

But the question is not sectional. Every State in the Union is vitally interested in it. Inequality is injustice; therefore, it is unjust that one voter in Mississippi should exercise as much power in national affairs as four voters in New York; it is unjust that one vote in South Carolina should count for as much as ten votes in Indiana.

Besides this, each State is powerfully affected by the customs and institutions in every other State. Interference between the States must be free and unrestricted. Take the industrial situation, for instance. Under existing conditions the standard of living among the colored people of the South is low, and the rate of wages on the same basis. The colored laborer is completely at the mercy of the employer. He is unable to initiate and maintain labor organizations for the protection of his own interests.

In the State of South Carolina to-day there is a qualified condition of industrial serfdom. Farm laborers are compelled by the penal laws of the State to carry out their contracts of employment, however unjust and unfair they may be. They must perform all "the labor reasonably required" of them by the contract or go to jail. If anyone shall knowingly employ a laborer in any kind of service who is under contract of labor with another, he, too, is liable to fine and imprisonment, though the workman or his family may be on the verge of starvation. Can labor be independent and progressive where such laws exist? Could such laws exist in any State where labor has the freedom of the ballot?

In recent years a new impulse has been given to manufacturing industries in States where colored labor is abundant. With the natural resources and cheap tractable labor, the field is peculiarly inviting to capital. The employer is free from the annoyances that labor organizations sometimes give in other sections, and with simplified machinery and the coercive force of penal laws, the negro becomes as efficient a factory hand in many lines as the white man. Capital will continue to be attracted by such favorable conditions, and the products of cheap, servile toil will continue to be sold in competition with the products of intelligent, independent labor in other sections of the country. The strength and glory of our civilization abide in the comfortable but unpretentious homes of the independent wage-earners. Shall those homes be invaded by the blighting hand of servility? Shall intelligent labor be debased by such unjust and unholy competition?

Already cotton mills in New England have been compelled to reduce wages in order to compete with the cheap labor of Alabama and Georgia. Tariffs can not be imposed for protection, but colored labor must be educated and elevated. The negro must be given political power as fast as he can safely use it if his industrial independence is to be achieved. This is the only remedy. Have other States no interest in this question? Has organized labor no concern about it?

If the right of suffrage was taken from the white laborer, his independence would soon be lost and the legal safeguards for his protection would disappear from the statute books. Citizenship is an empty husk without the power to protect and enforce it, and that power is the ballot. The late Mr. Blaine truthfully said, respecting the negro:

Without the right of citizenship his freedom could be maintained only in name, and without the elective franchise his citizenship would have no legitimate and no authoritative protection.

No one questions the superiority of the white race, but that superiority is grounded in the rugged virtues of justice and humanity. It is surely no credit to American manhood to bind and shackle a helpless race to avoid the temporary embarrassments that would attend its proper development. Equal rights for all is the strongest sentiment in the American heart.

I rejoice at the evidences of a stronger bond of unity between all sections of the country; but the ties, if they are to be permanent, must be based upon everlasting principles of right. The Constitution is the measure of the rights and responsibilities of the States in their mutual relations, and all its essential provisions must be observed.

Let justice be supreme; give virtue the palm, whether it be in the white man or the black man. Pass suffrage laws as you will, but make them apply to all alike. Give the ebony-hued citizen the same opportunity in the struggles of life as the Anglo-Saxon and you will have appeased justice and satisfied the conscience of the American people. [Prolonged applause.]

Reapportionment Bill.

SPEECH

OF

HON. ANDREW F. FOX,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 5, 1901.

The House having under consideration the bill (H. R. 12740) making an apportionment of Representatives in Congress among the several States under the Twelfth Census—

Mr. FOX said:

Mr. SPEAKER: The bill the gentleman from Indiana [Mr. CRUMPACKER] has presented proposes to reduce the representation in Congress of the States of Louisiana, Mississippi, North Carolina, and South Carolina three each on account of the disfranchisement of citizens by constitutions recently adopted, but does not reduce the representation in any other of the several States which, by their constitutions, impose similar restriction on the elective franchise.

The Washington Post in its issue of December 29, commenting on an editorial of the Indianapolis Sentinel in reference to the Crumpacker bill, said:

From all of which it appears that there will be both justice and common sense in voting down Representative CRUMPACKER'S bill; and that is just what is going to happen. As the Post has stated in previous discussions of this question, this nation is not going into the new century with a revival of sectional animosity; the second McKinley Administration is not going to be a new era of ill feeling between the North and the South. The South will not be further punished for the fateful mistake of the fifteenth amendment.

Mr. Speaker, I congratulate the country on this assurance from so distinguished a journal, representing, as I know it does, the best

thought and opinion of our people of all parties. With this assurance I congratulate the country that the bitterness which characterizes the report of the gentleman from Indiana, and which has led him, perhaps unwittingly, to misrepresent the people of my own and other States is not shared or approved by the great political party of which he is a member. We of the South will be especially glad to realize the fulfillment of the Post's prophecies and to know that the time is coming when the two great political parties of the country will no longer be divided by sectional animosity, but only by honest differences as to governmental policies and a generous rivalry in developing our common country. I want to say in all sincerity that I am glad that I have at last lived to see a Republican Administration which is willing to let us alone and to trust our patriotism and our statesmanship to solve our own problems, which we are trying to do in good faith to both races and to the whole country.

The preservation of our civilization is to us paramount, and the South has remained solid for Democracy largely because Democracy in the South means opposition to the overthrow of that civilization.

Remove from us this nightmare, take away Federal interference in local affairs which constantly threatens us with a reign of ignorance and vice, and we will turn our backs upon the bitterness and mistakes of the past and devote ourselves to the consideration of great economic questions, the expansion of our commerce, the manufacture of all our raw materials, and the utilization of the great riches with which nature has blessed us more bounteously than any other quarter of the globe.

Mr. Speaker, the measure reported by the gentleman from Indiana is purely sectional and framed to secure political advantage, because, as I have said, it proposes to reduce the number of Representatives on account of the denial or abridgment of the right of suffrage only in four Southern States, when, as has just been shown by the gentleman from Ohio [Mr. SHATTUCK], the same conditions apply to many other of the States of the Union. The gentleman from Indiana in his report says:

Other States than those noted have restrictive qualifications upon manhood suffrage; but they are all of such a character and apply such conditions that it can not be said that in any particular State they directly and necessarily disfranchise a sufficient number of citizens to materially affect the basis of representation.

I hold in my hand a copy of the January number of the Forum, in which there is an able article contributed by Henry Gannett, chief geographer of the United States Geological Survey, on the new Congressional apportionment, in which he shows clearly that under the fourteenth and fifteenth amendments the representation from Massachusetts should be reduced from 16 to 14 on account of the denial to certain classes of the right of suffrage. The franchise clause of the constitution of Massachusetts limits the right of suffrage to "every male citizen 21 years of age and upward, excepting paupers and persons under guardianship, who shall have resided within the county one year and within the town or district six months, and who shall have paid taxes assessed against him within two years next preceding an election."

By a subsequent amendment, adopted in 1857, the right of suffrage is further restricted by the following provision:

No person shall have the right to vote nor be eligible for office under the constitution of this Commonwealth who shall not be able to read the constitution in the English language and write his name.

It is well known that the Mississippi constitution is copied from the Massachusetts constitution so far as the electoral franchise is concerned, with the only difference that the Massachusetts constitution is more restrictive than the Mississippi constitution, because it denies the right of suffrage to paupers and other classes who can vote under the Mississippi constitution.

I want to show, Mr. Speaker, that there is almost as great a proportion of the number of male inhabitants over 21 years of age denied the right of suffrage in the State of Massachusetts as in the State of Mississippi. According to a State census of 1895, taken under the laws of Massachusetts, there were in that State 766,233 persons over 21 years of age liable to a poll tax, and who, under a rule of unrestricted manhood suffrage, would have been entitled to vote. Yet the total number of those who could qualify themselves to vote in Massachusetts in 1895 was only 560,892. Much has been said in the report of the gentleman from Indiana, and by other gentlemen on this floor, as to the small number who actually vote at elections in the State of Mississippi.

I have taken the trouble to ascertain the number of votes cast in each Congressional district of Massachusetts in the election of 1900, and I have found that in the 13 Congressional districts of that State there were only 284,783 votes cast; but little over one-half of those who could qualify themselves to vote. By the same argument that is used by the gentleman from Indiana, that everybody who does not vote is disfranchised and not allowed to vote, there are proportionally more voters in the State of Massachusetts who are disfranchised than in the State of Mississippi; that is, about two-thirds of the number who pay poll tax.

In this connection I want to call attention of the House to the

fact that while it is true that there is a small number of votes cast in a general election in Mississippi, it is because there is no division along party lines in that State and nominations are generally settled by primary election; so that the way to ascertain the number of legal voters in Mississippi is not to take the number of votes cast in a general election, but to take the number registered and those who vote at primary elections. In my own Congressional district there were 24,935 registered voters in 1899; in the entire State of Mississippi, 140,984 registered voters. These figures are taken from the report of the secretary of state.

Mr. SIMS. May I ask the gentleman from Mississippi a question?

Mr. FOX. Certainly.

Mr. SIMS. Is there any attempt of any kind in Mississippi to prevent those who are qualified to vote under the laws of Mississippi from voting?

Mr. FOX. I am very glad the gentleman has asked that question, because the gentleman from Indiana charges in his report that there is a general denial of the right to vote to qualified colored voters in the Southern States. I challenge the statement. He should not make so grave a charge without proof of the fact. I challenge him to show to this House that since the adoption of the constitution of Mississippi, in 1890, there has ever been a single registered qualified voter denied the right to cast his vote freely and as he wished. Such a thing has never occurred. There is no State in this Union in which the right of suffrage is exercised more freely, so far as registered voters are concerned, than in the State of Mississippi.

Mr. GAINES. By all who have the legal right to vote?

Mr. FOX. Yes, sir.

But, Mr. Speaker, the gentleman from Indiana, in speaking of lynchings and other crimes in the State of Mississippi and other States, says that—

These atrocities bespeak a deplorable condition of political morals; that their frequent occurrence is the legitimate result of a generation of disregard of election laws.

Sir, we have lawlessness in the State of Mississippi, I am sorry to say, as they have in the State of Indiana; but I challenge the gentleman to the proof that any lawlessness in Mississippi is the result of the condition of political morals, or that it is a legitimate result of the disregard of election laws. Allow me to read what the Washington Post says in reference to this charge of the gentleman from Indiana:

We regret Mr. CRUMPACKER's action in the matter of reducing representation in the Southern States, especially his plea that the reduction will be warranted on the score of lynchings. Surely this is an issue that Indiana can not afford to broach. There have been more lynchings in Indiana within the past few years than in any Southern State, and as for the outrages committed by the "White Caps"—the whippings, the burnings, etc.—surely Mr. CRUMPACKER's State occupies an easy prominence.

Only a few days ago a mob in Indiana battered down the wall of a jail, took from their cells three negro prisoners charged with murder, hung them in the jail yard, and riddled their bodies with bullets. Mr. Speaker, I am not here to make charges against the State of Indiana. I dislike to admit the fact—I am sorry to say it is a fact—that there is lawlessness anywhere in the United States, but it is true and always will be true. I wish to ask the gentleman, if it is true that whatever lawlessness there is in Mississippi is due to a low state of political morals and a disregard of election laws, is it not equally true in the State of Indiana that the lawlessness, which is greater there than in any Southern State, according to the Post, is due to the low state of political morals and disregard of election laws?

The fact is, Mr. Speaker, so far as lynchings for rape are concerned, they are not due to a disregard of law, but to the resentment that manhood will always feel toward crimes against womanhood. Lynching is much to be deplored, but the only way to stop it is to stop the crime of criminal assault upon woman. As long as that continues, whether the guilty man is white or black, he will be lynched. Lynching for these crimes is not caused by any race prejudice, but is a result of the deep resentment against the offense, and our people are as quick to resent it against a white man as against a negro. There is no section of the United States where there exists manhood and respect for womanhood where these crimes will not be resented.

As was stated on one occasion by the distinguished gentleman from Missouri [Mr. CLARK], under the very same condition that a lynching would occur in Mississippi it would be pulled off on Boston Commons. If the Southern people are quicker and more violent in their summary punishment of such outlaws, it is because in no quarter of the globe is there greater reverence for pure womanhood. They idealize and idolize women. When a girl baby is born she is the queen of the household, before whom every knee bends. Father, mother, and brother are her willing subjects. Every sacrifice is made for her comfort, her education, and her refinement, and when she buds into womanhood it is not only the courtier, cultivated in all the graces of gallantry, who shows her honor, but every son of toil doffs his hat to her, if

not with the grace of a plumed knight, certainly with a loyal heart and ready hand that she can always command, whether it be to hold the plow or pull the trigger.

The truth should be known. Apologists sometimes make the statement that lynching is caused by the law's delay and the uncertainty of punishment by the courts. In my judgment, for the crime of rape, anyone, white or black, of high or low station, would be lynched in the South if there were absolute certainty that the criminal would be tried, convicted, and executed the next day. In my judgment, the main reason for this, which, strange to say, so far as I know, has never been mentioned in the public prints, is the fact that everyone revolts at the idea of placing on the witness stand a refined woman and compelling her to go through the harrowing and disgusting details of so horrible a crime. Such a punishment to a good woman would be more cruel and inhuman than lynching one who has placed himself beyond the pale of law and forfeited his right to protection under any law, human or Divine. Another thing should be well understood, that our people will never be influenced by those who are continually howling against the crime of the lyncher and have no abhorrence for the hellish crime of the lynched and no sympathy for his victim.

Mr. Speaker, in 1899 the New York Herald sent to the State of Georgia one of its most distinguished representatives, the senior member of its staff, Dr. George H. Hepworth, as a special commissioner to investigate the crime of lynching in the South. He made a report to his journal of his observations and the conclusions to which he arrived after making a thorough investigation with reference to these crimes in the South. I commend to the gentleman from Indiana [Mr. CRUMPACKER] what Dr. Hepworth says:

We shall be greatly puzzled unless we can fully grasp the situation, which is very different from anything to be found in the North. And we shall not only misunderstand the Georgians, but give them discredit for motives which they do not entertain. I am not at all sure, however, that we should ourselves pursue any other course under the same circumstances. The cry which made the welkin ring was, "We must protect our wives and our daughters," and that is the key to the problem. If my wife, or mother, or sister, had been outraged by a doubled-dyed villain I could not tell you what I would or would not do. When the matter is brought home to yourself you recognize its horror. There are no lengths to which you would not go in the way of punishment. It is easy to condemn a thousand miles away, but hard to condemn when on the spot with a like fate staring you in the face. I neither plead nor excuse; I simply say that I also am human.

Ninety-five per cent of the negroes have the entire confidence of their employers. They are respected because they are law-abiding citizens. They have property interests of their own to guard, and a man who has a few hundred dollars at stake is a conservative. But the 5 per cent of fellows, who are not only ignorant, but vicious, who know no restraint and will commit any crime without compunction, have ample opportunity to perpetrate deeds of daring devilry, and, as at present constituted, the people of the region are powerless to protect themselves and live in the continual consciousness of insecurity. They are nervous, irritable, and timid. A woman dares not trust herself at any distance from her home after dark. With nine men out of ten whom she may meet she will be as safe as at her own fireside. It is the unknown tenth whom she evades. We can hardly conceive of this state of affairs, but it is the actual condition in many counties in this State and in other States of the South.

It would be an impertinence for me to name a remedy. The country has the most perfect confidence in the South. We neither impeach your motives nor charge you with unwisdom. You are to the manner born, and quite able to handle all public questions; better able to do so than we of the North are to make suggestions. To merely find fault with existing conditions is the task of self-conceit or fanaticism, and I don't think I have more than the average amount of either quality.

Mr. Speaker, I want especially to emphasize what Dr. Hepworth says, that 95 per cent of the negroes have the entire confidence of their employers.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. FOX. Mr. Speaker, I want very much to make a full statement as to the political and social conditions in Mississippi, and I ask—

Mr. OLMSTED. Mr. Speaker, I ask unanimous consent that the gentleman have permission to conclude his remarks.

The SPEAKER pro tempore. Unanimous consent is asked that the gentleman have leave to conclude his remarks. Is there objection?

There was no objection.

Mr. FOX. I thank the House. I did not intend to trespass further upon the time of the House and was only going to ask leave to extend my remarks in the RECORD, but I will continue for a few minutes.

I say I want especially to emphasize the fact that 95 per cent of the negroes have the entire confidence of their employers. This is true in every section of the South. In Mississippi especially the relations between the two races could not be more friendly or more satisfactory to both. The truth is that since the adoption of the constitution of 1890 in the State of Mississippi there has been no race question in the State; it has been solved. There was a race question before that time. There was, rather, a question as to which should rule—the intelligence and virtue of the State, or the ignorance and vice of the State. It is a fact that from 1865 to 1875 the State was dominated and plundered, not by the negroes, but by their vicious leaders, who pandered

to their prejudices and controlled their votes. The condition of things is correctly described by the gentleman from Indiana [Mr. CRUMPACKER] in his report, in which he says:

The insurrectionary States were restored to their constitutional relations with the National Government upon the adoption of constitutions that granted suffrage to all citizens. Legislation was enacted by Congress providing that the qualifications of voters contained in the constitutions of those States should never be changed. By these provisions about a million men, largely unfitted for the responsibilities of suffrage, were given the ballot, and it is no reflection upon them to say that in a large degree they became the helpless tools of demagogues and political intriguers, and in most of the Southern States was inaugurated a reign of political corruption and misgovernment that constitutes one of the most shameful pages in the history of the States.

Men of the South, men of intelligence and character who had at heart the welfare of their States, looked with dismay upon the wreck and ruin to their institutions that was being perpetrated by this irresponsible flood of ignorance and illiteracy. As might have been expected, there was reaction, and intelligent citizens set about to devise some method of checking this saturation of political corruption and mismanagement. They felt justified in adopting methods for the protection of their affairs that were condemned by the people of other sections of the country.

It was in order to avoid these conditions and save ourselves from their degrading and demoralizing influences that the constitution of 1890 was adopted, disfranchising illiterates, those who fail to pay their taxes, and criminals, just as has been done in the State of Massachusetts. The framing of that constitution, solving as it did the great race problem in a manner satisfactory to both races, was the greatest achievement of modern statesmanship; and for its adoption Mississippi should have the approbation and not the condemnation of every patriotic American citizen. Since the adoption of that constitution no State in this Union has been characterized by a better observance of law and order than the State of Mississippi.

Mr. Speaker, I live in a small town of something like 4,000 inhabitants. One-half the population of that town are negroes. In the county in which I reside there are three times as many negroes as whites, and the proportion is about the same in many other counties of my Congressional district. During the seventeen years that I have resided in the town of Westpoint, Miss., there has never been a negro killed or, so far as I know, even assaulted by a white man in that town. Three negroes have been killed there by negroes, one white man by a negro, and one white man by a white man. These are the only homicides that have occurred in that town in seventeen years. Since 1890 there has not, to my knowledge, been any crime or violence caused by race antagonism or race prejudice in my Congressional district. No kinder relations could possibly exist anywhere between employer and employee than exists in the State of Mississippi between the white man and negro laborer.

Much has been said here by the gentleman from Indiana as to the educational conditions in the State of Mississippi. He says:

It is claimed that as long as the negro has political rights he will have ambitions for political preferment and thus become a disturbing factor in society, and the right of suffrage should be withheld for the purpose of extinguishing hope of advancement. But the social and industrial proscription is as unrelenting and implacable as the political. With his advancement in intelligence the negro will have aspirations to advance socially and industrially, and still he will be a "thorn in the flesh" to his supersensitive white brother. In order to make the dominion of the white man complete all opportunity for education must be taken from the negro. This is the inevitable tendency of the present régime and the necessary result of the logic of absolute disfranchisement.

I am sorry that the gentleman from Indiana did not inform himself more correctly as to the state of affairs in Mississippi. In the public schools of Mississippi there are more colored children enrolled than white. They have exactly the same facilities, both in the common schools and in the colleges, as the whites. They attend for the same length of time and have the same privileges.

Mr. GAINES. Will the gentleman allow a question?

Mr. FOX. Yes.

Mr. GAINES. How much taxes do they pay?

Mr. FOX. I am very glad you asked that question. The whites, of course, pay almost all the taxes. A large majority of negroes are liable for nothing but poll tax, and the payment of that is not compulsory. The statement is made in the report of the gentleman from Indiana of the amount expended in Mississippi, which he says is 81 cents per capita. He has been misled. I have a recent report of the superintendent of education for the State of Mississippi giving the data, which I will insert in the RECORD. Instead of 81 cents per capita, it is over \$2. Over 25 per cent of the population of Mississippi is enrolled in the public schools, while only 16 per cent of the population of Massachusetts is so enrolled. While they pay a much larger tax per capita for public schools in Massachusetts than in Mississippi, we pay a greater ad valorem tax—that is, we pay more in proportion to the assessed valuation of our taxable property than they do in Massachusetts.

Mr. MANN. May I ask the gentleman a question?

Mr. FOX. Certainly.

Mr. MANN. You say you have a report of the commissioner of education of Mississippi, giving the school tax per capita at over \$2?

Mr. FOX. Yes, sir. I will insert the data in my remarks.

Mr. MANN. Does that apply to the public-school system?

Mr. FOX. I will explain how it does apply. One million dollars are levied for common schools by the State. My colleague [Mr. WILLIAMS of Mississippi] will correct me if I make a mistake. In addition to that, each county levies a tax, where it is necessary, to carry on the schools for the required term.

Mr. HENRY of Mississippi. And I will also state that there is also \$272,534 for the colleges, white and colored.

Mr. FOX. And the colored have the same collegiate advantages as the white children, as well as the same common-school advantages. Then there is the Chickasaw school fund, amounting to \$52,733.47. In addition, we have in the cities and towns—and I hope I have the attention of the gentleman from Illinois—

Mr. MANN. You have.

Mr. FOX. We have in all the cities and towns of the State what we call separate school districts, in which there is a sum levied by the municipality, in addition to the sums levied by the State and by the county, for the purpose of maintaining the schools ten months instead of five months in the year. This levy and also the cost of school buildings in the separate districts are not embraced in the report of the commissioner of education.

There is no State in the Union in which the cities and towns have better public schoolhouses. In every instance they are built, not by public taxation levied by the State or by the counties, but by the municipalities, and are never reported. In the State of Massachusetts and other States the reports include not only the salaries of teachers and every current expense, but also the cost of school buildings. They were not included, so far as the separate school districts are concerned, in the report of the superintendent of education for Mississippi. Most schoolhouses used for public-school purposes, even in the country, are built by private subscription and never reported.

Mr. MANN. If the gentleman will permit me—and this is a very important subject—I do not know how far the report of the Commissioner of Education is correct, and for that reason I call the gentleman's attention to the fact that the report of the Commissioner of Education for 1896 and 1897—the last report of the Commissioner of Education of the United States—gives 15 cents for each pupil for building purposes in Mississippi; so that it does purport to give the amount spent in the State for building purposes. The total expenditures for school purposes, for salaries, and for all other purposes in the State of Mississippi is given for 1896-97 at \$1,165,845. Now I shall be very glad indeed if the gentleman from Mississippi will show to us that this report is entirely inaccurate, and that the State of Mississippi, instead of paying over 81 cents, is paying over \$2 per capita.

Mr. FOX. I do not say that it is inaccurate so far as it goes, but I say that it has no reference to the town schoolhouses. I repeat, there is no report embracing the cost of the schoolhouses in the separate town districts. Take my own town, for instance. The public schoolhouse in Westpoint was built at a cost of something like \$20,000 by a tax levied by the municipality. It is not embraced in any report, and—

Mr. MANN. If the gentleman will pardon me, the report of the commissioner of education purports to give the cost of that.

Mr. FOX. It is not correct.

Mr. WILLIAMS of Mississippi. If the gentleman will pardon me, the State tax of Mississippi is the amount given there, and in addition to that each municipality levies a school tax.

Mr. MANN. If the gentleman from Mississippi will permit me, I will state that this is the case in every other State of the Union, and this report of the Commissioner of Education purports to give it as to Mississippi.

Mr. FOX. It is not accurate.

Mr. MANN. I will ask if the gentleman will give us the figures with reference to the State of Mississippi.

Mr. FOX. I can not give the gentleman from Illinois the figures as to the cost of the schoolhouses in each of the cities, because, I say, it is not embraced in any report.

Mr. MANN. Does the gentleman from Mississippi tell me that they keep a commissioner of education in the State of Mississippi, and that having such an officer they do not keep any record of the amount spent in building schools by the county?

Mr. FOX. It is not the business of the superintendent of education to report to the legislature what the city of Westpoint has done in the matter of erecting schoolhouses at her own cost and on her own account.

Mr. MANN. He does not so report?

Mr. FOX. He does not so report.

Mr. MANN. If the gentleman will pardon me, so far as the process of taxing for school buildings and raising money for school purposes is concerned, the same process exists in all the States practically. The State makes an appropriation for a certain amount, cities make appropriations, and school districts make appropriations, and the report of the Commissioner of Education for the country purports to cover all these expenditures. In the State of Illinois, which is reported as having expended \$17,000,000,

that does not mean that the State raises that amount by taxation, but it includes the city taxes and local taxes.

Mr. HENRY of Mississippi. We have no building fund in Mississippi. We build our schoolhouses by private subscription. We built one several years ago in my town by taxation on the town.

Mr. MANN. They report a public-building fund in the State of Mississippi, so I think the gentleman must be mistaken.

Mr. FOX. Well, the gentleman will have to accept my statement or reject it. If he will not accept it, I can not help it.

Mr. MANN. What I want is the gentleman's figures.

Mr. FOX. I have not compiled them, but I will insert them in the RECORD.

Mr. MANN. Oh, I thought the gentleman had them before him.

Mr. FOX. No; I have not. I say, so far as the cost of schoolhouses is concerned, only the expenditure for certain public schoolhouses in the country levied by the legislature or by the county is reported; and there is not included in any report the cost of schoolhouses in separate school districts, which is by far the larger amount.

I find from the report of the State superintendent referred to that for the fiscal year of 1898-99 the receipts for public education, exclusive of separate districts, were \$1,195,877.48. For the year 1900 the legislature in the State appropriated the following amounts:

For public education in common schools.....	\$1,000,000.00
Poll tax.....	300,000.00
For improvements in the university.....	34,000.00
Textile school at A. and M. College.....	40,000.00
For the A. and M. College.....	31,019.28
For the Industrial Institute and College.....	91,031.00
For the Alcorn College (colored).....	47,034.50
For Holly Springs State Normal College.....	4,500.00
Interest on the Chickasaw school fund.....	52,733.47
Interest on agricultural-scrip fund.....	12,729.00
Interest on seminary fund.....	32,643.67

Total..... 1,645,690.92

In this no account is taken of the extra levies made by the cities and towns for the purpose of carrying on the schools nine months instead of five months each year, nor for the levies made for building schoolhouses. It is safe to say that the school buildings erected by the cities and towns and those erected in the country by private subscription cost not less than \$1,000,000.

Mr. TOMPKINS. Will the gentleman allow me an interruption?

Mr. FOX. Yes.

Mr. TOMPKINS. I understood the gentleman from Mississippi to say that in his Congressional district there were three colored men to every white man.

Mr. FOX. No; I said in my county.

Mr. TOMPKINS. I understood the gentleman to say that it was true of the whole district.

Mr. FOX. If I did I will modify that and say that it is so in most of the counties. In some counties there is a larger proportion.

Mr. TOMPKINS. What is the entire population of the gentleman's district?

Mr. FOX. Under the last census it is 238,864.

Mr. TOMPKINS. Will the gentleman tell us what proportion of colored men entitled to vote actually do vote in his district?

Mr. FOX. I will tell you how many have qualified and registered. In the Fourth Congressional district there are 24,935 registered voters, of which 3,331 are colored voters. I might say that this is about the average number of votes cast in each Congressional district of Massachusetts.

Mr. TOMPKINS. Will the gentleman kindly tell us what the total vote for a member of Congress in his district was last year? Was it not about 3,500?

Mr. FOX. No, sir; about 10,000. It is given in the report of the gentleman from Indiana [Mr. CRUMPACKER].

Mr. TOMPKINS. The Congressional Directory says 3,431.

Mr. FOX. That was the vote cast in 1898.

Mr. TOMPKINS. Will the gentleman tell us what the vote was in his district in 1900?

Mr. FOX. It is given in the report of the gentleman from Indiana. I will read from that. You will find it on page 126. In my district, according to the report of the gentleman from Indiana, there were 9,552 votes cast.

Mr. TOMPKINS. Out of a registry of 24,000?

Mr. FOX. Yes. I will explain how that is. Nominations are made by primary election, and they settle the contest, so that little interest is taken in the general election. I am glad to say that we have very few Republicans in the Fourth Congressional district of Mississippi. [Laughter.] I read further from the report of the gentleman from Indiana. He says:

It is highly probable that a fair educational law, justly administered, would be attended with great advantages to both races. If that kind of law were enacted, applicable to all alike, and if it were administered so that the colored man would know that when he complied with the law he would be accorded his privileges, there would be a constant motive for him to improve his condition.

I am glad the gentleman from Indiana made that admission. His statement exactly describes the condition of things in Mississippi.

As I have already explained, the educational law is fairly administered in that State. Whether the law satisfies the gentleman from Indiana or not, the blacks in that State have exactly the same school facilities as the whites. In 1899 there were 167,178 white children and 192,368 black children in the public schools. We pay as much for the public education of white and colored population as does any other State, in proportion to our ability. If there is any crime in not paying more, it is the crime of poverty. It is not because we are unwilling to pay. The gentleman from Indiana intimates that the negro in the Southern States is not treated fairly; that when he has qualified himself to vote he is not allowed to vote. The reverse is true. Since the adoption of the constitution of 1890 in Mississippi no man has ever been denied the right to vote on account of race, color, or previous condition. There has never been anybody disfranchised, either by the terms of the law or by its administration, except for crime, for illiteracy, or for other reasons specified in the constitution.

Mr. GAINES. I would like to interrupt the gentleman for a moment.

Mr. FOX. Certainly.

Mr. GAINES. In speaking of the constitutions of the different States, allow me to say that the State of Wyoming has a constitution patterned after that of the State of Massachusetts, which provides as follows:

Article 6, section 2. No person shall have the right to vote who shall not be able to read the constitution of this State.

Now, sir, the supreme court of Wyoming, in the case of *Rasmussen vs. Baker* (50 Pacific Reporter, 821), held that no person is to be regarded as able to read the constitution who can not read it in the English language. In a certain case the constitution was translated into the Finnish language, and as translated the Finns read it, and having complied with that test they voted. A contest arose upon the question, and the case that I have just cited settled that the vote was not a legal vote.

Mr. FOX. So far as that is concerned—

Mr. MONDELL. I would like to make a brief statement in reply to the gentleman from Tennessee [Mr. GAINES].

Mr. FOX. I can not yield for further interruption.

Mr. MONDELL. I simply wish to make an explanation of this matter.

Mr. FOX. I am trespassing upon the time of the House and I can not yield further.

So far as this question is concerned, whatever objection the gentleman from Indiana may find to the constitution of the State of Mississippi, the Supreme Court of the United States has found no objection to it. The suffrage provisions of our constitution were passed upon by that court in the case of *Williams vs. The State of Mississippi*. In that case no question was involved except the validity of the constitutional provision of the State of Mississippi on the subject of elective franchise. Every lawyer is familiar with that case, in which the Supreme Court held that there is nothing in the constitution of the State of Mississippi in violation of the fourteenth and fifteenth amendments.

The gentleman from Indiana says:

Under existing conditions the prejudice against color is so intense that by subterfuge and administrative jugglery the negro is usually denied the right to vote when he earns it, and there is little inducement for him to prepare himself.

This statement is news to me and to every Representative from Mississippi in this House. I would not at all hesitate to say that I would resign my seat in this Congress if this fact could be established. I challenge the gentleman from Indiana to establish it. The statement is not true as a matter of fact. It is a libel on the good name of the State. There has never been even a complaint in the State of Mississippi by a negro that he was denied the right of suffrage when he had earned it under the constitution of the State.

It was to escape the deplorable condition of affairs that existed before 1890 that we fell into line with Massachusetts, Connecticut, and other great States and adopted an educational qualification. As to the "understanding clause" of our constitution, which has been criticised so much, it is an enlargement and not a restriction of the right of suffrage. It is a curious fact that more colored men than white men have registered and qualified themselves to vote in the State of Mississippi under the "understanding clause." As a rule the white illiterate has too much pride to expose his illiteracy, and only in rare instances does a white man ever apply for registration under the understanding clause. In my own county I have never known a solitary instance of that kind. Indeed, I do not recollect that I ever knew of such a case in the State of Mississippi.

Mr. WILLIAMS of Mississippi. If my colleague will allow me, I would like to reinforce his argument by saying that there has never come to my knowledge a single instance of a white man

making application for registration and the right to vote under the "understanding clause." If there has been such a case I have never heard of it. I have heard of a few negroes who have qualified under that clause.

Mr. CRUMPACKER. Will the gentleman allow a question?

Mr. WILLIAMS of Mississippi. I have not the floor; but if my colleague will yield, I shall be glad to do so.

Mr. FOX. I will yield for a question.

Mr. CRUMPACKER. Does the gentleman know of a single white man in his State having been refused registration who applied for it?

Mr. WILLIAMS of Mississippi. Yes; a great many white men have been refused registration and the right to vote—some upon the ground that they have not paid their poll tax, and some upon the ground that they have not qualified under the educational clause of the constitution. There has been a great deal of carelessness, and a great many people, white and black both, have been allowed to register without a proper examination as to whether they were educationally qualified.

Mr. FOX. Mr. Speaker, I have trespassed too far upon the time of the House, and I shall close by reading from an address made by a distinguished Senator from Massachusetts in the city of Charleston, December 22, 1899. I commend it to this House with perfect confidence that the great majority of Republican members here agree with Senator HOAR. And I want especially to commend to the gentleman from Indiana [Mr. CRUMPACKER] what the Senator has said of lawlessness in the South after a full investigation of the subject. I want to commend the spirit with which the Senator treats this question, void of any sectional animosity or feeling and void of any partisanship. He said in part:

In our part of the country we have to deal with the great problems of the strife between labor and capital, and of the government of cities where vast masses of men born on foreign soil, of different nationalities and of different races, strangers to American principles, to American ideas, to American history, are gathered together to exercise the unaccustomed function of self-government in an almost unrestricted liberty. You have to deal with a race problem rendered more difficult still by a still larger difference in the physical and intellectual qualities of the two races whom Providence has brought together.

I should be false to my own manhood if I failed to express my profound regret and sorrow for some occurrences that have taken place recently, both in the North and in the South. I am bound to say that, considering all the circumstances, the North has been the worse offender.

The time has already come when throughout large spaces in our country both races are dwelling together in peace and harmony. I believe that condition of things to be the rule in the South, and not to be the exception. We have the right to claim that the country and the South be judged by the rule and not by the exception.

But we want you to stand by us in our troubles as brethren and as countrymen. We shall have to look, in many perils that are before us in the near future, to the conservatism and wisdom of the South. And if the time shall come when you think we can help you, your draft shall be fully honored.

[Applause.]

Reapportionment Bill.

SPEECH

OF

HON. MARRIOTT BROSIUS,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 5, 1901,

On the bill (H. R. 12740) making an apportionment of Representatives in Congress among the several States under the Twelfth Census.

Mr. BROSIUS said:

Mr. SPEAKER: Eight years ago I introduced a joint resolution to amend the Constitution so as to limit the membership of the House to 350. In the present session I introduced a similar resolution. I have long been convinced of the wisdom of this limitation, and this is my apology for inflicting some observations upon the House this morning.

I listened with much interest to the notable address of the gentleman from Maine [Mr. LITTLEFIELD] on Saturday morning. When that gentleman makes a speech in this House it is a public event of importance, and no apology is needed for giving it some attention. It is my singular good fortune to agree with one proposition in all that part of my honorable friend's speech which related to the bill, and that is that the pending measure is one of the most important that can engage the attention of the House.

The importance of it is so transcendent that the gentleman, with all his amplitude of understanding, does not fully appreciate and is not entirely sensible of its far-reaching consequences. The evidence of this is found in the tenor of his speech, which was primarily an appeal for justice to the State of Maine and for fairness and equity in the action of the House. No injustice can be done the State of Maine or any other State by this bill. It is an entire misconception of the effect of the operation of the measure that

leads to the suggestion of injustice. That word expresses the deprivation of some right, public or private, which ought to be enjoyed. A farmer might with as much propriety accuse the Almighty of injustice for not making his farm as fertile as his neighbor's.

The effect of this measure upon the State of Maine and other States is a scientific result. It results from the inevitable operation of the laws of mathematical science. It is the decree of arithmetic—the inexorable logic of figures. To call such a result injustice is an outrage on the dictionary as well as a mutilation of logic. That the State of Maine has not increased in population in the last ten years is a fact which could only wound a supersensitive nature. Yet the gentleman from Maine, with extreme ardor, which may or may not indicate sincerity of conviction, rallies to the defense of his State against the supposed reproach which that fact casts upon her as if it was a matter involving moral turpitude or a breach of honor on the part of his State.

He must himself realize, as everybody else does, that from that fact, though reflecting no discredit upon the State, there results an imperious necessity for either diminishing Maine's representation or increasing that of States which have increased in population; for the Constitution requires representation to be apportioned according to their respective numbers. It does not modify the situation or mitigate its effects to suggest that Maine has sent her citizens to other States, for the Constitution does not permit the representation from the State of Maine to be based upon those who, for motives of prudence or prosperity, have left the State, but upon those only who remain, whether to avail themselves of the superior opportunities that State affords, or whether they think it a good State to die in, because they can leave it at last with so little reluctance. As well might I claim an additional member for Pennsylvania because that State gave the State of Maine the greatest citizen she ever had, whose luminous intellect and exalted character shed upon his adopted State an undying luster.

It would not be much out of place to observe here that the protracted colloquy between the distinguished gentlemen from Maine and Illinois this morning is an illustration of the evils which are promoted by undue numbers in a legislative body. But for vices of behavior and decorum into which we have fallen by the encouragement of numbers that colloquy would not have occurred.

The chief merit of the minority bill which was advocated by the gentleman from Maine is that it increases the delegations from nearly half the States and prevents a loss to any. That suggestion may appeal, and may have been intended to appeal, to the State pride of the States which gained as well as those which did not lose Representatives, but it does not rise to the dignity of argument, for it is totally irrelevant to the question to be determined, which is, what is the most suitable number of members to constitute an effective working body.

If gentlemen believe that it is an end in itself important to be secured that each State shall have at least its present representation, that end will continue important in the future and the House must continue increasing its membership as long as population increases in any State. How anyone in a lucid interval can entertain such a proposition I can not understand. It is an end which Congress has not heretofore regarded as important and has not observed except in three instances in all our history. In 8 out of 11 apportionments in our history one or more States suffered a loss of representation.

In the first apportionment Georgia lost 1. In the fourth, Connecticut lost 1; Delaware, 1; Massachusetts, 7; Vermont, 1, and Virginia, 1; 11 in all. In the fifth, Maryland lost 1; Massachusetts, 1; New Hampshire, 1; Virginia, 1; 4 in all. In the sixth, Connecticut lost 2; Georgia, 1; Kentucky, 3; Maine, 1; Maryland, 2; Massachusetts, 2; New Hampshire, 1; New Jersey, 1; New York, 6; North Carolina, 4; South Carolina, 2; Tennessee, 2; Vermont, 1; Virginia, 6; in all, 38. In the seventh, Maine lost 1; New Hampshire, 1; New York, 1; North Carolina, 1; South Carolina, 1; Tennessee, 1; Vermont, 1; Virginia, 2; in all, 9. In the eighth, Alabama lost 1; Georgia, 1; Kentucky, 1; Maine, 1; Maryland, 1; New York, 2; Pennsylvania, 1; South Carolina, 2; Tennessee, 2; Virginia, 2; in all, 17. In the ninth, New Hampshire lost 1; Vermont, 1; Virginia, 2; in all, 4. In the tenth, Maine lost 1. The aggregate loss of members in all the apportionments from the beginning is 85, and singularly enough the State of Maine sustained the loss of one member in each of the sixth, seventh, eighth, and tenth apportionments.

Now it is proposed that the almost unbroken practice of Congress for a hundred years is to be reversed, and we are asked to adopt the principle that a State should never have its representation diminished.

Later in his address the gentleman from Maine reached the fundamental contention and declared that the House ought to increase its membership as population increases. On this proposition I join issue with him. I insist that there should be a stop to the growth of this House right here and now. The increase of our membership may be a good thing, but only to a limited extent. The limit,

in my judgment, has been reached, and we ought to stop. I do not know that I can better accentuate the importance of this than by introducing a humorous situation in a family which I somewhere heard of.

An Irishman made a contract with his wife that when the children came singly she should name them and when they came in pairs he should enjoy that prerogative. At length there came a pair of girls. The father said: "Under our arrangement it falls to me to name these girls, and I will name one Kate; and as they look a good deal alike, I will name the other Duplicate." After the lapse of time there came a pair of boys. The father said: "I will name one of these boys Peter; and as I vote in New York, I will name the other Repeater." Fate was kind to the family, and after a time another pair of boys came. The father looked serious and said: "Mother, this seems like a good deal of a good thing. I will name one of these boys Max and the other Climax, and this thing has got to stop right here." Mr. Speaker, we have reached the climax in the size of this House, and I would stop right here.

THE SITUATION.

Now, Mr. Speaker, to bring the existing situation into distinct view it may be stated that the only limitations upon the power of Congress to regulate the number of the House of Representatives are that it shall not exceed 1 for every 30,000 inhabitants, and that each State shall have at least 1 member. These restrictions are a distinct concession to the principle of constitutional limitation, and they had for their object the prevention of a too numerous and unwieldy House. There was no fear that it would be too small for effective legislation. Story, in his Commentaries, says:

The danger was that from the national impulses of the popular will and the desire of ambitious candidates to attain offices the number would be soon swollen to an unreasonable size, so that it would at once generate and combine factions, obstruct deliberation, introduce and perpetuate turbulent and rash counsels.

There are those who believe that we are already perilously near the edge of this condition. Now, Mr. Speaker, it is easily seen that it would be no infraction of the Constitution to make the ratio so large that no State could elect more than 1 Representative. In that event the House would now consist of 45 members. It would, on the other hand, be equally free from constitutional objection to make the ratio 30,000. This would give us a House of over 2,500 members. Between these extremes the pendulum of Congressional power swings.

In the exercise of such a power we can not be too conservative. Wisdom enjoins us to stoutly resist the tendency to increase the membership of the House. The following table shows how steadily, with a single break, the number has increased from the beginning:

Census.	Ratio.	Whole number of Representatives.
Constitution, 1789.....	30,000	65
First Census, 1793.....	33,000	105
Second Census, 1803.....	33,000	141
Third Census, 1813.....	35,000	181
Fourth Census, 1823.....	40,000	213
Fifth Census, 1833.....	47,700	240
Sixth Census, 1843.....	70,680	223
Seventh Census, 1853.....	93,423	234
Eighth Census, 1863.....	127,381	243
Ninth Census, 1873.....	151,425	253
Tenth Census, 1883.....	151,911	325
Eleventh Census, 1893.....	173,901	356

But it was further illustrated in the debate on the apportionment bill ten years ago. The chief end which the Committee on the Census set before them and which they seemed most proud of achieving, because it reconciled all minds, was to find a number which would prevent a loss to any State without unreasonably swelling the aggregate membership. The temptation to keep intact the delegations of the States whose population is stable is hard to resist. It will be no easier in the future than now. The virtue of an average member of Congress will be found not quite equal to the task of resisting the solicitations of State pride to maintain the numerical integrity of his delegation. If he is a man of heroic mold and can rise superior to such considerations, he may still encounter a situation quite too much for him in the fact that his own seat is in peril.

Who is fit to legislate upon the right to retain his own seat in Congress? Under the stress of such a situation how much easier it would be to give your adhesion to a place than to a principle. That the tenure of one's office depending upon his conclusions on a public question is not calculated to promote a wise decision goes without saying. Situations which invite such conflicts in the arena of legislation between private interest and public duty ought to be avoided whenever possible.

The character of the opposition to this bill still further exemplifies what all experience confirms. We witness the members from the States which will lose a member under the operation of this measure in solid array against it, with few exceptions. They

organized the opposition that is being made to the bill. For some days prior to the beginning of this debate the newspapers have informed us of the combination that was being formed by the States that will lose a member to defeat the bill. The following, from a Washington correspondent to the Philadelphia Press, I have no doubt is authentic:

[Special dispatch to the Press.]

WASHINGTON, December 26.

Some of the opponents of the Hopkins reapportionment bill, who have been trying to ascertain the prevailing opinion in the House of Representatives on the subject, assert that there is not the least doubt that the bill will be defeated. Representatives LANDIS, of Indiana; CURTIS, of Kansas; BURLEIGH, of Maine; MERCER, of Nebraska, and others are quoted as expressing that opinion. On the other hand, Mr. HOPKINS is very confident of the passage of the measure.

All of the States that will lose a member under the Hopkins bill, with the exception of Ohio, are perfecting an organization, or claim to have accomplished one already, with a view of defeating the bill. Kansas, Kentucky, Maine, Nebraska, South Carolina, and Virginia are the most active in the opposition to the bill, which provides for retaining the House with its present number of members.

But, Mr. Speaker, it is too obvious to need to be mentioned that the time will come when States of stable populations must have their delegations in Congress diminished more or less to avoid the calamity of a House too unwieldy to do business. Why not recognize the inevitable now and avert the evil of undue numbers? If State pride is to be wounded sooner or later it would be patriotic to bare your breasts and receive the wound now for the good of the country. A State may be excused for desiring to maintain its standing in the family of Commonwealths, but it can not expect to stand still and hold its rank with States that are marching on. This a popular body, whose representative power is based on population. States of stable population must decrease their delegations in Congress, or States of growing population must increase theirs. In either case the relative political power of the States would remain the same.

Under this bill the "ratio" will be 208,868—with an additional member to those States which, after being divided by the "ratio," have a fraction of population left of more than half the "ratio." The result will be that in 30 States the representation will remain unchanged. In the remaining 15 States 7 would gain and 8 lose representation. The gains and losses would be as follows:

GAINS.	
Illinois.....	1
Louisiana.....	1
Minnesota.....	1
New Jersey.....	1
New York.....	1
Texas.....	2
West Virginia.....	1
Total.....	8
LOSSES.	
Indiana.....	1
Kansas.....	1
Kentucky.....	1
Maine.....	1
Nebraska.....	1
Ohio.....	1
South Carolina.....	1
Virginia.....	1
Total.....	8

These results are tempered with moderation; there are no extreme hardships, no gross inequality. Every objectionable feature is reduced to its lowest terms, and there only remains the smallest margin of that inconvenience and inequality incident to all human efforts to attain perfection. To be willing to suffer this is not too much to expect of statesmen who are sensible of the public need and animated by a patriotic desire to provide for it.

Now, Mr. Speaker, I desire in a feeble way to demonstrate the wisdom of keeping the membership of the House within its present numerical limit. The proposed number, 357, is as likely as any other to be the "magic one" that will secure the most of the best and the least of the worst results. In the demonstration of this it is necessary to have in mind the ends to be compassed by any regulation of the number of the House, constitutional or legislative. It is easy to deduce from the discussions in the Federal convention and from "Madison's Summary" the objects the "framers" set before them in considering the number of which the House should consist. Stated generally, they are:

(1) A body large enough to be a safe custodian of the interests with which it is charged and to secure the benefits of free consultation and discussion, as well as immunity from too easy combinations for improper purposes.

(2) A body small enough to avoid the confusion and feebleness resulting from the turbulence of numbers.

(3) Congressional districts as large as is compatible with the Representative's knowledge of the local circumstances of his constituents and his means of keeping up the necessary touch of elbow with them in sentiment and sympathy.

In determining the size of a legislative body with a view of effectually securing these ends it is quite obvious that too much arithmetic will be likely to vitiate the result. In a problem of this kind twice 3 are not always 6, but may be 4. The law of "diminishing returns" is plainly operative here. The "framers" evidently considered the principle that requires representation to increase with population, without due attention to its limitations.

A body of 357 members is, no doubt, a safer custodian of the public interests than one of 45, but no one believes that a body of 2,500 would be proportionably safer. There is a number within whose charmed circle is to be found the maximum effectiveness,

and inefficiency must increase in varying ratios as we depart either way from it.

What that number is in a given case is the "pinch." Here "many men have many minds." It is instructive to note the kaleidoscopic views our people entertain on the subject of representative ratios. The States are widely variant in the number of their legislative bodies; so much so that it makes us almost despair of ever being able to arrive at a conclusion which will unite in its support both reason and experience.

The subjoined statement, which I will incorporate in my remarks, shows the population and area of each State, the number of the upper and lower houses of their respective legislatures, and the ratio of population to each number. Though made eight years ago, it is approximately correct to-day.

Statement showing the population and area of the States, the number of representatives and senators, and the ratios of population to each member.

States.	Population.	Area, square miles.	Lower house.	Upper house.	Ratio in lower house.	Ratio in upper house.
Alabama	1,513,017	50,722	100	33	15,130	45,850
Arkansas	1,123,179	52,193	92	32	12,362	36,363
California	1,206,138	155,591.5	80	40	15,102	30,233
Colorado	412,138	104,550	49	25	8,412	15,554
Connecticut	746,258	4,750	249	21	3,000	35,536
Delaware	186,490	2,150	20	9	8,424	18,721
Florida	891,422	59,268	76	32	6,159	16,399
Georgia	1,837,353	58,000	175	44	10,500	41,798
Illinois	3,829,351	55,414	153	51	25,009	75,027
Indiana	2,195,404	33,800	100	50	21,624	43,848
Iowa	1,911,892	55,045	109	50	19,119	38,238
Kansas	1,427,096	80,891	125	40	11,417	35,673
Kentucky	1,858,635	37,690	100	38	18,590	48,911
Louisiana	1,118,587	29,924	98	36	11,415	31,072
Maine	661,086	35,000	151	31	4,378	21,325
Maryland	1,042,300	11,124	117	29	8,909	40,062
Massachusetts	2,238,943	7,800	240	40	9,329	55,974
Michigan	2,093,889	56,451	100	32	20,939	65,434
Minnesota	1,301,826	85,531	100	49	12,166	59,174
Mississippi	1,289,000	46,750	120	40	10,746	40,300
Missouri	2,679,184	65,350	140	34	18,736	78,800
Nebraska	1,058,910	75,095	100	33	10,589	35,297
Nevada	45,761	112,080	40	20	1,144	1,830
New Hampshire	376,536	9,491	321	24	1,173	31,377
New Jersey	1,444,933	8,320	60	21	24,082	68,806
New York	5,997,853	47,000	123	32	46,858	187,433
North Carolina	1,617,947	49,800	120	50	13,483	32,359
Ohio	3,672,316	39,964	110	37	33,084	90,232
Oregon	813,767	95,274	60	30	5,229	10,459
Pennsylvania	5,258,014	46,000	204	50	26,159	105,160
Rhode Island	345,306	1,054	72	36	4,799	9,597
South Carolina	1,151,149	34,000	124	25	9,283	24,883
South Dakota	323,808	77,000	121	48	2,635	6,850
Tennessee	1,767,513	45,600	99	33	17,553	70,701
Texas	2,235,523	274,356	106	31	21,000	72,114
Vermont	332,423	10,212	240	30	1,373	11,081
Virginia	1,655,980	38,348	100	40	16,559	38,511
West Virginia	762,794	23,000	65	26	11,735	31,783
Wisconsin	1,686,880	53,924	100	33	16,869	51,118

RATIOS IN THE STATES.

From this table the most incongruous results appear—whether we compare the legislative assemblies directly or consider their respective ratios of representation. For example, Connecticut, with an area of 4,150 square miles and a population of 746,258, has 249 representatives, a ratio of less than 3,000, while California, with more than thirty-two times the area and nearly double the population, has but one-third the representatives and a ratio of 15,102.

New Hampshire, with an area of 9,291 square miles and a population of 376,536, has 321 representatives, a ratio of 1,173, while New York, with an area about five times as great and about sixteen times the population, has a little over one-third as many representatives and a ratio more than forty times as large. Between other States almost as great disparity prevails. The smallest ratio is 1,144, in Nevada, and the largest, 46,858, in New York. A similar variety of ratios prevails in the senatorial representation of the States.

An equal contrariety of view seems to exist upon this subject among European nations, as appears from the table hereto appended, showing the size of their legislative bodies.

Statement showing the number of various European legislative bodies.

Austria-Hungary:	Japan:
Representative Assembly of the Empire	House of Representatives
120	300
Belgium:	Netherlands:
Representative body	Representative Chamber
138	100
Senate	Upper Chamber
60	50
Denmark:	Portugal:
Chamber of Representatives	Chamber of Deputies
102	173
Senate	Chamber of Peers
96	180
France:	Spain:
Chamber of Deputies	Congress of Deputies
576	440
Senate	Senate
300	360
Germany:	Sweden:
Representative body	Chamber of Deputies
307	222
Federal Council	Upper Chamber
58	148
Great Britain:	Norway:
House of Commons	Legislative Assembly
670	114
Greece:	Switzerland:
Chamber of Deputies	National Council
150	145
Italy:	Upper House
Chamber of Deputies	44
508	

FIRST PRINCIPLES.

It is thus apparent that we can derive little aid from the experience of the States or of other nations in the solution of our problem. Turning again to the experience of the Federal Legislature for a hundred years, and a few general principles, uniformly accepted by our people, we find abundant data to sustain the belief that a House of 357 members will be as safe a depository of the powers vested in it when our population is 100,000,000 and upward as it is now. A Representative stands to his district in a twofold relation, (1) as to territory; (2) as to population. As to the former relation it is well known that the existing districts vary widely in area. The Tenth district of Pennsylvania, which I have the honor to represent, consists of a single county, having an area of about 1,000 square miles. The Eleventh district of Texas ten years ago was 120 times as large, consisting of 97 counties, with an area of 120,000 square miles. The large districts, it is easily seen, would diminish in territorial extent as population increases, while the smaller districts, in which population is more stable, would increase in extent with lapse of time.

In his relation to the people of his district the qualifications of a Representative are more exacting. A general knowledge of his constituents, their principles and their employments, and the laws under which they live, is quite essential. But any man who applies his intelligence to the subject can clearly see that with the largest ratio possible for a hundred years under the proposed limitation any man likely to be elected to Congress would easily meet all the conditions imposed either by the extent of his district or the number of his constituents. Mere numbers within a given area is not a matter of great consequence where there is similarity of interest and employment.

Diversity in the industries of the district is of much greater moment; but the natural limitations upon this will keep the business interests of the district within easy range of the Representative's knowledge. Moreover, with modern facilities for communication and transit a member can be as well acquainted with the sentiments, sympathies, employments, and interests of 300,000 people as with those of 30,000 scattered over the same area a hundred years ago, when Madison declared that "if the largest State in the Union be divided into ten or twelve districts the Representatives would possess an adequate knowledge of every local interest."

So that due attention to the reasons which lie nearest the nerve of the problem can hardly fail to produce a conviction that, as far as the qualifications of the members to render effective service are concerned, the number proposed will adequately respond to any demand that will be made upon them for a hundred years.

EVILS OF NUMBERS.

But the body must be large enough to secure the benefits of free discussion as well as immunity from too easy combinations for improper purposes. I hazard the statement that no man who witnessed the House of Representatives in action during some of the stormy scenes of the first session of the Fifty-first Congress will contend for a greater number to promote these important ends.

The deliberative character of the House is already impaired by its size. Its dignity is occasionally marred by conduct which would only be tolerated in a crowd. The behavior of members, the quality of debate, the attenuated wit and low-down retort which occasionally make the judicious gripe could not occur without the encouragement of numbers.

The enfeeblement born of confusion and turbulence is of all things to be avoided. Here we are already trembling on the edge of danger. The House is becoming unwieldy. A condition closely approaching chaos is possible to it in seasons of excitement. Much of the time the level of disorder is high enough to make it difficult for one-half the members to tell what the other half are doing.

It has been on rare occasions a very cave of Æolus with every wind let loose—deliberation impossible, profitable discussion out of the question, legislative business at a standstill, waiting for the storm to blow over. In these seasons of tumult the wisest head, the firmest hand, and the stoutest heart available in our time have been unequal to the task of maintaining the conditions necessary to the transaction of business. Without some restriction upon the tendency to increase, the House will continue to grow until confusion worse confounded will bring the nation to shame and invite the "lingual curse of Babel" to put an end to the stupendous folly of attempting to legislate in a mass meeting.

Few members of the House can be heard with distinctness in all parts of the Chamber without an exertion of the vocal organs which destroys every quality of voice which makes speaking or hearing agreeable and corrupts every excellence in oratory. If it were possible for this House to vitiate the morals and principles of the people as much as it has deprived the taste and corrupted style in public speaking, I should cry out with Daniel Webster, "God save the Republic!" Much of what passes for debate is only an exchange of vociferations across the Chamber. An unduly

loud voice is as disagreeable to most people as it was to the sensitive Cowper, who wrote:

Vociferated logic kills me quite;
A noisy man is always in the right.
I twirl my thumbs, fall back into my chair,
Fix on the wainscot a distressful stare,
And when I think his blunders all are out,
Reply discreetly, "To be sure; no doubt."

ECONOMY.

The arguments, Mr. Speaker, in support of this bill would not be complete without allusion to the cost of maintaining a numerous House of Representatives. No amount of growth and no stretch of prosperity ought to make us indifferent to the claims of economy in the administration of Government. No man who thinks well of his country and desires to minimize the burdens of the people will sanction the waste of public money upon officials who are not only needless, but who actually embarrass the legislation of the country.

The increase of 24 members by the last apportionment bill carries an addition to the annual appropriation for the House of at least \$200,000. In ten years it swells to \$2,000,000. An increment of 29 under the minority bill would involve an outlay of \$2,500,000 in ten years, and so on down the years, gathering in volume as the House swells in number.

In this connection I may add that \$57 members can be comfortably accommodated in the Hall of the House without any radical or expensive alterations in its architectural structure, while any number in excess of that would require extensive modifications of the interior construction of the building, destroying its architectural unity, impairing its symmetry and beauty, and causing great inconvenience and expense in the remodeling.

INFERIOR MEN.

Any comprehensive survey of the evils of an unduly numerous House must include the obvious source of weakness arising from the diminished responsibility of members as well as from the large number of inferior men likely to enter into its composition. An undue proportion of members of limited information and weak capacities make it easy for the few able and astute to direct and control legislation. Madison addressed himself to this view with great force and clearness. These are his words:

The more multitudinous a representative assembly may be rendered the more it will partake of the infirmities incident to collective meetings of the people. Ignorance will be the dupe of cunning, and passion the slave of sophistry and declamation. The people can never err more than in supposing that by multiplying their Representatives beyond a certain limit they strengthen the barrier against a government of a few. Experience will forever admonish them that, on the contrary, after securing a sufficient number for the purposes of safety, of local information, and of diffusive sympathy with the whole society, they will counteract their own views by every addition to their Representatives.

HOUSE OF COMMONS.

Some who favor a larger House refer us to some European legislatures as examples of ideal legislative bodies, notably the House of Commons. This is not a happy reference. Passing over the total dissimilarity of the American and English legislative bodies, and the fact that one does all the legislation for England, Ireland, Scotland, and Wales, and in a general way for the whole British Empire, while the other has for its limited sphere the remnant which remains after 45 State assemblies have supplied every local and State need, it is worthy of note that English statesmen do not conceal their belief that the House of Commons is too large for effective work, and no one conversant with the history of that body will fail to unite in that belief.

That it is able to transact business with any degree of dispatch under ordinary circumstances is due in a great degree to the non-attendance of members. But, lest the English example may be again quoted, I want to say very distinctly that if anything could bring greater reproach upon America than the scenes which occasionally occur in Congress, it would be what would be likely to occur after we had formed it on the model of the House of Commons. It has on its rolls 670 members, 40 of whom constitute a quorum to do business.

It rarely happens that more than two-thirds of the members are present at a time, and when there is a full attendance all but 360 must stand round like "bound boys," as that number exhausts the sitting space on the floor. No member can reserve a seat. The rules of the barber shop prevail. The "next" takes the seat until they are all occupied, and the hindmost stand or retire. If a member without a seat addresses the House, he holds his hat in his hand or puts it on the floor. If he has papers or books to which he desires to refer, he holds them in his arms or puts them in his pockets or on the floor. Gladstone objected to enlarging the hall, because, he said, "it is big enough."

T. P. O'Connor, M. P., in a recent article presents the House of Commons in a light which makes it anything but desirable for us to regard it as worthy of imitation. He says it consists of men who for the most part avoid the place as if it were infected with a pestilence; that it is the most unbusinesslike and ineffective

legislative instrument in the world. Members will not remain in the House unless there is something of unusual interest pending. Business of great importance may be under consideration, but unless there is hope of a scene or a sensation the House empties.

For example, the navy and army bills, dealing with the defenses of the country and carrying millions of dollars, are debated often in a House consisting of 10 or 15 members. A scrap of some kind, a personal squabble between two members, will fill the House with an excited and interested audience, while the highest interests of the Empire will leave the House cold and empty. Our own House of Representatives, with its present membership, scarcely escapes the enfeeblement and inefficiency of the House of Commons, and with an equal number our body would be equally unsatisfactory, and it would be said of this House, as it has been said of the House of Commons, that a man in the armor of the fifteenth century could not be more unwieldy, and we would witness scenes in this House, which have been witnessed in the House of Commons, when a member was addressing the House with but two others in the Chamber, and sometimes only the Speaker in the Chair.

TUMULT OF NUMBERS.

Such conditions, it must be confessed, are well calculated to discourage attendance. Members who receive no salary and have other business easily yield to the solicitations of interest or pleasure and remain away. When lured by the expectation of a "scene" or brought in by the "whips," when the "division bell" can not reach them, they swell the crowd, but they bring little of the element of deliberation and less acquaintance with the bearings of the legislation on hand, but much subserviency to the leaders—many elements of the mob—and ready passions to be played on by the fiery orators who marshal the contending hosts, and the result is precisely what could be foreseen—excited members shake their fists in the speaker's face, disorderly calls produce an uproar which an Englishman likened to a "cataract in a thunderstorm."

Members usually grave shouting with boyish abandonment, or in a frenzy of desperation struggling to lift their voices above the tumult of noises, comparable to those of a "zoo" "just before feeding time," the eloquence of honorable members seeming like a real representation of the Morse telegraphic alphabet, the alternate dot representing the utterances of one side and the alternate dash the groans of the opposition, and the whole tumultuous assembly "bedlam" more than a deliberate body of Christian statesmen. In depicting these occasional features of the House of Commons to illustrate the evil of undue numbers I have only borrowed, in the main, the delineations of Englishmen who saw what they described.

AN EXAMPLE TO BE SHUNNED.

Now, Mr. Speaker, is this the parliamentary feast to which American legislators are invited? Certainly an example so worthy to be shunned will no longer be held up for our imitation. The consequences of an unwieldy and overnumerous House of sturdy Britons ought to admonish us to avoid similar dangers and make us sensible of the necessity of keeping the House of Representatives within the numerical limit of an effectively working body. To effect this wise and salutary end after a hundred years will be a reform which—

Is not the hasty product of a day,
But the well-ripened fruit of wise delay.

Reapportionment Bill.

SPEECH

OF

HON. ALBERT D. SHAW,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 7, 1901.

On the bill (H. R. 12740) making an apportionment of Representatives in Congress among the several States under the Twelfth Census.

Mr. SHAW said:

Mr. SPEAKER: I am in trouble over the questions arising under the apportionment issues now before this House, and will endeavor to explain the perplexities and doubts pressing upon my mind and conscience concerning my sworn duty in connection therewith. As one of the latest to come into this body, with the oath of office still fresh on my lips, confronted with the grave constitutional mandates regarding the apportionment now under discussion, it causes me some hesitancy.

That the issues involved are of grave importance all here admit;

and that great prudence and wisdom are necessary in reaching a just and safe conclusion is equally clear. As for myself, I have no difficulty over the two bills presented to the House by the chairman of the Census Committee [Mr. HOPKINS] and by the gentleman from Maine [Mr. BURLEIGH].

These bills differ mainly as to the ratio upon which to base the representation of States, and the advocates each have defended their views and conclusions with unusual force and eloquence.

As to these bills, it can be truly said that each has strong points in its favor and that no constitutional barriers have been thrown down in their preparation, assuming that each State of this Union has observed the constitutional safeguards and rights of all citizens in the last elections. The so-called Hopkins bill proceeds upon the basis of limiting the membership of this House to its present number, 357, and the Burleigh bill is based upon an increased membership of 29, enlarging the House to 386 members. So far as precedents are or should be a guide, from the First Census, in 1790, down to the Eleventh, in 1890—a period of one hundred years—with only one exception—that of the Sixth Census, in 1840—the ratios established increased the number of Representatives, as the following table will show:

	Year.	Ratio.	Representatives.
Constitution		30,000	65
First Census	1790	33,000	105
Second Census	1800	33,000	141
Third Census	1810	35,000	181
Fourth Census	1820	40,000	213
Fifth Census	1830	47,700	240
Sixth Census	1840	70,680	223
Seventh Census	1850	93,423	233
Eighth Census	1860	127,381	243
Ninth Census	1870	131,425	293
Tenth Census	1880	151,911	325
Eleventh Census	1890	173,901	357

From this table it will be seen that the percentage of increase in Representatives since the one reduction in the Sixth Census, of 1840, has been as follows: In 1850, 4½ per cent; in 1860, a fraction over 4 per cent; in 1870, something over 20 per cent; in 1880, a little less than 10 per cent, and in 1890, a little over 10 per cent. Under the ratio of the Burleigh bill the percentage of increase is a fraction over 8 per cent. The proof is conclusive that the policy of enlarging the membership of the House of Representatives is a national one, as shown in the first one hundred years of its history. The question of the seating capacity of this Hall, as proved by the plan before us, is settled in the affirmative beyond fair dispute. The question of architects, acoustics, and rules can be easily determined.

The more important consideration as to the wisdom of increasing the membership at the present time is one each member must consider and settle for himself under his oath of office. I shall not attempt any extended remarks upon this point, first, because the past precedents are my guide as to my own views, and, second, for the reason that others with far greater weight of judgment have already gone pretty fully over the question. I believe, however, that the theory upon which our Government was modeled had in view the enlargement of the House of Representatives under the increasing population of the Union. The two Senators from each State—small or great in area and population—were to be offset by the enlarged membership of States in proportion to their growth. One was a fixed, the other an expanding representation.

As has been ably set forth in this debate, our present House is small in comparison with the membership of the foreign parliaments of the world. I am of the opinion that it is a wise policy to reasonably increase the Representatives of our nation in conformity with past precedents. The duties of each member here increase from year to year, and it will in a measure bring relief by enlarging the membership of this House. I feel that it is better to increase the membership here than to unduly enlarge the population of our constituencies.

With this view, I am in favor of the Burleigh bill. Under its provisions the great State of New York will gain three members, as compared with one under the Hopkins bill, and this seems to me in every way fair and desirable. But, Mr. Speaker, a broader question, that of the constitutional rights of citizens in some of the States of our Union, as specified in much detail in the official report accompanying a proposed bill known as the Crumpacker bill, is one which is profoundly perplexing and difficult for me to satisfactorily solve. Charges are made that the right of suffrage has been denied large numbers of American citizens in certain States of this Republic, and the particulars are described in such a manner as must arouse the keenest solicitude over the rights of the negro race of every true lover of our country and liberty.

I have diligently sought to inform myself of the basis of these

charges, and in this search the following statistics, prepared wholly from official records, have been in part the result:

Ratio of votes to population in each State and in the Northern and Southern States, respectively, in the Congressional election of 1898; also number of votes required to elect a Congressman in the North and South, respectively.

States.	Population (census of 1900).	Vote, 1898 (Congressional Directory).	Votes per each 1,000 inhabitants.
California	1,485,053	272,511	183.5
Colorado	539,700	144,101	267
Connecticut	908,355	148,109	163
Delaware	184,735	42,007	227.3
Idaho	161,772	39,091	241.6
Illinois	4,821,550	873,328	181.2
Indiana	2,516,462	567,821	225.6
Iowa	2,231,853	419,994	188.1
Kansas	1,470,495	281,143	191.1
Kentucky	2,147,174	251,626	117.2
Maine	694,406	86,815	125
Maryland	1,190,050	217,002	182.3
Massachusetts	2,805,346	312,222	111.3
Michigan	2,420,982	415,852	171.7
Minnesota	1,751,394	248,157	141.8
Missouri	3,106,005	551,406	177.5
Montana	243,329	49,787	204.6
Nebraska	1,008,539	188,172	176.1
Nevada	42,333	8,907	210.3
New Hampshire	411,588	81,315	107.5
New Jersey	1,883,660	332,140	176.3
New York	7,238,012	1,323,930	182.1
North Dakota	319,146	45,620	142.9
Ohio	4,157,545	769,803	185.2
Oregon	413,536	82,875	200.4
Pennsylvania	6,302,115	939,786	149.1
Rhode Island	428,556	38,093	89
South Dakota	401,570	71,902	179.1
Utah	276,749	59,272	214.2
Vermont	343,641	52,079	151.5
Washington	518,103	75,776	146.3
West Virginia	958,800	174,056	181.5
Wisconsin	2,069,042	322,029	155.7
Wyoming	92,531	19,671	212.6
Total	55,634,858	9,506,918	170.9

Southern States.	Population.	Vote, 1898.	Votes per each 1,000 inhabitants.
Alabama	1,823,697	91,131	49.8
Arkansas	1,311,564	27,678	21.1
Florida	528,542	32,942	62.4
Georgia	2,216,331	65,739	31
Louisiana	1,381,625	33,208	24
Mississippi	1,551,270	28,860	17.3
North Carolina	1,893,810	331,352	174.6
South Carolina	1,340,316	28,831	21.5
Tennessee	2,630,616	177,902	68
Texas	3,048,710	421,539	138.3
Virginia	1,854,184	172,302	92.3
Total	18,975,665	1,412,484	74.4

Average number of votes required to elect a Congressman in the—	
North	35,740
South	15,694
State of New York	38,939
States of Alabama, Arkansas, Louisiana, Mississippi, and South Carolina	5,934
Number of votes necessary to elect 34 Congressmen in the State of New York	1,323,930
Number of votes necessary to elect 35 Congressmen in the States of Alabama, Arkansas, Louisiana, Mississippi, and South Carolina	207,708

Scattering votes not noted in the Congressional Directory of December, 1900, were supplied from the New York Tribune Almanac for 1900, as follows: Alabama, 72; Colorado, 2,077; Connecticut, 413; Georgia, 34; Idaho, 914; Iowa, 1,442; Maine, 438; Michigan, 470; Missouri, 271; Washington, 2,064.

The picture thus presented is one which should demand prompt and serious consideration. It seems to show that the negro vote has been largely eliminated in a number of Southern States from some cause. What that cause is it is the duty of Congress to find out, if possible, at the earliest moment, in my opinion. An analysis of the table I have presented discloses many surprising evidences of the inequality of representation, as proved by the records of the Congressional election of 1898. The fact that to elect 34 Congressmen in the State of New York there were cast 1,323,930 votes and to elect 35 Congressmen in the States of Alabama, Arkansas, Louisiana, Mississippi, and South Carolina it took only 207,708 is a difference in voting power which, under the charges that this is due to wholesale disfranchisement of citizens of the United States, is both startling and alarming, to say the least.

This table further shows that in the Northern States the average votes per each 1,000 inhabitants is 170.9 and in the Southern States 74.4, and that the average votes required to elect a Congressman in the North is 35,740 and in the South 15,694. This is the result of the comparison, broadly stated, but the average votes required to elect a Congressman in the State of New York is 38,939, while

in the States of Alabama, Arkansas, Louisiana, Mississippi, and South Carolina it takes only an average of 5,934 to elect a member, as shown in the Congressional election returns for 1898. I think this showing should be regarded as convincing reasons why an exhaustive and impartial investigation should be undertaken by the Census Committee of this House, so as to officially place before this body a full and clear review of all the facts entering into this remarkable political condition. Feeling this as a duty, I was in full sympathy with the resolution offered by the gentleman from Pennsylvania [Mr. OLMSTED], as follows:

Whereas the continued enjoyment of full representation in this House by any State which has, for reasons other than participation in rebellion or other crime, denied to any of the male inhabitants thereof being 21 years of age and citizens of the United States the right to vote for Representatives in Congress, Presidential electors, and other specified officers is in direct violation of the fourteenth amendment of the Constitution of the United States, which declares that in such case the basis of representation therein shall be reduced in the proportion which such male citizens bear to the whole number of male citizens 21 years of age in such State, and is an invasion of the rights and dignity of this House and of its members and an infringement upon the rights and privileges in this House of other States and their Representatives; and

Whereas since the last apportionment the States of Mississippi, South Carolina, and Louisiana have by changes in the constitutions and statutes of said States, and for reasons other than participation in rebellion and other crimes, denied the right of suffrage to male inhabitants, 21 years of age, citizens of the United States, and such denial in each of said States extends to more than one-half of those who prior thereto were entitled to vote, as appears from the following statistics, published in the Congressional Directories of the Fifty-second and Fifty-sixth Congresses, viz: In the 7 districts of Mississippi the total vote cast for all Congressional candidates in 1890 was 62,652; in 1898, 27,045. In the 7 districts of South Carolina the total vote in 1890 was 73,522, and 28,831 in 1898. In the 6 districts of Louisiana, 74,542 in 1890 and 33,161 in 1898. One member of the present House, representing 10 counties in Mississippi, with a population in 1890 of 184,297, received only 2,008 votes. One member of the present House, representing 6 counties in South Carolina, with a population in 1890 of 158,851, received only 1,735 votes, and one member, representing 13 counties in Louisiana, with a population of 208,802, received only 2,494 votes; and

Whereas it is a matter of common rumor that other States have, for reasons other than those specified in the Constitution of the United States, denied to some of their male inhabitants, 21 years old and citizens of the United States, the right to vote for members of Congress and Presidential electors, as well as executive and judicial officers of said States, and members of the legislatures thereof, and no reduction has been made in the representation of any State in this House because of such denial; and

Whereas the President of the United States has, by message, recommended "that the Congress at its present session apportion the representation among the several States as provided by the Constitution;" Therefore,

Resolved, Section 1. That the Committee on Census shall be and is authorized and requested, either by full committee or such subcommittee or subcommittees as may be appointed by the chairman thereof, to inquire, examine, and report in what State the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the legislature thereof, is denied to any of the male inhabitants of such State, 21 years of age and citizens of the United States, or in any way abridged, except for participation in rebellion or other crimes, and the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in each such State.

That this dignified and statesmanlike preamble and resolution should have been received by several of the Southern members of this House with keen resentment and under a challenge twice repeated by different speakers that it was "a firebrand" thrown into the discussion of the apportionment was to many here, I doubt not, as it certainly was to me, a great surprise. This preamble and resolution are based upon official data of undoubted accuracy and within the plain provisions of the Constitution. Grave charges have been made that drastic means have been resorted to in order that the disfranchisement of great numbers of citizens of the United States might be accomplished for a special political purpose in the Southern States. This whole question is one of grave constitutional importance, and deserves to be settled on broad lines of constitutional law and right.

It is not a question of mere partisan politics, but one of vital constitutional righteousness. If the statements detailed in the preamble and resolution of the gentleman from Pennsylvania are true, or in part true, then it is the sworn duty of every member of this House to provide ways and means to right the existing political wrongs! And if they are not true, then the truth should be known, in the broad interest of national concord and justice, and the sooner the better. As to our sworn duty here it may be well to again present the constitutional provisions governing the legal entry to this body:

ARTICLE XIV.

SECTION 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

SEC. 2. Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the legislature thereof, is denied to any of the male inhabitants of such State, being 21 years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in such State.

ARTICLE XV.

SECTION 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

SEC. 2. The Congress shall have power to enforce this article by appropriate legislation.

The meaning of section 2 is very clearly set forth in Mr. CRUMPACKER'S views as given in his dissenting report:

For instance, if a State with a population of 1,500,000 should disfranchise 40 per cent of its male citizens over 21 years of age, for any reason except for participation in rebellion or other crime, in apportioning Representatives the population of that State would be reduced 40 per cent, and it would be given representation on a basis of 900,000. It is as much a part of the constitutional scheme to reduce the basis of apportionment in States that have disfranchised male citizens 21 years of age as it is to base representation upon population at all. The language of the Constitution is clear, direct, and mandatory, and it leaves no discretion in Congress whatever. The form of expression is imperative and not permissive—"the basis of representation shall be reduced."

The constitutional provisions are mandatory. They leave no escape legally for the timeserver or trifler. The spirit of these provisions is as clear as the letter, and the declaration is that we "shall" see them safeguarded. We are left no discretion under their stringent mandates. Only one question is to be determined by the members of this House, and that is, "Have these constitutional provisions been abridged or disobeyed?" If they have, it is our plain and imperative duty to promptly apply the constitutional remedy. This is a sworn and clear duty—not one of politics merely. It involves high constitutional obedience, no more and no less; and it is one so sacred and so majestic, under our free Constitution, that every American citizen should stand on the front advanced line to keep sacred and inviolate this immutable basis of our liberties.

It seems to me that this vital question of disfranchisement is one of the most weighty interests of our civilization that has come before the American people since the great war of the sixties, and I regard it as the duty of every American citizen to resolutely demand that the plain provisions of the Constitution shall be jealously defended and impartially executed. To this end fair and full discussion is always in order, and especially so here. I present in this connection the sections of the Mississippi, Louisiana, and North Carolina election laws relating to the rights of certain citizens as voters:

The number of colored males of voting age in these three States was, in 1890, 320,000, and now, presumably, reaches 450,000, thus representing a population of over 2,000,000 in these States alone, "without the consent of the governed." It will be seen that the Louisiana and North Carolina laws are especially framed for the purpose of making the educational test apply only to the colored population, as all persons who were voters prior to January 1, 1867, and the lineal descendants of all persons who were voters prior to that date are exempt from the provision of the law which disqualifies persons because of illiteracy.

MISSISSIPPI.

SEC. 244. On and after the 1st day of January, A. D. 1892, every elector shall, in addition to the foregoing qualifications, be able to read any section of the constitution of this State; or he shall be able to understand the same when read to him, or give a reasonable interpretation thereof. A new registration shall be made before the next ensuing election after January 1, A. D. 1892.

LOUISIANA.

SEC. 3. He (the voter) shall be able to read and write, and shall demonstrate his ability to do so when he applies for registration, by making, under oath administered by the registration officer or his deputy, written application therefor, in the English language, or his mother tongue, which application shall contain the essential facts necessary to show that he is entitled to register and vote, and shall be entirely written, dated, and signed by him, in the presence of the registration officer or his deputy, without assistance or suggestion from any person or memorandum whatever, except the form of application hereinafter set forth: *Provided, however*, That if the applicant be unable to write his application in the English language, he shall have the right, if he so demands, to write the same in his mother tongue from the dictation of an interpreter; and if the applicant is unable to write his application by reason of physical disability, the same shall be written at his dictation by the registration officer or his deputy, upon his oath of such disability. The application for registration, above provided for, shall be a copy of the following form, with the proper names, dates, and numbers substituted for the blanks appearing therein, to wit:

I am a citizen of the State of Louisiana. My name is ——. I was born in the State (or country) of —, parish (or county) of —, on the — day of —, in the year —. I am now — years — months and — days of age. I have resided in this State since —, and am not disfranchised by any provision of the constitution of this State.

SEC. 4. If he be not able to read and write, as provided by section 3 of this article, then he shall be entitled to register and vote if he shall, at the time he offers to register, be the bona fide owner of property assessed to him in this State at a valuation of not less than \$200 on the assessment roll of the current year, if the roll of the current year shall not then have been completed and filed, and on which, if such property be personal only, all taxes due shall have been paid.

SEC. 5. No male person who was on January 1, 1867, or at any date prior thereto, entitled to vote under the constitution or statute of any State of the United States, wherein he then resided, and no son or grandson of any such person not less than 21 years of age at the date of the adoption of this constitution, and no male person of foreign birth, who was naturalized prior to the first day of January, 1892, shall be denied the right to register and vote in this State by reason of his failure to possess the educational or property qualifications prescribed by this constitution: *Provided*, He shall have resided in this State for five years next preceding the date at which he shall apply for registration, and shall have registered in accordance with the terms of this article prior to September 1, 1892; and no person shall be entitled to register under this section after said date.

NORTH CAROLINA.

SEC. 4. Every person presenting himself for registration shall be able to read and write any section of the constitution in the English language; and, before

he shall be entitled to vote, he shall have paid, on or before the 1st day of May of the year in which he proposes to vote, his poll tax for the previous year as prescribed by Article V, section 1, of the constitution. But no male person who was, on January 1, 1867, or at any time prior thereto, entitled to vote under the laws of any State in the United States wherein he then resided, and no lineal descendant of any such person, shall be denied the right to register and vote at any election in this State by reason of his failure to possess the educational qualification herein prescribed, provided he shall have registered in accordance with the terms of this section prior to December, 1908.

The general assembly shall provide for the registration of all persons entitled to vote without the educational qualifications herein prescribed, and shall, on or before November 1, 1908, provide for the making of a permanent record of such registration, and all persons so registered shall forever thereafter have the right to vote in all elections by the people in this State, unless disqualified under section 2 of this article: *Provided*, Such person shall have paid his poll tax as above required.

It is widely charged that the intent of the framers of these late amendments to the constitutions of the several Southern States named was to shut out negro voters from the polls. This charge has been eloquently denied by distinguished Southern members of Congress during this debate. The issue is one of fact, and the only way to determine the facts is by an exhaustive Congressional investigation. I deeply regret that this did not receive first attention in this apportionment by this body. "Right wrongs no man" is an adage as old as civilization, and at this period of irritation and unrest over the issue of disfranchisement, which will soon have to be met and composed, it would have been statesmanlike and wise to have first officially ascertained the facts regarding all the charges and denials about the abridgment of the constitutional rights of negroes in the South before any apportionment bill was considered in this House.

I shall not be unfair to any section or State in quoting the remark of the president of the convention that framed the Louisiana constitution, as showing his view of the work that had been done in framing the new articles: "What care I whether it be more or less ridiculous or not? Doesn't it meet the case? Doesn't it let the white man vote, and doesn't it stop the negro from voting? And isn't that what we came here for?" Again, Senator TILLMAN, with brave frankness, said in the convention that adopted the constitution of that State in 1895: "It has always been my cardinal doctrine as a public man that all white men, as far as the enjoyment of the privileges of government and the emoluments of office are concerned, should be equal in this State, and that the majority alone should govern." There can be no doubt about what the meaning of this famous Senator was in the above announcement of his political views.

In view of the official returns already given in this connection, it would appear that the system presumably adopted to disfranchise the negroes in some of the Southern States has been an undoubted success. Starting in the early part of March last, I made an itinerary of visitations, embracing nearly every Southern State, in my capacity as commander in chief of the Grand Army of the Republic. During my extended tour I endeavored specially to study carefully the environments of the negroes who had served their country in the great war. I had exceptional facilities for doing this, and for discussing their status under a wide range of conditions. I became acquainted with many of the leading friends of the negroes, men who had served in the Union armies in many cases, and with others who took a deep interest in the welfare of the colored people. Some little time ago I wrote several of these prominent comrades and friends regarding the situation, so far as any constitutional amendments of laws in the Southern States led to disfranchising negroes therein. I submit several of the replies I received as germane to this discussion. I do not give the names of the writers simply because of local prejudices, perfectly well understood by every member of this House. I can vouch for their genuineness.

[From Louisiana.]

I inclose herewith copy of resolution adopted at meeting of fifteenth department encampment, and a copy of the same was forwarded to the State constitutional convention then in session in the city of New Orleans.

Never before in the history of the world can it be shown where such a terrible outrage was perpetrated by a civilized and enlightened people. What would a Bismarck or a Gladstone say to such an act?

"Be it resolved, That this department encampment of the Department of Louisiana and Mississippi, Grand Army of the Republic, recognizing that politics or the discussion of political questions are not allowable under the rules and regulations of the order, yet deem it fit and proper to request as a matter of simple justice that the State constitutional convention now assembled grant to the honorably discharged Union veteran soldiers of the war of 1861-1865 the right to register and vote in the State of Louisiana."

Men who under the most trying hardships and difficulties bravely and heroically fought in defense of their country and flag, and then to be deprived of the rights of citizenship of the nation they helped to save, by the very people who fought to destroy it. You may rest assured that the time will come when the descendants of these same people will hang their heads with shame on account of the action of their fathers or grandfathers in having voted for such an unjust, tyrannical measure.

I also forward to you herewith a copy of blank which the law directs each applicant shall fill up in his own handwriting before he can secure a certificate of registration which will entitle him to vote. Now, I can testify under oath that at least 100 men in the ward where I reside have filled up these blanks correctly, and yet were refused registration papers. Upon the other hand, I have known many instances where white men could not fill up these blanks and were promptly assisted in the performance of their duties by the clerks of registration.

Again, it will be seen how the laws of Louisiana discriminate against the colored men, as under our constitution all men (without regard to educa-

tional or property qualifications) are permitted to vote whose fathers or grandfathers were voters prior to the year 1867.

I sincerely hope and pray that the Congress of the United States may, in its great wisdom, be able to devise some method which will result in removing from the statutes of Louisiana and other Southern States these monstrous acts.

[From Alabama.]

I have been at a great loss to discover how any member of Congress, who has taken an oath to support the Constitution of the United States, can deliberately permit the mandates of the fourteenth amendment thereto to be violated. Several of the Southern States have already abridged the suffrage, so far as their colored citizens are concerned, and the remaining Southern States will follow in the same course. Those first referred to are Louisiana, Mississippi, South and North Carolina. In my opinion, it is not only just to said States, but to other States of the Union, and in strict conformity with the Constitution, to reduce their representation in Congress in proportion as the right to vote by the citizens of said States has been abridged. The extent to which this has been done may properly become a matter for Congressional inquiry, and hence it has appeared to me unwise to pass an apportionment bill until the facts are fully known, and then base representation accordingly.

A great many men of high character in the South, who have always been Democrats, but who conscientiously think that the interests of their respective States require an abridgement of colored suffrage, admit that it would be just and proper to curtail their representation accordingly. I am unable to conceive how any Northern Representative can advocate a basis of representation in Congress whereby it would require about five citizens of one section to be equal to three of another. Any such basis of representation is so palpably unjust and unequal that it has seemed to me the slightest reflection would convince any fair-minded man that nothing but discontent could follow such a course. I had sincerely hoped that Congress would not make a mistake in this matter. I have seen it stated, as coming from some excellent men, that the inequality would adjust itself by a future division of parties, and in said division the Republican party would really secure the advantage. A residence of thirty odd years in the South, and active participation in the political revolution that has taken place there since the war, persuades me that any such view is fallacious and chimerical.

[From Louisiana.]

While the people of the South have great admiration for those who stand firmly by their honest convictions, yet their opposition in this State is so bitter against the negro exercising the rights of citizenship that I feel quite sure they would have no kind feeling toward those who would in any way aid in a reduction of their representation in Congress as a consequence of the disfranchisement of the colored man. * * *

It is very difficult for me to understand how any just man who believes it unwise to permit the colored man to vote should desire to have this same man to be placed on an equality with the white man in making an apportionment for representation in Congress.

The action of the white people of Louisiana in bringing about, through intimidation, fraud, and violence, nearly a total disfranchisement of the colored voter is not only one of the most infamous acts ever perpetrated by a civilized people, but it also exhibits a disrespectful and disloyal feeling toward the Government of the United States.

It carries with it a nullification of the conditions which were made requisite for the States in rebellion to return to their old positions in the Union. I can not understand how the loyal people of the nation can tamely submit to such terrible outrages.

Shall we bow in humble submission before those who labored so earnestly to destroy our country and flag, and acknowledge that the terrible sacrifices freely offered during the war of the rebellion in behalf of freedom and equal rights were made in vain?

The white people of the South were alone responsible for every evil that occurred through the enfranchisement of the negro. In Louisiana the colored people prayed to their former masters to cooperate with them; they would cheerfully vote for white men to hold the offices and make the laws, and in return they only desired to be furnished with such public-school facilities as would enable them to better prepare their children to discharge the duties of citizenship, and 90 per cent of all ex-Federal soldiers who were then residents of the State were ready and anxious to lend their influence to bring about this friendly and harmonious action between the white and colored voters. If this fair and judicious method could have then been adopted, and good faith had been maintained between the parties, what a great blessing it would have been to all the people of Louisiana; what a terrible amount of suffering and bloodshed could have been avoided.

Our fertile and beautiful Commonwealth would have become the garden spot of the world. Property would have enhanced in value millions of dollars. The greatest feeling of good will and confidence would have existed among all classes of people. And such noble and Christianlike conduct would have pleased the Great Architect of the Universe that great blessing would have been freely bestowed upon all his children. But no; at the time of the adoption of the fourteenth and fifteenth amendments to the Constitution of the United States a large majority of the white people of the South were bitterly opposed to granting the right of suffrage to the colored man. Notwithstanding their fierce opposition, this great privilege was secured for the negro, and then the old white opposition began to make a fight to obtain control of the State. And the issue made by them through the press and by their campaign orators was not that they were opposed to colored men voting, but that they only desired to place honest and competent men in office.

In 1870, when the Democrats obtained possession of the State government, it would have been at the risk of one's life to have made a public statement to the effect that the Democratic party of Louisiana would ever attempt to deprive the negro of the right of franchise. So you can readily see that the fight against the colored men in the South since the close of the war has been founded on fraud, violence, and injustice.

While the Republican party was in control of the State of Louisiana (a large majority of whose voters were colored men), the affairs of state were well administered. No lynchings were heard of, and but few small defalcations were reported. Soon after the Democratic party came in possession the State treasurer left for Central America, and has not returned up to the present. The amount of money he took with him never was reported, but I have often heard it estimated to be over a million of dollars, and a New Orleans city Democratic official left for Mexico, and it was reported he took with him about a like amount. You will find by the records that in a large number of the Southern States, under Democratic administration, State treasurers have been defaulters to a large amount.

All classes of our citizens here will cheerfully testify that the only two reform administrations elected in the city of New Orleans since the war was secured by the colored vote.

The colored man is not afraid to take his chance with his white brother on an educational or property qualification if justice and fairness is shown him. But in Louisiana the white man can be registered if his father or grandfather was a voter at the date when most of the colored men were slaves. And as to educational qualifications, why, the most learned man in the country if his skin be dark will be refused registration in the city of New Orleans.

With these facts before me, I can not understand how any member of Congress can consistently object to the reduction of representation to the basis of the legally registered votes.

I present these statements of men of high character and large experience in the South, and their views tend to bear out in words what the statistics I have used verify—i. e., that disfranchisement of American citizens, on a widely extended scale, has been carried on in Southern States in comparatively recent elections. The able speech of the gentleman from North Carolina [Mr. LINNEY] was surcharged with statistics and statements almost commanding in their evidence of disfranchisement of American citizens in his State. As a Southern witness, who followed the "Stars and Bars" in the great war, his speech was a powerful plea for justice, in the interest of right and liberty, one that will not soon be forgotten by those who listened to its effective reasoning and dramatic eloquence. His arraignment of the legislature of his State for repealing the writ of mandamus was most impressive, and yet no Democrat from his State rose to deny his charge in this important respect. Referring to the repeal of mandamus, he said:

Mandamus had its origin in the court of King's Bench five centuries ago. It was regarded as the flower of the King's Bench. It was regarded as a judicial prerogative. The court had the same power to issue the writ that it has in this country to issue an order of contempt to preserve order in the court. I thought at first, and many lawyers in the State of North Carolina, some Democrats, concurred with me that a statute repealing mandamus was unconstitutional and void; but upon investigation I found that the writ of mandamus was not a judicial prerogative, but was subject to legislative control by the State.

Now, this grand writ, which is the twin sister of habeas corpus and which is as essential to the enforcement of the rights of the citizen against despotism or other malfeasance of an officer as the writ of habeas corpus is as to personal liberty; that writ which had existed in the State of North Carolina alongside of habeas corpus, without any thought of its having been abolished, in less than two months from the time we held the meeting in the city of Greensboro to determine what remedy we could apply, and concluded that our only remedy was mandamus, was abolished. It leaked out—some man from our meeting—some one told them of it, and they called the legislature together and passed this act; and such an act!

Now, I challenge any lawyer on this floor, any Democrat or Republican, or any gentleman upon this floor to point to a single instance where any legislature has ever attempted to lay its hands upon the writ of mandamus. It can not be shown. It would have produced a revolution up in Yankedom, where the coolest people in the world live. I have examined the authorities of some States, and I find that by this high prerogative writ the fraudulent hand of a bad officer and at other times bad electors has been paralyzed and made harmless by the writ. Here it is repealed. What for? What has that to do with rape committed by negroes on white women? What has mandamus to do with that, pray tell me? What was the purpose of it? They knew as well as they could that the Lord of Hosts lives and presides over the affairs of men; that the effect and purpose of this law was to prevent the courts from interfering with their wicked designs.

In the elaborate argument, backed by full statistics, submitted by the gentleman from North Carolina [Mr. LINNEY], he called attention to the fact that the methods and purpose of the Democracy in North Carolina is to disfranchise Republicans. They bring the race question to the front at every election to influence the public mind on the racial question, that being simply a cover to secure Democratic supremacy by any means. To demonstrate this he calls attention that the official returns show that in eight counties in his State—those being the only eight that have clear negro majorities of the voting population—the election machinery was in the hands of the Democrats, and there was 14,000 majority for that party in those counties, having a colored population of more than 30,000 majority. And, be it remembered, this result was proclaimed in an election involving the disfranchisement of the negroes! Such a statement from such a source, strongly corroborated by official data, is enough to stir up a line of thought not at all complimentary to the spirit and purpose of such unlawful and unconstitutional acts.

Mr. Speaker, I have no harsh words to use in this discussion. It is a subject too solemn and momentous for the display of such a spirit. The political situation in the Southern States, so far as this disfranchisement question is concerned, is a serious constitutional one. If the rights of American citizens have been and are being abridged there, the "shall" of the Constitution must be obeyed and its remedy applied, or we will lose our high estate as a liberty-loving and liberty-defending nation. It is not a question of a "white man's" rule, but one of an American citizen's constitutional rights. If not, why not? The fruits of the stupendous struggle of the sixties were garnered into the thirteenth, fourteenth, and fifteenth amendments to our Constitution, and thus became a part of the fundamental law. These are inviolate, as fixed as the north star. And they will forever remain a monument to the saviors of the nation to full liberty.

Some people claim that the equal rights granted to the negro race were a huge mistake. That question is not germane to this discussion. The negro race was raised to an American citizen's estate by the spirit of liberty, after the greatest internecine war of the world had closed in a complete victory. Wise or unwise, the Constitution guarantees the negro the equal protection of our laws and our liberties, and our sacred honor is pledged to this. He is an American citizen panoplied by our Constitution. I know well how serious the "negro problem" of the South is, and I also believe that time, prudence, wisdom, and the following of the rules of the Great Teacher—of "bearing each other's burdens"

and "doing unto others as ye would that others should do unto you"—will compose all the irritations and dangers so much in evidence in the present, in God's good time.

I have spoken of my visitations in the South during the past year, and feel sure that reproducing my speech made at the reunion of the "blue and the gray" at Atlanta on July 21, 1900, will prove how fully and in what a broad spirit I covered the ground of past differences between the South and the North from a private Union soldier's point of view. The spirit of fraternal concord displayed at that memorable meeting of former foes, on one of the famous battlefields of the great war, will be a sweet memory to their dying day with everyone who was present. And I believe that the same spirit displayed at this reunion should dominate all American hearts. This verbatim report of my address is taken from the Atlanta Constitution:

I am proud to be present on this battlefield of the great war and to meet and great comrades and veterans of the North and of the South on this anniversary of the Peachtree Creek battle of the sixties. I am not here to speak of its details, for others will recount the reminiscent features of this famous fight who were participants on either side; but I am present as a Union veteran, to show my full sympathy with reunions of this sort, where brave former foes, once engaged in the hot rush of contending armies, now meet as friends and fellow-citizens, with common aims and in common loyalty to the greatest Republic of the world. I am to speak to-day not officially as the commander in chief of the Grand Army of the Republic, but as a veteran and a private soldier of Company A, Thirty-fifth New York Volunteers, in which I carried a gun for two years, what wells up in my heart on this great occasion. I believe the time has come when plain words should be spoken of a past that will forever witch the world by its great deeds and great men, covering the period of American history between 1861 and 1865.

THE GREAT WAR DAYS.

I will not dwell long upon the unhappy trend of events which led up to the opening of the great war here and now. It will be enough to say that the South and the North became divided in the current of national ideas and sentiments of liberty, and slavery and State's rights became the cause of an "irrepressible conflict" between two great sections of the Union. Our diplomacy and statecraft lamentably failed to compose the sectional differences that divided the nation along sectional lines, and the final appeal to the bloody court of war through the cruel arbitrament of the sword came as the last resort in the composing of vital questions in which the fate of the Union was at stake.

And there followed four years of the fiercest internecine war of all ages, fought in the main by armies of volunteers on either side, composed of the flower of the North and of the South, equally brave, equally as honest in their convictions of duty, and of a girth and brain of lofty patriotism that has won for their soldierly qualities the admiration of the whole world. The great struggle was a stupendous conflict unparalleled in its sacrifices in the history of wars. More and greater battles were fought and more men were killed, wounded, and died of disease than ever before went to their doom in the horrid holocaust of war during any similar period in history.

THE CAVALIER AND PURITAN.

The end came at Appomattox, and the Cavalier Lee and the Puritan Grant faced each other on the closing scene of the most pathetic and bloody drama of all the ages. The half-drawn sword was motioned back, and the victorious leader's words sounded forth the death knell of past national divisions and greeted the glorious dawn of a new destiny, when he said: "How many rations do your hungry soldiers need?" And then followed the blessed assurance that horses and side arms could be retained, the former as helps in the new life of peace and the latter as evidence of personal loyalty. What a scene was this, my countrymen? Here stood side by side the grand representative of the Cavaliers and the splendid type of the Puritans, facing a new epoch in the history of the saved nation. In this hour, big with events, the Puritan and Cavalier were merged into a new product of our soil, the one representative type of the future within our Union, the American Christian citizen. Time's curtain then dropped down to shut out from view the carnage of war, blood ceased to flow, and only the memories of the dread strife remained. Peace, sweet peace, came to bless all homes and to gladden all hearts within the circle of our Union.

A NEW DESTINY.

The era of war had ended and the epoch of peace began. If it be true that there are no birds in last year's bird's nest, and that there can be no turning of the wheel with the water that has passed, so also must it be true that dead and gone events in the life of individuals and nations must rest upon the history of the recorded years. The decision reached at Appomattox was that slavery and State's rights and the Stars and Bars should be surrendered, and henceforth there should be but one flag, one faith, one indissoluble Union, and one ideal and sentiment of American citizenship. This was the immutable basis of the final settlement of the questions fought to a finish in blood and agony, in a sum total of sacrifice almost appalling to contemplate. Ours was not a war of conquest, but a war to commandingly solve and settle the problems sectionalism had brought into view, for it had come to pass that national unity was at an end unless this could be done. As the great Lincoln tersely and wisely stated the issue, the nation could not exist "half slave and half free." When the last resort of war had been tried and the South surrendered, then the bond of a common citizenship was sacredly signed in the blood of almost countless thousands, and henceforth there was to be no sectional division, and former sectional lines were to disappear utterly. This was the issue and judgment of fate and war.

HAPPY RECONCILIATION.

I am proud to say on this day that as a whole, and under all the conditions in a broad view, the South has nobly kept the bond made at Lee's surrender. The reconciliation has been as complete as it has been glorious in the happy circle of our redeemed Union. The bravest are the tenderest, and the heroes are the daring in all battles of war or peace, and the stately heroic Lee and his able generals, as a whole, fully accepted the bond of blood and at once entered upon the era of peace worthy in a citizenship, surcharged with the sentiments of lasting peace and concord. But it remained under God for the Spanish-American war to come to bring into line side by side the sons of veterans of the North and the sons of veterans of the South, marching to the music of the Union, under the Stars and Stripes, and commanded by former wearers of the gray and the blue, to bring forth full accord between old foes, and thus secure a common sentiment of American patriotism. This meeting on the ground where the brave men fought and fell during the fierce onsets of the blue and gray in the sixties but illustrates the lesson of peace and concord of the nineties I have just mentioned. I trust this great gathering of former veterans of the armies of the South and of the North will bear lasting fruit as an object lesson of fellowship as American citizens, one that stands for a strong and high civilization.

SOME IRRITATING MEMORIES.

I am aware that both in the South and in the North there linger irritating memories over the great war. It is not strange that this should be so; it would be strange, indeed, if it were otherwise under all the remarkable circumstances surrounding the mighty conflict and victory. There is some misunderstanding, no doubt, even yet, both in the North and in the South, over the conditions and proprieties which the surrender made binding upon all.

The South fought under their Stars and Bars, and the principles these stood for, with a heroism unsurpassed in battle record, and when they laid down their arms in surrender all they fought for went down with their silenced guns in an unquestionable settlement and decision of all the issues involved. The Confederacy passed into history as a dead and gone effort to "found a new nation" on American soil, and its furling flag should have no place in public view or parade henceforth. Old things have, indeed, passed away with us, and the new promises of present and future growth in all that makes a nation happy and free, as well as wise and truly great, should be as the "pearl of great price" to every soul in our dear land.

I do not like to hear the term "rebels" and "traitors" applied now to the former foes of our Union, for it seems to me that men who volunteered to face death in the hell of battle did all that honest men could do to prove their loyalty to principle and duty, as they saw it from their point of view, duty, and principle. When they yielded to the fate of war, and accepted the new destiny of the nation, they stood upon a common plane of American citizenship, flesh of our flesh, bone of our bone, and Americans all; and I do not believe we should ask ex-Confederates to admit that they were wrong or traitors in the service they honestly rendered the Southern Confederacy. I know of no higher test of love of country than that of periling one's life for his ideals of law, justice, and liberty. Under this view it would follow that a final settlement of our sad and bloody differences should forever end all harsh recriminations regarding the great war. What I am anxious to see is the disappearance of all unworthy reminders of the terrible conflict, and the culture of present unity and righteousness over all the Union.

A COMMON CITIZENSHIP.

There can now be but one ideal of American citizenship, one Stars and Stripes, one bulwark of future national glory, and one line of patriotic teachings for all and by all. In this view the keeping alive of sectional teachings as to the justice and rights of the cause of the South in the hearts of the children is all out of order, unwise, unjust, and utterly opposed to the bond by which the great chieftain, Lee, solemnly bound the cause of the South in his final surrender. I deeply deplore all agencies of this sort, because in honor and in chivalric American manhood and womanhood nothing of this nature should be taught or tolerated for an instant. The facts are that one of two things is true—first, all the issues of the South were surrendered to the Union, or, second, the war for the preservation of the nation and the freedom of the slave and the end of the cause of contention was a failure. The whole world acknowledges that the final victory of the matchless Grant was complete, and that the South lost and the Union won.

Recently I visited the Southern States in my capacity as commander in chief of the Grand Army of the Republic, and from the opening to the close of my official visitation I received the warmest and most cordial welcome, both from ex-Confederates and ex-Union veterans and comrades. Here, in this beautiful city of Atlanta, the hospitable gates were opened wide, and a camp of Confederate veterans came in a body to meet me, and I shook each one by the hand as they slowly marched past in two ranks. I was touched to tears by the pathetic scene. The memory of other scenes and other times came back to me, and I could but contrast the fierce onsets of foes on bloody battle lines to the blessed hand grasps of peace. At Dublin, in Texas, a deputation of ex-Confederates and comrades met me, coming 20 miles by rail to escort me back to their town, and we were welcomed by the mayor and officials, and a salute was fired in honor of the occasion. At a banquet held that evening the majority present were members of the Confederate camp at Dublin.

A TOUCHING INCIDENT.

I shall never forget the thrill that one ex-Confederate's speech sent through my soul. He said that he served in the Confederate army all through the war, and at its close his heart nearly broke under the burden of final defeat. He almost doubted the providence of God, as in tears and agony he laid down his arms. But the travail of soul passed, and he communed thus to himself: "I have done my duty as I understood it; have periled all and lost all in the conflict, and now, under the laws of fate and of war, I fully accept the new destiny. I have a Confederate flag I followed in the war, and once a year I bring it out and display it in my home. I have made provision in my will that when my time comes to go, three ex-Confederates and three ex-Union veterans shall bear my body to the tomb; and I have directed that my Stars and Bars shall be wrapped about my body so that I may sleep the sleep that knows no waking within the folds of the banner I followed so often in battle; and this is to be the disposition of the emblem of our lost cause in my family—buried out of sight forever!" And he closed one of the most eloquent speeches to which I have ever listened as follows:

"Now, sir, I am an American citizen, as loyal as you can be to the Stars and Stripes, and to the new destiny of this Union. I would willingly peril my life in its defense, and my children are taught to live in the present and for the future, zealous for the fullest realization of the fruits of the victory won by the armies of the Union, and faithful in all that inspires sentiments of loyalty and strength in the institutions of our now happy reunited nation."

THE RIGHT DOMINATING SPIRIT.

This is the spirit of wisdom, as it seems to me, which should dominate all American hearts in the living present of this closing year of the greatest century in the life of man. Let us cherish our country, our whole country, and nothing but our country, and labor to secure the raising of the Stars and Stripes over every schoolhouse in the nation, and to place common text-books within them in every way worthy of a great nation, as the only safeguard of future national development and glory. It cost the lives of a million men and untold sacrifice in suffering and treasure as the price paid for not wisely understanding each other, South and North in the sixties, and now the lamp of the Lord should be our guide along the ways of right and righteousness, within the circle of our great country, so as to be worthy of our birthright, bought with such a price, and where a union of hearts and a union of hands and the flag of our Union may be our watchword and defense forever.

BATTLEFIELD PARKS.

The battlefield parks which have been established in various parts of the country, dedicating to our posterity the sacred areas where were settled the momentous issues which caused the great war, are, I feel confident, one of the composing and wise agencies in the elimination of prejudices and enmities born of that unhappy period. I am earnestly in favor of this policy, and it is a new growth of the national spirit of true Americanism in which is embraced the sentiment that settled antagonisms should be fully accepted as of the past, and that the fields of carnage where valor

"Sung a music to the march of man"

should become the common center of the affections of the whole people. Such monuments will tell the story of a nation's sacrifices as nothing else

can. These will show what war means, and what it costs, and these mute monuments will teach coming generations the true glory and sublime of patriotism and the highest human endeavor. And more, the environments of these battlefields will make clear the lessons of reconciliation as the joint heirs of either side meet in glory and in joy to pay a tribute to the memory of brave heroes thus commemorated for all time to come. I am strongly in favor of expansion along this patriotic line of action, and national appreciation of the deeds of heroes, as worthy of the full confidence and support of all patriots.

A NATIONAL MEMORIAL DAY.

It seems to me that a national memorial day, falling on the last Sunday in May, would be a prudent and wise selection. It would bring to the association of Memorial Day a sacred memory day, the guardianship of the church, and the tender memories of families, societies, and veterans of all wars, each in their own way to pay tribute of flowers and tears to the memory of the dear dead. I would make it national in order that a common day of devotion might strengthen the sentiment of affection among the living, and it should fall on a Sunday to insure that peace and rest which the holy Sabbath should always command. If this national day and date are fixed upon, the distracting present accompaniments of Memorial Day in the form of boat races, baseball, and many forms of sport would not come in to mar the solemnity and change the original sacredness of this holy function of patriotism and affection.

The last Sunday in May would meet the broad requirements of flowers and season as well as any possible date, and but little difficulty would attend the change. The important object of so surrounding Memorial Day as to fix its beautiful sentiment in the affectionate remembrance and observance of coming generations is one of greatest moment; and it is believed that to have it invariably fixed on a Sunday would secure the desired result. The new custom of scattering flowers on the waters in memory of those who died on the sea or on ships is a touching memorial worthy of the widest extension and observation. Let us embrace all our dead in the loving circle of a national Memorial Day, and thus the soldier, the sailor, and the citizen would receive the tribute of flowers as the tender custom of decorating the graves of our dear more and more finds favor among our people.

RETURN OF CAPTURED FLAGS.

Much that was wise, with much irrelevant, has been said in the past, as well as in the present, about the return of captured battle flags. I do not see what real service agitation over this question will render the living veterans, either of the South or the North. They are a part of the dead past and of an issue forever closed. Many of the heroes who won or lost the colors of troop, battery, or regiment are beyond the reach of any action proposed with these relics of brutal war, and I do not know that there has been any demand made by those from whom flags were captured, or by those who captured them, for any action whatever to be taken regarding their present condition. After all the veterans of the sixties are at rest, the sons of veterans of the South and of the North can make any disposition they please of these emblems of departed significance, and without the slightest shock to the most sensitive or prejudiced mind. I am sure I voice the commanding sentiment of the veterans of the gray and the blue on this question when I say that silence is more desirable than agitation in connection therewith. On the great record of these years the history of unsurpassed heroism in capturing or defending these battle flags has an undying place. This monument to valor will never perish, but the crumbling flags will soon decay. Under these conditions, let us leave both as an undisturbed legacy of equal heroism to the future.

VETERANS OF THE BLUE AND THE GRAY.

This meeting is deeply pathetic to me, and no doubt to all who are present. It marks a broad fraternity of sentiment among reunited citizens of our great country. We can not fully realize what a vast national domain we have to hold and develop in the coming years. Eighty millions of free and happy souls, heirs of the greatest Government. Of all the people, by all the people, and for all the people; of all mankind, presents a power for good and for God unparalleled in human history. Our internecine battles of horrid war are ended, and the rule of righteousness should henceforth be our guide and inspiration. Let us go forward in loyal courage to fight the battles of peace as valiantly as we met the shock of battle on either side a generation ago, and in union and devoted citizenship remember that righteousness exalteth a nation. If we do this, our last days will be our noblest, and the future will bless our final victories, when, as Abraham Lincoln prophesied, "this land shall be the home of 600,000,000 free and happy people."

SURSUM CORDA.

And now in the farewell that I must speak, under this fair sky, now so peaceful, once filled with the thunderclouds of war, let me urge you men of that heroic past which we all remember; women of that day of desolation and of sacrifice, when we all laid our dead away; yes, let me implore you that we, the Americans of this our land—our land of one flag and of a common glory—that we, forever united, turn from all that grieved our poor, bruised hearts, and, facing the future, teach all our children that this, under God, is their land—a land to be ruled in righteousness and kept for enduring liberty!

Mr. Speaker, we have before us grave duties to perform in connection with the franchise in a number of the States of our Union. A full investigation without fear, prejudice, or favor by the Census Committee of this House should at once be undertaken. This course is demanded by the plain requirements of the Constitution and in the broad interest of all the people. Worthy statecraft is the strong arm of just governments. We can not as a great free people permit wrongs to be done to the humblest of our citizens without endangering the liberties of all. Judge Emory Speer, of Georgia, in a recent speech at Atlanta, took this broad and statesmanlike ground upon the constitutional rights of the white man and the negro:

We should resort to no questionable expedient. We should accord to ignorance or worthlessness of whatever color no hereditary right to the privileges of the elector. That "Wisdom, justice, and moderation" which proudly adorn the blazonry of the Empire State of the South should guide our councils in all the deliberations so vital to our future. We should hazard no unconstitutional risk in prescribing the qualifications of the elector. We should hew to the constitutional line, let the chips fall as they will. This is manly. This is the part of honest men engaged in a great and arduous struggle to secure to themselves and their posterity the blessing of lawful popular government. Then in truth will the people of the South enjoy their own again.

Ex-President Cleveland lately uttered these prudent and wise words:

This is a time for sober thought, tolerant language, and fraternal counsels. * * * Above all things, there should be a manly renunciation and avoidance of undue sectional control.

These expressions were not made specially regarding the negro race in the South, but the reference to "sectional control" bears a striking relation to all the causes leading up to the "undue sectional control" to which he was referring. If Congress does not show its courage and statesmanship in resolutely dealing with the issue under discussion, a grave peril surely confronts us. Congress has a sworn duty to perform in connection with the present apportionment which it can not in wisdom or justice ignore or disobey. Lack of stalwart courage is always ignoble in the swirl of the carnage of battle or in the no less important conflicts over constitutional rights.

Reason, law, and statesmanship are the resources of the highest civilization, and we are face to face with issues and sworn duties that will test our best inspirations of loyalty and liberty. In the year 1809 two children were born who became great historic figures in history—Abraham Lincoln and William Ewart Gladstone. Each lived to win universal reputations of great renown. One represented England and the other the United States. Slavery existed in British possessions and in the United States when these two men appeared, at the age of 22, to take up their public life work. When Abraham Lincoln fell a martyr to liberty, and his great heart ceased to beat for the downtrodden and oppressed, slavery had been swept away wherever the union jack and the Stars and Stripes floated.

Gladstone led the culture of safe statesmanship that secured the abolition of slavery in his great country without war. Lincoln was forced to lead his country through "seas of blood" before the final doom of slavery on our own soil was sealed; and this became irrevocable with the surrender at Appomattox.

These two pictures are worthy of careful study by us all under present pressing demands of right and duty.

Where there is a common and patriotic effort to find the way of justice and law, the way of law and justice can always be found. When a great constitutional duty is disregarded and no just means are tried to right apparent wrongs, liberty is endangered and citizenship dishonored.

As to what will or can solve the negro problem, Booker T. Washington argues, in the August number of the North American Review, that "education" will solve it. In his views, which are presented in a way to command general respect on broad educational lines, there are practical considerations of great wisdom. He holds that the sort of education needed is that which "begins in the home and includes training in industry and habits of thrift, as well as mental, moral, and religious discipline, and the broader education which comes from contact with the public sentiment of the community in which one lives."

WISE SAFEGUARDS.

This is cogent reasoning and prudent counsel. A reasonable and impartial property qualification and a just and safe educational test are not objectionable, providing that the same are applied to all citizens alike, and that each is free to cast his ballot in peace and have it counted in righteousness. Unless this is the rule then any political action that leads to the disfranchisement of American citizens on account of race or color is not only unconstitutional, but fraught with grave peril to American justice and citizenship. The following plank in the platform of the Philadelphia Republican national convention clearly sets forth the policy of the Republican party upon this subject:

It was the plain purpose of the fifteenth amendment to the Constitution to prevent discrimination on account of race or color in regulating the elective franchise. Devices of State governments, whether by statutory or constitutional enactment, to avoid the purpose of this amendment are revolutionary, and should be condemned.

I have the honor to represent in part, measured by its wealth, its population, and its commanding elements of national strength, the greatest State in the Union. I am proud to say that we have manhood suffrage, based upon the plain provisions of the Constitution. And every son of its soil, and all naturalized citizens, under just local regulations, can cast their votes in perfect freedom. The statistics prove that its citizens exercise the right of franchise in full measure, and in a manner worthy of the honor of our State and the safety of our electorate.

Reference has been made to restrictions in a number of States of our Union, where educational and property qualifications are enforced to regulate the suffrage.

I am frank to say that our experience in New York, on the whole, leads me to believe that universal suffrage is a good system in all its bearings. In time of war every citizen between the age of 21 and 45 is enrolled. When a draft is ordered, the names are placed in the revolving wheel, and the choice of chance, when a name is drawn, settles the claim of the Government to the services of its citizens in its defense. Now, it seems to me that when a citizen can legally be taken thus drastically from his home and all he holds dear in life to become a soldier in war, amid all its dangers and sacrifices, that he is entitled to a vote in periods of peace as a constitutional right, even though he is poor or is unable to read and write. And in this view New York opens the way to the ballot box to all its citizens.

Under our broad constitutional provisions we have no trouble in meeting the fullest constitutional tests. We can discuss full enfranchisement with a clear conscience and present a satisfactory compliance with constitutional prerogatives. Wherever State restrictions lower the electorate and practically disfranchise American citizens, then the plain mandate of the Constitution should be enforced and the representation made to conform to the constitutional requirements. I would apply this test to any State and to every State, without the slightest impartiality whatever, because the qualifications of electors should be uniform in all the States of our Union. I believe this policy is one that would secure general respect for the Constitution and justice for all State and national interests, and all would participate alike in the privileges of citizenship by means of the ballot. Education will more and more eliminate ignorance, and thrift will certainly follow a better culture of manhood.

I can not understand how any patriotic and loyal American citizen can object to a just constitutional rule that a restrictive franchise should be followed by a lowering of the representation based thereon. Any objector to a negro vote should fairly refuse to benefit by this uncast ballot. Before the great war a slave stood for three-fifths of a vote in the Southern States. Now each negro of lawful age stands for five-fifths in voting power—a full vote. If he is disfranchised, then a gain of two-fifths in voting strength is added to the electorate as compared with ante-bellum days, thus securing a larger representation and yet denying the right to vote. Where all are American citizens, under sacred constitutional provisions, such discriminations should be promptly swept away by an aroused public sentiment of justice and law over our whole country, or those communities or States which bring about other conditions should not be permitted to profit thereby in the matter of representation.

This is a good time to rise to the demands of constitutional justice. The opening of a new century calls for a higher development of all the moral and political forces entering into our national life. We have it in our power as citizens of a Republic unrivaled in history to so act in peace and concord as to secure the blessings of the highest civilization of all the ages of mankind in the near future. Above all, the problem is one concerning Americans alone, and the exercise of patient statecraft and the loyal defense of constitutional rights under God will eventually bring about a happy solving of an issue which now seems so perilous in many ways. The spirit of our great martyr President should animate and inspire us all. We should be quick and proud to "quit ourselves like men" in the face of the present race problem. If we do, with reason and without passion, the true light of safety and justice will surely bless all our borders.

When President Lincoln was walking through the streets of Richmond, Va., April 4, 1865, some negroes knelt at his feet and thanked him for their freedom. The President's noble reply was as follows:

Don't kneel to me; that is not right. You must kneel to God only, and thank him for the liberty you will hereafter enjoy. I am but God's humble instrument, but you may rest assured that as long as I live no one shall put a shackle on your limbs and you shall have all the rights which God has given to every free citizen of this Republic.

In this spirit of worthy American freedom let us defend the constitutional rights of every American citizen, and so prove "Equal to the present, reaching forward to the future." Above all, let there be no "color line."

The Negro Problem of the South.

SPEECH

OF

HON. CHARLES H. GROSVENOR,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 8, 1901.

The House having under consideration the bill (H. R. 12740) making an apportionment of Representatives in Congress among the several States under the Twelfth census—

MR. GROSVENOR said:

MR. SPEAKER: The problem of what to do with the colored man is becoming intensely interesting to the people of the whole country, and, taking advantage of the order of the House, I propose to submit an article from the Forum of last August, written by myself, which clearly expresses my views. It is as follows:

THE NEGRO PROBLEM IN THE SOUTH.

If I for one moment believed it possible that in any contingency I could have any feelings other than those of absolute fraternity and cordial good will toward the people of the South, I would not put pen to paper upon the subject-matter of this article. Indeed, I feel as much anxiety for the welfare of the Southern people—for the growth and development of their splendid possibilities in all directions—as I do for the welfare of the people of any

other section of the Union. All my animosities of the war period have been long since lost sight of. So much, then, for the feeling with which I enter upon my present task.

It may be stated as an unquestionable proposition that the foundations upon which our Government rests differ widely from those of other nations. The authority of our Government is founded upon the consent of the governed; and this is not a phrase to be criticised and trifled with when the subject-matter of discussion relates to the people of the organized States of this Union, nor even when it applies to the people of territory acquired by conquest or treaty, although the application differs in various cases.

It is not necessary to enter upon the field of discussion which has grown out of some of our foreign relations. Let us, then, start out by accepting the proposition that all men in the United States have an equal right to be consulted about those matters of the United States Government which, by any possibility, can affect them. To take from members of a free government their individual right to participate in that government—a right guaranteed by the constitution of the State in which they live, and long recognized as undeniable—would be to act in opposition to the doctrine so tenaciously adhered to by a large body of men in Congress during the recent session, namely, that it is the consent of the governed alone that gives power to the governing body.

That there is a movement on foot, fully developed and already largely executed, having for its aim and object the disfranchisement at the polls of a body of men in the South will not be denied by any candid writer or thinker. It is not alone the hope of those who are thus moving to exclude ignorance and vice and incompetency, but it is their hope to make it impossible by law that the rights of citizenship shall any longer be exercised by the colored men of a majority of the Southern States. Already, in the States of Louisiana, Mississippi, and South Carolina, constitutional amendments have been adopted which, by their operation, will exclude from the privilege of voting a very large minority, if not indeed a majority, of the people of these States.

No intelligent, fair-minded man will deny that it is the purpose of the organizers and promoters of this movement to make it impossible for the colored man to vote in those States. Nor did any gentleman of the South, in the recent reference to the matter in Congress, deny that the manifest intention is so to shape legislation as to have it operate unequally upon the white and the black. Indeed, the gentlemen of that section justify it, and that justification will be discussed here briefly. But, to make it a little plainer and more emphatic, it is intended that offices of every kind shall be held by white men alone, and that the colored men shall have no voice in choosing who of the white men shall hold the offices.

The colored men of the South are to become serfs, persons in, but not of, the Southern States. Stripped of all power of resistance by the use of the only weapon that a free man has in a republic, he would be subject at once to the will of his white masters; and it may be well argued that his condition in that case would be worse than it was in slavery. Then he had certain claims upon his master; then his master had great interest in him, at least in his physical welfare. Now the master would have no interest in the colored man whatever. He would be simply his master, and would be under no obligation to protect him under any circumstances whatever.

In order that this argument may be considered fair and equitable, there should be no misunderstanding as to what the movement in the South has for its ultimate object. Great art has been used to make it appear that the disfranchisement contemplated in the new formula of political rights is applicable alike to the white and the black; and, literally speaking, that is true. But before assuming the responsibility of this article the writer interrogated a number of gentlemen distinguished in political and social life in several of the Southern States as to whether or not it would be just to charge that the movement was intended to disfranchise the black and preserve the white from the operation of the new system.

Without exception they answered: "It would be perfectly fair, for such is the real purpose." It will not be forgotten that a distinguished Senator openly declared that purpose in the United States Senate recently, nor will it be forgotten that a number of the Representatives of the South in the House manfully defended their attitude upon this question on the ground of their determined hostility to negro domination.

If anything were lacking to show that the real purpose is to disfranchise men upon the basis of color, an examination of the new provisions of the constitution would settle the question affirmatively. To illustrate: Two men present themselves at the polls, one a black man and the other a white man. Upon examination as to their educational qualification, they both fail in like degree. But the interrogator at once puts to the white man this question: "Was your father a voter in 1860?" The answer is in the affirmative, and he is permitted to vote. A like question to the colored man reveals the fact that his father was not a voter at that time, and he is at once turned out as a political pariah. Here we find the whole matter of the amendment disclosed.

Now, what have we here? One of the most un-American, undemocratic provisions that can be imagined—hereditary right of suffrage—a species of class legislation utterly at variance with the American spirit. The questions of fitness and of the benefits of intelligence to flow to the State are entirely discarded.

What will be the effect of this movement upon the South, and, incidentally, upon the whole country? It is the principal object of this article to point out that the danger to the people of the South is far greater than it is to the other people of the United States. The history of the world proves that men who have tasted liberty know its value and resent its removal. Not only will the negroes show their resentment, but they will cease to produce anything of value for the body politic in which they reside. They will add neither to the material welfare nor to the intellectual growth and strength of the State.

It may be argued at this point that during the civil war the slaves of the South remained at home and cared for the families of the men at the front. That is all true, and does not argue against this proposition. They had never been free men, and they did not know what the right to vote meant. They have tasted something of liberty, and no men enjoyed citizenship more deeply than did the enfranchised slaves of the South. It came to them as an unexpected boon, and they valued it beyond comparison.

No people ever developed the elements of good citizenship with such remarkable rapidity as did the colored people after emancipation. After two hundred years of bondage they were liberated, and civil and political rights were accorded to them. The inference that social equality had not been a part of the transition, that distinctions of race and color still existed, was at once accepted by them; and it has been a world's wonder how faithfully the colored people have observed these lines of distinction.

And, more than that, take the whole country over. It has been a world's wonder that they have sought after and obtained such a degree of education as they are shown to have acquired. Figures would be tiresome in this connection; but their institutions of higher learning, their devotion to the public schools, and their deep interest in all that relates to the uplifting of their race have marked them as a most peculiar and interesting race of people.

It will be a marvel if disfranchisement does not stop all, or practically all, progress in this direction. In such event what has the colored man to look forward to? Simply a lower stage of degradation. He knows that if this

scheme is put into operation his children and his children's children, for all time to come, are to be in practical slavery. Why should he struggle? Why should he educate himself and his children? He will retrace the steps he has taken toward good citizenship much more rapidly than he has advanced. It is the history of the world, and there is no escape from the blighting effects.

But it is said, in answer to all this, by the men of the South, men of character, men of intelligence, "We will not live under colored government." Very well. Assume this to be a proper position to take, and who will deny it? What State in this Union is under colored domination to-day? There are in the Union a number of States having a greater voting population of colored men than of white men; and yet not one of those States is dominated by the colored race.

Take the State of Mississippi—no colored man in Congress. There is no more danger of colored domination in one of those States than there is that intelligence will find itself prostrated by ignorance, enterprise by sloth. This is not a just argument. It never was. There is no such thing as negro domination, and there is no danger that there ever will be. The colored man as he becomes intelligent grows in virtue and love of country; and he is as likely to vote for the white man as for the black man, and much more so, as has been demonstrated a thousand times.

I fear that the just historian of these hours of apparent political evolution in the South will be compelled to write that this effort toward the destruction of the franchise of the colored people was a play of partisan politics and not of sincere patriotism. I fear this; it may not be so, but that is my anxiety. For more than thirty years now, about one-third of a century, the colored man has been a voter. During that time the Southern States have flourished beyond all comparison.

The property, the prosperity, the happiness, the good government, the education, and the civilization of the Southern States have increased in a ratio most gratifying; and all this has been accomplished with the political rights of the colored man unassailed. Why should this new suggestion force itself in here? Why should it be insisted upon that this race, which has suffered so much, so long, and so patiently, and made such rapid strides toward a better condition, shall now be disfranchised?

The white man of the South at the end of the war found himself living where this great colored element resided. It was one of the burdens. It could not have been expected otherwise. It could not have been imagined by the people of the South that in case of failure they would bear no burdens growing out of a war. They were compelled to bear burdens, not the lightest of which, in their estimation, was the carpetbag government. But they have gotten rid of that, and every Southern State is now under the control and influence of its own people.

The question now presented to the people is: "Will you let well enough alone, or will you hazard the future?" Can not the people of the South be patient while the transformation is going on? Is it because of the ignorance of the colored man alone, or is it a prejudice because of his color? If it is the first, there is an excuse for it; if the second, it is without excuse. The remedy should be patience, hope, discharge of duty, and the education of the black men of the South. If I may be permitted to say so, the remedy lies also in the education of the white men of the South, to see to it that the colored men do not get ahead in the great race of life.

It is to be hoped that the people of the South will halt at the position now assumed, and that no other States will enter upon this unfortunate process. The forthcoming census of the United States will disclose approximately the situation in the South. We shall learn the number of voters, comparisons will at once be made, and agitation will at once become manifest in American politics. It will be regrettable. It will be a sad day for the country when there shall come a new political issue which shall take sides and be organized for political contests along geographical or sectional lines.

These are merely outlines, brought to the notice of the reader for the purpose of suggesting thought and study, and with the hope that the gravity of the situation will be met by calm judgment and patriotic action.

CHARLES HENRY GROSVENOR.

Will the colored man remain in the South as a slave, for that is what he is coming to? I know it is boastfully stated here on the floor that great sums of money are being lavished on the education of the colored children of the South, but is there not danger that the smell of the blood of the overthrown manhood of the colored man will further stimulate the threats to enslave him? Is there not danger that he will become in fact, if not in law, a slave? His disfranchisement is for the purpose of crippling his power. Why not take another step and cripple his power by removing the means of education from him? Is not this being done?

Within forty-eight hours after boasts were made on this floor of the vast sums of money that North Carolina was expending for the education of the colored man alike with the white man, three bills were introduced in the North Carolina legislature to strip from the colored man all participation in the common schools of the State except such as arises from the taxation of his own property. It is in the power of the Southern States to do it, and is there any doubt that it is the purpose of some? I do not; I hope not; I pray that it is not. I fear it is.

If this develops, the result will be to place the colored man of the South in a worse position than he was in slavery. He will be, to all intents and purpose, the burden bearer of the labor of the South, with no claim for support in case of sickness, no claim to be housed and fed by his master, but he will be a servant of servants. His position will be that of absolute political, educational, and industrial slavery. Can this be? It looks as though it were coming. Every turn of the windlass binds the shackles closer and closer.

I copy a suggestion from some Southern newspapers, which shows what must apparently occur. I cite the Raleigh Post, of which I know nothing, but which talks without hesitation:

EXODUS OF BLACKS FROM NORTH CAROLINA.

The disfranchisement of the negroes of North Carolina has its economic as well as its political aspect. The electoral privilege, the right of citizenship, is the most highly regarded of all that a State can confer. Even men who are negligent in the use of it arise to arms when it is sought to take it from them. That the blacks of North Carolina should bitterly resent the robbing them of the right they have heretofore possessed is natural, and that this resentment should take the form of removal from the State is a sequence that was to have been anticipated. It is not probable that the blacks will

better their material condition by any exodus from the State, but they will find consolation in the fact that they have thereby preserved the one privilege which men prize next to life itself.

That there is a considerable exodus of the blacks from North Carolina since the passage of the constitutional amendment is shown by several statements. Royal Daniel, secretary of the convention of Southern commissioners of agriculture, writes to the *Atlanta Journal* that "the negroes are on the move." The *Observer*, of Charlotte, N. C., says: "The negro is a failure as a voter, but he has his uses as a farm hand, and there is no doubt that the farmers in some sections of the State are sorely put to it for help to pick their cotton crops. It is right to exclude these people from the ballot, but it is suicidal to drive them by bad treatment out of the State."

The *Raleigh Post* tells the truth about the matter when it says: "If this exodus keeps on, these land owners and farmers will be in a worse condition than they have been since the war, and will have no one to thank for it save the arrant demagogues whose reckless imbecility is only equaled by their unblushing and unselfish aspirations."

The exodus can only be stopped by one means, the restoration to the blacks of the rights which have been taken from them. If this is not done, the State will join the list of decadent States, such as Nevada, for which there seems to be no future.

The exodus of the colored people of the South, which apparently will begin and go on, and must, in the very nature of things, would be a national disaster, not only to the people of the South, but to the people of the North, and yet it seems to be their only remedy, and with the vast lands in the Indian Territory and Oklahoma, and with the vast unoccupied lands in Missouri and Kansas, it looks as though the drift of the colored labor of the South would shortly ensue and go forward.

I have no feeling in this matter but that of deep and unqualified regret and sympathy for the South, and I do not undervalue the burden they are bearing; but I believe they are overestimating it, and I feel that their efforts to relieve themselves of the difficulty are pressing them closer and closer and that the burden will become greater and greater. Patience, hope, fair play, and justice, I believe in the long run would have relieved all this trouble.

Reapportionment.

SPEECH

OF

HON. JESSE OVERSTREET,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 5, 1901,

On the bill (H. R. 13740) making an apportionment of Representatives in Congress among the several States under the Twelfth Census.

Mr. OVERSTREET said:

Mr. SPEAKER: Availing myself of the privilege to print extended by the House in this debate, I desire to submit, for the information of members interested in the subject of legislation strengthening the gold standard, an argument favoring the exchangeability of the coins of the United States, which has been prepared by the executive committee of the Indianapolis monetary convention. In view of the successful operation of the act of March 14, 1900, further legislation in harmony with that act will surely operate equally as well. This is made clear by the argument referred to, which is as follows:

MAKE THE GOLD STANDARD UNASSAILABLE BY MAKING ALL FORMS OF MONEY INTERCHANGEABLE WITHOUT DISCRIMINATION AGAINST SILVER.

The only way to make the gold standard unassailable is to provide for the free exchange by the Treasury of all standard coins issued by the United States, for each other, without discrimination, at the option of the holder.

This will insure the maintenance of the gold standard, because the holder of any other form of money can exchange it, at his option, for gold.

It will insure the parity of all silver money by making it as good as gold. It will make no discrimination against silver, because it can be obtained on demand in exchange for gold or paper.

It will not add any burden to the Treasury beyond that imposed by its present obligations, because, all forms of money being treated alike, there will be no discrimination in the presentation of money for redemption.

It will prevent any discrimination in the payment of money into the Treasury, and will, therefore, prevent the drying up of the stream of gold in times of panic, which flows between the banks, the clearing houses, and the sub-treasuries in times of business activity.

It will establish the gold standard so firmly and plainly that international transactions will be attracted to the United States, and this country will take her proper place in the contest for the commercial empire of the world.

The opposition to making silver, paper, and gold interchangeable is based upon the belief that it would add to the quantity of gold obligations of the Government, and, therefore, to the burden imposed upon the Treasury gold reserve. While this proposition seems plausible at first glance, examination will show that it is not in accordance with the facts.

The Treasury now redeems in gold on demand any part of the issues outstanding on December 1, 1900, of these forms of money: \$346,081,016 in United States notes, \$63,448,000 in Treasury notes of 1890, and \$254,007,370 in gold certificates. National bank notes are redeemable at the Treasury in legal-tender

notes, which are themselves redeemable in gold, so that practically the amount of bank notes outstanding on December 1, 1900, which was \$332,232,330, may be said to be redeemable in gold on demand at the Treasury of the United States. So long as the Government holds out the offer to redeem any part of this sum of about \$996,000,000 in gold coin on demand, ample opportunity is afforded for persons desiring gold to obtain it from the Treasury. It can not add in any appreciable degree to the ability to obtain gold from the Treasury to extend the offer of the Treasury so as to pay gold for silver. Silver is already paid for gold upon demand, and demands for silver dollars in exchange for gold are frequently made during the crop-moving season. Perfect equality between the two metals would, therefore, be established by making them interchangeable at the Treasury.

The proposition that silver dollars should be exchangeable for gold coin at the United States Treasury, at the option of the holder, would not change existing conditions in any material respect except in the increased degree of confidence inspired among the public in the character of silver money. The United States now maintain a system of redemption of silver as the equivalent of gold through the acceptance of silver for public dues. The receipts of the Treasury, including postal receipts, for the fiscal year 1900 were \$699,595,431. This sum is in excess of the whole volume of standard silver dollars coined or issued, which was reported by the Treasury on December 1, 1900, at \$500,061,162. The Treasury, therefore, constantly holds out the offer to accept the whole volume of its standard silver money within less than one year as the equivalent of gold by receiving it for public dues. The option lies with the taxpayer to pay silver if he prefers to retain gold. The Government can not escape this liability for redemption of silver through the public dues without enacting legislation making silver no longer receivable, which would discredit a part of the standard money of the country, possibly send silver dollars to a discount, and introduce grave disorder into the monetary system.

The power to secure the redemption of silver through its payment for public dues was actually availed of to a very large extent from the spring of 1891 until the spring of 1895. The payments for customs at New York were made largely in gold certificates for ten years from the issue of such certificates in the autumn of 1882.

Gold payments by the Government at the clearing house practically ceased in July, 1892, except for a brief period in the autumn of 1893, when the cash balance of the Treasury became so reduced that it was necessary to employ, for ordinary expenditures, the gold held for the redemption of the United States notes. The payments into the Treasury for customs dues began to be made in the summer of 1891 largely in United States notes and Treasury notes, the latter being then regarded by the banks as less definite gold obligations than United States notes. The customs payments at New York in July, 1891, were \$11,303,169, of which only 15.1 per cent was in gold coin and gold certificates, 49 per cent was in United States notes, 27.4 per cent in Treasury notes, and 3.5 per cent in silver certificates.

The proportion of Treasury notes rose in July, 1892, to 42.3 per cent and of silver certificates to 15.5 per cent, while gold certificates and gold coin together fell to 13.9 per cent. The percentage of gold certificates paid for customs never, until the autumn of 1899, reached 10 per cent of the total payments after August, 1892, and fell below 5 per cent after March, 1893. The proportion of silver certificates paid reached 51.1 per cent in December, 1893, and did not fall below 45 per cent during any of the first eight months of 1894. Silver certificates remained a large element in payments for customs until February, 1898, when they had fallen to 31.2 per cent of total payments. Gold coin began to reappear in customs payments in November, 1897, when the proportion was 5 per cent, and gradually rose to 52.7 per cent in April, 1898, and 78 per cent in September, 1898. The proportions since then have been even larger.

The following table shows the changes in the proportions of gold coin, gold certificates, legal-tender notes, and silver certificates paid for customs dues at New York under different conditions for representative months:

Customs payments at New York.

Month.	Gold coin.	United States notes.	Treasury notes.	Gold certificates.	Silver certificates.
January, 1890	0.1	4.6	-----	92.5	2.8
July, 1890	0.1	2.5	-----	95.3	2.0
January, 1891	0.1	4.1	6.2	89.5	2.1
July, 1891	0.2	49.0	27.4	14.9	8.5
January, 1892	0.1	15.0	14.5	66.1	4.3
July, 1892	0.1	26.4	42.2	13.8	15.5
January, 1893	0.0	42.1	33.2	8.9	15.8
July, 1893	12.5	55.6	15.0	4.6	12.3
January, 1894	17.0	11.2	11.8	0.6	59.3
July, 1894	0.0	23.4	17.1	0.0	59.4
January, 1895	0.7	53.6	5.0	0.0	40.6
July, 1895	0.2	67.1	1.9	0.2	30.5
January, 1896	0.0	47.4	2.7	0.0	49.9
July, 1896	0.0	53.1	0.7	0.0	46.2
January, 1897	0.0	42.6	9.2	0.0	48.2
July, 1897	0.6	63.8	2.7	0.0	27.9
January, 1898	6.8	54.1	1.2	0.0	37.9
July, 1898	59.9	22.6	0.4	0.0	17.1
January, 1899	78.4	6.9	0.2	0.0	14.5
July, 1899	85.3	5.3	0.1	0.0	9.3
January, 1900	5.5	3.0	0.0	76.5	15.0
July, 1900	1.8	6.3	0.0	78.5	13.4
November, 1900	2.5	5.1	0.0	88.5	3.9

These figures show that the forced redemption of silver through its payment for public dues is a resource which was promptly availed of when discredit was thrown upon the paper and silver money of the country. Gold practically ceased to be paid for public dues from 1894 to 1897, while silver was poured into the Treasury in large amounts. The situation changed in 1898, and gold, including gold certificates contributed during the year 1900 from 80 to 90 per cent of the customs payments. These figures show that the payment of silver for public dues is as effective a resource or draining the Treasury of gold as the direct presentation of silver for gold. In fact, the use of this resource would probably be much greater, even in case of distrust of silver, than direct presentations at the Treasury for exchange. A law which abolished discriminations against silver, by making it in some sense a gold certificate, would put an end to any tendency to employ it for obtaining gold from the Treasury.

If silver were presented largely to the Treasury for exchange for gold, it would be presented chiefly through the banks. The banks have carried so

little silver since the enactment of the silver laws of 1878 and 1900 that the amount they have held at any one time would be a trifling factor in raising the Treasury. The banks might accumulate more silver if it were raised to equality with gold, but they would be less disposed to discriminate against it by presenting it to the Treasury. They found legal-tender notes enough to present for redemption when the gold export movement was at its height in 1893 and 1894, because they got rid of silver as rapidly as possible for public dues. Under a system which made no discrimination between different forms of money, more silver might be held by the banks and more might be presented for gold than would now be possible, but it would simply take the place of other money which might be thus presented, and would not increase the total demand upon the Treasury.

How trifling is the amount of silver which could be presented by the banks for exchange for gold under present conditions is apparent when the amounts they have carried at the dates of different reports to the Comptroller of the Currency is examined:

Silver in national banks.

Date.	Silver dollars.	Silver certificates.
December 10, 1893.....	\$7,530,135	\$34,776,253
May 4, 1894.....	7,489,931	41,580,654
December 19, 1894.....	5,354,778	29,743,446
May 7, 1895.....	7,245,537	28,519,277
December 13, 1895.....	6,984,382	25,878,323
May 7, 1896.....	7,285,043	31,512,287
October 6, 1896.....	6,721,871	28,057,095
December 15, 1897.....	7,500,247	31,752,596
May 5, 1898.....	8,100,544	35,316,796
December 1, 1899.....	8,012,695	32,700,654
April 5, 1899.....	8,246,929	32,193,899
June 30, 1899.....	8,361,974	32,578,638
December 2, 1899.....	7,569,649	26,356,766
February 12, 1900.....	8,798,952	34,132,389
April 26, 1900.....	9,053,551	44,049,035
June 20, 1900.....	9,293,232	44,437,981
September 5, 1900.....	8,782,306	45,243,559

Most of the silver held by the banks is a necessary part of their small change. The distribution of the small amounts given above among 3,600 national banks would afford an average of less than \$15,000 for each institution. How widely this small amount of silver was distributed over the country is indicated by the following exhibit of silver held by the national banks at the date of their reports to the Comptroller on September 5, 1900:

Location of banks.	Silver dollars.	Silver certificates.
New York City.....	\$90,523	\$11,167,153
Chicago.....	440,737	5,296,950
St. Louis.....	30,307	1,613,826
Other reserve cities.....	1,931,450	15,333,156
Country banks:		
New England.....	444,161	2,259,425
Other Eastern States.....	1,285,734	4,767,548
Southern States.....	2,030,702	1,804,199
Middle States.....	1,710,684	2,233,118
Western States.....	594,959	574,133
Pacific States.....	208,049	192,042

This table shows that the whole power of the national banks of New York City for raising the Treasury by means of silver is only about \$11,000,000, and that in employing their silver for this purpose they would deprive themselves entirely of their silver dollars and largely of their small notes.

The figures of silver holdings of the national banks indicate that the silver certificates in circulation are largely scattered among the people for current transactions and could not be withdrawn from circulation by any process except that of paying a premium for them. One of the resources relied upon by the Monetary Commission, and embodied in the existing law, for preventing the presentation of silver for exchange in gold is the limitation of silver certificates chiefly to denominations of \$1, \$2, and \$5. There can be little doubt that this limitation will still further diminish the tendency of silver to accumulate in the banks and will keep the silver money absorbed in active circulation among the people. When heavy payments of silver certificates for customs dues took place at New York in 1893 and 1894, a large proportion of the certificates used were in large denominations.

The presentation of any form of money for gold at the United States Treasury would be practically limited to the demands of the foreign exchanges if the gold standard were established and properly fortified by law. This demand must be met by the Treasury under the existing currency system, and it makes little difference in the ultimate effect upon the Treasury whether it is met by the presentation of one form of money or another for gold. The banks have the option of furnishing gold from their own supply under the existing system, but they have also the option of declining to furnish it, except by the presentation of some form of United States money for exchange at the Treasury. The largest foreign demand for gold in any fiscal year was in 1893, when the net exports were \$37,500,463. There were net exports in the fiscal year 1891 of \$68,130,057, and in the fiscal year 1896 of \$78,884,882.

It is a question whether, in all these cases, the export of gold was not stimulated by distrust regarding the metallic standard and by the pressure of a redundant and inelastic mass of Government paper upon the volume of the circulation. Assuming, however, that the maximum export of gold indicated for the fiscal year 1893 was a normal movement of the foreign exchanges, there is no device under existing conditions, while the Government continues to issue redeemable paper money, for preventing the imposition of the burden upon the Treasury gold reserve. The question whether the burden shall be imposed upon the Treasury or shared by the banks is largely optional with the banks. They are likely to share the burden when gold is plentiful, out their ability to throw it upon the Treasury when gold is in demand can not be greatly impaired by any device regarding the Government currency, except its retirement or the suspension of gold payments. The adoption of a system making all United States money interchangeable and equivalent with gold would tend to limit the maximum demands upon the Treasury for gold to the needs of the foreign exchanges.

River and Harbor Bill.

SPEECH

OF

HON. JACOB RUPPERT, JR.,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 12, 1901,

On the bill (H. R. 13189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. RUPPERT said:

Mr. SPEAKER: I do not desire to discuss the river and harbor bill from a partisan standpoint or in a spirit of either criticism or laudation of the work of the committee. No committees in Congress perform more arduous labors or more important work than those which guard the expenditure of public funds. Importance is always relative. To the member who represents a district in which there is an unnavigable stream that could be rendered navigable by the expenditure of money, the appropriation for that stream is naturally very important alike to the member from that district and to his constituents. The money which is expended belongs to the people of the United States and not to the people of any particular section. This being true, it is important that the expenditures be so distributed as to render the greatest possible good to the greatest number.

I realize, Mr. Speaker, the stress of business which has to be transacted by the Rivers and Harbors Committee. I realize that some people must of necessity be disappointed. I realize also that it is but natural that some appropriations be made which might not be deemed as wise as some others which were refused.

It would be impossible for appropriations to be made in direct ratio with the benefits to be derived from the improvements, but such a ratio should not be entirely lost sight of in considering these appropriations.

The United States has entered upon what is practically a new era. The conditions of the world's commerce have changed for the better so far as our foreign trade is concerned, and if no mistakes are made the growth of the United States in its trade relations with foreign countries must continue to be rapid for some years to come.

It is important to provide for the coastwise trade and the internal rivers by proper appropriations, and the appropriations for these purposes contained in the present bill are liberal. In fact, it has been argued upon this floor that the appropriations for the lake ports and the Mississippi River are much too little. This is a question which I have no desire to discuss, nor do I wish to criticize a single appropriation made by this bill. I only want to call attention to the liberality of the appropriation made for the benefit of river and lake commerce, in order to give my approval to the principle of upbuilding this important branch of our domestic trade. But while I approve of liberal appropriations for these purposes, I submit that it is even more necessary that those harbors which accommodate the ships engaged in our foreign-carrying trade be made as nearly perfect as possible. In our foreign-carrying trade the railroads can not assist the water, but all of the business must be done on the sea. It is but natural that foreign ships seek the best harbors. They seek those harbors that are most safe, where the conditions are least onerous, and where the facilities are greatest.

The harbor of New York, from which more than one-half of all our imports and exports are unloaded or loaded, and where ships of all nations seek to enter into our foreign carrying trade, has had a good deal of attention at the hands of Congress, but it has been one of the least expensive harbors of any of the great harbor of the world. There has been less money expended upon the harbor of New York in proportion to the commerce of their harbor than has been expended upon any harbor in the United States upon which any expenditure has been made. There has been some good work done there. There has been some of the finest engineering in the world done there. That harbor, if completed in accordance with the plans of the engineers, would be justly a source of national pride and admiration. Not only does one-half of our entire foreign trade find its home in New York Harbor, but it is the greatest coastwise harbor in amount of commerce in the world to-day.

I am not an engineer, but I have been informed by those who ought to know that had the money already expended upon New York Harbor been made available at one time and the work been prosecuted diligently and without cessation, all of the improvements needed could have been made without the expenditure of another dollar. Whether this be true or not, it is certainly true

that much more could have been accomplished than has been done.

This is so short-sighted a policy that it is remarkable that it has ever obtained in the Government work on public improvements. Admittedly, one of the most important measures ever devised for the improvement of the New York Harbor is that of the canal to connect the Hudson River with Long Island Sound. In 1876 the attention was called to this scheme, and Congress thoroughly examined into it. It was found to be a work of the utmost importance, and one which presented no serious difficulties, and which could be completed at a moderate cost.

Congress made appropriations from time to time, but always in such amounts that the work could not be pushed to completion. They tinkered at that canal for seventeen years. It could have been built in three years. It is not yet completed. It is completed just far enough to show the absolute necessity for it, and not far enough to render it of substantial benefit. I introduced a resolution on January 4, 1900, concerning this matter, asking for an appropriation of \$1,175,000, the work to be completed within thirty months. No report has been made upon this important matter and the people of New York will be very greatly disappointed. The people of the entire United States would be disappointed if they could realize the benefits that would be derived from the successful completion of this work.

Without in any way intending to be captious and without any desire to criticize the Rivers and Harbors Committee, I wish, as a business man representing a business constituency upon the floor of this House, to enter an objection to the present policy of holding down appropriation bills by making appropriations too small to accomplish the purpose for which they are made, in order to benefit more communities. It would be better to put \$10,000,000 in any one river or harbor, if that would complete the work, than to put the \$10,000,000 in fifty rivers and harbors and have none of them completed when the money was expended.

It seems to me that business prudence would dictate that nothing be undertaken unless it was to be completed as rapidly as possible. By the policy of piecemeal appropriations the benefits of the first appropriations are counteracted and rendered null by damages to the work by the time the second appropriation is made. In all cases a part of the money is thus absolutely lost, while in some all of it is lost.

Up to the present time the United States has expended on its rivers and harbors during the past thirty-five years the sum of \$450,000,000. There are few, if any, of these rivers or harbors upon which the work has been so completed that no further work is necessary except that of maintenance. This money, if expended upon business principles, would have made one of the finest harbors in the world upon each of the coasts of the United States, would have improved a number of intermediate harbors, and would have made a ship canal out of the Ohio, Missouri, and Mississippi rivers. Under the policy that has been pursued none of the rivers or harbors have had the money that they ought to have had. This bill carries about \$60,000,000, and when that \$60,000,000 is expended there is not a river nor a harbor which will not be in need of appropriations.

Had I asked for a small appropriation for the Harlem Canal, I would probably have obtained it; had I obtained it, the money would have been lost. While I do not assert nor believe that all of the money appropriated by this bill will be uselessly expended, yet I do believe that had this same money been put in one-half of the rivers and harbors it would have effected a saving to the Government of several million dollars and conferred ten times the benefit. And in saying this I do not discriminate in favor of any of the improvements named in the bill. If they are all equally meritorious, it would still be the best policy to finish half of them, if we have not enough money to finish them all, before putting a dollar into the other half.

The committee recognized this principle in their appropriation for Buttermilk Channel in placing that as a continuing contract. The Buttermilk Channel is one of the most valuable improvements that could be made in New York Harbor. The commerce affected amounts to about \$375,000,000 a year. The appropriation was asked for by the municipal council, Cotton Exchange, New York State Chamber of Commerce, New York Board of Trade and Transportation, Maritime Association of the Port of New York, New York Produce Exchange, the Manufacturers' Association in New York, and the Coffee Exchange.

Three of the important lines have their piers along the river which this improvement affects, and more will be established there. The importance of a thorough investigation of the needs of the ports of New York can not be estimated. The Harlem canal I have already spoken of would to a very considerable extent relieve the congestion of trade along the rivers of New York, and that congestion has begun to be so great that something must positively be done to ameliorate the conditions which prevailed there.

The city of New York has grown more rapidly and more substantially than any other of the great cities of the world. The

port of New York is now first in the amount of commerce when both foreign and coastwise trade are considered.

The clearances from the port of New York are over 8,000,000 tons a year, or one-third of those of the entire United States. One-fourth of the total tonnage of registered vessels is registered in the port of New York.

The great cities of Europe depend for their business largely upon their foreign trade. New York has a larger domestic trade than any other city in the world. It is therefore at least abreast with London, Paris, and Berlin. It is a city of which every American ought to be proud. It has not the features which separate it from the rest of the country as is Paris separated from the rest of France in the minds and hearts of the French people. It is distinctively American, and will always be American. The people of the United States would be glad to see all improvements in the harbor of New York that would be necessary to make it the best harbor in the world.

The census of the United States when completed will reveal the fact that the growth of the country during the past ten years has been remarkable. It will show that notwithstanding the great increase in population, and therefore in the consuming capacity of our people, our imports have not materially increased, while our exports have doubled. This increase in exports has been a uniform one in all classes of products, and our merchants as well as our manufacturers have competed successfully with those of Europe. We not only feed the world, but we clothe and supply it with all classes of necessities and luxuries.

This condition has not been brought about by any party, any creed, or any class. It has been brought about by the indomitable pluck and energy of the American people. The condition of trade in Europe and in the Orient made the growth of American enterprise possible, but to the American business men is due the credit of taking advantage of those conditions. It is in behalf of these business interests that I speak to-day. No question of sectionalism, of favoritism, or prejudice should be allowed to enter into this matter. We have established the foundation for a foreign business in comparison with which our present business will appear but small.

There have been many millions of dollars invested by conservative men upon the faith they have in the future. Without counting any of the unfortunate and illegal speculative trust enterprises or capitalization which is not based upon actual cash paid in, it is a conservative estimate to say that from three to five thousand million dollars have been invested within the past ten years in New York City alone in order to build up our foreign trade. I do not mean that this money has been invested exclusively for the foreign trade, but it has been invested in such directions that its direct effect will be the upbuilding of our foreign commerce. The business interests of the country have in times past troubled Congress but little. It has been but a few years since professional men alone appeared before the committees of Congress. They now realize that in this they made a mistake, and the best business men in the country freely inform Congressmen concerning the business needs of the country. While I do not believe that these men should be listened to to the exclusion of all other men, I do believe that the petitions of commercial organizations and the statements of men with large interests should be listened to very attentively, and unless they are dictated by self-interest the demand should be granted.

If the people of New York believed that by conservative effort they could secure an alleviation of the congestion of commerce now in the harbor of New York, every man in that city would ask that this be done. The River and Harbor Committee in the present bill has done much for the harbor of New York. It has made appropriations for East River, Harlem River, and the very greatly needed improvements of the Buttermilk Channel. The committee has treated the members representing the districts of Greater New York with kindness and courtesy, and has given what undoubtedly seems to them liberal appropriations. They have given so much that we have asked that it would seem ungrateful for me to criticize their action in not giving all that we ask. I only do so because I believe that the interests of the country demand that a new system be adopted with relation to our harbor improvements. I believe that the leading harbors should be very carefully examined, not with a view to patching them up, or to see how little money they can get along with, but with a view to ascertaining all that can be done toward developing them, and what amount of money can be profitably expended upon them. A million dollars might be put into a harbor and be practically lost, where \$3,000,000 could be expended at a large profit to the country.

The principal condition now operating against New York Harbor is the congestion of commerce. There are places where the channel is not sufficiently wide; there is an insufficiency of available water front. To anyone who visits New York, even though he may not be acquainted with the shipping business, the fact that the rivers are in places overcrowded is evident at a glance. There are delays, especially with tramp vessels, in the loading and unloading of freight. These delays are costly to the vessels and to

the shippers. In many respects New York has a magnificent harbor, and the disadvantages I speak of can be overcome at a very reasonable expenditure. Much of the trouble would be obviated by the completion of the canal from the Hudson River to Long Island Sound.

There has never been an adverse report from the Government engineers as to this canal, and I am satisfied that every time it has been considered by Congress it has been considered favorably. The appropriation is not in this bill. I think that the reason it is not in this bill is that New York Harbor already had as large a share as the committee thought advisable in order to satisfy those members who were interested in other harbors. I can not blame a member for wanting to secure as large an appropriation as possible for legitimate work in his own district, but I think the time has come when we ought to consider this question upon a broad national basis, and not from a local or sectional standpoint. We want harbors, and we want the very best harbors that our coast will permit. We want those harbors where they will best further the interests of both domestic and foreign trade.

It is not necessary that every seacoast town should have a deep-sea harbor, but it is necessary that those harbors which are most used should be made as nearly perfect as possible in order to facilitate and build up our trade. In order to accomplish this with the least expenditure it is necessary that the improvement work upon a harbor which is to be improved should be pushed to completion as rapidly as possible and should be made as thorough as possible. Then, when the contract is completed, the harbor is completed. The only further expense necessary is for maintenance. I do not believe that we have to-day, in permanent improvements, the value of 25 per cent of the total amount which we have expended for improvements intended to be permanent. If we change the policy from our present one for one more broad and liberal, we will make larger immediate appropriations, but our expenditure during a series of twenty or thirty years will be much smaller than under the present plan, while the benefits derived will be vastly greater.

I would be glad if the Rivers and Harbors Committee would during one Congress have continuous meetings and occupy the time in preparing an exhaustive report upon the conditions and possibilities of the harbors of the country. If the conditions are worse than the possibilities are attractive, then there would be no wisdom in making expenditures, while, if the possibilities are great, conditions, no matter how adverse, can be overcome. If our river and harbor improvements should be thus systematized the effect upon both our coastwise and foreign trade would be beyond computation. If the present system is continued and members obtain appropriations because of their personal popularity or because of return favors in the passage of other bills, it can not be expected that the river and harbor appropriations can ever be otherwise than what they are now—frequently a source of absolute waste of money. I am not in sympathy with the attack upon the committee or upon any individual members.

Under the present system these expenditures are probably as equitably distributed as it would be possible to make them. But it ought not to be a question of equitable sectional distribution. What the Government is buying when it invests its money in improvements of this character is facility for commerce. The best investment is that which facilitates commerce. If an investment does not facilitate commerce it is lost. The best way to facilitate commerce is by either improving facilities where commerce exists or making facilities where commerce fails to exist only by reason of the absence of such facilities.

It is a matter of fact that one-half of the commerce of the United States has its habitat in the port of New York. It would naturally be supposed, therefore, that if only one perfect harbor was to be provided that harbor would be in New York. It would be supposed that the New York Harbor would have everything done for it that could be done in order to develop the possibility of its commerce. The next harbor to be completed ought to be the next harbor in importance. Judging from what I know of the New York Harbor I should think that the amount of money carried in the present bill would be sufficient to complete all of the work that would be possible to do on at least ten harbors so situated that they would facilitate business upon the Atlantic coast, the Gulf coast, the Pacific coast, and the Lake coast.

As it is now, no one is fully satisfied, because the work is not fully completed on these improvements, while if enough was appropriated to complete the specific work it would take but a few years to complete improvement of enough harbors and rivers to supply the needs of the entire country.

I give expression to these thoughts for the reason that as a business man, representing a business constituency, I believe in securing the greatest possible amount of benefit for the least amount of money, and I do not believe in wasteful expenditure. As a business man I would, as a measure of economy, complete the improvement of one property, and not use my means in doing partial and temporary work upon all of my property at the same time. [Applause.]

River and Harbor Bill.

SPEECH OF

HON. NICHOLAS MULLER,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 15, 1901.

On the bill (H. R. 13189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. MULLER said:

Mr. CHAIRMAN: The paragraph which has just been read, calling for an appropriation for Arthur Kill, or Staten Island Sound, for a 21-foot channel from Kill van Kull to Raritan Bay, is a very meritorious one, and ought to pass without any amendment. According to the statement of the Chief of Engineers, United States Army, this improvement was commenced in 1874, and calls for a channel 21 feet deep and 300 to 400 feet wide. It is proposed to do the work by dredging and diking, and the estimated cost is \$696,000.

The preliminary examination for this work was ordered in the river and harbor act of March 3, 1890, and has been reported upon favorably and an appropriation incorporated in the river and harbor bill now under consideration by the House. It is estimated that over 9,000,000 tons of commerce, consisting largely of oil, coal, brick clay, etc., passes through this channel annually, and is increasing.

The channel has been repeatedly dredged to 14 feet, but through the peculiar effect of the tides it soon becomes obstructed again. The length from Kill van Kull to Raritan Bay is about 15 miles, and for about 9 miles the depth is 21 feet. It is now proposed by this appropriation to make it all 21 feet, which will require dredging for about 6 miles.

The proposed improvement will be of a permanent nature and of a lasting character, and the cost of maintenance very light. The value of the improvement will be inestimable to commerce, as it will also add largely to the value of the water frontage, thus increasing the taxation of the property benefited thereby. Part of this improvement is located in the district I have the honor to represent, and it has been indorsed by the Staten Island Chamber of Commerce and the business interests affected by the same.

It is without question a work which is absolutely necessary for the increasing commerce of the country, and the improvement is recommended by the Secretary of War and the Chief of Engineers.

In conclusion, I desire to say that this work being of such a nature as will recommend itself to the favorable consideration of every member of the House I trust there will be no opposition to the appropriation and it will be allowed.

River and Harbor Bill.

SPEECH OF

HON. JAMES R. MANN,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 12, 1901.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 13189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. MANN said:

Mr. CHAIRMAN: I can not hope to equal, either in interest or information, the gentleman from Mississippi [Mr. CATCHINGS] who has just taken his seat. It will be a distinct loss to the House and to the interests of the commerce of the country when that distinguished gentleman leaves his place upon the floor of this House as a Representative from Mississippi. [Loud general applause.]

I take it that no member of Congress who has ever sat either in this body or in the Senate has been so well posted upon and has so thoroughly understood all of the problems relative to the navigation and preservation of the Mississippi River as the gentleman who has just entertained the House. It is not very much that I know about the navigation or commerce of the Mississippi River, though I represent a locality which is interested to a considerable degree in the commerce of that river.

The city of Chicago has expended already about \$40,000,000 in the construction of a canal which cuts through the divide separating the valley tributary to the Mississippi from that tributary to the Great Lakes. That canal has been constructed partly for the purpose of obtaining a supply of pure water, but at least one-half the cost of the canal has been expended in order to make it of suitable size for navigation by deep-draft vessels.

Sooner or later the Chicago Drainage Canal will be connected by a canal, yet to be constructed, with the Desplaines and Illinois rivers, so that Chicago will be connected through direct water transportation with the Mississippi River and the Gulf of Mexico.

The river and harbor bill of two years ago carried an appropriation of \$30,000 to pay the expense of making a survey and estimate of cost for the construction of an 8-foot canal connecting the sanitary canal with the Illinois River.

I had hoped, Mr. Chairman, that this bill would carry an appropriation to commence that improvement.

But some of the gentlemen who are interested in the commerce of the Illinois River Valley, as well as others interested in commerce going southward from Chicago and northward from St. Louis, have most earnestly urged that, instead of commencing the work on an 8-foot connecting canal, we first have a report from the Engineering Department of the Government as to the feasibility and cost of a canal 14 feet in depth. Although I do not believe myself in the practicability of a 14-foot canal, I have, in deference to those members of this House from Illinois who have so earnestly favored the project, withheld any objection to it; and this bill now carries an appropriation of \$200,000 for the purpose of making a thorough examination into the practicability and cost of constructing a 14-foot canal from the Chicago Drainage Canal at Lockport, Ill., to the Illinois River, and thence deepening the Illinois River and the Mississippi River to a depth of 14 feet from Lockport to St. Louis.

Personally I do not believe that a 14-foot canal will be of much, if any, greater value than an 8-foot canal; nor do I believe that a 14-foot channel between the mouth of the Illinois River and St. Louis is practicable or possible.

Below St. Louis it is practically impossible to construct or maintain a 14-foot channel at low-water mark.

It will be seen, however, from this statement that Chicago and the State of Illinois are vitally interested in the commerce of the Mississippi River and in the possibilities attending its navigation. The Government has already expended upward of \$40,000,000 for the purpose of improving the navigation of the Mississippi River, without counting the amounts expended by bordering States, municipalities, and individuals.

But the commerce of the Mississippi River is small and insignificant compared with another branch of commerce affected by the present bill, and in which Chicago and the entire Northwest are most vitally interested. I refer to the commerce of the Great Lakes.

When Jefferson acquired the territory west of the Mississippi and at the mouth of the Mississippi, known as the Louisiana purchase, in 1803, it was the well-nigh universal opinion that the products of the Mississippi Valley must find their way to other parts of the country and to the sea almost exclusively by way of the Mississippi River. But to-day the great lines of commerce in the country are from west to east and east to west, and the commerce on the Great Lakes has grown within a few years to a magnitude unappreciated by our people, and with a development so rapid that it is unparalleled in the history of the world.

Some of the gentlemen who have spoken in opposition to the pending bill have attacked with considerable bitterness the proposed appropriations for some of the harbors and channels upon the Great Lakes.

The city of Chicago does not consider that it has received full justice in the pending bill. At the proper time I propose to offer an amendment directing the Engineering Department of the Government to report to Congress upon the feasibility and need and the estimated cost of one or more turning basins in the North and South branches of the Chicago River. But whether that amendment shall be adopted or not, I shall be glad to vote for this bill, because, in my opinion, some of the improvements contemplated by it are of vast interest not only to the country and its commerce generally, but also to the particular commerce of the city of Chicago.

The city of Chicago has two great harbors. One is the Chicago River; the other is the Calumet River. This bill carries no appropriation for the Chicago River. It carries an appropriation of \$75,000 for the purpose of extending the present 20-foot channel in the Calumet River from One hundred and sixth street to One hundred and twenty-second street and for the improvement of that river up to and beyond Hammond, Ind. Of course, further appropriations will be required for this important improvement from time to time hereafter. Other appropriations relating to the Calumet Harbor will be made in the sundry civil appropriation bill in order to continue the construction of the great outer harbor at that point.

But notwithstanding Chicago does not receive a direct appropriation, it will not be without benefit by the passage of the present measure. Chicago is the gateway of the bulk of the commerce between the middle West and the middle East. Situated as it is at the southernmost point of western lake navigation, it occupies geographically a commanding position in the internal commerce of our country, akin to that occupied by New York City in relation to our foreign commerce.

Take, for instance, the grain trade. Chicago is the leading grain center of the country. The large proportion of the grain raised on the Western farms must pass through Chicago on its way toward the East or on its route to Europe.

The controlling factor in this grain trade is the navigation on the Great Lakes. The grain-carrying fleets going from Chicago to Buffalo increase considerably the price of every bushel of grain raised in our Western country. They cheapen the cost of flour and other food in every portion of the East. They enable us to maintain a profitable competition with Argentina and other foreign countries in the production of breadstuffs and other cereals.

The distinguished gentleman from Iowa [Mr. HEPBURN] has attacked, with his usual vigor and incisiveness, the appropriations carried by this bill for the Great Lakes, including the deepening and widening of the channel of the Detroit River. At the last session of Congress I listened with great pleasure to his remarkably exhaustive, entertaining, and instructive speech in behalf of the Nicaragua Canal bill which bears his name, and which proposes an expenditure of \$150,000,000, more or less, for the construction of that canal. But, Mr. Chairman, if the Nicaragua Canal shall be built there will not be so much commerce pass through it in five years' time as now passes in seven months of each year through the Detroit River.

Much or most of the commerce through the Nicaragua Canal will be foreign commerce in which this country has little interest. The commerce which passes through the Detroit River is our own domestic commerce, which is of vital interest to our country. And yet gentlemen who will propose to expend \$150,000,000 for the construction of a Nicaragua Canal, far away on foreign shores, object to the expenditure of a million or so for the improvement of a river close at home and of tenfold value to our own commerce.

I call the attention of the House to the fact that the amount of commerce between this country and foreign countries to-day is a little less than 30,000,000 tons each way, counting the tonnage of the vessels entering and clearing at the various ports; while the commerce carried in the year 1899 through St. Marys Canal amounted to 27,527,205 tons and the commerce passing through the Detroit River during the same season, as estimated by the Engineering Department, amounted to more than 40,000,000 tons.

Where in the history of commerce in the world is there so startling and striking an example as the history and growth of the commerce through the St. Marys River canals? By far the greater proportion of the commerce there passes through the American canal. And the total traffic through these canals in the St. Marys River was, in 1888, 1,567,741 tons. Year by year it has gradually increased until in 1899 that commerce amounted to over 27,000,000 tons, an increase in twelve years' time from 1,500,000 to 27,000,000 tons. Who can parallel its development in the history of mankind?

The day before yesterday, in the course of debate upon the floor here, a slight controversy arose between the gentleman from New York [Mr. ALEXANDER] and myself in regard to which of the two cities, Buffalo and Chicago, was the second port in importance in the United States. The fact that such a question arose at all is an illustration of the remarkable growth of commerce on the Great Lakes.

We in the inland portions of the country have been accustomed for years to talk and hear about the remarkable commerce of New York City, of Boston, of Charleston, of Galveston, of Philadelphia, and of many other seaport cities. And the popular impression of the people of our country is that the vast proportion of the commerce of the United States passes in and out of these great ports on the seaboard.

It is very natural that such an impression should prevail, because, of course, the import duties are usually paid at the point where the ship comes into port, and not a very large proportion of the goods imported into the country is sent in bond to the inland States. New York, Boston, Philadelphia, and the other great ports of the country are the places where the money is mainly collected for import duties. And some of the gentlemen representing those localities seem to have the impression that it is in their States that the great commerce of the country exists.

As a simple illustration of the comparative amount of our commerce upon the Great Lakes and upon the ocean let me call your attention to the figures given in the report of the Steamboat Inspection Service for the year ending June 30, 1900.

The number of domestic steam vessels inspected for the year ending June 30 last was as follows:

For the Pacific coast, 913 vessels, with a tonnage of 384,271.

For the Atlantic coast, 3,666 vessels, with a tonnage of 988,820.
 For the Western rivers, 985 vessels, with a tonnage of 143,958.
 For the Gulf coast, 615 vessels, with a tonnage of 99,252.
 For the Great Lakes 2,129 vessels, with a tonnage of 1,118,224.

It will be noticed that while the number of vessels inspected on the Great Lakes is considerably less than the total inspected on the Atlantic and Gulf coasts, yet their tonnage is greater than the combined tonnage of all the domestic vessels on the Atlantic and Gulf coasts. This shows not only that the commerce of the Great Lakes is greater than the combined coastwise commerce of the Atlantic and Gulf coasts, but that the average size of the vessels engaged in the lake commerce is at least twice as large as the average size of the vessels engaged in coastwise commerce on the Atlantic and Gulf coasts.

Mr. Chairman, the total entrances of vessels engaged in the foreign trade at Boston for the year ending June 30, 1899, were 1,780, and the total clearances were 1,707, making a total of 3,487 vessels, with a tonnage of 4,002,543.

Boston Harbor has heretofore had appropriated for it more than \$4,000,000 by the National Government, and the present bill carries an appropriation of \$3,763,000 and provides for a channel 1,500 feet in width.

The entrances at New York for the same period in the foreign trade were 4,250 and the clearances 4,034, or a total of 8,304, with a tonnage of 15,203,756.

New York Harbor has had appropriated for it heretofore \$10,000,000, and the present bill carries an appropriation of \$2,100,000, and provides for a channel 2,000 feet in width.

The entrances at Philadelphia in the foreign trade for the same period, were 1,028 and the clearances 1,088, or a total 2,116 vessels, with a tonnage of 3,346,808.

Philadelphia has received before very large appropriations, and received in this bill \$3,000,000 for the purpose of making a channel 600 feet in width in the Delaware River.

The entrances in the foreign trade at Charleston Harbor for the same period were 109 and the clearances 80, or a total of 189 vessels, with a tonnage of 219,225.

Charleston Harbor has received appropriations heretofore of \$4,487,500, though in the present bill it receives only the modest appropriation of \$60,000.

The entrances in the foreign trade at Savannah Harbor for the same period were 320 and the clearances 321, or a total of 639 vessels, with a tonnage of 668,079.

The appropriations for Savannah Harbor have been heretofore \$6,387,000, and the present bill carries an appropriation for that harbor of \$1,000,000.

The entrances in the foreign trade at Mobile Harbor for the same period were 535 and the clearances 555, or a total of 1,090 vessels, with a tonnage of 789,678.

The appropriations for Mobile Harbor have been heretofore \$4,218,630, and the present bill carries an appropriation of \$400,000.

The entrances in the foreign trade for the same period at New Orleans were 1,066 and the clearances 1,022, or a total of 2,088 vessels, with a tonnage of 2,871,031.

Without referring to the immense appropriations which have been made heretofore in the interest of the New Orleans foreign commerce, it is sufficient to say that the present bill carries an appropriation for the improvement of the Southwest Pass of the Mississippi River of \$3,500,000, and that this improvement is sought for solely in the interest of the foreign trade at New Orleans.

The entrances at Galveston Harbor for the same period in the foreign trade were 514 and the clearances 563, or a total of 1,077 vessels, with a tonnage of 1,788,141. The prior appropriations for Galveston Harbor have been \$8,478,000, and the present bill carries an appropriation of \$1,500,000, though it is proper to say that at least a portion of the present appropriation is called for by reason of the recent great disaster at Galveston.

The total number of vessels engaged in foreign trade entering at all of the ports on our Pacific coast for the year ending June 30, 1899, was 3,007, and the number clearing was 3,092, or a total of 6,099, with an aggregate tonnage of 3,266,585.

There have been appropriated heretofore several million dollars for the improvement of our Pacific harbors, and the present bill carries an appropriation of over \$2,000,000 more.

I do not complain of these appropriations. I do not doubt the advisability of the improvements contemplated by them. The increase in the size of the modern ship compels, in many places, the deepening and widening of harbor channels, as well as greatly decreasing the cost of ocean carriage.

But I see no reason why we should discriminate in favor of salt water and against fresh water. It is true that salt water is not drinkable, but that is also true of Chicago River water. We should decide these questions upon the basis of the amount and possibilities of commerce and navigation, and not upon the basis of the amount of salt in the water or whether the body of water is affected by the tides.

In the discussion between the gentleman from New York [Mr.

ALEXANDER] and myself with reference to the relative position of Buffalo and Chicago some figures were presented by the gentleman from New York, taken from the recent number of Commerce and Finance, which figures I may say are not accurate. This is the first year that that department of the Government has attempted to present any figures at all on this subject, and the method of collecting them at present is crude and unsatisfactory. But I will give to the House the number of vessels and tonnage entering both at Chicago and Buffalo during the last year and make a comparison, with the courtesy of the House, of these two ports and some of the seaboard ports.

The total entrance into the city of Chicago for the year 1900 was 8,422 vessels, with a tonnage of 6,945,170; and the total clearances from Chicago were 8,554 vessels, with a tonnage of 7,045,714. For the year 1900 these figures are given. I have not the figures for the last year of the city of Buffalo, but for 1899 the total entrances and clearances for the Buffalo port were 10,417 vessels, with a tonnage of 10,481,043. The total entrances and clearances in the Chicago Harbor district for the present year were 17,533 vessels, with a tonnage of 14,186,190. The gentlemen of the House can very quickly make comparison between these figures of 17,000 entering and clearing at Chicago and 10,000 entering and clearing at Buffalo, with a tonnage at Chicago of upward of 14,000,000 and at Buffalo of over 10,000,000, with some of the figures at the seaboard ports.

Mr. ALEXANDER. Will the gentleman permit me an interruption?

Mr. MANN. Yes.

Mr. ALEXANDER. Where do you find the statistics you have just given?

Mr. MANN. The statistics relating to Chicago were sent to me by the collector of customs of the city of Chicago. The statistics relating to Buffalo I took from the last report of the Chief of Engineers of the War Department.

Mr. ALEXANDER. You speak of the district of Chicago, and that includes the Chicago River and South Chicago?

Mr. MANN. The first figures I gave in regard to the entrances and clearances at Chicago included Chicago and South Chicago, all of which is within the limits of the city of Chicago. The district of Chicago includes Michigan City, which has two or three hundred vessels a year.

Mr. ALEXANDER. And the figures given at Buffalo include simply Buffalo Creek?

Mr. MANN. I would not be certain about that, but my impression was—I may be mistaken about it—when I made the figures that it included Buffalo and Tonawanda Creek, the entire port of Buffalo. But I would not be absolutely certain about that.

Allow me to say in reference to the figures given by the gentleman from New York concerning the amount of commerce at Chicago, that my object is simply to correct an error in his speech as printed in the RECORD, and also to correct an error in his calculations. The speech as printed in the RECORD gives to Chicago a freight tonnage of about 2,300,000. I asked the gentleman whether that included both the shipments and the receipts, and I understood him to say that it did; he intended that it should include both. The fact, however, is that the document to which the gentleman referred, and from which he had taken the figures, gives to the city of Chicago from October 31 last a freight tonnage entering Chicago of 4,007,300 tons.

Mr. ALEXANDER. May I interrupt the gentleman again?

Mr. MANN. Certainly.

Mr. ALEXANDER. In the tonnage of Chicago, as printed in my speech, there is a typographical error—not an error in my computation, for I have now in my hand the computation made at the time. The amount should be 4,167,950 instead of 2,132,691, as it appears in the RECORD.

Mr. MANN. Mr. Chairman, the trouble with the gentleman's figures is that, as I understood him, they were supposed to cover both the receipts and the shipments.

Mr. ALEXANDER. They do.

Mr. MANN. The receipts of Chicago were over 4,000,000 tons, and the shipments were quite a number of hundreds of thousands of tons. So I think the gentleman was mistaken. I think he made, in some way, an error of figures.

Mr. ALEXANDER. I think there is only a difference of 100,000 between us.

Mr. MANN. The difficulty is that the gentleman gave only the receipts, while he undertook to give both. I have not had time to figure up the shipments.

Now, Mr. Chairman, while this little controversy between the gentleman from New York and myself makes no difference whatever as to the amount of commerce of these two ports, it does call attention to the fact that there is a very vast amount of commerce at these ports, as well as at other ports on the Great Lakes. Chicago and Buffalo do not monopolize the lake traffic. There are plenty of other ports—Milwaukee, Duluth, Cleveland, Ashtabula, and many other places upon the Great Lakes—which are also of

great importance. As compared with these figures of Chicago and Buffalo, I give the figures of the foreign trade at Boston for the year ending June 30, 1899, being the last available statistics. In that year there entered at Boston 1,780 vessels, with a tonnage of 2,129,795; and there cleared 1,707 vessels, with a tonnage of 1,872,748, making a total of 3,487 vessels, with a tonnage of 4,002,543.

New York had in her foreign trade during the year ending June 30, 1899, 8,304 vessels, with a tonnage of 15,203,756, being a smaller number of vessels and only a trifle larger tonnage than the city of Chicago had during the present year.

And, Mr. Chairman, the tonnage emanating from Chicago is not by any means exclusively Chicago freight. Let it be remembered that the freight traffic upon the Great Lakes is almost entirely through freight—freight which is passing from one section of the country over a long distance to another section. The freight going from Buffalo does not emanate from Buffalo. The freight going through Buffalo does not stop at Buffalo. The freight going from Chicago does not emanate from Chicago, and a large portion of the freight coming through Chicago does not stop there.

Of the Chicago freight during last year there were shipped away from Chicago 132,681,731 bushels of grain. It might be rash to say that not a bushel of this grain was grown in Chicago, because Chicago has some agricultural territory. But the bulk of that grain was grown in the Western States. A large proportion of it was grown in the State of Iowa, a considerable portion in Wisconsin, much of it in the northern part of Illinois, and much of it in Nebraska and Kansas. The great bulk of that freight going through Chicago came from the Western States on its way east. And when it reached Buffalo it did not stop there; it went on east, either for export or for consumption by the mills in that part of the country.

It would be interesting to know the comparative difference between the cost of sending a bushel of grain from Chicago to New York City by the lakes and the cost by way of the railroads. Taking the last twenty years, the cost on the average of shipping by rail and shipping by the lakes from Chicago to New York has been about 7 cents less per bushel of grain by the lakes than by rail; and the average cost of sending a bushel of grain from Chicago to New York by the lakes is less than 5 cents a bushel, while by way of the railroad it is about 12 cents a bushel.

This difference, which goes to the benefit of the people who raise the grain, amounts to many million dollars a year. These people are interested not merely in the development of commerce at Chicago but in the development of the channels between these points. The Detroit River fixes absolutely to-day the size of vessels that can be used upon the Great Lakes. Whenever any method is adopted of deepening the water of the Detroit River there is an increase of the carrying capacity of the vessels which have been and are to be constructed.

The great bulk of the iron of the country comes from the Superior region. If that iron, either in ore or in manufactured products, had to be carried by rail, not, as it is now, by water, to the East, the cost of iron would probably be increased more than twofold. The decrease in the cost of iron products has been largely owing to the fact that they have discovered this wonderful iron ore in the Superior region and they have found a method of bringing it in this cheap way to Pittsburgh, to Ashtabula, to Cleveland, to South Chicago. Every dollar saved of that is of great benefit to the country at large. It is not for the interest of the locality. It is for the interest of the country, because it decreases the cost of the one article in use more than any other one article in the country.

But, Mr. Chairman, I have a little complaint myself in reference to the bill. As I said, the city of Chicago, at the Chicago River, or Chicago Harbor, does not receive a cent of appropriation in this bill. I do not ask for a cent of appropriation, but I did ask that the engineer at Chicago be authorized to make a survey and an estimate of the cost of a certain improvement there.

I hope the House will understand that the harbor of Chicago is the river. The Chicago Harbor is the Chicago River, a long, narrow, winding stream. During the busy summer months in Chicago—in June, July, and August—the entrances and clearances of vessels in this river amount to more than 3,000 a month. These are not small vessels, but large vessels. The entrances and clearances amount to more than 2,000 per month, a larger number of vessels entering and clearing out of the Chicago River than enter and clear out of any space of equal size on the face of the earth, and larger than anywhere enter and clear from a river of any kind.

This long, narrow, and winding river is so constructed that a moderate-length vessel entering it can not turn around. The great grain fleet that goes up the Chicago River to-day, down the South Branch, has to be pulled out backward by tugs, at great cost and at great danger. Several times a week during the busy season there are collisions of vessels, one with another, or of vessels with the bridges across the river. It is not the city of Chicago

that is interested in having this improved so much as it is the navigation interests.

The Lake Carriers' Vessel Association have made a special request that there should be constructed by somebody on the Chicago River what they call turning basins, at least two or three in the 15 or 20 miles of the river, where a vessel can go up and turn around and go out nose to the sea instead of backing out, as they do now. This is a matter of great importance. Why, I ask, should Chicago, with a commerce of more than 14,000,000 tons annually, receive no consideration, and Boston, with a commerce of 4,000,000 tons, receive out of this an appropriation of \$3,673,000?

Mind, I do not criticize the amount of the appropriation for Boston. I believe it is proper. But if Boston, with a commerce of 4,000,000 tons, ought to receive an appropriation of \$3,673,000; if New York, with a commerce of 15,000,000 tons, ought to receive an appropriation of \$1,800,000; if Savannah Harbor, with an annual commerce of 668,000 tons, ought to receive an appropriation of \$1,000,000; if New Orleans, with an annual commerce of 2,871,000 tons, ought to receive an appropriation at the Southwest Pass of \$3,500,000; if Galveston, with an annual commerce of 1,788,000 tons, ought to receive an appropriation of \$1,500,000; if Mobile, with an annual commerce of 789,000 tons, ought to receive an appropriation of \$400,000, certainly Chicago, with a commerce of 14,000,000 tons, ought to receive the right to have an engineer's estimate made.

Mr. OTJEN. Will the gentleman permit a question?

Mr. MANN. Yes.

Mr. OTJEN. Are any of these appropriations for these various interests intended for the improvement of the inner harbor—the harbor inside the city limits?

Mr. MANN. Well, Mr. Chairman, the harbor of New York is almost entirely within the city of New York since New York was made Greater New York. All of the money that is to be expended there is practically expended within the limits of New York City.

A very large proportion of the money, if it is spent at all these places, is spent within the city limits. It is true these amounts are not spent upon rivers, because the harbors are not the rivers, except that at New York they call it channels. It is not the ocean; it is something else than the ocean. It is within the city limits. It is a proper expenditure of money. It is a proper improvement. It is a proper appropriation. I do not mean to criticize one of these. New York Harbor is entitled to every dollar of money that it can profitably use in the extension of its commerce and in making commerce easy. Every dollar spent in New York City in improving the facilities for commerce adds to the value of the grain in the Western States and a decrease in the cost of the material which the Western people use.

But there is no distinction such as the chairman of the Committee on Rivers and Harbors seeks to draw at times between one kind of water and another kind of water within the city limits. The Chicago Harbor can not be constructed in the lake. The National Government has spent on the Chicago Harbor, all told, about \$1,900,000, outside of the river, in the lake. We have a harbor there constructed originally at the suggestion of the engineering department under a plan to have the bridge and carrier business of Chicago done upon the lake front.

No modern freight vessel has ever gone inside of that harbor, and none ever will. The experiment has been a failure. They can not transact this business upon the lake front. The harbor of Chicago is the Chicago River, and as the Chicago Harbor it is entitled to consideration for the interests of navigation. There is no local interest that can do this. The city of Chicago can not make the improvement I speak of. The sanitary department, which has assumed control of the Chicago River, is not entitled to make the improvement. Only the National Government can make it, if it ever is made, and it is to the interest of the people owning the vessels and transacting the carrying business on the lakes to be able to turn their vessels around and go out bow foremost.

Mr. OTJEN. May I ask you another question?

Mr. MANN. Certainly.

Mr. OTJEN. Has there not been heretofore an appropriation made for improving the inner harbor of Chicago?

Mr. MANN. There was an appropriation of \$700,000 appropriated or contemplated. I think it has all been appropriated for the improvement of the Chicago River.

Mr. OTJEN. Let me ask you a further question.

Mr. MANN. Certainly.

Mr. OTJEN. Has that been expended on the river?

Mr. MANN. That has been expended on the river.

Mr. ALEXANDER rose.

Mr. MANN. I yield to the gentleman from New York [Mr. ALEXANDER].

Mr. ALEXANDER. Did you say \$750,000?

Mr. MANN. I said \$700,000.

Mr. ALEXANDER. I was thinking it was not quite so much

as that, perhaps about \$350,000. Possibly you are speaking by the official figures.

Mr. MANN. In the appropriation bill which was passed here in 1896 Congress appropriated \$50,000 cash and authorized \$650,000 more under the continuing contract system.

Mr. Chairman, I have stated heretofore the tonnage of the vessels entering and clearing at the city of Chicago, with the amount of their tonnage. Of the total of 8,247 entering at Chicago 7,035 vessels, with a tonnage of 4,989,118, entered at the Chicago River, and 1,202 vessels, with a tonnage of 1,956,062, entered at the Calumet River, in South Chicago, a portion of the city of Chicago.

Of the 8,250 vessels clearing from Chicago 7,017, with a tonnage of 4,976,964, cleared from the Chicago River, and 1,233, with a tonnage of 2,068,750, cleared from the Calumet River.

The total tonnage entering and clearing at the Chicago River was, therefore, 9,966,082, and the total tonnage entering and clearing at the Calumet River was 4,024,812.

The Calumet River Harbor at Chicago is of the lesser present importance of the two harbors, and yet the tonnage entering and clearing at that harbor is greater than the tonnage engaged in foreign trade entering and clearing at any port of the United States other than New York.

With such an immense commerce as this, why should the interests of Chicago not receive fuller attention in this bill? I do not make complaint against the River and Harbor Committee, and particularly I exonerate from any blame whatever the eminent member of that committee from the State of Illinois [Mr. REEVES], who has labored in season and out of season for the best commercial interests of our State and of the great Northwest.

I appreciate the fact that Chicago herself is largely to blame for the present situation. Not until after the present river and harbor bill had been practically agreed upon was any communication whatever sent to any member of this House from Chicago calling attention to the need of turning basins in the Chicago River, and although we have a strong association at home known as the Chicago River Improvement Association, I do not think any member of Congress from Chicago has received a line from that association concerning any needed improvements in the Chicago River.

Do not think from this statement that these improvements are not absolutely needed or that the river improvement association has not been actively at work.

We have been met with this situation at Chicago: The National Government, by the river and harbor bill of two years ago, fixed the navigable depth of the Chicago River at 21 feet. We have three tunnels under the river—one at La Salle street, one at Washington street, and one near Van Buren street. The La Salle street and Washington street tunnels were constructed by the city of Chicago, but are now used mainly by the street-railway companies. The Van Buren street tunnel was constructed and is solely used by the street-railway company. These tunnels fix the navigable depth of the Chicago River at the ordinary level of water at about 17 feet.

In addition to the obstruction to navigation caused by the tunnels, there are a great many bridges across the river, most of which are swing bridges with center piers. I have for many years been advocating the necessity of lowering the tunnels and removing the center-pier bridges. I have repeatedly said to the people of Chicago that this work was local in character and would not be undertaken or paid for by the National Government. At first those of us who took this position were scolded and derided at by the officials of Chicago, by some of our leading newspapers, and by practically all the Chicago River interests. I have repeatedly called the attention of the people of Chicago to the necessity of a local effort in removing these river obstructions, and have stated that no great improvement in river conditions could be obtained through the National Government until Chicago had commenced to make some progress in this direction herself.

Mr. Chairman, I am glad to see that Chicago now appreciates her position in the matter. She has been hampered by lack of funds. The bonded indebtedness of Chicago can not be increased under the present constitution of Illinois, but Chicago has spent \$40,000,000 in the construction of her new drainage canal. The drainage canal trustees have assumed control of the Chicago River as a portion of that canal, and they are now proposing, as rapidly as is practicable, to remove the present center-pier bridges and to erect in their places what are known as bascule bridges, which open from the center outwardly. There is no doubt that within a reasonable time the center-pier bridges will disappear from the Chicago River, leaving a navigable channel wide enough for all practical purposes.

It is not to be believed that either the National Government or the local authorities will ever engage upon any such wild-goose chase as endeavoring to widen the Chicago River along its entire length. Chicago is also making proper effort to lower the tunnels. As I stated, the tunnels were used by the street-car companies. Something of a conflict is now going on between the city and the

street-car companies in regard to renewal of franchises. Until that question is settled it is natural that the street-car companies should object to the expense involved in the lowering of the tunnels. But the city has taken hold of the question and is making an effort to have it settled. Mandamus proceedings are now being pushed in the courts for the purpose of compelling the street-car companies to lower these tunnels so used by them to a depth which will conform with the navigable depth of the river as fixed by Congress at 21 feet.

Chicago is doing all that can possibly be expected of her in this connection. She has spent more money in the last few years in the construction of the new canal than any other half dozen cities in the country have ever spent in the improvement of water navigation. The results of this vast expenditure of money Chicago tenders to the nation.

But the changing of the current of water in the Chicago River and the rapid flow of that current from the lake toward the new drainage canal has been a great damage to navigation in the river.

The rapid current which is now compelled to pass through the Chicago River in order to furnish the necessary water to the drainage canal makes it both expensive and dangerous for tugs to pull loaded vessels out of the river backward. It is the duty of the National Government, in the interest of commerce on the lakes, and for the benefit of the commerce passing through Chicago from west to east and east to west, to construct such turning or winding basins as may be necessary to make the river navigation both cheap and safe.

I call the attention of the House to a petition which has been sent to me recently through the activity of Mr. James B. Gallo-way and Mr. J. G. Keith, of Chicago, who are two of the best friends the Chicago River has ever had. This petition is as follows:

To the Congress of the United States:

Your petitioners, the undersigned, representatives of various marine, commercial, and transportation interests of Chicago, respectfully state that they are all deeply interested in the improvement of the Chicago River. That in compliance with the river and harbor act of March 3, 1899, amending the act of June 3, 1896, providing for a depth of 21 feet in the Chicago River, provided the tunnels shall be first lowered and center pier bridges be removed, your petitioners are now pressing for the removal of said obstructions and have reason to believe that this will be accomplished within a short time.

Your petitioners further respectfully represent that to make the river suitable for navigation by vessels requiring said depth of channel parts of the river must be widened and winding basins provided at suitable points along the channel.

Your petitioners are advised and believe that the best interests of lake commerce will be served by an expenditure of about \$2,000,000, to be expended from time to time under the supervision of the Government engineer at Chicago.

That to enable said engineer to act when the tunnels are lowered and center piers are removed, an appropriation at this time for the current year of \$500,000 is needed to purchase the necessary land and construct basins, so that the dredging of the channel may be proceeded with so soon as the obstructions are removed.

These turning basins are in great demand for the present commerce and can be made immediately useful.

Your petitioners therefore respectfully pray that your honorable body will appropriate the sum of \$2,000,000 as a continuing appropriation, of which the sum of \$500,000 may be made immediately available for the purposes hereinbefore stated.

This petition is signed by a large number of the leading business men of Chicago.

The people of Chicago believe that this petition ought to be granted by Congress, but I am not at this time asking so much of this House. All I ask now by the amendment which I propose is to follow the usual course in the making of public improvements by the National Government and have a report by the Engineer Department as to the need and expense of the proposed improvement.

Permit me to say, Mr. Chairman, that in my opinion the expense of the proposed turning basins will not be anywhere near the \$2,000,000 asked for by the petition. In fact, I fail to see how it is possible at the present time for the Government to make an expenditure of \$2,000,000 on the Chicago River. But this petition was gotten up hastily, and I only present it for the purpose of showing the feeling of the people of Chicago in reference to the duty of the National Government to make needed improvements there. When the report of the engineer comes in, it will then be seen what is the estimated cost of the improvement which I am now urging.

Mr. Chairman, I am aware of the difficulty of amending the present bill. I know very well the danger to the bill if the chairman of the committee [Mr. BURTON] in charge of the bill consents to any material amendments to it. I am aware that he can not very well favor one amendment and one member of the House and refuse another amendment and another member of the House. I am aware that at this stage of the proceeding it is almost impossible to have proposed amendments considered upon their merits, but I appeal to this House to consider the magnitude of interests involved at this time. Chicago is the second city of the country. It has a population of nearly 2,000,000. It has a commerce of immense importance to those both east and west of her.

I shall, with the consent of the House, put in a statement

showing the amount and character of receipts and shipments by lake at Chicago during the year 1900. Most of this commerce is not trade local to Chicago. It is through commerce, in which the whole country is interested and which merely passes through Chicago on its way between the purchaser and the consumer.

Mr. Chairman, so long as I have the honor to remain a member of this House I shall continue to take every opportunity to impress upon this body the importance of the internal commerce of our country, the magnitude of the commercial interests on the Great Lakes, and the strategic advantage of Chicago in relation to our inland commerce.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. ALEXANDER. If the gentleman desires it, I have some little time to my credit, and the gentleman may take it if he wishes to.

Mr. MANN. I do not care to trespass upon the time of the House any further. I thank the House for the indulgent attention it has given to me. [Loud applause.]

River and Harbor Bill.

SPEECH

OF

HON. D. E. FINLEY,

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 14, 1901.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 13189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. FINLEY said:

Mr. CHAIRMAN: It has long been the settled policy of this Government, that under the "general-welfare" clause of the Constitution, that it is the duty of Congress to make appropriations for the improvement of our harbors and navigable rivers. It has been stated by a distinguished gentleman in the debate on this bill that "where commerce is, where harbors are, where the great commerce-bearing rivers flow, there the money must be spent on improvements." In a general way I indorse this statement, with the qualification that wherever the conditions are such that improvements may be made and corresponding benefits derived for commerce, the work of improvement should be commenced.

Many of the most capacious harbors and greatest commerce-bearing rivers in the United States have been made such by expenditures for the purpose of improvement by the National Government. Many rivers and harbors in the United States can be cited as instances of this. Therefore it will not do to say that a river which is capable of improvement or which in times past has been navigable, such as the Great Pedee, and for various reasons, as the accumulation of rafts and snags in the bed of the river, has become unnavigable, that improvement is unnecessary because there is no annual commerce on the river.

The true test is as I have stated. Further than this, I will say that it is not necessary that all of the commerce along a river should be transported on the same when the improvement is made. In this enlightened age of progress and development commerce and transportation for healthy growth and prosperous development are inseparably connected in every line of business.

Freight rates such as will enable the business man, whether he be a merchant, manufacturer, or farmer, to compete in the matter of transportation with all others like situated as himself is most necessary.

It is a fact that railroad freights are as a rule arbitrary when uninfluenced by competition or Government supervision, and when once established remain fixed until interfered with by some outside influence.

The present river and harbor bill carries a large amount of money for the improvement of rivers and harbors. Whether too much or too little I have not the time to argue. But I will state that in my judgment it should be the settled policy of this Government to improve, when necessary for the purposes of commerce, every navigable river in the United States, for the reason that water transportation invariably brings about a reduction in freight rates on the part of the railroads ranging anywhere from 5 per cent upward. A freight steamer tied up at a wharf at any competing point is an assurance that freight rates will be properly adjusted.

The plan of improvement presented in House Doc. No. 124 contemplates improving the upper part of the Great Pedee River in South Carolina, between the Wilmington, Columbia and Augusta Railroad bridge and the town of Cheraw, the head of navigation, so as to obtain a 3½-foot channel depth at low water between the two points, at an estimated cost of \$118,345.37, and thereby open up water transportation to the Atlantic Ocean.

The commercial importance of this river is very great, as is shown by the reports of Mr. Reid Whitford, assistant engineer, and the report of the committee on commerce and navigation of the town of Cheraw, S. C., including the letter of W. C. Coker & Son and other business men of Society Hill, S. C., which I will incorporate in my remarks.

The survey has been made, and the improvement asked for is recommended by the Chief of Engineers of the United States Army, and is reasonable.

Large appropriations have been made for Winyah Bay and Georgetown Harbor, into which the Great Pedee flows, and also that part of the Great Pedee up to the Wilmington, Columbia and Augusta Railroad bridge. The improvement provided for in the amendment offered will add greatly to the value of these improvements. Georgetown Harbor has been and is being improved, as it should be. That part of the Great Pedee River between Georgetown and the Wilmington, Columbia and Augusta Railroad bridge, 103 miles, has been improved.

But from this point to the town of Cheraw, some 69 miles, remains yet to be improved. The bill now under consideration carries an appropriation of \$12,000 to be expended on this work in accordance with the report submitted in House Document No. 124, a sum but little in excess of 10 per cent of the estimates and entirely insufficient to carry the work to speedy and successful completion.

This part of the river is more important from a commercial standpoint than the part which has already been improved. The present commerce and future probabilities are greater.

The good results that will follow the opening of the Great Pedee River from the head of navigation to the sea can not be accurately estimated. It can be said, however, that it will result in a large industrial development of the resources of Chesterfield County, in South Carolina, and a considerable area of contiguous territory.

In the issue of the Cheraw Chronicle, a newspaper published at Cheraw, S. C., of the date of January 10, 1901, there appears the following:

A large cotton-manufacturing concern with more than a million dollars surplus, which they propose to put into a mammoth cotton mill at some favorable point, and who had been prospecting in Georgia and Alabama, have, on the recommendation of their president, decided to wait and see if Cheraw is going to secure a navigable waterway to the ocean before deciding on a location.

This only illustrates that the persistency on the part of a manufacturer to locate only where he is reasonably assured of competitive freight rates is the rule almost invariably followed. And I may add that the action of the United States Congress in assuring to Columbia, S. C., water transportation by the river and harbor bill of 1899 has already resulted in great good to that town. Without this assurance I am satisfied that Columbia could not to-day occupy the place that it does in industrial matters.

Mr. Chairman, I may add that in all the time that has elapsed since the formation of this Government no money has been expended by the United States for the improvement of this part of the river. For thirty-one years following 1784 the State of South Carolina improved the Great Pedee River; and it was not until 1879 that the United States Government made a survey looking to improvement. This was not because the river was small or the commerce insignificant. The Great Pedee is one of the largest and most important rivers in the State, and the present and future commerce is inviting.

There is no lack of freight along the 69 miles of this river that is recommended to be improved in the survey embraced in House Report No. 124. There is more commerce on this part of the Pedee River than there is from the Wilmington, Columbia and Augusta Railroad bridge to the Atlantic Ocean. All the surveys made heretofore have contemplated improving this river to the head of navigation; that is, the town of Cheraw. But the fact is, all the appropriations heretofore made, amounting to \$111,500, for the improvement of this river have been expended, and I submit unfairly expended, on the part below the Wilmington, Columbia and Augusta Railroad bridge.

The amendment is in accordance with a survey made under authority of a law enacted at the last session of Congress. It contemplates only giving to these people along the upper part of the river the rights and privileges and benefits which they have been denied for more than a century. It is recommended by the Chief Engineer and the division and local engineers. The immediate commerce along the part of the river which is sought to be improved now, and which has been discriminated against so long, amounts to more than \$7,000,000 annually, or 400,000 tons. Not

only this, but within the area which will be affected in the matter of freight rates by the improvement of this part of the Pedee River there is more than two thousand million feet of lumber, possibly a greater amount than there is in any other section of the country east of the Savannah River of equal area.

So I submit, Mr. Chairman, that if it be contemplated to speculate and see what the prospective commerce of this section is, taking no account of the present, there is enough there to warrant the Congress of the United States in giving the amount which I have suggested in the amendment. I only ask that justice be done. For a hundred years it has not been done, and now is a good time to begin. [Applause.]

REPORT OF MR. REID WHITFORD, ASSISTANT ENGINEER.

UNITED STATES ENGINEER OFFICE,
Georgetown, S. C., September 8, 1900.

CAPTAIN: I have the honor to make the following report on preliminary examination of Great Pedee River, South Carolina, from Cheraw to the Wilmington, Columbia and Augusta Railroad bridge, to comply with section 2 of the emergency river and harbor act of June 6, 1900, and also in response to your letter of August 22, 1900.

DESCRIPTION AND REMARKS.

The distance between the places mentioned is approximately 60 miles. The river has considerable width and is a bold stream, carrying large quantities of water during the freshest period, but at its dead low stage the channel depth is reduced from 1 to 2 feet on probably 12 shoal places, to a great extent formed by the accumulation of sand around sunken logs and snags. Generally the water is comparatively deep both above and below the shoals. The country through which the river finds its way is considered the most productive in the State of South Carolina for cotton, corn, etc., large quantities of the above articles being harvested yearly.

The town of Cheraw, situated at the head of navigation, is a place of considerable commercial importance, of about 1,500 people. Society Hill, 17 miles farther down, located 2 to 3 miles from the river, is also a town of considerable trade, with a population of 800 to 1,000.

The country was looked over generally as to its commercial resources, and a great many people living within reach of the river express themselves as being extremely anxious for the improvement of the stream, to be finally developed into something beneficial to the industries of their country.

The Pedee people are generally alive to the importance of using their river for the economical transportation of products and supplies. They also realize the utter hopelessness of maintaining anything like a steady yearly traffic on the stream in its present condition. The country, therefore, is left at the mercy of railroad rates for the transportation rates.

HISTORY.

To say that this stream is worthy of improvement would be nothing more than the opinion expressed as far back as the year 1784, when an act of the South Carolina legislature appropriated \$200, to be expended in the removal of all obstructions as far up as the North Carolina line; 1785, an act of the same legislature to improve the river from Yauhannah Ferry, 28 miles above Georgetown, to the North Carolina line, funds for this purpose to be collected by levying a special tax upon the lands lying along the river; 1791, an act to improve the river between points mentioned in 1785 by requiring the male inhabitants of the adjacent counties to work, each, six days in the year at removing obstructions; 1805, an act of this year appropriated \$4,000 for the improvement of the river from Brittons Ferry to the North Carolina line; 1815, an act of this year was passed, which provided for the improvement from the North Carolina line down to Singleton's plantation by the 6 days' plan. All the above embraces the section of the river now ordered for preliminary examination.

It appears that in the year 1873 the United States Government assumed control of the engineering operations on this river, and it was then examined by Gen. Q. A. Gillmore, Corps of Engineers, United States Army.

Further on, in 1879, an act of Congress, March 3, provided for a survey of the river below Cheraw. This was executed under the direction of Capt. Charles B. Phillips, Corps of Engineers, United States Army, in October of that year. Upon this survey was based the beginning of the regular project for the improvement of the Great Pedee River from Cheraw to its mouth, at Georgetown, a distance of approximately 172 miles. Captain Phillips recommended that the sum of \$25,530 be expended for this purpose. The survey upon which this estimate was made was very hurried, the water being high, rendering it altogether impossible to furnish an accurate estimate as to cost.

Therefore Capt. (now Maj.) William H. Bixby, Corps of Engineers, United States Army, in taking charge of the work, revised the estimate, after having made a more careful examination of the river in 1885, and recommended that the total sum of \$90,000 be expended in clearing the stream of obstructions, it being understood that the section from the Wilmington, Columbia and Augusta Railroad bridge to Cheraw was to receive its proportionate part of money and work. Captain Phillips's original project of the year 1879-80, and as continued to date, provided for a thorough cleared length of navigation to Smiths Mills, 54 miles above Georgetown, to 9 feet depth, thence 3½ feet navigation to Cheraw, the head of navigation, at all stages of water.

The project contemplated that this depth would probably be acquired by the expenditure of the amount as above mentioned, but as appropriated, in small sums and at intervals of one and two years, it has been barely sufficient to keep the river channel open to navigation, by the removal of logs and fallen timber, from Georgetown, 108 miles, up to the Wilmington, Columbia and Augusta Railroad bridge.

No attempt has ever been made to remove any of the shoals by dredging, which will be necessary in order that a navigable channel depth of 3½ feet be secured and maintained, according to the original project.

Below the bridge there are several shoals, upon which there is said to be less than 3½ feet at dead low water.

COMMERCE AND NAVIGATION—PAST, PRESENT, AND PROSPECTIVE.

The river above the Wilmington, Columbia and Augusta Railroad bridge seemed to have shoaled in the past few years, or else the water supply is not now what it formerly was, as the steamers apparently are unable to make as frequent trips to Cheraw as they did in former years. I am told by Capt. F. B. Cushman, who has commanded and successfully operated steamers on the river for a good many years, that, from his own personal knowledge, the commerce in past years was very much greater than it is now, and the steamers found much less difficulty in running on the river, and their trips could be much more surely counted on in getting to Cheraw; but, owing to the probable raising of the shoals and the accumulation of other obstructions, that year by year the boats have been forced to greater irregularity in their trips, until now the commerce is, by comparison, very little or nothing.

It has been stated in a general way, as a matter of interest, in setting forth the value of the Great Pedee River as a highway of commerce, that there has been known to have been shipped many years ago as much as 50,000 bales of cotton from landings between Cheraw and the Wilmington, Columbia and Augusta Railroad bridge annually.

From the best information attainable there is at this time practically no fixed yearly commerce on the river, except such as is carried on by timber rafts, of which no approximate account could be secured.

The prospective commerce is enough to attract favorable attention toward this stream, as will be seen in the attached statement from the people at Cheraw, Society Hill, and landings along the river, which, being reduced to figures, amounts to, in aggregate, 355,425 tons, valued at \$7,022,500, could the river be navigated continuously at all stages of the water.

The Great Pedee River is known to be one of the most valuable for commerce and trade in the State, and therefore, taking all the foregoing into consideration, is deemed well worthy of continued improvement by the General Government, and it is recommended that a detailed survey of it be made with the view of revising and enlarging the original estimate for its improvement between Cheraw and the Wilmington, Columbia and Augusta Railroad bridge to 3½ feet depth at dead low water. Such a survey would probably cost \$1,300, including the general map of the river, as well as an extra detailed survey of each shoal, from which to make estimates for dredging, transportation of surveying party, etc.

Very respectfully, your obedient servant,

REID WHITFORD,
Assistant Engineer.

Capt. J. C. SANFORD,
Corps of Engineers, United States Army.

LETTER OF COMMITTEE ON COMMERCE AND NAVIGATION OF THE BUSINESS LEAGUE OF CHERAW, S. C.

CHERAW, S. C., August 23, 1900.

DEAR SIR: In accordance with your request, we, the undersigned committee on commerce and navigation of the business league of the town of Cheraw, hereby submit to you the following report of the probable commerce of the said town of Cheraw, which would result on account of the opening of the Great Pedee River for navigation from the Wilmington, Columbia and Augusta Railroad bridge across the said river to the town of Cheraw:

75,000 tons fertilizer.....	\$1,575.00
Naval stores.....	24.00
Merchandise.....	1,000.00
500,000 sticks of timber.....	1,444.00
40,000 bales of cotton.....	1,800.00
Probable total.....	6,819.00

The town of Cheraw is situated in the northeastern portion of the State of South Carolina, at the head of navigation of the Great Pedee River, and at the intersection of the Seaboard Air Line and the Atlantic Coast Line railroads. It is a progressive town and needs only proper freight rates to make it one of the best commercial and distributing points in the two Carolinas, but on account of the fact that the Great Pedee River is not open to navigation the town is at the mercy of the two great railroad companies, which now afford the only means by which business with the outside world can be carried on, and in many instances the high freight rates now in force make it almost impossible to carry on commerce with the outside world to advantage. We not only, under our present condition, can not undersell other points, but in many instances can not even compete with them.

With the rates to which we should be entitled on account of our geographical position, being the only town within 80 miles which could under any circumstances have water navigation, we should have such freight rates that no town could compete with us. Instead of remaining a town of 1,500 inhabitants, and so remaining forever, we should in a very short time, with deep water in the Pedee, become a city of 25,000 inhabitants. Situated in the very heart of the cotton-growing region, with the best class of labor, and with fuel plentiful, with good water and a mild and healthful climate, there is no reason except the high freight rates why Cheraw should not become one of the greatest cotton-manufacturing centers in the South.

The Seaboard Air Line Railroad has just been completed from Cheraw to Columbia, S. C., and there is now another road under construction from this point to Lancaster, S. C., and these two new roads will no doubt do much toward the development of the town, but that is not all Cheraw needs. The freight rates will not be much, if any, reduced on account of the railroad competition. What we need is water rates to compel all these roads to reduce rates.

As an instance of the high rates now in force, we cite the rates following on cotton:

Freight per hundredweight from Cheraw to New York on cotton.....	\$0.59
Freight per hundredweight from Cheraw to Liverpool on cotton.....	.75

From this it will be seen that the rate on cotton from Cheraw, S. C., to Liverpool, England, is only 16 cents per hundredweight higher than it is to the city of New York.

Therefore we, the said committee, hereby respectfully request that a survey of the said section of the Great Pedee River be made as early as possible and that an estimate be made for the deepening of the channel of the same, so as to afford a channel with a draft of at least 3½ feet at any and all times, so that the said report may be submitted at the next session of Congress.

C. A. MALLOY,
T. C. D. MALLOY,
H. W. FINLAYSON,
W. P. POLLOCK,
W. F. STEVENSON,
H. P. DUVAL.

Committee on Commerce and Navigation of the
Business League of the Town of Cheraw, S. C.

Mr. REID WHITFORD,
United States Assistant Engineer, Georgetown, S. C.

SOCIETY HILL, S. C., August 23, 1900.

DEAR SIR: Our village is on the Great Pedee River. We have only one railroad by our town and have to submit to any rate of freight they may charge us. We think if the Pedee was made navigable for steamers the year through it would be a great advantage to us in securing reasonable freight rates.

In answer to your inquiry as to the amount of freights handled at this point will say:

4,000 bales of cotton.....	\$200.00
650 carloads brick.....	35.00
50 carloads timber.....	4.00
400 carloads wood, at \$40.....	16.00
8,000 tons of merchandise.....	800.00

We are glad to know that Congress is about to take some steps toward making our rivers navigable. We are in the midst of the most fertile part of the State of South Carolina, with fine climate and good water. There are landings above and below us that receive and ship large quantities of freight by steamer when the river is navigable.

We are satisfied that a competing carrier would get a good per cent of the above business.

W. C. COKER & SON.
E. T. BARENTINE, M. D.
Z. W. WINES, P. M.
D. L. WINTERS.
A. M. SOMPAYRAC.
L. E. CARRIGAN.
JNO. E. SUMNER.

Mr. REID WHITFORD,
Assistant United States Engineer, Georgetown, S. C.

Other landings on the river (collected by Mr. William H. Johnstone during the survey):

Outward freights:	
20,000 bales of cotton, 5,000 tons, valued at.....	\$1,000,000
10,000 tons cotton seed, at \$15, valued at.....	150,000
	1,150,000
Inward freights:	
10,000 tons fertilizers, at \$18.....	180,000
12,000 tons general merchandise, at \$60.....	720,000
Total.....	2,050,000

No estimate could be formed of the amount of naval stores, timber, shingles, cross-ties, corn, and other products which would probably pass over the river from these intermediate landings. They would evidently amount to no little each year.

For full history of the efforts in the past made to improve the Great Pedee River see report on examination of this stream September 8, 1900.

Mr. William H. Johnstone, surveyor, rendered valuable service in completing the survey thoroughly, and in a most satisfactory manner, in a short time.

Very respectfully, your obedient servant,
REID WHITFORD, Assistant Engineer.

Capt. J. C. SANFORD,
Corps of Engineers, U. S. A.

Army Bill.

SPEECH

OF

HON. CHARLES DICK,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, December 6, 1900,

On the bill (S. 4300) to increase the efficiency of the military establishment of the United States.

Mr. DICK said:

Mr. SPEAKER: There should be no delay in the passage of the bill now under consideration, "to increase the efficiency of the military establishment of the United States." Every consideration urges prompt action. There is no doubt as to the policy of the Administration in respect to the Philippine Islands or any of our new possessions. They have come to us as the result of war, their accession has been sanctioned by treaty, and it is the declared policy of the Administration, indorsed as it has been by the people of the country at the polls, to give to the Filipinos stable government, republican in form, as soon as they shall be capable of administering it. That the result of our late war with Spain has made an increase in the Army necessary is apparent. The situation in the Philippines demands a force equal to that now in the archipelago.

The Secretary of War informs us that speedy action is necessary and gives his reasons for it in his report from which I quote:

Under the existing provisions of the act of March 2, 1890, on the 30th of June next the present volunteer force will be discharged and the Regular Army will be reduced to 2,447 officers and 29,025 enlisted men, distributed as follows:

	Officers.	Enlisted men.
General officers.....	9	
Adjutant-General's Department.....	17	
Inspector-General's Department.....	10	
Judge-Advocate-General's Department.....	8	
Quartermaster-General's Department.....	57	80
Subsistence Department.....	22	90
Medical Department.....	122	
Paymaster's Department.....	23	
Corps of Engineers.....	127	500
Ordnance Department.....	67	805
Signal Corps.....	11	50
Record and Pension Office.....	2	
Chaplains.....	34	
Ten regiments of cavalry.....	480	6,170
Seven regiments of artillery.....	385	8,050
Twenty-five regiments of infantry.....	1,050	13,125
Miscellaneous.....		355
Total.....	2,447	29,025

This force is about one-third as great in proportion to the population of the country as it was thirty years ago. As our country has grown in wealth and variety of interests, and as more intimate contact with the other nations of the earth has resulted from the natural extension of our trade, there has been an increase in the duties required from the regular establishment fully equal to our increase in population. (Report of the Secretary of War, 1900.)

That this deficiency should be provided for before the actual reduction takes place I am sure no member of this House will seriously dispute. On the 30th day of June, less than six months from this date, the term of service of 35,000 volunteers and about 5,000 regulars will expire. To withdraw this force from the front without filling their places would be to surrender to the insurgents a large territory and abandon to lawless bands of savage and semi-savage marauders and bandits peaceable and law-abiding Filipinos who have accepted in good faith the sovereignty of the United States. And yet the Government must either break faith with the thousands of our citizens now in the Philippines, who in a spirit of patriotism have voluntarily offered their lives as a sacrifice in defense of our country's rights and her honor, or it must furl the Stars and Stripes and retreat.

Thousands of our citizens are now in the Philippines who, at the call of their country, have enlisted in the Army with the distinct understanding that they should be relieved promptly at the end of their terms of service. Good faith demands that the contract be faithfully carried out. It is hard to believe that anyone for any cause would trifle with not only their rights, but their lives.

Mr. Speaker, I yield to no one, on this floor or elsewhere, in my admiration for and confidence in the volunteer soldiery of this country. The battles of our country have been fought and our victories won by the volunteer soldier, and, I might add, by the "rank and file," from Lexington and Concord to San Juan Hill; from the very inception of our Government to the present time. But I do not forget that the regular is also a volunteer. I am glad to say that we have no conscripts in our Army. In a large majority of cases the regular soldier was born under the Stars and Stripes, reared under the same influences, and educated in the same school, side by side with his comrade of the Volunteer Army; and when their respective terms of service shall expire they will return home together and engage in the arts of peace. They are alike entitled to the care and protection of the Government.

That there has been almost criminal sacrifice of life in all our wars by rushing into battle undisciplined, untrained troops, is painfully true. I agree with my colleague from Illinois, that—

An Army officer has the lives of his men in hand, and the complaint about mismanagement at our camps during the late Spanish war was not due to the quality of our men, but was largely due to a lack of proper knowledge and technical training on the part of some of the officers.

My colleague's views are in line with those of all our great statesmen and generals who have spoken on this subject. As early as September 24, 1776, General Washington in a letter to the President of Congress, urging the importance of a regular army, said:

To place any dependence upon militia is assuredly resting upon a broken staff. Men just dragged from the tender scenes of domestic life, unaccustomed to the din of arms, totally unacquainted with any kind of military skill (which is followed by want of confidence in themselves when opposed to troops regularly trained, disciplined, and appointed, superior in knowledge and superior in arms), are timid and ready to fly from their own shadows. Besides the sudden change in their manner of living, particularly in their manner of lodging, brings on sickness in many, impatience in all, and such an unconquerable desire of returning to their respective homes that it not only produces shameful and scandalous desertions among themselves, but infuses the like spirit in others.

And again, September 15, 1780, in a letter to the President of Congress, he made the following statement:

Regular troops alone are equal to the exigencies of modern war, as well as for defense or offense, and whenever a substitute is attempted it must prove illusory and ruinous. * * * The firmness requisite for the real business of fighting is only to be attained by a constant course of discipline and service. I have never been witness to a single instance that can justify a different opinion, and it is most earnestly to be wished that the liberties of America may no longer be trusted in any material degree to so precarious a dependence.

Col. Nelson A. Miles, Fifth Infantry, major-general in the volunteer service, now Lieutenant-General Commanding the Army, testified before the military commission in 1876 as follows:

In organization and administration it is indispensable that the first place be given to the system and method that will make the Army most efficient as a body of fighting men; that the essential functions of supply, equipment, and administration, that require the commercial virtues, honesty and industry, but not great military capacity, should take their proper place as subordinate members, not usurp those of the directing head of the body, the Army; that the ability to organize, care for, discipline, command, and fight troops be sought for, cultivated, and rewarded.

Before the same commission Col. Augustus V. Kautz, Eighth Infantry, commanding Department of Arizona, brigadier-general of volunteers and brevet major-general, testified as follows:

With all that the late war has cost the country in life and property, it has taught us nothing for the future, and the nation is as destitute of military system to-day as when that war began. Should such a disaster come upon us again to-morrow, I would expect to see again the distressing spectacle of the youth of the land called out for sixty or ninety days and returning at the end of that time with ranks depleted and constitutions broken, not by the foe, but simply because there was not a soldier of experience in the regiment to tell them how to take care of themselves.

So the judgment and testimony of our most distinguished military men are against the employment of raw troops—militia, if you please—in times of war; and the only way to avoid it is to create a regular establishment sufficiently large to meet any emergency that may arise. Experience teaches us that our military establishment always has been deficient in this respect. At no time when war has been forced on the Government has it had a sufficient regular force to meet the emergency. This is precisely what we are trying to remedy, and it can not be done too quickly. It amounts to almost a crime to rush raw troops into battle under inexperienced officers, and I say this without reflection on the intelligence, patriotism, or valor of either the men or officers. These are qualities that are unquestioned in the American people—a fact which has been demonstrated on many a bloody field.

General Schofield once said:

Valor is the most common thing in the United States. There are at least 2,000,000 men you could bring in at any time whose valor would be unsurpassed. I do not say it is the cheapest thing. I would not say that, but it is the commonest thing among the American people.

There is no doubt about the accuracy of that statement, and no one is more competent to speak on that subject than is General Schofield; but valor alone will not prevail against the present destructive weapons of war. The time was when the wage of battle depended upon valor, physical strength, and endurance, but as the weapons of war grow more and more destructive, valor must be blended with other qualities to be effective. So it becomes necessary that both officers and enlisted men be thoroughly schooled in the art of war, at least as far as it relates to their respective grades. It is not enough that the soldier should know how to shoot and take care of himself in battle; he should know how to take care of himself in the camp and on the march, which knowledge can be gained only by long experience, or from officers who have acquired a knowledge of the military service by training in school, or by long experience in the camp and field.

In order that our Army may continue to command the respect and confidence of our people at home and the admiration of the nations of the world it should attain the highest standard of effectiveness and of discipline. Every soldier should undergo thorough individual training; and the officer, even in subordinate rank, having in charge the education, the discipline, and the care of men should be educated and trained in the moral as well as the physical faculties, in order that he may inspire the confidence of those under his care. He should be able to teach the science as well as the art of war. This is all the more necessary because of the recent great improvements in firearms, their great intricacy of construction, and the consequent change in tactics as well as in the methods of fighting.

It is within the memory of men still living when the old flint-lock was the standard arm; and the development from that primitive contrivance in use in our Revolutionary and other early wars to our present intricate and rapid-firing rifle was not rapid. Indeed, the development of military science and the evolution of the art of war from ancient times to within the last thirty years—about the close of our civil war—was exceedingly slow and gradual, and therefore it was not difficult to keep abreast of progress, and the necessity for legislation on the subject was not so pressing; but the time has come when our military establishment must be adjusted to the advanced conditions.

It is gratifying that the morale of our Army has been raised to a high standard, for no system of tactics nor the skill and intrepidity of any leader can guarantee victory when the morale of an army is bad. Our Regular Army is not an asylum for criminals or other unworthy citizens; it is not made up of conscripts, but of men who through patriotism and a military spirit, desiring the experience and education it affords them, voluntarily enter it, therefore maintaining for it a high standard.

On this subject Gen. Wesley Merritt says:

A term of service judiciously spent in the Army is an advantage to a young man second only to a university course. It improves him physically, broadens his mental view, and fits him to compete in life with the educated and enterprising. Some of the most successful men in the Western country are among those who have served a term in the Army. They are proud of their service and grateful for the advantages it has brought them. No young man not having superior advantages need now hesitate to adopt the Army as an experience which will increase his opportunities for success in any profession.

In line with this Gen. Nelson A. Miles says:

The science of war has become a fixed science, and the appliances of war are different from what they used to be in olden times when our fathers used to take their hunting rifles and make the best fighting men on the continent, for now we have the use of smokeless powder, high-power guns, magazine guns, low trajectory, long-range rifles, machine guns, dynamite, and all of those appliances which were unknown thirty years ago and were not in use during the great civil war.

The Secretary of War, in his recent annual report, speaking of our improved defensive machinery, ascribes the very highest necessity for special training of both officers and men. He says:

No one can use this defensive machinery or take proper care of it and keep it in order without being instructed and trained in its uses. For this purpose it is necessary to have an adequate force of artillery officers and men who make the handling of such machinery their business. This is prac-

tically a new requirement for the Army. It did not exist to any considerable extent prior to the building of the new fortifications. The number of men necessary to perform this duty is capable of exact computation, and the number required according to the men most familiar with the business is, at a minimum allowance, 18,420.

On this subject the remarks of Gen. Winfield S. Hancock are also pertinent. He says:

I believe, and I presume you know as well as I do (although it is a matter requiring too much time to be gone into fully here), that one of our greatest deficiencies in time of war is the want of a general staff of the Army, as it is called in continental Europe. The officers are selected from all the branches of the service—engineers, artillery, infantry, and cavalry—tried and talented young men. They are then sent to a school for, I believe, two years, where they learn the matters of administration, etc., so far as it can be taught to them theoretically and practically in that time. They are then sent to serve in each arm of the service, for probably two years, except their own, to familiarize them with the tactics and the practical operation of each arm of the service. This plan forms a large body of men of general information—accomplished men. From that body are taken the chiefs of staffs of armies, corps, divisions, and sometimes brigades, and also the adjutant-generals of the different commands. Also from that body are taken the aids, and it is quite a useful school for the education of general officers, too. The tendency of the system is, of course, to make of these officers men who know more about the details of all the branches of the service than any other officers, because they serve with all arms of the service. This in our country would be especially important, as we raise large armies from the people.

While the opposition are proclaiming their love and affection for the "old volunteer," they are by one flimsy pretext or another doing precisely what the old volunteer does not want done. What the old volunteer wants, and what in justice should be done, is to return him to his home when he shall have fulfilled his part of the contract.

The opposition objects to our providing a standing army in time of peace as if that were a new phase of the question. They object to the sliding scale, as they term it, as if that were something new in Army legislation. They are perfectly willing to increase the efficiency of the military establishment of the United States by reducing it.

Mr. Speaker, I am as much opposed to a standing army disproportionate to our population as any gentleman on the other side. But I believe we should have a force sufficient to meet any sudden emergency, and this belief is verified by experience as well as by the best judgment of the wisest.

In arguing for the maintenance of a standing army, when the adoption of the Constitution was under consideration, James Madison said:

If one nation maintains constantly a disciplined army, ready for the service of ambition or revenge, it obliges the most pacific nation which may be within the reach of its enterprises to take corresponding precautions.

What would be an adequate corresponding precaution at this time is a question for the judgment of this House. In every civilized country a certain proportion of the population is dedicated to the military service. At present Germany has 11½ soldiers to every 1,000 of her population; France has 14; England, 5½; Austro-Hungary, Russia, Turkey, and Italy each have 7; while the United States has less than 1 soldier to every 1,000 population, a number utterly insignificant as compared with the armies of other nations. Our interest as well as our area has expanded, and I believe, under these conditions, that an Army as provided for in the bill now before Congress is not too large as a permanent establishment.

In this connection I desire to call the attention of the gentlemen on the other side to what the "Father of his Country" thought the strength of a standing army, for safety, should be, even when the population of the country did not reach 3,000,000 people.

In his letter of September 24, 1776, to which I have just referred, General Washington in part said:

Certain I am that it would be cheaper to keep fifty or a hundred thousand in constant pay than to depend upon half the number and supply the other half occasionally by militia. * * * The jealousy of a standing army and the evils to be apprehended from one are remote and, in my judgment, situated and circumstanced as we are, not at all to be dreaded; but the consequence of wanting one, according to my ideas formed from the present view of things, is certain and inevitable ruin. For, if I was called upon to declare under oath whether the militia have been most serviceable or hurtful upon the whole, I should subscribe to the latter. I do not mean by this, however, to arraign the conduct of Congress; in so doing I should equally condemn my own measures if I did not my judgment; but experience, which is the best criterion to work by, so fully, clearly, decisively reprobates the practice of trusting to militia that no man who regards order, regularity, and economy, or who has any regard for his own honor, character, or peace of mind, will risk them upon this issue.

Again, December 5, 1776, he wrote:

* * * My first wish is that Congress may be convinced * * * of the necessity of raising a larger standing army than they have voted. The savings in the articles of stores, provisions, and in a thousand other things by having nothing to do with militia, unless in cases of extraordinary exigency, and such as could not be expected in the common course of events, would amply support a large army, which, well officered, would be daily improving instead of continuing a destructive, expensive, and disorderly mob. I am clear in the opinion that if 40,000 men had been kept in constant pay since the first commencement of hostilities, and the militia had been excused from doing duty during that period, the country would have saved money. When I reflect on the losses we have sustained for want of good troops, the certainty of this is placed beyond a doubt in my mind.

And again, in his letter to the President of Congress, dated "Headquarters near Passaic Falls, N. J.," October 11, 1780, he

urged an establishment the maximum of which should be 30,000 and a minimum of 20,000, in the following language:

It is not easy to be conceived except by those who are witness to an additional waste and consumption of everything, and consequently what an increase of expense, result from laxity of discipline in the Army; and where the officers think they are doing the public a favor by holding their commissions, and the men are continually fluctuating, it is impossible to maintain discipline. Nothing can be more obvious than that a sound military establishment and the interests of economy are the same. * * * Twenty-two thousand fighting men appear to be necessary on a defensive plan. To have these our total number must be 30,000, rank and file. The wagoners, workmen at factories, waiters, men for other extra service, and sick, on an average, make at least a fourth of the total number, which Congress may see by recurring to the returns of the Army from time to time.

Writing on this subject in the North American Review, an extract from which was submitted by Gen. W. T. Sherman to the joint committee of which Senator Burnside was chairman, General Garfield said:

It is a significant fact that, while numberless petitions and remonstrances upon almost all subjects of legislation have been constantly pouring into Congress, yet during the last eight years not one petition has been addressed to either the Senate or the House praying for the decrease of our military establishment. Our people remember with gratitude the great captains who in the late war led their soldiers to victory to save the Republic from overthrow. They thoroughly learned the lesson that in times of extreme peril the preservation of liberty and peace depends upon the disciplined valor of the nation, and that the science and art of war can be acquired only by the thorough and patient study and practice of its elements. This work they expect of the Army, and the annual amount which they cheerfully pay for its support is the cost of national insurance against foes from without and anarchy within. * * *

The Army should be large enough to preserve inviolate our national boundaries and protect our widely extended frontier settlements against Indian hostilities, to keep the peace and protect the public property in all places subject to the jurisdiction of the United States, and to aid the several States in case of invasion or insurrection too powerful to be controlled by their local authorities. * * * In determining how large an army is needed we must consider the extent of territory for the defense of which it was created. * * *

A republic, however free, requires the service of a certain number of men whose ambition is higher than mere private gains, whose lives are inseparable from the life of the nation, and whose labors and emoluments depend absolutely upon the honor and prosperity of the government, and who can advance themselves only by serving their country.

So it appears that our wise and patriotic statesmen and generals from the inception of our Government to the present have urged a standing army much larger in proportion to the population than we have heretofore had or than we have now, and events have shown the wisdom of their judgment. General Washington urged a permanent military establishment more than six and at one time even ten times greater in proportion to the population at that time than that which the present bill provides. The average number of soldiers to 1,000 of population from 1790 to 1860 was 24. With the exception of two or three decade periods this is less than the average. From 1850 to 1860 the Army—through unfriendly legislation and otherwise—was reduced to the rate of one-fourth of a soldier to 1,000 population. In that time a most gigantic conspiracy against the life of the nation was consummated.

The men who managed that conspiracy, fearing the loyalty of the Regular Army, were careful not to strike the blow until the Army was reduced to mere handfuls of men, less than one soldier to every 4,000 population. Having distributed these so that they could not be made immediately effective and having dispersed our Navy to distant parts of the world, when the Government had no national force available to protect itself, they struck the blow, and the country was plunged into a wicked, brutal, expensive, and bloody war; wicked, because it struck at the life of the best Government on earth and aimed to perpetuate human slavery—the blight of the nineteenth century; brutal, because it arrayed brother against brother, brave men against brave men, men who were equal in valor and loyalty to their respective causes—equal in everything except the righteousness of their cause. Perhaps no braver men ever lived than the men who wore the gray. The rank and file were loyal to the Constitution and to its flag, as I verily believe; but reared in a school of politics which taught them that their first duty was to the State, and firmly believing in that doctrine, they followed their leaders into that great conspiracy. That they at heart loved our form of government, the Constitution, and the flag was demonstrated by the alacrity with which they went to the support of the Stars and Stripes in our late war with Spain. That the civil war was an expensive and bloody one our immense war debt and large pension roll attests.

The necessity for and value of a standing army is shown in the New York riots of 1864 and the railroad riots in 1877 and 1894. It is a part of the history of those riots that the mobs yielded peacefully to the regular troops when they appeared.

The contention that the regular establishment of the Government in all our wars has been inadequate when the emergency came upon us is sustained by comments of our military experts. It was true in the war of the Revolution, the war of 1812, the Mexican war, the Florida war, and others; and especially in the case of our civil war, of which Maj. Samuel Breck, Assistant Adjutant-General, brevet brigadier-general, U. S. A., and afterwards Adjutant-General of the Army, says:

Had the Army been large enough so that President Lincoln could have put 35,000 or 40,000 regulars at once in the field I believe the incipient war would have ended promptly and properly and money been saved sufficient to pay the expenses of an army of 50,000 men three hundred years, not to speak of the lives of those who perished.

Those who look forward to an unending period of peace may think with profit how few of the North in 1860 anticipated any war at all, and even when the first call for men was made the war was expected to be a small affair of sixty or ninety days. The last twenty-five years have given rise to the war in the Crimea, the war in Italy, the war between Prussia and Austria, the war in France, in addition to our own, and the wars with and among half-civilized peoples. Does this past promise a long future of peace? Few nations of the earth have been exempt from war in this period of twenty-five years, and the art of war, both on sea and land, has made progress hitherto without a parallel. Can we with safety disregard the wisdom contained in the maxim, "In time of peace prepare for war?"

The staff corps of the Army ought to be not merely for the present necessities of the Army, but also for the purpose of having an educated and trained body of experts to assist in raising an army and putting it in the field when war comes. This needs only to be thought of to be an acknowledged necessity.

This absurd opposition to a standing army and its establishment in time of peace has made its appearance in some kind of disguise at every stage of our progress since union was first attempted in this country. It rendered impotent the Union under the Articles of Confederation. It made its appearance when the question of the adoption of the Constitution was pending, and since that time, in every instance when the subject of Army legislation has come before Congress, the Regular Army has been held up as a menace to constitutional liberty in language intended to mislead and inflame the people and to engender and intensify class prejudice.

In urging that absolute power be vested in Congress in respect to a regular army in time of peace, Alexander Hamilton said, and his argument has been adopted by Judge Story in his able Commentary on the Constitution:

These powers ought to exist without limitation, because it is impossible to foresee or define the extent and varieties of national exigencies or the correspondent extent and variety of the means which may be necessary to satisfy them.

Mr. Hamilton further said:

The circumstances that endanger the safety of nations are infinite, and for this reason no constitutional shackles can wisely be imposed on the power to which the care of it is committed. This power ought to be coextensive with all the possible combinations of such circumstances, and ought to be under the direction of the same councils which are appointed to preside over the common defense.

This is one of those truths which, to a correct and unprejudiced mind, carries its own evidence along with it, and may be obscured, but can not be made plainer by argument or reasoning. It rests upon axioms as simple as they are universal. The means ought to be proportioned to the end. The persons from whose agency the attainment of any end is expected ought to possess the means by which it is to be attained.

Mr. Speaker, in a republic like ours, envied by the old forms of government all over the world, an emergency is always imminent; and the Secretary of War in his report just quoted strongly intimates an emergency at this time on account of our extension of trade. Trade extension and commercial supremacy are always a most prolific source of war, and nothing has more seriously influenced the history of the world and the welfare of nations. An eminent French economist, speaking of the mercantile system, says:

It has made each nation regard the welfare of its neighbors as incompatible with its own; and hence that spirit of commercial rivalry which has been the immediate or remote cause of the greater number of modern wars.

That the commercial supremacy of the world is rapidly passing into our hands is evident. Take exports alone. The United States in the past eleven months has surpassed the total for Great Britain by over \$5,000,000. Statistics show that in the last quarter of the nineteenth century France has made no gain in her exports of domestic merchandise. In the same period Germany shows an increase of only 50 per cent, and the United Kingdom has gained 40 per cent, while the United States, the youngest of them all, shows an increase of over 200 per cent. Of the \$18,000,000,000 total commerce of the world, the United States is credited with over 11 per cent, a greater per cent than is shown by any of the countries of the world except the United Kingdom, whose percentage includes the business done by her colonies and dependencies.

Our exports show an increase of \$166,331,178 for the ten months ending October, 1900, as compared with the corresponding ten months of 1899, and the total for the ten months in question is practically double what it was during the corresponding months of 1894. Our exports of manufactured products for the nine months ending September, 1900, amounted to \$338,678,243, as against \$327,502,649 for the corresponding months of 1899, and \$145,793,834 during the same months of 1895, thus indicating an increase of manufactured exports for one year of nearly 25 per cent, and the amount has more than doubled during the four years from 1896 to 1900, while the importation of manufacturers' materials has also increased at a very rapid rate. Our exports of iron and steel for the ten months ending with October, 1900, amounted to \$110,000,000, as against \$86,000,000 for the corresponding months of 1899 and \$51,000,000 for the corresponding months of 1897.

showing that the amount has more than doubled during the three years from 1897 to 1900.

Our exportation of agricultural products for the ten months ending October, 1900, amounted, in round terms, to \$700,000,000 as against \$625,000,000 for the same month in 1899. Exports from the United States for the ten months ending with October, 1900, show an increase, as already referred to, of \$166,000,000, yet during the same period the exports of the United Kingdom increased but \$125,000,000. During the year 1900 neither Belgium, Spain, nor Italy showed any apparent increase in exportations. Reports for the current year show that in Belgium, France, Spain, Italy, Germany, and the United Kingdom the imports exceeded the exports, while the exports from this country vastly exceeded the imports, the amount for the ten months ending with October, 1900, being \$499,667,936, or a greater excess than has been attained during the corresponding period of any preceding year and a greater excess than that attained by any other country of the world.

It is therefore unsafe to act upon the assumption that because we are now at peace with all the nations of the earth there is no danger that our relations may be disturbed and our country drawn into war in order to protect our rights. We can not tell what hour some one of the powers may see fit to interfere with our trade; and we are within the reach of the "enterprise" of a number of powerful nations who, alleging encroachment on their trade rights as a grievance, may attack our interests in such a way as to compel the use of troops, in what numbers it is impossible to predict. We have powerful governments on the north and on the south of us; and while we are at peace with them, it is not an infrequent occurrence that the best friends fall out.

Our relations with Great Britain have been greatly strained many times since the close of the civil war, and in a number of cases war was averted only by diplomacy. For instance, the *Alabama* claims case, which, though not without apprehension of war, was submitted to and amicably settled by the Geneva board of arbitration; the fisheries dispute; the Bering Sea difficulty; the Venezuela case, which at one time presented a very serious aspect, and the Alaskan boundary. Our relations from time to time within the period named have been strained with nations in other parts of the world, which made it necessary to hold in readiness troops that were needed in our garrisons and which could with difficulty be spared for other employment. Notably among these instances are the Chilean affair, the troubles in the Hawaiian Islands, and in Samoa. Gentlemen may say that these emergencies could be met by enlistment of volunteers when needed. Under the old system of fighting this may have been true, yet at a sacrifice of blood and money that has been shown to be unnecessary, and which could be avoided by an ample regular establishment. Present conditions would not admit of this. Recent wars, on account of improvement of arms and other reasons, have been of short duration.

On this subject General Merritt says:

The war between France and Austria (1859) lasted two months and that between Austria and Prussia (1866) lasted a little over a month. The Franco-Prussian war of 1870, in which the territory of France was completely overrun, their capital and central city besieged and captured, and the nation made to pay a ransom such as modern statesmen had not dreamed of, was finished in a little more than a half year. The war between Russia and Turkey, with its sieges of fortified places and severe battling at the passage of rivers and the mountain ranges, was concluded in much less time than one year. In other words, no war between the war-making powers of Europe in the last thirty years has occupied the time it would take to prepare the best reserves we have for the field.

The same may be said of more recent wars; the wars between Japan and China, Turkey and Greece, and our late war with Spain, which was concluded in the short space of one hundred days. That war alone is sufficient to demonstrate the absurdity and the wickedness of throwing into active service, in a foreign country, unacclimated, undisciplined recruits. Everyone who has given the subject thought knows that if the Government had had 50,000 or even 30,000 well-organized and well-disciplined troops available at the outbreak of the Spanish war, victory could have been accomplished in the same length of time with infinitely less loss of life and a less expenditure of money than was required under the system that our opponents are now trying to force on the country.

Again, it is impossible for us to know when a blow may be struck at our Government. The war of the rebellion came as if in a night, and the Spanish war came like a cyclone, and, increasing in volume, was upon us before it could be fully realized. On the other hand, in this age a formal declaration of war is not necessary, so that an attack may follow immediately the suspension of diplomatic relations. It will be made when our defenses are weakest, and no one doubts that every foreign nation knows almost to a certainty at all times the exact strength of our Army and of our coast defenses.

The framers of this measure have provided—

That the President is authorized to maintain the enlisted force of the several organizations of the Army at their maximum as fixed by this act during the present exigencies of the service, or until such time as Congress may hereafter direct.

That this is an abdication of the powers of Congress is too absurd for serious consideration. It is in line with precedent running through the entire history of the Republic, as has been clearly shown by my colleague from New Jersey [Mr. PARKER]. I quote from what he has said on this point, by which it will be seen that this bill guards more carefully the rights and powers of Congress than has any previous legislative acts of Congress conferring on the President authority to enlarge or decrease the Army.

May 28, 1798, in anticipation of a war with France, Congress passed an act which authorized the President—

In the event of a declaration of war against the United States, or of actual invasion of their territory by a foreign power, or of imminent danger of such invasion, discovered in his opinion to exist, before the next session of Congress, to cause to be enlisted and called into service troops not exceeding 10,000.

July 16, 1798, Congress conferred on the President power, in his discretion—

To raise, in addition to the present military establishment, 12 regiments of infantry and 6 troops of light dragoons, to be enlisted for and during the continuance of the existing differences between the United States and the French Republic, unless sooner discharged.

March, 1799, Congress conferred upon the President certain powers, and among them—

In case of danger of the invasion of their territory by any power shall, in his opinion, be discovered to exist, to organize 24 regiments of infantry, besides riflemen, artillerymen, and cavalry.

May 14, 1800, the President was given power to suspend further appointments in the military establishment.

March 16, 1802, the President was given authority, when he should deem it expedient, to organize a corps of engineers.

March 8, 1803, the President was authorized, in his discretion, and at such a time as he should deem expedient, to require the governors of such of the States as he might deem proper, and from their situation most convenient, to take necessary and effectual measures to arm and equip, in accordance with the provisions of law, and hold in readiness to march at a moment's notice, forces of militia to a number not exceeding 80,000, including officers.

January 2, 1812, Congress conferred upon the President, when he should have satisfactory evidence of an actual or threatened invasion of any State by any Indian tribes, to raise, either by the acceptance of volunteers or by enlistment for one year, as many companies as he might, in his discretion, deem necessary, not exceeding 6, as rangers.

January 20, 1813, Congress provided that such a number of regiments of infantry, not exceeding 20, should be enlisted as, in the judgment of the President, might be deemed necessary for the welfare and protection of the country.

June 15, 1832, Congress authorized the President to accept the services, by the acceptance of volunteers or by enlistments for one year, of 600 mounted rangers, as the conditions of the service, in his judgment, rendered necessary.

May 23, 1836, the President was authorized to raise volunteers—either infantry or cavalry—not to exceed 10,000 men, to serve for a period of six or twelve months.

May 13, 1846, Congress enacted—

That the President of the United States be, and is hereby, authorized by voluntary enlistment to increase the number of privates in each and any company of the existing regiments of dragoons, artillery, and infantry, to any number not exceeding 100, whenever in his opinion the exigencies of the public service may require the same; and to reduce the same to 64 when the exigencies requiring the present increase shall cease: *Provided*, That said enlistments shall be for the term of five years and no longer, unless sooner disbanded by the President.

June 18, 1846, Congress extended the power of the President to increase or diminish the companies of volunteers already in service.

Discussing the proposed reduction of the Army in the House of Representatives, February 9, 1869, General Garfield said:

The Army as it stood before the war was admitted on all hands to be the smallest organization consistent with the public safety in time of peace. We had in 1860 an Army of 11,848 enlisted men and 1,083 commissioned officers. In July, 1866, not quite three years ago, Congress discussed very fully what should be our future Army, and, after a long debate in both Houses, passed the law of July 28, 1866, fixing the military peace establishment. That law authorized 5 regiments of artillery, 10 of cavalry, and 45 of infantry, and fixed the staff departments as they are now organized. The law so fixed the maximum and minimum strength of a regiment of each arm of the service that the Army might contain as many as 80,370 or as few as 47,270 of enlisted men. Whether it should, in fact, be larger, the larger or the smaller number, or any intermediate number was left to the wisdom and discretion of the President of the United States.

This law of July, 1866, was the last legislative utterance of the people of the United States through their Congress in regard to their peace establishment, and that utterance declared that we should have an army of about 3,300 commissioned officers, and from 47,000 to 80,000 enlisted men. The President used this discretion given him by this law, and I will show how he has used it. The new Army organized in accordance with this law amounted in 1867 to 54,641 men. One year later, as shown by the Army Register of 1868, the Army had been allowed to run down to 53,964 men. That was the force in August, 1868. As the necessity of a military police in the late rebel States diminished, the rank and file of the Army has been allowed to decrease by not filling it by enlistments, until, on the 1st of January, 1893, a little more than five weeks ago, the full strength of the Army was 33,575 enlisted men and a few less than 3,000 commissioned officers.

But the new feature of Army legislation—that terrible sliding scale! Read the record of the laws of Congress on this subject. In nearly every act there is fixed by Congress a maximum and a minimum for the Army; and the Chief Executive of the nation, a coordinate branch of the Government, has been charged with the responsibility of filling it up to the maximum, or of letting it run down to the minimum. What is the obligation of a President? He shall execute the law as by his oath he is compelled to do, and he can not go beyond the law. But the opposition contend that it is an abrogation of the power of Congress, and that once gone can never be regained, and that they are fearful of placing so great a power in the hands of one man. If it be true that it is a yielding of the power of Congress, then that power has passed out of its hands long ago. If his predecessors have been intrusted with this responsible duty, why not trust President McKinley?

Mr. Speaker, President McKinley needs no defense from me. His whole life from boyhood to the present time; his early education and the influences that surrounded his early life; his services in battle in defense of the Constitution and the flag; his long service on this floor, and the confidence reposed in him by the people as chief magistrate of his native State; the firmness and prudence with which, as Chief Magistrate of the nation, he has met the present troubles in which our country is involved, all go to affirm the utter groundlessness of the insinuation that he is unworthy to be trusted with duties which history shows have been intrusted to his predecessors. There has not been a moment since he knew what the Constitution and the Union meant that he has not been in full sympathy with the people and the Government; and measured by the standard of statesmen, measured by any standard you may choose, there has not been a moment since he was first elected Chief Magistrate of the nation that he could not be fully intrusted with any powers Congress might see fit to confer on him.

The fear that the duties enjoined by this measure would enable a President to continue in force an army that would be dangerous to the liberties of the people, and the statement that no army in this country has ever been reduced by law, are alike without foundation. History shows that the Army often has been reduced and never increased in time of peace, except in an emergency such as the present. A brief recital of the history of the American Army and the acts of Congress bearing on it will not be out of place here:

SKETCH OF THE HISTORY OF UNITED STATES ARMY.

On the 3d day of July, 1775, George Washington, by authority of the Continental Congress assembled at Philadelphia May 10, 1775, assumed command of the American Army then besieging Boston and which was composed of about 15,000 men fit for duty. This Army was organized by the appointment by Congress of four major-generals and eight brigadier-generals, and became known as the Continental Army. To the organization and discipline of this crude and unorganized body of men General Washington immediately addressed himself.

Thus the American Army commenced its career, originating in an effort on the part of the American colonists to free themselves from the oppressive laws of Great Britain in respect to trade and commerce. Discrimination against the American colonies had long existed, but between the years 1763 and 1775 laws were enacted to regulate trade so that all gain might accrue to the mother country and all losses might fall on the colonies. The colonies were required to confine their trade to Great Britain. No American colony could sell its produce in any country abroad except England, nor could they buy any commodity except from England, her authorized agents or merchants. Although American ships were permitted to carry American goods to England, the carrying trade between the different colonies was confined by law to British ships. Manufacturing in the colonies was prohibited. All raw material must be taken to England to be manufactured, and finally, to protect British farming interests, the infamous corn law was enacted, putting a prohibitive tax on all farm products of the colonists.

It was sought to enforce more rigidly the already too oppressive revenue laws, and to that end search warrants and writs of assistance were issued. This caused individual and stubborn resentment, and in many of the colonies open revolt, which was suppressed only after severe measures and bloodshed. Notable among these were the revolt of the colonies in the Carolinas, in New York, Massachusetts, Connecticut, and in Rhode Island, in April, 1770, when the citizens burned the revenue cutter *Gaspee*; and subsequently, on the 16th day of December, 1773, 7,000 people assembled in Boston to protest the unloading of a cargo of tea then lying in the harbor. This was the largest number of men theretofore assembled for a defensive purpose; and although the tea was thrown overboard, actual hostilities did not commence until the battle of Lexington and Concord, which was fought on the 19th day of April, 1775, followed by the siege of Boston by an army of not less than 13,000 men, when Washington assumed command.

The Continental Army was recuperated from time to time by voluntary enlistment from the different colonies, and among the recruits were found colored men from many of the colonies, including Virginia. In 1778 a plan proposed by Brigadier-General Varnum, of Rhode Island, for the emancipation of the slaves of that State on condition of their enlisting in the Army for service during the war, which, being approved by Washington and Governor Cooke, was put in execution. The plan was adopted by other colonies, notably in South Carolina and Georgia, where Congress commended the enlistment of 3,000 able-bodied negroes.

When Washington assumed command of the Army he found an unorganized mass of men, undisciplined, inexperienced, without money or matériel, to the organization of which he immediately addressed himself.

During the war of the Revolution, when Congress by resolution frequently directed the control of military affairs and issued all of the general and staff commissions, military and administrative affairs generally were conducted by a board of war, and this system continued until the adoption of the Constitution.

One of the first acts of Congress under the Constitution (act of August 9, 1789) was to authorize the establishment of a Department of War. To the War Department under this act was assigned the control of: (1) All military commissions; (2) the land and naval forces, ships, and warlike stores of the Government; (3) all matters generally pertaining to military and naval affairs; (4) the distribution of "bounty lands" to all soldiers and ex-soldiers entitled thereto; (5) Indian affairs, and (6) generally all such duties connected with these various affairs as might be assigned to the Department by the Chief Magistrate.

On the 8th day of May, 1792, Congress passed an act for the establishment of "an uniform militia throughout the United States." The act provided that the militia should be officered by the States as follows:

To each division, 1 major-general and 2 aids-de-camp with the rank of major; to each brigade, 1 brigadier-general, with 1 brigade inspector to serve also as brigade major with the rank of major; to each regiment, 1 lieutenant-colonel commandant; to each battalion, 1 major; to each company, 1 captain, 1 lieutenant, 1 ensign, 4 sergeants, 4 corporals, 1 drummer, and 1 fifer or bugler.

It was directed that the regimental staff should consist of 1 adjutant and 1 quartermaster, 1 surgeon and 1 surgeon's mate, 1 sergeant-major, 1 drum major, and 1 fife major.

This is a brief review of the first effort to erect a military establishment for the United States, and with this as a basis the establishment has been strengthened from time to time by Congress.

That large powers have been conferred on our Presidents from the very earliest history of our country and that the Army often has been reduced will appear by the following acts and resolutions:

On December 27, 1776, Congress by resolution conferred upon General Washington almost supreme command for the period of six months, and this power was continued until after the battle of Brandywine, September 11, 1777.

In February, 1778, Congress adopted, with some modifications, Washington's plan for forced draft to fill up the Army, which plan was carried into execution.

For the campaign of 1779 the infantry of the Continental Army was organized in 88 battalions, apportioned pro rata to the several States. There were four regiments of cavalry and 29 companies of artillery.

In February, 1790, Congress fixed the number of men at over 35,000, and the States were required to furnish the same by draft or otherwise.

The number of soldiers furnished for the Continental Army during the war of the Revolution was 231,791.

In a statement of the troops in the service of the United States, furnished by Secretary Knox, August 8, 1793, the establishment, as directed to be raised and organized by the acts of Congress of October 3, 1787, was given as one regiment of infantry, 500 men, and one battalion of artillery, 280 men; total, 840. The troops in actual service were two companies of artillery, one of which was stationed at the arsenal at Westpoint, on the Hudson River, and the other at Springfield, on the Connecticut River, 70 men; at the various points northwest of the Ohio, 500; wanting to complete the establishment, 168; total noncommissioned and privates, 840 men. All the troops were enlisted for three years. In 1790 the regiment of infantry and battalion of artillery included 1,216 men; in 1791 a second regiment was formed, increasing the total to 2,128. (Army and Navy of the United States.)

In 1793 the Army was increased to 6,000 men; in 1796 it was reduced to 2,800. In 1798, in apprehension of a war with France, Congress ordered an increase in the Army of 13,000. Washington was made Commander in Chief, with the rank of lieutenant-general, under the act of May 28.

In 1800, after the death of Washington, a proposition was made to entirely abolish the Army. John Randolph declared in Congress that the country could place no trust in "mercenary armies" and "a handful of ragamuffins." The Army remained at the normal strength of 3,400 men, and, 1802, was reduced to 3,000.

In 1808, in apprehension of a war with England, Congress authorized the equipment of 6,000 troops.

Gen. Winfield Scott, in his *Memoirs*, says:

The breaking out of the war 1812 found the military establishment of the country in such a disordered condition that the long train of blunders and defeats that signalized its course was inevitable.

Under the act of April 12, 1808, there was an increase in the Regular Army to 5 regiments of infantry, 1 of riflemen, 1 of artillery, and 1 of dragoons. On June 6, 1812, about the time of declaration of war with England, the entire Army consisted of 6,744 men inclusive of the staff. On December 2, 1811, Congress ordered an increase of 10,000 troops, doubled the bounty from \$8 to \$16, and authorized six months' pay and 160 acres of land to each honorably discharged soldier. Under the act of January 11, 1812, Congress authorized the enlistment of 10 regiments of infantry, 2 regiments of artillery, and 1 regiment of light dragoons for a term of five years. Under this law the maximum strength of the Army was 25,484 officers and men, exclusive of generals, field and staff officers. Each regiment of infantry contained 1,800 privates, each regiment of artillery 1,440 privates, each regiment of dragoons 960 privates. Each was provided with a full quota of line and noncommissioned officers and musicians. The act also provided for 2 major-generals, 5 brigadiers, an adjutant-general, and an inspector-general, each with the rank of brigadier-general; also a judge-advocate for each division of the Army, with the pay and emoluments of a major of infantry.

On the 1st day of May, 1813, the War Department issued "Rules and Regulations of the Army of the United States." The Register of the Army of 1813 appeared in December of that year. From these we find that the Army at that time consisted of the following organizations besides the staff departments: (1) The regiment of light artillery; (2) 2 regiments of dragoons; (3) First, Second, and Third regiments of light artillery; (4) 25 regiments of regular infantry; (5) the rifle regiment; (6) 14 regiments of one-year infantry; (7) 5 regiments of infantry enlisted for service "during the war;" (8) 12 companies of "rangers;" (9) 4 regiments, a battalion, and a company of "United States Volunteers," and (10) 5 companies of "Sea Fencibles." Under this arrangement the organization of the Regular Army would have given a force of 36,374 men, adding to which the one-year regiments and those enlisted for service "during the war" would have increased the total force to 58,254.

On the 1st of July, 1814, the whole enlisted Army of the United States consisted of 31,533 regular soldiers, of which 27,010 were effectives. Secretary of State and Acting Secretary of War Monroe, in his report to Congress of October 17, gives the amount of "the existing military establishment" as 62,448, and recommends the raising of a "permanent force" in addition of not less than 40,000. (Army and Navy of the United States.)

A report of the Secretary of War to Congress in 1821 shows that the aggregate number of militia called into service during the years 1812, 1813, and 1814 was 410,603.

Under the act of March 13, 1815, a few months after the battle of New Orleans, Congress ordered the reduction of the peace establishment to "such proportion of artillery, infantry, and riflemen, not exceeding in the whole 10,000, as the President shall judge proper." The Corps of Engineers as then established was retained, also the corps of artillery and the regiment of light artillery. The number of field officers then in the service was 216, and of regimental officers 2,055. Under general orders the aggregate of artillery was fixed at 3,200, the light artillery at 660, the infantry at 5,440, and the rifles at 660 privates and matrosses.

It is from this year—

Says the Comte de Paris—

that the existence in America of a regular army may be dated, comprising corps of all arms, systematically recruited, having a fixed system of promotion, and opening a legitimate career to officers, certain henceforth of retaining their respective grades.

The Army Register published January 18, 1816, shows a corps of engineers and 2 judge-advocates, 8 regiments of infantry, 1 regiment of riflemen, a regiment of light artillery, and the "corps of artillery." On the 1st of January, 1817, the entire number of officers and men, including all officers of the staff department and the Corps of Engineers, was 10,024.

The forces which were employed against the Seminoles in Florida consisted of 800 regular troops, 1,000 Georgia militiamen, 1,000 Tennessee volunteers, and 1,500 Indians.

Under the act of March 2, 1821, it was provided that the military peace establishment of the United States should be composed of 1 major-general, 2 brigadier-generals, 1 Adjutant-General, 2 inspectors-general, 1 Quartermaster-General, 2 quartermasters, 10 assistant quartermasters, 1 Commissary-General of Subsistence; as many "assistant commissaries" as the service might require, not exceeding 50, to be taken from the subalterns of the line; 1 Paymaster-General, 14 paymasters, 1 Surgeon-General, 8 surgeons, 45 assistant surgeons, 1 commissary of purchases, and 2 military storekeepers, "to be attached to the purchasing department." There were to be 4 regiments of artillery and 7 of infantry, the Corps of Engineers and the topographical engineers were to be retained, and provision was made for certain officers of engineers, of ordnance, and of the staff.

The Ordnance Department was merged in the artillery. The Army as thus organized contained neither cavalry, light artillery, or riflemen. When the Florida war broke out in 1834, a regiment of dragoons had been added to the Army, and in 1837 there were

two, which brought the strength of the Army up to 7,958 officers and enlisted men (about 0.12 soldier to 1,000 population).

For the increase of the Regular Army during 1846-47, 10 additional regiments were authorized. Of these 1 was to be of dragoons, 1 of foot riflemen and voltigeurs, and 8 of infantry.

A report of the Adjutant-General to the Secretary of War, November 30, 1847, gives the authorized regular military establishment as follows:

Designation of corps and troops of the line.	Commissioned officers.	Noncommissioned officers, musicians, artificers, privates, etc.	Aggregate.
General officers	11	11
General staff	75	75
Medical Department, 10 regimental surgeons and 20 assistant surgeons of the new establishment included	115	115
Pay Department	31	31
Officers of the Corps of Engineers	43	43
Officers of the Corps of Topographical Engineers	36	36
Officers of the Ordnance Department	36	36
Military storekeepers	17	17
Aggregate	347	17	364
Three regiments of dragoons	118	3,408	3,526
One regiment of mounted riflemen	35	1,146	1,181
Four regiments of artillery	208	5,462	5,700
Sixteen regiments of infantry and foot riflemen	648	17,684	18,312
One regiment of voltigeurs	47	1,104	1,151
Aggregate troops of the line	1,056	28,814	29,870
One company of engineer soldiers, sappers, miners, and pontoniers	100	100
Orderly sergeants	46	46
Aggregate of authorized force	1,372	28,960	30,332

The report adds:

According to the latest returns, which are not of recent date, and estimates made, the rank and file in all the regiments (enlisted men) does not exceed 20,333, leaving a deficiency in the companies of 8,481 privates to be supplied.

The "volunteer forces of the war" are given as follows:

General officers	7
Staff officers, Quartermaster's Department (5 majors, 26 captains)	31
Commissary Department (5 majors, 23 captains)	29
Medical Department (25 surgeons, 29 assistant surgeons)	54
Additional paymasters (under section 25, act July 5, 1838)	12

Total general and staff officers provided for the volunteer troops in commission at this time

The aggregate regular and volunteer forces in campaign is given as 43,530. The distribution of the troops in the field is as follows: Of the army in Mexico, under the command or orders of Winfield Scott, major-general, commander in chief—including the garrisons at Vera Cruz and Tampico—aggregate of regular troops, according to latest returns and estimates made, 17,101. "Of this force not less than 10,851 are recruits, enlisted, for the most part, since the 4th of March." Aggregate volunteer troops, according to the latest returns and estimates made, 15,055. Of the "army of occupation," under Brig. Gen. John E. Walton, next in rank to Major-General Taylor, temporarily absent on leave, regulars, general staff included, 3,657; volunteers, general staff (30) included, 2,790; aggregate, 6,447. Under Brigadier-General Price, commanding in New Mexico, Santa Fe, 3,157. On the Oregon route, Lieut. Col. L. E. Howell, commanding battalion Missouri Mounted Volunteers, headquarters Fort Kearney, Upper Missouri, 479. Under Col. R. B. Mason, First Dragoons, commanding in California, headquarters Monterey, 1,019.

The inconveniences attending the short terms of service for which the volunteers sometimes enlisted were occasionally very great, as at Jalapa, where General Scott, waiting for reinforcements, and not having received any, was obliged to discharge 4,000 volunteers whose time was about to expire.

At the close of the war with Mexico the aggregate strength of the Army was rated at 47,150 officers and men, of which 1,338 were officers and 22,695 were enlisted men of the Regular Army, the volunteer forces consisting of 1,527 officers and 21,500 men. After the President's proclamation of July 4, 1848, announcing the close of hostilities, the Army was reduced to the regular peace establishment, limited by law to 865 commissioned officers and 8,940 enlisted men. (Census 1850, about one-fourth soldier to 1,000 population.)

Under the act of Congress of March 3, 1855, the Army was organized as follows: One major-general and 3 brigadiers, to whom were allowed, in all, 5 aids-de-camp; an Adjutant-General's Department; a Judge-Advocate, an Inspector-General's, a Quartermaster's, a Subsistence, a Medical, Pay, and an Ordnance Department; a Corps of Engineers, and one of topographical engineers; 2 regiments of dragoons, 2 of cavalry, 1 of mounted riflemen, 4 of artillery, 10 of infantry, and 67 unattached ordnance sergeants; a total of 1,040 commissioned officers and 11,658 enlisted men. The aggregates were increased in 1860 to 1,083 officers and 12,931 enlisted men. About one-fourth soldier to 1,000 population.

The President's proclamation of April 15, 1861, called for State militia to the number of 75,000, nearly five times the strength of

the then existing Regular Army. This call was made under the act of February 28, 1795. On the 4th of May, 1861, the President issued a call for 42,000 more troops.

In response to this call 208 regiments were organized, of which 153, with an aggregate of 188,000 men, were mustered into service. The President at the same time, May 4, 1861, without authority of Congress (an act afterwards sanctioned by Congress), added a regiment of cavalry, a regiment of artillery, and 8 regiments of infantry. At the beginning of the war the Regular Army, by law, consisted of 2 regiments of dragoons, 2 regiments of cavalry, 1 regiment of mounted rifles, 4 regiments of artillery, and 10 regiments of infantry, admitting of an aggregate strength of 13,024, officers and men. Adding to this number the forces ordered by President Lincoln on May 4, 1861, the Regular Army comprised an admitted strength of 39,973. At no time during the civil war did the Regular Army attain a strength of 25,000 men.

In May and June, 1862, calls were issued for 15,000 men for three months' service under the act of 1795. On July 17, 1862, Congress authorized the raising of new regiments of volunteers not to exceed 100,000 men. Congress authorized the drafting of men to fill up the Army by the act of April 18, 1862, "for the enrollment of the national forces." President Lincoln issued calls for volunteers at comparatively short intervals during the latter years of the war—in September, 1863, he called for 30,000 men; in July, 1864, for 300,000; in December, 1864, for 200,000 to complete the war.

On the 1st of March, 1865, the muster rolls of the Army showed an aggregate force of 965,591 men, of whom 602,593 were present for duty, and 132,538 were on detached service. The aggregate force was increased, by enlistments, by the 1st of May to 1,516,000 of all arms, officers and men. The whole number of men called into service during the war was 2,565,553. Of these about 1,490,000 were in actual service. (Army and Navy of the United States.)

In the final report of the Provost-Marshal-General the aggregate strength of the Army, regulars and volunteers, at different periods of the war, was given as follows:

July 1, 1861	186,751
January 1, 1862	575,917
March 31, 1862	637,125
January 1, 1863	918,101
January 1, 1864	860,737
January 1, 1865	959,900
March 31, 1865	980,088
May 1, 1865	1,000,516

The records of the War Department show the following figures relative to the civil war:

Number of soldiers enlisted during the war, exclusive of reenlistments	2,213,365
Number killed in battle and by other casualties, and who died of disease prior to July 1, 1865	364,116
Number of desertions	121,896
Number of survivors of the war, July 1, 1865, less deaths and desertions	1,702,069
Total number of survivors January 1, 1860	1,246,089

The organization of the Army under the act of Congress of July 28, 1866, was as follows:

One general; 1 lieutenant-general; 5 major-generals; 10 brigadier-generals; 1 chief of staff to the general; 1 military secretary to the lieutenant-general; 43 aids-de-camp to general officers; 9 inspector-generals, of whom 4 were colonels, 3 lieutenant-colonels, and 2 majors; an Adjutant-General's Department, a bureau of military justice, a Quartermaster's Department, a Subsistence Department, a Medical Department, a Pay Department, the Corps of Engineers, and Ordnance Department, the chiefs of all these ranking as brigadier-generals; a Chief Signal Officer, with the rank of colonel; 30 post chaplains; 10 regiments of cavalry of 12 companies each; 5 regiments of artillery of 12 companies each; 45 regiments of infantry of 10 companies each, 4 of these regiments being of the Veteran Reserve Corps; 15 brigade or post bands, with an aggregate of 360 musicians, and 115 officers of the noncommissioned staff unattached to regiments.

The total number of companies in the infantry, cavalry, and artillery regiments was 630; the minimum strength of the companies as allowed by law was 50 privates in the infantry and cavalry and 64 privates each in the 50 companies of artillery not mounted, and 123 privates each in the 10 mounted companies. The maximum strength to which the companies might be increased at the discretion of the President was 100 privates in the infantry and cavalry and 123 in the artillery. If all the regiments were increased to the full complement allowed by law, the total number of enlisted men would be 77,259, and the grand aggregate 80,258. In addition to the enlisted men Indian scouts to the number of 1,000 might be employed in the Territories and Indian country, they to receive the pay and allowance of cavalry soldiers.

Under the act of March 3, 1869, the grand aggregate was given at 37,313 men. Under the act of July 15, 1870, there were still further reductions of some 2,000 men, and it was further provided that on or before July 1, 1871, the number of enlisted men should be reduced to 30,000 and the number of major-generals to 3 and of brigadier-generals to 6. Under the act of July 16, 1874, the Army was reduced to 25,000 men; and as organized under this

act and of subsequent ones of 1874, 1875, and 1876 the grand aggregate is given at 27,472 men. The number of infantry regiments remained at 25, of cavalry at 10, and of artillery at 5.

The Adjutant-General's report shows that at the close of the previous fiscal year, June 30, 1875, the Army was distributed through the four military divisions as follows:

	Number of troops.
Division of Missouri	14,841
Division of the Atlantic	2,044
Division of the Pacific	3,704
Division of the South	1,859
Total	22,448

As organized in 1889, the Army contained 3 major-generals and 6 brigadiers, with 21 aids-de-camp attached to their service. The troops of engineers consisted of 109 officers and 500 men; the Ordnance Department, 54 officers, 450 men; the Signal Corps, 15 officers and 320 men, and there were 30 post chaplains, ranking as captains of infantry. The 10 regiments of cavalry consisted of 432 officers and 7,970 men; the 5 regiments of artillery, of 280 officers and 2,650 men; the 25 regiments of infantry, of 877 officers and 12,625 men. The total aggregate strength of the Army was given as 28,417.

As approved by the Secretary of War, October, 1890, the organization of the Army of the United States is given as follows: 200 companies of infantry, 100 troops of cavalry, and 60 batteries of artillery (50 heavy and 10 light), the aggregate being 24,215 and the authorized enlisted strength 25,000.

That the situation in the Philippines will require a large part of the Army there, no one will dispute; but there are other reasons why the efficiency of our military establishment, even on a peace basis, should be increased. We have the most extensive seacoast, with the largest number of commercial cities, growing in wealth, of any country in the world. On the Atlantic coast and Gulf of Mexico alone we have many important points, from Maine to Texas, which an enemy's navy could utterly destroy; and our Pacific coast is equally extensive and exposed. Our new possessions have extended our territory and made necessary additional arms even in a time of profound peace. Not only have we not had a sufficient rank and file, but the Army has been deficient in the number of officers, the assertion to the contrary notwithstanding. Our most careful and conservative Army officers, charged by Congress with the care of the men and matériel in our forts and garrisons, estimate that the Army is largely deficient in officers; and any fewer officers and men than is provided in this bill would be inadequate to our present needs and possible emergencies.

As far back as 1817 John C. Calhoun, then Secretary of War, contending for an increase in our peace establishment and referring to the establishment under the act of 1813, when the Army was on a peace basis of 10,000 to a population of less than 8,000,000, urged the increase in population, which at that time did not exceed 9,000,000, being an increase of only 1,000,000, as one reason for an increase of the Army; and the increase of our territory by the Louisiana purchase, the extension of our frontier, and the increasing wealth of our commercial seacoast cities as another reason. Since that time we have acquired Texas and all our Southwest and Western territory, including Alaska. Our population is ten times greater now than it was then, and our commercial cities are vastly greater, both in population and wealth, than they were in 1813. If the growth of population, the increase of our territory, our frontier, and the increased number and wealth of our commercial cities were in 1817 good grounds for an increase in the Regular Army, on a peace basis, how much greater the necessity for an enlarged peace establishment at this time, with a population of 76,000,000—nearly ten times greater than it was in 1813—being an increase over the population in 1817 of over 67,000,000? In 1817, bear in mind, we had about 1½ soldiers to 1,000 population—1 to 1,500 population. Mr. Calhoun said:

To consider the present Army (1 soldier to 1,500 population) as dangerous to our liberty partakes, it is conceived, more of timidity than wisdom.

It costs more to maintain an American soldier than that of any other nation on earth, because he is freer; he is not an automaton; he has the right to exercise his intelligence, to think, and, in a great measure, to act for himself; and therefore on account of his education and his habits of life before entering the service he can not and should not be abandoned to the scant, restricted allowance of the soldier of countries less free than ours.

And Mr. Calhoun further says:

However well qualified for war in other respects, in the mere capacity of bearing privations we are inferior to most nations. * * * In fact, barbarous and oppressed nations have in this particular a striking advantage, which, however, ought to be more than compensated by the skill and resources of a free and civilized people. If, however, such a people want the skill and spirit to direct the resources to its defense, the very wealth by which it ought to defend itself becomes the motive for invasion and conquest.

Whether justly or not, my colleague from Massachusetts counts in the cost of maintaining the Army provided for in this bill of less than 100,000 our pension appropriation of \$145,000,000, resulting from an enlistment of more than 2,000,000 men. On the basis

of the present pension appropriation a fair estimate of a pension roll resulting from an enlistment of 100,000, one-half of which may not be called into active service outside of the limits of the United States proper, and free from the casualties incident to battle, would not exceed \$10,000,000, which would still keep us fourth in the list of nations. But the cost counts in opposite directions—for the Government and against the Government.

Examine the history of all nations. Take the Netherlands, for instance, of which Holland is the most important province. The Netherlands is one of the pioneers of expansion. In her Dutch prudence, foresight, and Dutch economy she saw the value of a footing in the Tropics, and as early as 1602 she created the Dutch East India Company, "went forth to conquer," and did conquer the East Indies; and to-day her possessions in the East Indies contain a population of 35,000,000, seven times greater than that of the mother country. Java alone, the center of trade in the Dutch East Indies, has a population of more than 25,000,000, and the other island possessions of the Netherlands more than 10,000,000. The native population of Java is made up of Malays and other oriental peoples, like the Philippines.

Under Dutch rule this people have become a civilized and to a large extent a Christian people—a blessing to themselves and a benefit to the whole civilized world. But it is not only in expansion the Netherlands has demonstrated her wisdom; she has had the foresight to see to it that her vast interests are protected by an ample army. She to-day maintains an army of 29,000 on a peace basis, to a population of about 5,000,000—five times greater in proportion to her population than the army provided by this measure is to our population. Now, this is the cost that counts for the Government. The cost of catering to a prejudice against a regular army, it is seen, in all our foreign wars has been immense. The cost of maintaining an army at the rate of one-fourth soldier to 1,000 population from 1856 to 1860 cost the Government billions of dollars, which could have been avoided by maintaining an adequate regular army. That is the cost that counted the other way. By a policy of false economy, the policy the opposition are now trying to force on us, the people of this country have been made to bear a most unnecessary burden for thirty years. And I am borne out in this by the testimony of our first generals and military experts. In his testimony before the House Military Committee in 1898 General Miles says:

I think we have learned something in that time. I think we have learned this, that if we had an effective force of 60,000 men we could have saved the expense of calling out nearly 225,000 men, equipping them, and organizing them, and all the trouble and enormous expense we have had in the last year in equipping an irregular and unprepared force, which has not been to war at all, but which has been in camp. I will not say 60,000, because really it required more than that. It required 52,000 men to go to foreign countries and meet the enemy, and at the same time we were compelled to keep at home a sufficient force to defend our extensive coast and as a support for the artillery force. It would not do to leave the harbors without artillerymen; it would not do to leave the batteries without support; so, to come right back to where I started, I still believe that Congress can fix a standard for its military force that will last for one hundred years without any modification, as far as I can see in the future.

Continuing, he said further:

I believe in making it so small that it can not be in any way a menace to any of the interests of the American people, and I believe in making it large enough to preserve our interests and protect our welfare, and be respected in case we require it in our intercourse with other nations.

And I call attention to General Hancock's testimony before the Military Committee, in 1878:

We rely upon creating armies from our population when the necessity for them has actually arisen or is impending. But "In peace prepare for war" is an accepted and respected maxim among us. Under the operations of these somewhat contradictory principles we have been led to the compromise of a small standing Army, which is expected to keep pace with the progress of the profession, construct adequate and suitable national defenses, hold some of our most important military positions, preventing their sudden seizure by an enemy, his occupation of our harbors and destruction of our great commercial cities; be prepared at all times to supply the national forces with the most improved weapons, implements, and munitions of war, and to guard these and other public property until distributed for service; be ready at a moment's notice to organize, equip, and supply, with efficiency and economy, armies of any magnitude which the occasion may call for, and, lastly, to serve as a nucleus for the law levies raised as needed.

The most specific testimony on this subject was given before the Military Committee in 1876, by Maj. Thomas M. Vincent, afterwards colonel and assistant adjutant-general, and Maj. Samuel Breck, afterwards brevet brigadier-general and adjutant-general.

Colonel Vincent says:

Our staff is not merely for the Regular Army, but it should be viewed as the national military staff, applicable alike to the regular, volunteer, and militia forces; and it should be organized and trained in time of peace, so as to be adequate to the wants of an army suddenly called into service.

The staff and line—our peace establishment—are maintained for the acquirement and preservation of military knowledge and to perfect military discipline, to construct defenses and organize the material necessary in war, and generally to form the stock, in all its parts, on which an army competent to the defense of the country may be ingrafted.

Past experience has pointed to the following facts: The saving in clothing, provisions, arms, and other things, by not being compelled to call out militia or volunteers, would amply supply a considerable force which, well officered, would be daily improving; the expenses of militia and volunteers in variably exceed those of the regulars by several hundred per cent; the Black Hawk and Florida wars necessitated 55,000 militia and an expenditure of \$30,000,000,

and would have been avoided in each case had there been two regiments of regulars available for early service; a well-organized available force of 12,000 would have enabled the Government to avoid the Mexican war and its consequent expenditure of millions of dollars and a large sacrifice of human life; and the recent rebellion would have been stayed by an available force of a few thousand men. * * * The magnitude attained by the rebellion is the most instructive, for the public debt and money paid to pensioners * * * would maintain our present force, costing, say, \$30,000,000 yearly, for ninety-nine and two-thirds years. Now, however, and as a result of temporary economy, we have to pay the debt, expend nearly \$30,000,000 yearly for pensions, and support a military establishment costing \$30,000,000; consequently we have lost, by not having an available force to prevent rebellion, the enormous amount of \$2,938,447,641.49. * * *

The opinion of our trained and most skillful military men, the history and experience of all foreign nations, and our experience at home all go to prove the folly, in the name of economy, of not providing adequate protection in time of peace against possible danger.

Mr. Speaker, I am in favor of the most rigid economy and retrenchment wherever possible in the administration and management of the Army. I would not vote for the employment of a single soldier or the expenditure of a single dollar beyond what is absolutely necessary for the protection of our interests and the safety of our country; but I believe this measure comes within the range of adequate protection, and I trust it will pass.

But the gentleman from Massachusetts attempts to show that because our trade with the Philippines has not equaled the cost of holding the islands up to the present time, therefore we ought to abandon them. Comparing them with the North American Indians, he concludes that our trade will never reach a paying basis. Trade is the outgrowth of enterprise, and does not reach a paying basis in a day. Our immense foreign trade of to-day is the result of the growth of a century of persistent, aggressive enterprise of our merchants and traders.

In considering the Philippines from a commercial and business standpoint, we must take into consideration not merely what we can sell to the people of those islands, but what we can buy from them, what field they offer to our business men and young men, whether they will enable us to expend among our own people any considerable sum which we now expend in other countries, and what the effect of their control will be upon our commerce and commercial standing throughout that part of the world.

First, it may be said that the market which the islands alone will offer is small when compared with the market which the world or even the Orient offers, but the growth of our exports to the Philippines since the United States assumed control of the islands is no inconsiderable factor, while the history of England's trade with the Orient following her control of Hongkong as a distributing point justifies a broader view of the Philippines and the commercial opportunities which their control offers.

England's exports to China, Japan, and Hongkong amounted to but half a million pounds sterling per annum when she obtained control of Hongkong in 1843. Gradually making it a distributing point for her commerce, by 1850 her exports to Hongkong and China had increased to one and one-half million pounds sterling (or about \$7,500,000); by 1860 they amounted to five and one-half million pounds sterling (or about \$37,500,000); by 1870 her exports to China, Japan, and Hongkong were over ten million pounds sterling (or about \$50,000,000); by 1880, thirteen million pounds (or in round terms about \$65,000,000); in 1890 and 1898 the amount was about the same as in 1880.

It is not assumed, of course, that the growth in England's exports to the Orient is entirely due to her control of Hongkong as a distributing center and base of operations, but the fact that her exports to China, Japan, and Hongkong increased more than a thousand fold in the thirty-five years after she had obtained control of that point, and that her gain from 1843 to 1880 was much greater than that of any other nation, is at least suggestive to us in considering what the effect of a central distributing point such as Manila would be to our commerce in that part of the world.

The fact that the exports of the United Kingdom to China, Japan, and Hongkong grew about \$80,000,000 in the quarter of a century following its control of Hongkong as a commercial base, and that those of the United States to those countries during the same time increased only about \$10,000,000, seems to strengthen the theory that an advantage is to be found in a fixed base of operations in the section where the trade is sought. The United States made her treaty of commerce with China very soon after England opened the doors of that country to the world, and England followed close behind the United States when our own Perry opened the doors of Japan, yet England's gain with a commercial entrepôt in that locality was nearly six times as great as our own during the quarter of a century after its occupancy by the English Government.

On this subject I desire to quote a statement made by Admiral Bradford before the peace commission at Paris, October 14, 1898, as follows:

The CHAIRMAN. Do you not think a commercial station in those islands is much more valuable to the United States, with a view to its trade in China and Japan and other parts of that sea, than it is with reference to any trade with the islands themselves?

Answer. I think a commercial station at the Philippines valuable for that purpose; how valuable depends largely upon our influence in China. The balance of trade there has been against us. Foreign powers seem to be at present in control of Chinese affairs, and if they are able to discriminate against us our trade may not be valuable.

Q. If the United States is to have a hand in the Chinese trade, our location in Manila and Luzon would be very valuable in that direction?

A. Very, indeed.

Q. And probably much more valuable than any interisland trade would be?

A. It ought to be. It would be fatal to profit if our trade with China was obliged to pass through foreign hands.

Q. Have you any means of estimating the value of these islands; and if so, will you give us an estimate, supposing they were to be acquired by purchase?

A. No, sir; I have none.

Q. You mean you could not form any estimate?

A. I do not think I could.

Q. You might form an estimate, possibly?

A. I can only state that which you already know, viz, the price paid for Alaska and that asked for the Dutch Islands in the West Indies.

Q. Suppose, to put it in another way, you were taking this group of islands as a war indemnity, could you form an estimate as to how much you were getting?

A. It is a subject I have not studied. I did not expect to be asked to give an opinion on such matters, and I should prefer not to do so until I can study the question. I will say I think them extremely valuable, both from a commercial and from a military point of view.

In the mere matter of the markets which the islands will supply to our manufacturers and producers they are worthy of serious consideration. Our exports to the Philippines have increased from \$69,000 in 1897 to \$3,500,000 in 1900, omitting from this statement the supplies sent by this Government to its troops in the islands. In 1899 we furnished about 6 per cent of the total imports of the islands, and in 1900 it seems likely that we shall have furnished about 15 per cent, with a greater total than any other source of supply except that which comes from China and Hongkong.

It should also be remembered that the Philippines can supply a large proportion of the articles of tropical growth which are now imported into the United States, and for which we are now sending to other countries more than \$300,000,000 a year. Sugar, coffee, tea, rubber, hemp, tobacco, and other articles of this class form a very important part of our importations, now that we are able to confine our importations largely to the class of articles which we can not produce at home, and nearly all of those are produced abundantly in the Philippines; and their productions may be indefinitely increased. In eleven months of the year 1900 we have sent to the Dutch East Indies, which lie just alongside the Philippines, more than \$16,000,000 for sugar, and in the corresponding months of 1899 the amount was \$27,000,000.

The Philippines can produce sugar as readily as their neighbors, the Dutch East Indies, from which sugar comes, and can produce it with the investment of American capital. Why should we not pay this money to our people and add to it the sums which we also send to that part of the world for coffee, tobacco, hemp, and other articles of that class which we can not, or at least do not at present, produce at home, and which can be produced in these islands? We have sent abroad in the year 1900, in round figures, \$90,000,000 for sugar, \$60,000,000 for coffee, \$30,000,000 for raw silk, \$30,000,000 for rubber, more than \$10,000,000 for hemp and jute, \$12,000,000 for tea, and \$17,000,000 for tobacco, also \$18,000,000 for tin, much of which comes from the immediate vicinity of the Philippines and which it is not unlikely we may be able to obtain from those islands by proper exploration and research.

It is argued that the Philippine Islands are not likely to ever become centers of trade, and that the "average inhabitant is not likely to be a better customer than the American Indian." Similar arguments were used when our Western and Southwestern Territories and Alaska were taken possession of by our Government. But we did not depend upon the Indians as customers; and yet these additions to our territory have grown into a mighty and wealthy empire. But the anti-imperialists, so called, are divided in their councils. On the one hand we have the anti-expansionist, holding that the average inhabitant of the Philippine Islands is no better than the North American Indian, who, everyone knows and acknowledges, never was capable of self-government, yet holding that the Filipino, who, it is claimed, is no better, should be granted self-government. On the other hand we have the so-called anti-imperialist, who believes that the archipelago should be retained by the United States for the good of the Filipinos, as well as for our own profit, yet who is opposed to holding them by force. Could we have held the Louisiana purchase against the claims of the native Indians except by force?

Going further than a mere business proposition, and looking at the subject from a more sentimental point of view, considering the history of all civilized nations, they all, from Greece and Rome to the present, have had a just pride in their language and their institutions, and every one of them from time to time have spent millions in extending their civilizations, their language, and their institutions; and it is not singular that the American people should feel a like pride in our civilization, our language, and our institutions; nor that they should feel it a duty to extend them even to the dark places on the earth.

In speaking of the sacrifices of England in extending constitutional liberty, General Garfield in a speech in Congress June 25, 1874, in part said:

There were two periods in the history of that contest when England saw darker days than any we have seen, or, I hope, ever shall see. Consider her condition in 1797. For ten years the tide of mad revolution had been sweeping over Europe like a destroying pestilence, demolishing thrones and principalities; and, while many evils were swept away, chaos and anarchy were left in its track. In 1792 France declared war against the world; and in February, 1793, specifically declared war against England. At that time the British debt was \$1,268,000,045, and its annual interest \$45,225,304. The population of the United Kingdom was less than 12,000,000, including Ireland—Ireland then, as now, "the tear in the eye of Great Britain"—a source of weakness rather than strength. The spirit of revolution pervaded the Kingdom from collieries to court. The throne distrusted the people, and the people were jealous of the throne. In 1794 the habeas corpus act was suspended, against an opposition in Parliament more determined and far abler than its suspension met in our Congress two years ago.

In 1793 three and a quarter million Catholics in Ireland were organized to revolt against the Government, to be aided by a French fleet of 40 sail, with 25,000 French soldiers on board. But for the storm which dispersed the fleet the revolt must have been successful. In the same year the naval power of England was threatened with dissolution by a widespread mutiny in the fleet. Ship after ship deserted the fleet off Cadiz and in the North Sea. The Channel fleet ran up the red flag of mutiny from almost every masthead and was drawn in line of battle across the mouth of the Thames, prepared to sail to London if the demands of the mutineers were not acceded to. It required all the firmness of the King and his Government to save the city and navy. In 1797, oppressed with financial disaster, the Bank of England suspended specie payments, and paper money (an immense circulation of which crowded the country) was the legal currency for twenty-two years thereafter.

But England saw darker days than those of 1797. In the beginning of 1812 Napoleon had risen to the height of his marvelous power. The Continent of Europe was at his feet. By victorious diplomacy and still more victorious war he had founded an Empire which seemed to defy human power successfully to assail it. Every coalition against him had been broken; every alliance had failed. More than half the nations of Europe followed his conquering eagles. From the Vistula to the Pillars of Hercules, except the rocky triangle of the Torres Vedras, where Wellington was held at bay by five times his number under a great marshal of France, the Continent presented an unbroken front against England. Russia remained in frozen isolation, a spectator of the contest. Only Prussia and Austria followed the lead of England. Let us consider her condition at this second crisis of her fate.

Her population, including Ireland, was about 17,000,000. Her debt had been more than trebled since the beginning of the war, and now reached the enormous sum of \$4,000,000,000. Specie being still suspended, her paper currency was more than ever expended. In the beginning of the war she raised from her mines and coined about \$30,000,000 in gold. But the revolution which swept over South America had stopped the working of the mines, so that before the close of the war the annual British coinage was less than \$12,000,000. Her navy was crippled by the war, her commerce ruined by the French decrees and the nonimportation act of the United States. Her imports exceeded her exports by \$65,000,000, and the balance was paid in gold.

For two years her harvest had failed, and in 1812 she paid \$21,000,000 in gold for foreign grain to feed her people. In that year alone her exports declined \$100,000,000. The heavy subsidies to her allies and the payments to her own armies on the Continent were in gold. In 1812 she sent \$50,000,000 in gold, for which she paid 30 per cent premium, to Wellington's army in the peninsula. Her bonds had so depreciated that a loan of £60 increased her debt £100. A short time previous, in the midst of increasing disaster, the reason of the King gave way, and he sat a lunatic on the throne of a Kingdom which seemed ready to go down with him in the general ruin. This event added a new and complicated question to the distractions of Parliament and gave a new weapon to the opposition.

It is not necessary for my present purpose to inquire whether justice leaned to the side of England or her adversary. It is enough to know that she believed it was on her part a struggle for self-existence and for the constitutional liberty of the world. Inspired with this conviction, she stood like a giant at bay. In high debate she reasserted the justice of her cause, summoned anew not the frantic energy of despair, but the inexhaustible reserve of calm, Anglo-Saxon courage, unfathomed resources of English faith and English pluck (a proud share of which I trust this nation has inherited), and in the face of unexampled discouragements and appalling disaster, laying under contribution all the resources of her realm, went out again to meet the man of destiny whose victories were numbered by hundreds, and whose eagles were followed by half the world. Increasing both taxes and loans, she raised and expended in that year \$550,000,000.

She filled her navy to 125,000 men, and before the year had ended 618,000 men were arrayed under her banners. Seconded by this indomitable spirit of her people, her armies emerged from the gloom of that nineteenth year of the war, and, marching with unflinching step through three more bloody years and the carnage of Waterloo, she planted her victorious standards on the battlements of Paris and gave peace to Europe.

And we can see the descendants of such a people. With such a history and such an example before us, can we—dare we—falter in a day like this? Dare we doubt? Should we not rather say, as Bolingbroke said to his people in their hour of peril: "Oh, woe to thee when doubt comes! It blows like a wind from the north and makes all thy joints to quake. Woe, indeed, be to the statesmen who doubt the strength of their country and stand in awe of the enemy with whom it is engaged!"

Mr. Speaker, viewing the present situation from any point, either as our rightful ownership of and sovereignty over the archipelago, as a commercial question, or as the more sentimental question of extending Christian civilization, our language, and our institutions, the Government is clearly right; and to retreat or even halt in our advance would be the beginning of decay and dissolution. Our new possessions have brought with them, whether foreseen or not, new burdens and responsibilities, and our refusal to bear them would disgrace us in the eyes of the world and humiliate our people.

In conclusion, by way of setting forth in brief form the glorious feats of our Army and Navy during the recent war with Spain, and giving an idea of the great responsibility assumed and discharged by the War Department and its bureaus, and the work

performed during that eventful period, I submit herewith the following important historical data compiled from official sources:

FACTS RELATING TO THE WAR DEPARTMENT SINCE THE DECLARATION OF WAR WITH SPAIN AND OTHER IMPORTANT HISTORICAL AND OFFICIAL INFORMATION.

Summary of the principal events connected with the war with Spain and military operations in the Philippine Islands.

- 1898.
- Jan. 25. The U. S. battle ship *Maine* enters and anchors in Habana Harbor.
- Feb. 15. The *Maine* destroyed by an explosion in Habana Harbor.
17. A commission, under the presidency of Capt. W. T. Sampson, named to proceed to the scene of the *Maine* disaster for the purpose of reaching an impartial conclusion as to the cause of the explosion and reporting this to the Government.
26. The Asiatic Squadron is directed to assemble at Hongkong.
- Mar. 8. Act of Congress increases the artillery arm of the service by two regiments.
9. Congress appropriates \$50,000,000 for the national defense, to be expended at the discretion of the President.
21. The court of inquiry appointed to inquire into the loss of the battle ship *Maine* finds that the ship was destroyed by the explosion of a submarine mine.
- Apr. 12. The President sends message to Congress requesting authority to take measures to secure a full and final termination of hostilities between the Government of Spain and the people of Cuba.
- 18-19. Conference committee agreed upon a final report, which declared independence of Cuba, demanded withdrawal by Spain, and directed the President to use the Army and Navy to enforce this demand, and pledged the United States to leave the people of Cuba free after expulsion of Spain. Report adopted in Senate by a vote of 42 to 35 and in the House by a vote of 310 to 6.
- 18-19. The President orders Acting Rear-Admiral W. T. Sampson, commanding North Atlantic Squadron, to blockade the north coast of Cuba, particularly Habana, and Cienfuegos on the south coast.
20. Act of Congress demands that Spain relinquish her authority in Cuba.
20. Minister Woodford, at Madrid, instructed to lay the ultimatum of the United States before the Spanish Government and demand an answer by the 23d of April.
20. President McKinley presents ultimatum of the United States to Spain.
20. The Spanish minister at Washington asks for and receives his passports.
20. Queen Regent delivers speech declaring her Parliament is summoned to defend country's rights and son's throne.
20. Joint resolution of Congress demands that the Government of Spain relinquish its authority and government in the island of Cuba.
21. Minister Woodford presents the ultimatum of the United States to the authorities at Madrid, and is given his passports by the Government.
21. Act of Congress declares a state of war with Spain to exist.
22. President declares a blockade of the north coast of Cuba, including all ports on that coast between Cardenas and Bahia Honda and the port of Cienfuegos, on the south coast of Cuba.
23. President issues proclamation calling for 125,000 volunteers.
23. United States consul at Manila is given his passports and leaves for Hongkong.
24. The Secretary of the Navy orders Dewey, Hongkong, China, to proceed to the Philippine Islands and destroy or capture the Spanish fleet in those waters.
25. Asiatic Squadron leaves Hongkong for Mirs Bay, China.
25. Congress formally declares that a state of war has existed since the 21st instant.
26. War with Spain formally declared. Regular Army increased to 63,106 men.
27. United States consul reaches Hongkong from Manila and joins the Asiatic Squadron at Mirs Bay. The American squadron sails for the Philippines.
29. U. S. S. *Marblehead* and *Eagle* engage and disable Spanish gunboat *Galicia* off Cienfuegos, Cuba.
29. Spanish mail steamer *Argonauta* captured off coast of Cuba by U. S. S. *Nashville*.
- May 1. The Asiatic Squadron, United States Navy, under command of Commodore Dewey, engages and destroys the Spanish squadron, under command of Admiral Montojo, in the bay of Manila.
2. Landing party of sailors and marines destroys several magazines in the vicinity of Cavite.
3. The Cavite Arsenal is abandoned by the Spanish and occupied by forces from the squadron.
16. Maj. Gen. Wesley Merritt, U. S. A., assigned to command of the Department of the Pacific.
20. The French cable to Cuba is cut by the U. S. S. *St. Louis*.
25. President issues proclamation calling for an additional 75,000 volunteers.
25. First expedition sails for Manila from San Francisco, Cal., under command of Brig. Gen. T. M. Anderson, U. S. V. This expedition comprised the First California Volunteer Infantry, Second Oregon Volunteer Infantry, 5 companies of the Fourteenth United States Infantry, and a detachment of California Volunteer Artillery.
30. Major-General Shafter directed to embark his command on transports at Tampa, Fla., and proceed under convoy of the Navy to the vicinity of Santiago de Cuba, and commence immediately upon the reduction of the defenses of the city, and, with the assistance of the fleet, capture or destroy the Spanish fleet in the harbor.
30. General Merritt arrives at San Francisco and assumes direction of the expeditionary forces.
- June 1. Admiral Sampson arrives with his squadron off the entrance to the harbor of Santiago.
3. Assistant Naval Constructor Hobson, United States Navy, and a volunteer crew sink the collier *Merrimac* at the entrance to the harbor of Santiago de Cuba in order to obstruct the channel at that point.
10. Battalion of United States marines lands at Guantanamo, Cuba.
14. Major-General Shafter sails from Tampa, Fla., with 10,887 officers and men for Santiago, Cuba.
15. Second expedition sails for Manila under command of Brig. Gen. F. V. Greene, U. S. V. This expedition comprised the First Colorado Volunteer Infantry, First Nebraska Volunteer Infantry, Tenth Pennsylvania Volunteer Infantry, 4 companies Eighteenth and 4 companies Twenty-third United States Infantry, 2 battalions Utah Volunteer Artillery, and detachment of United States engineers.

1898.

- June 18. Aguinaldo, by proclamation, establishes an interior civil government at points captured from or abandoned by Spanish authority.
20. General Shafter's expeditionary forces arrive at Guantanamo Bay, Cuba.
20. Third Wisconsin Volunteer Infantry leaves the United States for Porto Rico.
21. Formal surrender of the island of Guam, Ladrones group, to the commanding officer U. S. S. *Charleston*.
22. The *St. Paul*, off San Juan, P. R., commanded by Captain Sigbee, is engaged by the unprotected cruiser *Isabella II* and the destroyer *Terror*, resulting in the withdrawal of the Spanish cruiser and the sinking of the *Terror*.
22. General Shafter's expeditionary forces arrived at and began to disembark at Daiquiri and Siboney, Cuba.
22. A demonstration is made at Cabanas and Punta Gorda, defenses of Santiago.
23. Aguinaldo proclaims himself military dictator and president of the Philippine revolution and outlines a system of general government.
23. Thirty-third Michigan Volunteer Infantry leaves the United States for Cuba.
23. The occupation of Juragua City, Cuba, during the morning by American forces was reported.
24. The Fourteenth and Tenth Cavalry and Wood's regiment have a skirmish near Sevilla, the enemy driven from his position, and same occupied by the American troops.
24. A force consisting of 1 squadron First Cavalry, 1 Tenth Cavalry, and 2 of the First United States Volunteer Cavalry (Roosevelt's Rough Riders) engage Spanish force at Las Guasimas, Cuba, and drive them from the field, this being the first battle of the war with Spain.
26. Ninth Massachusetts Volunteer Infantry leaves the United States for Cuba.
26. Admiral Camara's squadron, en route to Manila, arrives at the northern entrance of Suez Canal.
27. Third expedition sails for Manila under command of Maj. Gen. Wesley Merritt, U. S. A., and Brig. Gen. Arthur MacArthur, U. S. V. This expedition comprised 4 companies of the Twenty-third United States Infantry, 4 batteries of the Third United States Artillery, 1 company United States Engineers, First Idaho Volunteer Infantry, First Wyoming Volunteer Infantry, Thirteenth Minnesota Volunteer Infantry, First North Dakota Volunteer Infantry, Astor Battery, and detachments Hospital and Signal Corps.
30. First expedition, under command Brig. Gen. T. M. Anderson, U. S. V., arrives off Manila.
30. U. S. S. *Hist* and *Hornet* engage and destroy Spanish gunboat, sloop loaded with soldiers and pontoon, Manzanillo, Cuba.
- July 1. Disembarkation of expeditionary forces begun and landing made at Cavite.
1. The Fifth Corps (Army) assault and carry San Juan and El Caney, defenses of the city of Santiago.
1. Engagement in the harbor of Manzanillo between Spanish gunboats and shore batteries and a portion of the United States squadron in those waters (*Oceola* and *Scorpion*).
1. First Illinois Volunteer Infantry leaves United States for Cuba.
1. Emilio Aguinaldo y Famy proclaims himself president of the Filipino republic.
3. Brigadier-General Randolph and 6 light batteries, on the *Comanche* and 2 English 9-knot transports, and the First District of Columbia Infantry, on the *Catania*, sail for Key West en route to Santiago to reinforce Major-General Shafter.
3. The *Maria Teresa*, the flagship of the Spanish fleet, appears at the entrance of Santiago Harbor at full speed, followed by the *Vizcaya*, *Cristobal Colon*, *Almirante Oquendo*, last of the last cruisers, and about thirty-five minutes later by the destroyers *Pluton* and *Furor*. The American fleet thwarts the attempt to escape, which ends in the complete demolition of the Spanish ships in forty-five minutes, with the exception of the *Colon*, which ran ashore at Rio Tarquino, 48 miles from Santiago, at 1.15 p. m.
4. General Pando, with 5,000 men, enters the city of Santiago during the night.
5. During the morning General Trol, commanding the Spanish forces in Santiago de Cuba, asks for further extension of truce in order that he may communicate with the Madrid Government concerning the surrender of the city, and requests that General Shafter send in some cable operators to work the cable between Santiago and Kingston. In reply, Major-General Shafter sends a message informing General Trol of the destruction of Cervera's fleet, repeating his demand for the surrender of the city, and permits the cable operators to go in for the purpose named, placing the time for the resumption of hostilities on Saturday, the 9th of July, 1898.
6. General Trol agrees to exchange Lieutenant Hobson and his 7 sailors for an equal number of Spanish prisoners. Exchange made, Lieutenant Arias of the Spanish army and 7 soldiers being turned over to the officer in charge of the Americans.
6. Eighth Ohio Volunteer Infantry leaves the United States for Cuba.
6. Joint resolution providing for the annexation of the Hawaiian Islands to the United States adopted by the Senate by a vote of 42 to 21, and approved by President on following day.
6. The Spanish cruiser *Alfonso XII* leaves the harbor of Habana in an attempt to escape, but is discovered by the blockading squadron which gives chase. The cruiser stranded at the entrance of the port of Mariel, where it is finally destroyed by fire resulting from American shells.
6. General Trol, in command of the Spanish forces at Santiago, Cuba, asks and is granted sufficient time to consult his Government.
7. The Navy takes Isla Grande and garrison of 1,300 without resistance.
7. Act of Congress providing for the annexation of the Hawaiian Islands approved by the President.
8. Sixth Massachusetts Volunteer Infantry leaves the United States for Porto Rico.
8. Maj. Gen. Nelson A. Miles, commanding the Army, leaves Charleston, S. C., with reinforcements for General Shafter's force, investing Santiago de Cuba.
10. Hostilities are resumed, having failed to arrive at an agreement as to terms of surrender, and bombardment is continued on the 11th until a flag of truce is raised in the city of Santiago and negotiations resumed.
10. Sixth Illinois Volunteer Infantry leaves the United States for Porto Rico.
11. General Miles arrives off the harbor of Santiago de Cuba with reinforcements.
11. Yellow fever makes its appearance in military hospital at Siboney, and on the 12th of July that town is burned.

1898.
July 13. The President issues a proclamation, the first State paper ever issued from this Government containing authorization and instruction for the government of captured foreign territory. The same transmitted to the Secretary of War on the 18th and published in General Orders, No. 101, Adjutant-General's Office, on same day, to the Army.
13. Generals Miles, Shafter, and Wheeler meet General Toral, attended by Colonel Valasquez and Mr. Mason, British vice-consul at Santiago, and confer as to terms of surrender.
 14. General Toral agrees to surrender the city of Santiago.
 15. Fourth expedition sails for Manila under command of Maj. Gen. E. S. Otis, United States Volunteers. This expedition comprised 6 troops Fourth United States Cavalry, 2 batteries Sixth United States Artillery, 5 companies Fourteenth United States Infantry, and a detachment of recruits. One battalion of the First California Volunteer Infantry encamps at Malate, on the outskirts of the city of Manila.
 16. The terms of the surrender of the Spanish forces occupying the division of Santiago de Cuba are signed by both the Spanish and the American commissioners.
 17. Second expedition under command of Brig. Gen. F. V. Greene, United States Volunteers, arrives in the bay of Manila.
 17. Santiago de Cuba is formally surrendered.
 18. Engagement in the harbor of Manzanillo, Cuba, resulting in the destruction of several Spanish gunboats.
 19. Fifth expedition sails for Manila, with First Montana Volunteer Infantry and detachment of recruits, under command of Col. H. C. Kessler, First Montana Volunteers.
 20. Maj. Gen. James H. Wilson, United States Volunteers, sails with his division from Charleston, S. C., en route to Porto Rico.
 21. United States Navy takes possession of Bay of Nipe, Cuba, and destroys Spanish cruiser *Jorge Juan*.
 21. Gen. Nelson A. Miles sails with expedition for Porto Rico, conveyed by ships of the North Atlantic Squadron.
 22. Sixteenth Pennsylvania Volunteer Infantry leaves the United States for Porto Rico.
 23. Sixth expedition sails for Manila with 8 companies of the First South Dakota Volunteer Infantry and detachments, under command of Brig. Gen. H. G. Otis, U. S. V.
 25. General Merritt arrives at Manila.
 25. Expedition under General Miles arrives during the morning off the harbor of Guanica, P. R. The blockhouse on the beach is taken and marines landed.
 26. General Wilson's division arrives off Guanica, P. R., during the night.
 26. Brigadier-General Garretson, in command of 6 companies of the Sixth Massachusetts Volunteer Infantry and 1 company of the Sixth Illinois Volunteer Infantry, engage a force of Spanish troops at Yauco, P. R., and take possession of that place.
 27. Fourth Pennsylvania Volunteer Infantry leaves the United States for Porto Rico.
 27. Commander Davis, United States Navy, arrives in the harbor of Ponce, P. R., and demands the surrender of that city.
 27. Major-General Wilson arrives in the harbor of Guanica, P. R., with Ernst's Brigade.
 28. General Miles, with his expedition, leaves Guanica and arrives and disembarks at Ponce, P. R.
 28. Troops under command of Maj. Gen. John R. Brooke, United States Army, embark at Newport News, Va., en route for Porto Rico.
 28. The fleet and transports under command of General Wilson move into the harbor of the port of Ponce, P. R., disembark, and march to the city of Ponce and take formal possession of the city and the adjacent country.
 29. Seventh expedition sails for Manila with four companies of the First South Dakota Volunteer Infantry and detachment of recruits, under command of Lieut. Col. Lee Stover, First South Dakota Volunteers.
 30. An answer to Spain's inquiry concerning peace terms is handed to the French ambassador, M. Jules Cambon, setting forth the terms under which hostilities will be stopped.
 31. Third expedition, under command of Brig. Gen. Arthur MacArthur, arrives in the Bay of Manila.
 31. Night attack on United States forces by Spanish troops in trenches around the city of Manila.
 31. Maj. Gen. John R. Brooke arrives off the island of Porto Rico and is directed to disembark at Arroyo.
 31. Brig. Gen. Theodore Schwan, United States Volunteers, arrives at Guanica, P. R., with reinforcements for the expeditionary forces of General Miles.
- Aug. 1. Arroyo, P. R., formally surrenders to the United States Navy.
1. Second Division, Eighth Army Corps, organized under command of Brig. Gen. T. M. Anderson, and Brigadier-Generals MacArthur and Greene assigned to command brigades therein. During the night Spanish field artillery at Manila shells the trenches occupied by United States troops.
 2. The United States transport *Berlin*, with Hood's Second United States Volunteer Infantry, arrives at Santiago, Cuba.
 2. Spanish at Manila open fire at 5 a. m. and 9.45 p. m. on the trenches occupied by United States troops, continuing in each instance for a period of less than an hour.
 3. First Kentucky Volunteer Infantry leaves the United States for Porto Rico.
 4. Captain-General Don Basilio Augustin relieved as governor-general of the Philippine Islands by Don Fermin Jaudenes, second in command.
 5. Spanish at Manila open vigorous fire with artillery and infantry on the troops in trenches.
 5. Forces under Maj. Gen. John R. Brooke engage Spanish at Guayama, P. R., and capture that place.
 5. Light Batteries A and C, Pennsylvania Volunteer Artillery, leave the United States for Porto Rico.
 5. Sheridan's Troop and Governor's Troop, Pennsylvania Volunteer Cavalry, leave the United States for Porto Rico.
 6. Four companies Second United States Volunteer Engineers leave the United States for Hawaiian Islands.
 7. Joint demand made by General Merritt and Admiral Dewey on the captain-general for the removal of noncombatants from the city of Manila, and notice given of intention to bombard the city. Camp Dewey established on the outskirts of the city.
 9. In reply to statement of inability on part of Spanish authorities to remove noncombatants from city on account of the presence of insurgent troops, joint formal demand is made for the surrender of the city of Manila and its defenses.
 9. Foreign war vessels leave their anchorage in front of city, and American fleet clears for action.

1898.
Aug. 9. A sharp engagement at Los Banos, Coamo, and Aibonito, P. R., results in the defeat of the Spanish and the occupation of those places by the United States forces.
9. General Schwan's command advances from Yauco, P. R., westward and successively occupies the towns of Sabana Grande, San German, Lajas, and Cabo Royo.
 10. General Merritt and Admiral Dewey jointly decline to allow the Governor-General of the Philippines sufficient time to consult his Government before attacking the city of Manila.
 10. United States forces advancing on Mayaguez, P. R., defeat the Spanish forces in a series of engagements.
 10. First United States Volunteer Engineers leaves the United States for Porto Rico.
 11. The Department of Santiago, with Maj. Gen. Henry W. Lawton assigned as commander, with headquarters in the city of Santiago, Cuba, is established by direction of the President.
 11. United States forces enter the city of Mayaguez, P. R.
 12. Protocol with Spain signed at Washington, D. C., by Hon. William Day, Secretary of State, and M. Jules Cambon, French ambassador to the United States.
 12. The Hawaiian legislature having ratified the action of the United States providing for the annexation of the islands, Admiral Miller, United States Navy, with a force of marines, takes formal possession.
 12. The bombardment of the Cuban town of Manzanillo by the U. S. cruiser *Newark*, commanded by Captain Goodrich, supported by the *Swansea*, *Oswego*, *Hist*, and converted Spanish gunboat *Alcedo*, is begun at 3.45 p. m. and is continued until night. On succeeding morning two Spanish officers, in a small boat and under a flag of truce, announce that the peace protocol has been signed.
 13. The United States forces defeat the Spanish in an engagement at Las Marias, P. R.
 13. Spanish intrenchments about the city of Manila bombarded by the Navy and stormed and carried by the troops; the city entered and a commission appointed to draw articles of capitulation.
 13. Third United States Volunteer Infantry leaves the United States for Cuba.
 13. A demand is made for the surrender of San Juan, P. R., which is refused.
 14. General Merritt issues his first proclamation to the Filipino people.
 15. By General Orders, No. 4, paragraph 2, Headquarters Department of the Pacific and Eighth Army Corps, Manila, P. I., the office of provost-marshal-general is established, and Brig. Gen. Arthur MacArthur, United States Volunteers, is appointed military governor of the walled city of Manila and provost-marshal-general of the city of Manila, including all the outlying districts within the municipal jurisdiction.
 15. Orders issued for the assumption of civil government by the United States military authorities in the city of Manila and district of Cavite and officers assigned to duty thereunder.
 16. By General Orders, No. 4, Headquarters Department of the Pacific and Eighth Army Corps, Lieut. Col. C. A. Whittier, United States Volunteers, is assigned to duty as collector of the port of Manila, P. I., the first to be appointed.
 16. General Merritt receives cablegram from the President announcing cessation of hostilities.
 17. The *Yale*, containing medical supplies, arrives at Santiago, Cuba.
 17. The transport *Berlin* sails from New Orleans, La., for Santiago, Cuba, with the Ninth United States Volunteers.
 18. President forbids joint occupation of the city of Manila with insurgents.
 21. Transport *Arizona* sails for Manila with 4 companies of the Eighteenth United States Infantry and detachments First Nebraska Volunteer Infantry, Tenth Pennsylvania Volunteer Infantry, and First Colorado Volunteer Infantry, under command of Brig. Gen. Charles King, U. S. V.
 21. Second Massachusetts Volunteer Infantry leaves Cuba for the United States.
 22. Disembarkation of Light Battery D, Sixth Artillery, headquarters and 5 companies Fourteenth United States Infantry, detachments of Twenty-third United States Infantry, Third Artillery, First California, First Wyoming, Thirteenth Minnesota Volunteer Infantry, and 2 batteries Utah Volunteer Light Artillery, from transports *Peru*, *City of Puebla*, and *City of Rio de Janeiro*, begins at Manila.
 22. Military commissions and provost courts for the city of Manila provided for and their jurisdiction defined.
 23. Gen. E. S. Otis announced in orders as the commanding general, Eighth Army Corps.
 24. First South Dakota Volunteer Infantry, First Montana Volunteer Infantry, and detachment Volunteer Signal Corps arrive in Philippine Islands.
 25. Twenty-third Kansas Volunteer Infantry (colored) leaves United States for Cuba.
 25. First Division Eighth Army Corps organized, Brig. Gen. T. M. Anderson, commanding.
 28. General Merritt assumes duties as military governor and transfers command of the Eighth Army Corps to Maj. Gen. E. S. Otis, U. S. V.
 28. Brig. Gen. Arthur MacArthur relieves General Anderson in command of Second Division.
 28. Disembarkation of Light Battery, Sixth United States Artillery, 6 troops Fourth United States Cavalry, First Montana, and First South Dakota Volunteer Infantry from transports *Peru*, *Pennsylvania*, and *City of Rio de Janeiro* begins at Cavite.
 29. Maj. Gen. E. S. Otis, U. S. V., relieves Maj. Gen. Wesley Merritt, U. S. A., in command of the Department of the Pacific and as military governor of the Philippine Islands.
 30. Brig. Gen. H. G. Otis, U. S. V., assigned to command of First Brigade, First Division.
- Sept. 2. First Battalion First South Dakota Volunteer Infantry disembarks at Manila.
8. General Otis demands the withdrawal of insurgent forces from the entire city of Manila, its suburbs, and defenses.
 13. Commission appointed by Aguinaldo confers with General Otis in regard to his demand for the withdrawal of insurgent forces from the city of Manila.
 15. Insurgents withdraw from limits of the city of Manila as established by General Otis, with the exception of the districts of Paco and Pandacan, south of the Pasig River.
- Oct. 7. Civil courts as constituted by the laws of Spain are allowed to resume their jurisdiction and regular functions, subject to supervision of the military government in its policy of occupation.

- 1898.
- Oct. 7. By General Orders, No. 163, Adjutant-General's Office, the Secretary of War directs that the Third, Fifth, and Sixth Army Corps be discontinued, and that the First, Second, and Fourth Army Corps be reorganized and assigned to camps as thereafter specified.
9. General Anderson and staff, while proceeding up the Pasig River in a steam launch, are ordered to return to the city by a Filipino guard.
10. General Otis makes formal demand for the retirement of Filipino forces from Paco, Pandacan, and other points established by survey to be within the city limits.
14. Eighth Army Corps reorganized.
16. Last detachment of Spanish troops depart from San Juan and thus formally terminate Spanish occupation of the Island of Porto Rico.
17. Battery D, California Volunteer Artillery, leaves United States for Philippine Islands.
17. Transport *Senator* sails for Manila with a battalion of Twenty-third United States Infantry, battery of California Volunteer Artillery, and detachment of recruits for Second Oregon Volunteer Infantry, under command of Maj. G. A. Goodale, Twenty-third United States Infantry.
19. Transport *Valencia* sails for Manila with Companies F, G, I, and L, First Washington Volunteer Infantry, and detachment of battalion California Artillery, under command of Lieut. Col. W. J. Fife, First Washington Volunteer Infantry.
20. Aguinaldo issues an order prohibiting all foreigners from entering the insurgent lines without passes and from approaching any of their earthworks or other defenses.
25. On demand of General Otis, of the 14th instant, insurgent troops are withdrawn from Paco and Pandacan, Manila, P. I., suburbs of Manila and defenses.
27. Transport *Indiana* sails for Manila with headquarters and band, Companies C, D, E, G, H, I, K, and M, Twentieth Kansas Volunteer Infantry, under command of Col. F. Funston, Twentieth Kansas Volunteer Infantry.
28. Transport *Ohio* sails for Manila with Companies A, B, C, D, E, H, K, and M, First Washington Volunteer Infantry, and detachment California Artillery, under command of Col. J. H. Wholley, First Washington Volunteer Infantry.
30. Transport *Zealandia* sails for Manila with the headquarters, Companies A, B, C, E, F, L, and M, First Tennessee Volunteer Infantry, under command of Col. W. C. Smith, First Tennessee Volunteer Infantry.
- Nov. 3. Transport *Pennsylvania* sails for Manila with the Fifty-first Iowa Volunteer Infantry, under command of Col. J. C. Loper, Fifty-first Iowa Volunteer Infantry.
6. Transport *City of Puebla* sails for Manila with Companies D, G, H, I, and K, First Tennessee Volunteer Infantry, detachment California Artillery, and First Troop Nevada Volunteer Cavalry, under command of Lieut. Col. Gracey Childers, First Tennessee Volunteer Infantry.
9. Transport *Newport* sails for Manila with Companies A, B, F, and L, Twentieth Kansas, and Wyoming Battery, under command of Brig. Gen. M. P. Miller, U. S. V.
10. Transport *Arizona* sails from Honolulu, H. I., for Manila, with battalion of Eighteenth United States Infantry, recruits for First Nebraska, Tenth Pennsylvania, and First Colorado Volunteer Infantry, and a detachment of Hospital Corps men.
21. Expedition under command of Maj. G. A. Goodale, Twenty-third United States Infantry, arrives at Manila. Left San Francisco October 17, 1898.
22. Expedition under command of Lieut. Col. W. J. Fife, First Washington Volunteer Infantry, which left San Francisco October 19, 1898, arrives at Manila.
24. Expedition under command of Maj. G. A. Goodale, Twenty-third United States Infantry, disembarks. Arrived at Manila November 21, 1898.
24. Expedition under command of Lieut. Col. W. J. Fife, First Washington Volunteer Infantry, which arrived November 22, 1898, disembarks.
24. Spanish troops evacuate Porto Principe and United States flag is raised.
25. Transport *Arizona* arrives at Manila from Honolulu with battalion of Eighteenth United States Infantry and detachment of recruits and Hospital Corps men. Sailed November 10, 1898.
26. Expedition under command of Col. J. H. Holley, First Washington Volunteer Infantry, which left San Francisco October 23, 1898, arrives at Manila.
26. Detachment of California Heavy Artillery disembarks at Manila.
28. Expedition under command of Col. W. C. Smith, First Tennessee Volunteer Infantry, which left San Francisco October 30, 1898, arrives at Manila.
28. The Spanish commissioners at Paris formally agree to the construction of the protocol put upon it by the Americans, accepting the twenty millions of bonus. By the agreement Porto Rico, Philippine Islands (including the Sulu Archipelago), Guam, in the Ladrones Islands, are ceded to the United States; Spanish sovereignty of Cuba is relinquished unconditionally, and the United States agree to relinquish all claim for money indemnity for cost of war.
28. The United States transport *Zealandia* arrives at Manila, P. I., with Companies A, B, C, E, F, L, and M of the First Tennessee Volunteer Infantry.
30. Expedition under command of Col. F. Funston, Twentieth Kansas Volunteer Infantry, arrives at Manila; left San Francisco October 27, 1898.
30. Troops on transport *Arizona* arrived November 25; disembark and join regiments.
30. Companies A and B, Tenth Pennsylvania Volunteer Infantry, assigned to duty at Corregidor Island.
- Dec. 5. Troops of First Tennessee Volunteer Infantry, arriving on transport *Zealandia* November 28, 1898, disembark and are assigned to duty with the provost guard.
6. Expedition under command of Lieut. Col. Gracey Childers, First Tennessee Volunteer Infantry, arrives at Manila; left San Francisco November 6, 1898.
6. First Washington Volunteer Infantry disembarks from transports *Valencia* and *Ohio*.

5. Corporal Roston with 8 men, Company K, Twenty-fourth Infantry, in an engagement near San Quintin, Luzon, with 30 insurgents, capture 10 of them and considerable amount of ammunition.
6. One hundred men of Forty-third Infantry are ambushed by insurgents near Panbisan, Samar. Insurgents' loss, 12 killed. Casualties, United States forces, 1 wounded. Lieutenant O'Connor with company of Macabebes, 10 men from Company F, Thirteenth Infantry, and 3 native policemen in an engagement with 8 ladrones in Villages, P. I., killed 2 and take 2 prisoners. Ernesto V. Smith, assistant adjutant-general, captain, Fourth Infantry, with 40 men of the Fourth Cavalry, troop G, 30 of these under Lieutenant Day, Thirty-fourth Volunteers, capture Gen. Pantelon Garcia and Major Hilario in the town of Jaen, Luzon. Col. Arthur Murray, Forty-third Infantry, reports capture of Hilongas, Leyte. Our loss 4 wounded. Insurgents' loss 70 killed, 21 wounded; 50 prisoners, 5 guns, 14 rifles captured.
7. Lieutenant Jernigan, Forty-fourth Volunteers, surprises insurgent camp near San Juan de Guimba, killing 2 and capturing 21 rifles. No casualties to United States forces. About 75 insurgents and bolomen attack Candelaria, Zamboales, Luzon, and are repulsed with a loss of 3 killed and several wounded.
8. Captain Payson, Thirty-second Infantry, destroys two barracks at Gunnay, near Orion, Luzon.
9. Lieutenant Draper, Twenty-second Infantry, with 20 men (Twenty-second Infantry) in an engagement with insurgents on barrio of Santa Barbara, Luzon, kills 3, wounds several, and captures 30 guns and considerable ammunition.
10. Commanding officer of Company M, Forty-ninth Infantry, stationed at Plat, Luzon, reports capture near there of 14 ladrones, among whom are insurgent officers. Sergeant Schmirz, Company M, Twelfth Infantry, with a small detachment, captures 6 ladrones and considerable ammunition in a barrio of San Juan de Guimba, Luzon.
12. Joaquin Luna, commissary of funds for Aguinaldo, and Maj. Santos Noras, insurgent president of Balaoan, surrender to Major March, Thirty-third Volunteers, at Candon, Luzon, P. I. Major Baldwin, with a detachment of Twenty-second Infantry, capture a lieutenant and 9 insurgents on an angle of Rio Grande and Chico rivers in Luzon, P. I. No casualties to United States forces. Col. Vincent Prado, of the insurgent forces, captured by Captains Styer and Wild, of Thirteenth Infantry, in a barrio of Pozorubio, Luzon, P. I.
13. Lieutenant Miller, Thirty-second Infantry, near Samal, Luzon, P. I., captures 4 ladrones; 3 were killed in trying to escape. Colonel Duval, Forty-eighth Infantry, reports capture of Ancilio Mendoza and Lieutenant Lon Meliano with 3 men in barrio near Bangar, Luzon. Captain Hawkins, Forty-eighth Infantry, in an engagement near Balaoan, Luzon, with 20 insurgents, kills 6, wounds 1, and captures several rifles and 1,000 rounds ammunition.

1900.
May 14. Lieutenant Noble, with detachment Company F, Thirteenth Infantry, captures 21 ladrones in barrio of San Manuel, Luzon. Lieutenant Read, with 30 men from Company H, Thirteenth Infantry, in an engagement with 20 ladrones near San Manuel, Luzon, P. I., kills 1 ladrone and wounds 2 others. Lieutenant Coburn, Twenty-fifth Infantry, engages about 20 insurgents at Hobat, near Candelaria, Luzon; captures 3 insurgents; no casualties to United States troops. Sergeant Smith, with a detachment of Company M, Twelfth Infantry, in barrio of San Jose, Luzon, captures 6 ladrones, 9 rifles, and 100 rounds of ammunition. Detachment Thirty-fourth Volunteers met Natividad (insurgent general) and 75 riflemen and a number of bolomen at Quiem, Leyte; insurgent loss, 6 killed; casualties to United States forces, 1 wounded. Eighty soldiers of Companies I and K, in an engagement with the insurgents, 500 strong, at Agusan, Mindanao; insurgent loss, 52 killed; our loss, 2 killed and 3 wounded.
16. Col. Pablo Padilla and Lieut. Col. Casemaro Tino, 2 insurgent officers, are captured near Licup, Luzon, P. I.
19. Detachment Thirty-third Infantry encounters Aguinaldo and party of 100 insurgents at Sagad, P. I., and wounds a mounted officer, whose saddlebags contain Aguinaldo's papers since November, 1899. Captain Rucker, Thirty-third Volunteers, surprises Captain Tino and kills him, together with 23 of his men, near Malibong, Luzon, P. I.
20. Major Muir, and Company D, Thirty-eighth Infantry (57 strong), attacked main body of insurgents (125 strong) on island of Marinduque. Six insurgents killed, many wounded in flight; no casualties to United States forces. A detail of native scouts belonging to Lieutenant Parson's detachment are attacked near San Quintin, Abra Province, Luzon. Lieutenant Parson arrived with 35 men and dispersed the insurgents, killing 6.
22. Two companies of insurgents (170 aggregate strength) voluntarily surrender to Colonel Liscum at Tarlac, Luzon, P. I.
21. Sergeant Berry is instantly killed by shot in the head while rescuing the daughter of the president of Montalbon from the ladrones at Balayan, P. I. Four privates, with Sergeant Berry, kept up a return fire until reinforcements arrive, when the ladrones fled, with a loss of 7 killed. Lieutenant McGowan, with a detachment of Forty-eighth Volunteer Infantry, kills 7 bolomen and captures 16 more near Gallano, Luzon, P. I.
23. Three insurgent officers and 46 men surrender to Colonel Liscum at Tarlac, Luzon, P. I.
27. Major Langhorne with a detachment Thirty-ninth Infantry in a skirmish with insurgents at Camalig, Luzon, P. I., kills 4 insurgents, and wounds many more. A force of 100 insurgents, in an attack on Abcay, Bataan, Luzon, P. I., are repulsed by Captain Brandt, Thirty-second Volunteers, killing 4 insurgents. No casualties to United States forces. Three insurgent officers and 55 soldiers surrender unconditionally to Lieutenant-Colonel Bubb, Twelfth Infantry, at Paniqui, Luzon, P. I. Action near Santiago, P. I., between insurgents under Captain Legaspi and detachment Forty-eighth Infantry, in which 1 insurgent is killed and 1 rifle and 90 cartridges captured. Action at Tulao, P. I., between native scouts and insurgents, and 2 rifles and 26 cartridges are captured.
28. The Barrio of Pawan near Pagsanjan, province of Laguna, P. I., surrenders to and is destroyed by detachments Forty-second Infantry, Thirty-seventh Infantry, and Eleventh Cavalry. Loss to insurgents 1 killed, 1 wounded, and 4 captured. No casualties to United States troops. Detachment Thirty-sixth Infantry captures near Mangatarem, P. I., 13 guns and 1 pistol. Detachment Thirty-fourth Infantry captures at Licup, P. I., 18 rifles, 485 cartridges, and insurgent lieutenant.
29. Action near Penaranda, P. I., between mounted detachment Thirty-fifth Infantry and insurgents. Action near Agno, P. I., between detachment Thirty-sixth Infantry and insurgents results in the capture of 2 native cannon and 3 rifles. Action near Tarlac, P. I., between scouting party and insurgents results in capture of 5 carbines, 44 cartridges, 1 prisoner, and papers belonging to insurgent Lieutenant-Colonel Gilino.
30. Mounted detachment Thirty-sixth Infantry in fight during the night captures 27 Remington and 4 Mauser rifles, also Francisco Orden, chief of ladrones. Lieutenant Barnado Vacho and 11 men surrender at Cuyapo, P. I., to adjutant Twelfth Infantry with 4 Mauser and 2 Remington rifles and 100 cartridges. In action at Linalon, P. I., between detachment Forty-second Infantry and 250 insurgents 1 soldier and 8 insurgents are killed and 4 insurgents are wounded; Colonel Duvall, Forty-eighth Infantry, captures Francisco Perez, captain of bolo gang, near Santa Lucia, P. I.; Major Johnson, Twenty-ninth Infantry, island of Tablos, near Odinuan, encounters and captures a band of 25 insurgents with 10,000 rounds of ammunition and a deposito containing 20 tons of rice.
31. Captain Sullivan with detachment Thirty-fourth Infantry captures at Licup, P. I., 3 rifles, 3 shotguns, and 125 rounds of ammunition; Lieutenant O'Connell, commanding Macabebe scouts, at Cuyapo, P. I., captures near that place 7 rifles and 6 insurgents.
- June 1. Capt. Ambrosia Sandoval surrenders at Cuyapo, P. I., to United States forces, with 1 lieutenant, 20 men, 26 rifles, 4 revolvers, and 700 rounds of ammunition. Major Steever, with Troop E, Third Cavalry, struck insurgents in force at Mount Parayan, southeast of Badoc. Our losses, 1 man killed, 1 wounded. Twenty-seven insurgents seen to fall, 2 prisoners.
2. Three Remingtons, 1 Mauser, 2 revolvers, and ammunition are surrendered to Lieutenant Davis, Twelfth Infantry, at San Juan de Guimba, P. I.; 3 rifles are surrendered at Camalig, P. I., to Major Allen, Twelfth Infantry; Lieutenant Smith, Twenty-sixth Infantry, captures 3 Remingtons, 3 Mausers, and 1 shotgun in Barrio of Mangatarem, P. I.; Lieut. Mariano Quinson, with 10 men, surrender at Cuyapo, P. I.; Lieutenant Matson, Thirty-fourth Infantry, captures near Santo Domingo, P. I., 23 rifles without stocks, large quantity artillery ammunition and parts of ammunition factory; detachment Thirtieth Infantry captures at Unisan, P. I., the insurgent Maj. Antonio Marina.
3. In action near Bustos, P. I., an insurgent, reputed to be Captain Francisco Malabon Battalion, is killed.
4. Insurgent Captain Versola turns in 4 rifles at Cuyapo, P. I., and insurgent Lieutenant Quinson, same place, brings in 13 insurgents, rifles, and ammunition; 3 rifles are surrendered at Aguila, P. I.
5. Insurgent Captain Mendoza surrenders at Cuyapo, P. I.; 10 guns, 10 rifles, and 3 shotguns are surrendered to commanding officer, Camalig, P. I.

1900.
June 8. The insurgent General Pilar is arrested opposite San Pedro Macati, P. I., by Captain Lara, in command detachment Twenty-first Infantry; Lieut. Col. Manuel de Leru, with 1 captain, 2 lieutenants, 36 men, and 64 guns, surrender at Tarlac, P. I.; Captain Sullivan, Thirty-fourth Infantry, captures Col. Queripaito Medina and Oboldo Yango, near Mayapup, P. I.; and Lieut. Col. Valentine Diaz, of Macabulo's force, surrenders at Camalig, P. I.
9. Lieutenant Bolton, commanding detachment Seventeenth Infantry, captures near Alcala, P. I., Cavestany and Maj. Nicolas Perez, also 12 rifles and 1,000 rounds of ammunition.
10. Insurgent Maj. Ynocencio Catlas surrenders at Camalig, P. I.
11. Lieutenant Johnson, commanding detachment Forty-first Infantry, captures the insurgent General Hizon, near Molina of San Jose, vicinity of Mexico, P. I.; General Grant captures stronghold occupied by insurgents near Libut, P. I., destroying barracks and stone houses; Captain Hilton, Thirty-ninth Infantry, surrounds barrio of Sutil, a haunt of pirates, and arrests every male inhabitant, 70 in number.
12. Lieutenant Mapes, Thirty-second Infantry, captures in mountains near Porac, a large quantity of ordnance stores, including Mauser cartridge machine.
13. Lieutenant Harvey, Forty-first Infantry, captures at Magalang, P. I., 5 insurgents, 5 rifles, and considerable ammunition; Major Braden, Thirty-sixth Infantry, secures 2 rifles at Mangatarem, P. I., and Lieutenant Smith, Thirty-sixth Infantry, captures 17 rifles near same place.
15. Major Steever, northeast of Cabugar, P. I., and southeast of Sinait, P. I., in several skirmishes with insurgents, destroys 6 cuartels, 4 outpost stations, and number of isolated shelters, also much clothing, and captures Tino's quarters (which are burned) and letters signed by him. Insurgent General Macabulos, with 8 officers, 154 men, and 124 guns, surrenders at Tarlac, P. I., to Colonel Liscum; Lieut. Genero Morelles surrenders at Camalig, P. I.; Maj. Mateo de la Cruz and Dionisio Loredo, secretary to Colonel Stana, are captured by detachment Forty-second Infantry during the night.
16. Detail Twenty-fourth Infantry, sent out on 15th instant, returns to San Jose, P. I., from mountains, bringing 120 Mauser and 85 Remington rifles found in cache and 13 bull-cart loads of machinery for making powder; Lieut. Catalino Alnas, with 10 men and 10 rifles, surrenders at Villasis, P. I.
17. Eight insurgents, with 9 Remington rifles and 1 revolver, surrender to Captain Crittenden, Twenty-second Infantry, at Candaba, P. I. Wagon train from Naic to Indang ambushed near Malabon and one civilian teamster killed.
20. Detachment Forty-first Infantry, near Barrio Panapan, P. I., in skirmish with ladrones, wounds one and captures considerable ammunition.
22. Lieutenant Burr, commanding detachment 15 scouts, encounters band of ladrones near Barrio Haciopis, P. I., killing 9 and capturing 2 wounded, 2 ponies, and quantity of ammunition. Captain Garviana surrenders at Cabanatuan, P. I., to United States forces.
23. Insurgent Lieut. Col. Cadore Calina, with 3 officers, 15 men, and 15 guns, surrenders at Tarlac, P. I.
23. Lieutenant Burr, Eleventh Infantry, with 23 scouts, finds and destroys in mountains west of Malabaca, P. I., stronghold and cache of 20 tons of ordnance stores, and machinery of all kinds, for manufacturing ordnance.
24. Captain Lyers, Thirty-seventh Infantry, and Captain Ross, Eleventh Cavalry, with 2 companies in action with 200 armed insurgents, near Luisiana, P. I., kill 4.
25. Detachments Eleventh Cavalry and Thirty-seventh Infantry, under Captain Scott, strike insurgent band south of San Antonio. Killed 2, wounded 2, captured 2 men, 2 rifles, 20 bolos; no casualties among our troops.
26. A patrol of ten men of the Thirty-fifth Infantry encounters band of armed natives near Barrio San Rita, killing 1, wounding 1, and scattering the rest; our casualties none.
29. Town of Baculan, 24 miles south of Taguig, raided by ladrones; natives, robbed of money, clothing, and cattle, resisted and had one wounded. Filipino General Aquino surrenders at Angeles, with 64 rifles and 1,122 rounds ammunition.
- July 1. Major Short, with detachments E and C, Thirty-fifth Infantry, captures insurgent Major Sinfrose, who commands all troops in that vicinity, with 15 guns. Lieutenant Jernigan, Thirty-fourth Infantry, strikes a band of outlaws near Talavera, P. I., and kills 14. Major Wygant, Twenty-fourth Infantry, captures an insurgent captain and 7 men near San Jose. Gen. Artemio Ricarte de Zibora, a prominent insurgent leader, captured at Manila. Lieutenant Walker, with Troop A, Third Cavalry, strikes the body of ladrones who had ambushed the Indang wagon train, killing 2.
2. A body of 50 ladrones secrete themselves on a coastwise vessel, the *Filipino*, at Manila, and when opposite Gotong seize and plunder the vessel. General Grant pursues and overtakes them on the 3d, killing 12 and dispersing remainder. Our loss, 3 killed and 2 wounded, all of Company H, Third Infantry.
3. First Sergt. E. L. Hamilton and 8 men, of Company E, Thirtieth Infantry, attacked by a body of some 50 insurgents at Damagueo bridge; attack successfully repulsed; 3 men wounded. In action with ladrones, near Humingan, P. I., detachment of Company A, Twenty-fourth Infantry, kills 1 and captures 5; also takes 8 Remington rifles and 200 cartridges.
4. Two insurgent officers and 20 men surrender at Magalang, P. I.

THE FIGHTING FORCE.

The number of enlisted men allowed by law prior to the outbreak of hostilities was 12,500. On August 15, when the enlisted force reached its maximum, there were 24,123 men in the service. This great increase was made necessary by the addition of 128 ships to the Navy. The maximum fighting force of the Navy, separated into classes, was as follows:

Battle ships (first class)	4
Battle ships (second class)	1
Armored cruisers	2
Coast defense monitors	6
Armored ram	1
Protected cruisers	12
Unprotected cruisers	3
Gunboats	18
Dynamite cruiser	1
Torpedo boats	11
Vessels of old Navy, including monitors	14
Auxiliary Navy:	
Auxiliary cruisers	11
Converted yachts	28
Revenue cutters	15
Light-house tenders	4
Converted tugs	27
Converted colliers	19
Miscellaneous	19

Captured in Spanish-American war.

Name.	Displacement.	Type.

ADJUTANT-GENERAL OF THE ARMY.

The Adjutant-General of the Army promulgates all orders of a military character of the President, the Secretary of War, and the Commanding General of the Army, and conducts the correspondence between the latter and the Army; receives reports and returns pertaining to the Army; prepares commissions, appointments, and acceptances of resignations for issuance, and, under the direction of the Secretary of War, has charge of the recruiting service.

ALASKA.

Superficial area 531,400 square miles, nearly equal to one-sixth of the whole United States and its Territories.

Discovered by Russian fur hunters a little over a century ago.

Acquired by the United States in May, 1867; purchase price, \$7,200,000.

Treaty negotiated on part of the United States by Hon. William H. Seward, Secretary of State.

Territory formally transferred at Sitka, October 18, 1867, by Prince Matutoff, acting for the Russian Government; received by General Rousseau, acting commissioner for the United States.

Chiefly valued at time of purchase for its furs and fisheries.

Population, 1880: Natives, 32,900; whites, 430. Total population 1880, 33,330.

Annual yield of furs (estimated 1880), \$2,181,832.

Trans-Alaskan military route 200 miles shorter than either the Skagway, White Pass, Dyea, or Chilkoot routes.

Yukon River the largest river on the North American continent.

Gold discovered in the Upper Yukon Valley in the fall of 1896.

All-American route discovered and explored in the summer of 1898.

Most valuable timber located on the coast range washed by the Japan current. Temperature of southern coast, minimum, zero; beyond coast range summer, as high as 110° F.; winter average 15° below.

Auriferous indications found in almost all streams having their inception in the Tanana hills; also at the head waters of the Tanana and in and on the several tributaries of that stream; also in the Mount McKinley range, and in almost every creek and river flowing to the Copper and Shushitna valleys. Promising argentiferous quartz deposits found in the mountains at the head waters of the Copper River.

Coal deposits of great commercial value found in large quantities in the Copper River valley and on shores of Cook Inlet.

Valuable iron deposits believed to exist adjacent to the coal beds above mentioned; main range of mountains rich in copper ore.

Cape Nome placer deposits discovered in 1898.

Military Department of Alaska created January 19, 1900, and Col. George M. Randall assigned to the command of the Department.

Number of troops stationed in Alaska in August, 1900, 900; number of military posts, 8.

Location of military posts: Cape Nome, Circle City, Fort Egbert, Eagle City; Fort Gibbon, Tanana; Port Valdez, Rampart City, Skagway; and Fort St. Michael, St. Michael's Island.

Military explorations: First serious step taken to explore the interior of Alaska by the United States instituted by War Department in 1869, when Capt. Charles P. Raymond, Engineer Corps, ascended the Yukon River to Fort Yukon, and by scientific observations decided that the above-named point was in United States instead of British territory.

Subsequent expeditions: Maj. Gen. O. O. Howard, 1875; to redress grievances of coast Indians.

Lieut. Frederick Schwatka, 1883, to ascertain numerical strength and peaceful tendencies of natives, arms at their command, and power to cope with United States troops in case of war, and physical characteristics of country traversed.

Lieut. P. Henry Ray, 1884, expedition to Point Barrow to make scientific observations.

Lieut. W. R. Abercrombie, 1884, expedition into Copper River Valley to learn manner in which natives were subdivided into tribes and clans; also something of the character of country inhabited; feeling toward United States Government; modes of life of natives, their means of communication from one part of the country to the other; character of arms in their possession; native grasses grown in country traversed, and to obtain such other information as would prove of value to the Government from a military standpoint.

Lieut. Henry T. Allen, 1885, expedition to explore Copper River Valley for the purpose of making scientific observations on country traversed; to observe peaceful disposition of natives; their numerical strength for war; their habits, and to bring back material for maps of the country traveled over.

Capt. P. H. Ray, 1897, expedition for relief of destitute miners in the Klondike gold fields, and to aid in maintaining order whenever the same became necessary.

Capt. P. H. Ray, 1898, expedition for the relief of the destitute in the Yukon region.

Capt. W. R. Abercrombie, 1898, expedition into the Copper River Valley to take note of mineral resources of same; to note character of country traversed; to observe characteristics of tribes encountered; to make note of the agricultural resources of the Copper River Valley, its timber supply, insect life, fish, game; to select sites for military posts, and to ascertain and establish feasible railroad routes and routes of travel from Fort Valdez to the Tanana and Forty-mile districts.

Capt. E. F. Glenn, 1898, expedition to discover the most direct and practicable route from tide water to one or more crossings of the Tanana River in the direction of the Yukon; to observe topographical features, available routes of travel, feasible routes for railroad construction, to establish available sites for military posts, and to map and photograph country traveled over.

Capt. W. P. Richardson, 1899, exploration of the Yukon River to note climate; to observe topography of country; to note agricultural resources and minerals; to observe and report on species of game in country traversed, customs and habits of the natives, and to observe and report on such other matters as would add to the general knowledge of the country.

Capt. E. F. Glenn, 1899, to explore Cook Inlet, and especially to explore, survey, establish, and mark a trail from Portage Bay, Prince William Sound, to Knik Arm; to observe topographical features of country, available routes of travel, and feasible routes for railroad construction; to select available sites for military reservations, and to note the adaptability of the country traversed for agriculture and stock raising; also its mineral resources, timber, food products, fuel, etc.

Capt. W. R. Abercrombie, 1899, exploration of the Copper River Valley. To open up a trans-Alaskan military road from Port Valdez to Copper Center, and from thence by the most practicable route to Eagle City. To furnish valuable information in regard to the country traversed; to report available route of travel, feasible route for railroad construction, adaptability of country for agriculture and stockraising; to note mineral resources of country traversed, its timber, fuel, food products, its fish industries; to locate practicable crossings of the upper waters of the Copper and Tanana rivers; to note depth of water, width of streams, and conditions for fording same; to survey and triangulate passes over glaciers and through mountains; to plat full and complete figures of distance, altitudes and widths of passes, and to definitely locate and properly mark the same in order that they might be declared a military road by the Secretary of War.

Arms and ammunition captured at Santiago.

ARMS.

Remington cartridges, 7 mm.	1,680,000
Total	4,651,200
Nine hundred and seventy-three thousand Remington cartridges, 7 mm., worthless.	

ARMY.

The joint resolution approved April 20, 1898, demanding that Spain relinquish its authority and government in the island of Cuba and withdraw its land and naval forces from Cuba and Cuban waters, authorized the President to use the land and naval forces of the United States to carry the resolve into effect. Congress followed this step by the passage of an act, approved April 22, 1898, providing for the temporary increase of the military establishment of the United States.

By this law the organized and active land forces were declared to consist of the Regular Army and of the militia of the several States when called into service, constituting two branches, designated, respectively, as the Regular Army and the Volunteer Army of the United States. And the President was authorized to organize the regular and volunteer troops into divisions of three brigades, each brigade to be composed of three or more regiments, and when three or more divisions are present in the same army, to organize them into army corps, each corps to consist of not more than three divisions.

Under the authority conferred upon him by the joint resolution of April 20 and the act of April 22, 1898, the President issued a proclamation, dated April 23, 1898, calling for volunteers to the number of 125,000 men, to be apportioned as far as practicable among the several States, Territories, and the District of Columbia, according to population, to serve for two years unless sooner discharged. Among the several arms of the service the troops were apportioned as follows: Five regiments and 17 troops of cavalry, 16 batteries of light artillery, 1 regiment and 7 batteries of heavy artillery, 119 regiments and 10 battalions of infantry.

May 25, 1898, the President issued a proclamation calling for an additional force of 75,000 men. For controlling military reasons, it was determined to utilize so much of this additional force as was necessary to bring up the several State organizations in service to the full legal strength, the remainder to be apportioned among the several States and Territories according to their respective quotas as nearly as possible. The apportionment to the several arms of service under this second call was for 16 batteries of light artillery, 3 battalions of heavy artillery, and 22 regiments, ten battalions, and 46 companies of infantry.

ARMY CORPS BADGES.

When the land forces of the United States are organized into army corps, divisions, and brigades, the same will be designated by the following symbols, flags and pennants, and badges, made according to description and designs in the office of the Quartermaster-General:

SYMBOLS.

Cavalry Corps, a winged horsefoot.
 Artillery Corps, crossed conical projectiles, with round shot above center.
 First Corps, a circle over the letter "I," of special design.
 Second Corps, a four-leaf clover.
 Third Corps, a three-tooth clutch.
 Fourth Corps, a caltrop.
 Fifth Corps, a five-bastion fort.
 Sixth Corps, a 6-spoke hub.
 Seventh Corps, a 7-pointed star.
 Eighth Corps, two circles overlapping each other, one-third radius, resembling the figure "8."
 Ninth Corps, a buzzsaw with 9 teeth.
 Tenth Corps, two triangles, point to point, resembling the letter "X."
 Eleventh Corps, badge of Tenth Corps, with horizontal bar through center, representing "XI."
 Twelfth Corps, a square with clover leaf at each corner, thereby showing 12 small circles.
 Thirteenth Corps, a palm leaf with 13 spikes.
 Fourteenth Corps, a square with half circles on each side.
 Fifteenth Corps, a bugle.
 Sixteenth Corps, a spearhead.
 Seventeenth Corps, a battle-ax.
 Eighteenth Corps, an arch.
 The divisions of the corps will be represented by the color of the symbol as follows:
 First Division, red.
 Second Division, white.
 Third Division, blue.

ARTIFICIAL LIMBS AND THEIR COMMUTATION.

Under the provisions of law relating to artificial limbs there were furnished during the year ended June 30, 1899, 27 artificial legs, 4 arms, 1 foot, and 1 apparatus for excision. Commutation certificates were issued for 105 cases of amputated leg, 70 of amputated arm, 12 of amputated foot, and for 1,934 cases of loss of the use of a limb. These cases involved an expenditure of \$125,088.91 from the appropriations available.

These benefits to disabled soldiers recur under existing laws every three years, so that the cases which matured and were paid during the year ended June 30, 1898, will again come up for payment if the beneficiaries are alive during the year ending June 30, 1901. There were in the files of the office 3,580 cases which matured during the fiscal year 1898. The commutation value of these cases was \$182,755. Allowing for deaths during the past three years, I estimate that there will be 3,400 claims presented during the year ending June 30, 1901, and that the sum of \$173,000 will be required to settle them. Estimates have already been submitted for this sum.

APPLIANCES FOR DISABLED SOLDIERS.

During the past year the sum of \$1,300.89 was expended for 149 appliances issued to disabled soldiers.

TRUSSES.

The number of trusses issued and fitted during the year was 1,068.

ARTILLERY.

12 batteries of heavy artillery, 113 enlisted men each	1,356
2 batteries of field artillery, 162 enlisted men each	324
Regimental noncommissioned staff	2
Regimental band	28

Total number of enlisted men in regiment	1,710
Number of regiments	7

Total number of enlisted men in artillery	11,960
---	--------

Each battery of heavy artillery shall consist of—

First sergeant	1
Quartermaster-sergeant	1
Sergeants	4
Corporals	12
Musicians	2
Mechanics	2
Cooks	2
Privates	85
Total	113

Each battery of field artillery shall consist of—

First sergeant	1
Stable sergeant	1
Quartermaster sergeant	1
Sergeants	6
Corporals	12
Artificers	4
Musicians	2
Cooks	2
Privates	133
Total	162

ASSISTANT SECRETARY OF WAR.

Under the law providing for the appointment of the Assistant Secretary of War, it is provided that that official shall perform such duties in the Department of War as shall be prescribed by the Secretary or may be required by law.

From time to time there have been delegated to the Assistant Secretary of War certain classes of business, and during the present Administration he has had jurisdiction over all matters relating to the volunteer forces of the United States in the civil war, questions relating to the enlisted personnel of the Army, the civil personnel of the War Department, and numerous other miscellaneous classes of business.

Battles and engagements in Cuba:

Las Guasimas, June 24, 1898.

El Caney, July 1, 1898.

San Juan, July 1-3, 1898.

	Officers.	Enlisted men.	Officers.	Enlisted men.
Cuba	23	237	99	1,332
Porto Rico		3	4	36
Manila		17	10	96
Total	23	257	113	1,464

The total deaths in the army of the Philippines for the ten months from the 1st of January, 1899, to the 1st of November, 1899—that is to say, for the entire period covered by the war with the insurgents—have been of those killed in battle and dying of wounds and other injuries, 477; those dying of disease, 366; making a total of 843.

The deaths from all causes (including casualties in action) in the whole Army, regulars and volunteers, for the fourteen months from May, 1898, to June, 1899, inclusive, were 6,619. This is equivalent to an annual rate of 31.03 per thousand of strength. The deaths from disease during the whole period were at an annual rate of but 25.68 per thousand. These were as follows:

Stations.	Number of deaths.	Rate per 1,000.
United States	3,577	23.81
Cuba	928	45.14
Porto Rico	238	38.15
Philippines	402	17.20

Deaths in the armies of the United States, by countries, between May 1, 1898, and June 30, 1899.

CHIEF OF ENGINEERS.

The Chief of Engineers commands the Corps of Engineers, which is charged with all duties relating to construction and repair of fortifications, whether permanent or temporary; with torpedoes for coast defense; with all works of defense; with all military roads and bridges, and with such surveys as may be required for these objects, or the movement of armies in the field. It is also charged with the river and harbor improvements, with military and geographical explorations and surveys, with the survey of the lakes, and with any other engineer work specially assigned to the corps by acts of Congress or orders of the Secretary of War.

CHIEF OF ORDNANCE.

The Chief of Ordnance commands the Ordnance Department, the duties of which consist in providing, preserving, distributing, and accounting for every description of artillery, small arms, and all the munitions of war which may be required for the fortresses of the country, the armies in the field, and for the whole body of the militia of the Union. In these duties are comprised that of determining the general principles of construction and of prescribing in detail the models and forms of all military weapons employed in war. They comprise also the duty of prescribing the regulations for the proof and inspection of all these weapons, for maintaining uniformity and economy in their fabrication, for insuring their good quality, and for their preservation and distribution.

CHIEF SIGNAL OFFICER.

The Chief Signal Officer is charged with the supervision of all military signal duties, and of books, papers, and devices connected therewith, including telegraph and telephone apparatus and the necessary meteorological instruments for use on target ranges and other military uses; the construction, repair, and operation of military telegraph lines, and the duty of collecting and transmitting information for the Army by telegraph or otherwise, and all other duties usually pertaining to military signaling.

CLOTHING AND EQUIPAGE.

Among the articles issued by the Department between May 1 and August 15, 1898, were about—

Blankets.....	546,300
Blouses.....	290,800
Pairs of trousers.....	523,200
Campaign hats.....	476,700
Canvas field uniforms.....	153,170
Pairs shoes.....	782,300
Pairs leggings.....	588,800
Dark blue flannel shirts.....	622,200
Undershirts.....	1,257,000

Pairs of drawers.....	1,210,680
Tents, exclusive of shelter tents.....	65,000
Halves of shelter tents.....	372,400
Axes.....	30,000
Camp kettles.....	34,300
Mess pans.....	58,600

Besides a multitude of minor articles.

Statement showing articles of clothing and equipage supplies furnished by the Quartermaster's Department from September 1, 1899, to June 30, 1900, for issue to the Army. This statement does not include issues to troops stationed in the United States, as the necessary data will not be available until depot reports called for shall have been received.

CLOTHING AND EQUIPAGE SUPPLIES.

There was available for this branch of the service, during the last fiscal year, the sum of \$4,080,947.50. From this amount the sum of \$23,597,508.10 was remitted to disbursing officers of the Department, and requisitions for \$100,105.60 issued on settlements made at Treasury of accounts and claims, leaving a balance on hand June 30, 1899, of \$10,383,333.89, which will be further drawn upon to meet obligations entered into prior to the close of the fiscal year.

COMMISSARY-GENERAL OF SUBSISTENCE.

The Commissary-General of Subsistence has administrative control of the Subsistence Department; the disbursement of its appropriations; the providing of rations and their issue to the Army; the purchase and distribution of articles authorized to be kept for sale to officers and enlisted men; the administrative examination of accounts of subsistence funds preliminary to their settlement by the proper accounting officers of the Treasury, and the examination and settlement of returns of subsistence supplies.

By direction of the President, May 7, 1898, seven army corps were constituted, embracing both the Regular and Volunteer branches of the Army.

And, on June 21, the forces comprising the Philippine expeditions were constituted an army corps to be known as the Eighth.

THE FIRST AND THIRD CORPS.

These corps were made up of the troops assembled in the provisional army at Camp George H. Thomas, Georgia, and were commanded by Maj. Gen. John R. Brooke from May 1 to July 23, when he relinquished command to Maj. Gen. James F. Wade, United States Army, who commanded the forces until July 31. From that date until August 2, when Maj. Gen. J. C. Breckinridge reported by assignment, Gen. Royal T. Frank was in command. General Breckinridge continued as the commander of the forces until August 14, on which date he left Chickamauga Park.

In July the First Division of the First Corps, under General Wilson, was detailed for duty in Porto Rico.

August 21-22 the Second and Third Divisions of that corps were sent to Lexington, Ky., and Knoxville, Tenn., respectively.

The Third Corps was transferred early in September to camps at Anniston, Ala.

The combined strength of the First and Third Corps on the last days of the months of May, June, July, and August, 1898, was as follows:

Month.	Officers.	Enlisted men.
May.....	2,254	42,237
June.....	2,211	52,574
July.....	1,700	43,856
August.....	1,582	39,816

THE FIRST CORPS.

This corps was made up of the troops assembled in the provisional army at Camp George H. Thomas, Chickamauga Park, and Major-General Brooke was assigned to command May 1, which he relinquished July 23. Gen. James F. Wade, U. S. V., commanded the corps from that date to July 31, when General Frank commanded the forces until the arrival of Major-General Breckinridge, August 2.

In July, 1898, the First Division of the corps, under General Wilson, was detailed for duty in Porto Rico.

General Breckinridge left Camp Thomas September 14, all of the troops having left, the Second and Third Divisions having been sent to camps at Lexington and Knoxville, respectively. He established his headquarters at Lexington. On October 20 Maj. Gen. James H. Wilson relieved General Breckinridge of command of the reorganized First Corps (see G. O., 163, 1898), and the troops were moved to camps in the South, General Wilson making his headquarters at Macon, Ga. (See report Inspector-General, 1898, pp. 44 et seq.)

By orders from the War Department dated December 30, General Wilson was ordered to prepare certain of his command, including his headquarters, for service in Cuba. He sailed from Savannah January 7, 1899, reported his arrival at Matanzas January 10, and the remainder of the corps, with the exception of those regiments mustered out of service, were during the latter part of December, 1898, and January, 1899, distributed in the Provinces of Matanzas and Santa Clara.

By General Orders, No. 8, January 16, 1899, the First Corps was discontinued, and the few troops remaining in the United States belonging thereto were assigned as separate brigades of the Second Army Corps.

The strength of the First Corps is included in the forces at Camp Thomas to September.

Its strength on the last days of the months following was:

Month.	Officers.	Enlisted men.
September, 1898.....	824	19,519
October, 1898.....	862	20,683
November, 1898.....	837	19,536
December, 1898.....	812	19,220

THE SECOND ARMY CORPS.

Commanded by Maj. Gen. William M. Graham, U. S. V., from date of organization to November 2, 1898, when Maj. Gen. Samuel B. M. Young, U. S. V., assumed command and continued until the corps was discontinued May 3, 1899.

The corps was organized at Camp Alger, near Falls Church, Va., but was removed during the months of August and September to Camp George H. Meade, near Middletown, Pa.

As the winter months approached camps were selected for the corps at various stations in the South, General Young making his headquarters at Augusta, Ga.

The strength of the corps for the last days of the months mentioned below was as follows:

Month.	Officers.	Enlisted men.
May, 1898.....	922	17,467
June, 1898.....	1,103	23,002
July, 1898.....	1,183	29,747
August, 1898.....	1,347	33,765
September, 1898.....	879	21,436
October, 1898.....	887	21,576
November, 1898.....	976	22,646
December, 1898.....	973	22,185
January, 1899.....	1,304	29,446
February, 1899.....	814	17,972
March, 1899.....	242	4,954
April, 1899.....	49	795

NOTE.—A complete history of the Second Corps can be gathered from the reports of Major-General Graham (1898) and Young (1899), which are printed.

THE THIRD CORPS.

This corps was made up of the troops assembled in the provisional army at Camp George H. Thomas, Chickamauga Park, and Maj. Gen. James F. Wade, U. S. V., assumed command May 26, 1898, and he, after the departure of Gen. John R. Brooke, July 23, also commanded the troops at Camp Thomas. On July 31 Major-General Wade relinquished the command of the troops assembled at Camp Thomas to Brig. Gen. Royal T. Frank. On August 2 Maj. Gen. J. C. Breckinridge, U. S. V., assumed command of Camp Thomas, and General Frank was placed in command of the Third Corps, by direction of the President, September 4.

The Third Corps was transferred early in September to the camps established at Anniston, Ala., and by the end of that month but a small detachment remained at Camp Thomas, Georgia. The corps was discontinued October 7, 1898 (see G. O. 163, 1898), but by the time the corps was fully under way for Anniston it had melted away to a very few regiments, the rest having been ordered home for muster out. The strength of the Third Corps is included in the forces at Camp Thomas to September. Its strength on the last day of that month was 300 officers and 8,076 men.

THE FOURTH CORPS.

By orders of the War Department, Maj. Gen. John J. Coppinger, U. S. V., was designated to command the corps, and he arrived at Mobile April 19, 1898, where the organization of the corps was begun.

June 2 the corps commenced the march to Tampa, Fla., and on June 20 the First Division changed station from camp near Mobile to Miami, Fla., and on June 27 the division was transferred to the Seventh Corps. Regular regiments of the corps then assembled at Tampa were embarked with General Shafter's expedition, and other troops which were left behind were absorbed. The troops that then remained to the corps were moved to Fernandina, Fla., commencing July 30.

On August 11, the corps having been ordered to Huntsville, Ala., the movement was begun, and as fast as transportation was provided the corps was centered about Huntsville.

General Coppinger having been retired from the Army, General Wheeler was designated to command the corps, and served with it from October 13 to December 3. Brig. Gen. A. K. Arnold commanded from December 14 to 20, when General Lawton was assigned to command, and remained from December 23 to 29, when the command devolved upon Brig. Gen. Royal T. Frank, the senior officer present, and the headquarters were removed to Anniston. The corps was discontinued January 16, 1899.

Month.	Officers.	Enlisted men.
May, 1898.....	442	7,689
June, 1898.....	969	21,736
July, 1898.....	625	14,019
August, 1898.....	534	12,009
September, 1898.....	329	6,616
October, 1898.....	733	16,797
November, 1898.....	689	16,470
December, 1898.....	545	13,337

The above table shows the strength of command on last days of months mentioned.

THE FIFTH ARMY CORPS.

Commanded by Maj. Gen. William R. Shafter, U. S. V.

This corps was organized at Tampa, Fla. On June 7, 1898, the corps embarked on transports for Santiago, Cuba, the fleet sailing June 14, with 834 officers and 16,154 men, and the troops commenced to disembark on June 22. On June 29, 1898, 8,000 men were sent to reinforce the expedition.

After the short but brilliant campaign, which resulted in the surrender of the city and Province of Santiago de Cuba, it was decided, owing to the prevalence of disease which infected the whole army there, to withdraw the troops that had been operating in Cuba. The repatriation of the United States troops was commenced August 7, and, excepting the sick in hospital, was completed by August 24, when General Shafter and his staff sailed for the United States. The corps was discontinued October 7, 1898.

The strength present on the last days of the months indicated was as follows:

Month.	Officers.	Enlisted Men.
May.....	1,061	16,482
June.....	1,107	17,041
July.....	1,272	22,610
August.....	1,109	20,761
September.....	218	5,136

THE SIXTH ARMY CORPS.

The Sixth Corps failed of organization, and General Wilson was assigned to the command of the First Division of the First Corps.

THE SEVENTH CORPS.

Maj. Gen. Fitzhugh Lee, U. S. V., assumed command May 26, 1899.

The corps was organized at Tampa, Fla. General Lee having been authorized to establish his headquarters at Jacksonville, Fla., the corps removed to that place May 31, with the exception of the First Division, which remained at Tampa.

A division, General Schwan's, of the Fourth Army Corps, at Mobile, Ala., was transferred June 20 to the camp at Miami, Fla., and on the 23d of the same month was designated as the First Division of the Seventh Army Corps. This division was subsequently (July 31) transferred from Miami to Jacksonville, Fla. On October 8, 1898, orders were issued by the War Department to move the corps to Savannah, after suitable camps were prepared; and subsequently, by General Orders 171, dated October 21, 1898, the corps was reorganized; and in General Orders 184, December 13, 1898, General Lee, commanding the Seventh Army Corps, was assigned to the immediate command of all the troops in the province of Habana, that order in a preceding paragraph announcing a military division to be known as the Division of Cuba under the command of Maj. Gen. John R. Brooke. General Lee arrived at Havana December 14, 1898, and during the months of December, 1898, and January, 1899, all of the Seventh Corps was embarked from Savannah on transports for Cuba, and distributed in the province of Habana.

The volunteer troops having been mustered out of service, by General Orders 87, May 3, 1899, "all the divisions thereof having been disbanded," the Seventh Army Corps was discontinued.

The following table shows the strength of the corps on the last days of the months mentioned:

Month.	Officers.	Enlisted men.
May, 1898.....	501	8,904
June, 1898.....	873	18,778
July, 1898.....	978	23,704
August, 1898.....	1,236	29,940
September, 1898.....	779	17,514
October, 1898.....	724	16,365
November, 1898.....	674	14,421
December, 1898.....	551	15,693
January, 1899.....	678	14,806
February, 1899.....	672	14,700
March, 1899.....	275	5,342

THE EIGHTH ARMY CORPS.

Commanded by Maj. Gen. Wesley Merritt, U. S. A., who sailed from San Francisco June 29, arrived at Manila July 25, 1898.

Maj. Gen. E. S. Otis, U. S. V., assumed command August 29, 1898. Headquarters of the corps, Manila, P. I.

This corps embraced the forces comprising the Philippine expeditions, the troops being concentrated at San Francisco and forwarded to Manila at different dates.

TROOPS SENT TO MANILA.

First.—Gen. T. M. Anderson. Sailed May 25 on the *Australia*, City of Peking and City of Sydney, and arrived June 30, 1898. First California, Second Oregon, battery California Artillery, and A, C, D, E, and F, Fourteenth Infantry. Total, 115 officers and 2,386 enlisted men.

Second.—Gen. F. V. Greene. Sailed June 15 on the *China*, *Zealandia*, *Colon*, and *Senator*, and arrived July 17, 1898. A and B, Utah Artillery, Tenth Pennsylvania, First Colorado, First Nebraska, A, B, E, and G, Eighteenth and Headquarters, D, E, F, and H, Twenty-third Infantry, and detachment United States Engineers. Total, 158 officers and 3,428 enlisted men.

Third.—Generals Merritt and MacArthur. General Merritt sailed June 29 on the *Newport*, and arrived July 25, 1898. General MacArthur sailed on June 27 on the *Indiana*, with the *Morgan City*, *Ohio*, *Valencia*, and *City of Para*, and arrived July 31, 1898. First North Dakota, Thirtieth Minnesota, First Idaho, First Wyoming, Astor Battery, C, D, F, and H, Eighteenth United States Infantry, headquarters, band, B, C, G, and L, Twenty-third United States Infantry, G, H, K, and L, Third United States Artillery, Company A, Signal Corps Volunteers, and Company A, Engineer Battalion, U. S. A. Total, 197 officers and 4,650 enlisted men.

Fourth.—Gen. E. S. Otis. Sailed July 15 on *City of Peru* and *City of Pueblo*, and arrived August 21, 1898. C, E, G, I, K, and L, Fourth Cavalry, D and G, Sixth Artillery, headquarters, G, I, K, L, and M, Fourteenth Infantry, and detachment of recruits. Total, 42 officers and 1,640 enlisted men.

Fifth.—Col. H. C. Kessler, First Montana. Sailed July 19 on the *Pennsylvania*, and arrived August 24, 1898. First Montana. Total, 54 officers and 1,394 enlisted men.

Sixth.—Gen. H. G. Otis. Sailed July 23 on the *City of Rio Janeiro* and arrived August 24, 1898. A, C, D, E, F, G, L, and M, First South Dakota, and recruits. Total, 48 officers and 874 enlisted men.

Seventh.—Lieut. Col. Lee Stover, First South Dakota. Sailed July 29 on the *St. Paul*, and arrived August 31, 1898. B, H, I, and K, First South Dakota, and recruits. Total, 26 officers and 784 enlisted men.

Eighth.—Brig. Gen. Charles King. Sailed August 21 on the *Arizona*, and arrived at Honolulu August 27, 1898. Sailed from there November 10 and arrived at Manila November 25, 1898. Battalion (I, K, L, M) Eighteenth Infantry, and detachments First Nebraska, Tenth Pennsylvania, and First Colorado. Total, 18 officers and 1,006 enlisted men.

Ninth.—Maj. G. A. Goodale, Twenty-third Infantry. Sailed October 17 on the *Senator*, and arrived November 21, 1898. A, I, K, and M, Twenty-third United States Infantry, D, California Artillery, and detachment recruits for Second Oregon. Total, 16 officers and 778 enlisted men.

Tenth.—Lieut. Col. W. J. Fife, First Washington Volunteers. Sailed October 19 on the *Valencia*, and arrived November 21, 1898. F, G, I, and L, First Washington Infantry, and part of battalion California Artillery. Total, 17 officers and 484 enlisted men.

Eleventh.—Col. F. Funston, Twentieth Kansas Volunteers. Sailed October 27 on the *Indiana*, and arrived December 1, 1898. Headquarters and band, C, D, E, G, H, I, K, and M, Twentieth Kansas. Total, 31 officers and 725 enlisted men.

Twelfth.—Col. J. H. Wholley, First Washington Volunteers. Sailed October 28 on the *Ohio*, and arrived November 29, 1898. A, B, C, D, E, H, K, and M, First Washington Infantry, and detachment California Artillery. Total, 28 officers and 779 enlisted men.

Thirteenth.—Col. W. C. Smith, First Tennessee Volunteers. Sailed October 30 on the *Zealandia*, and arrived November 29, 1898. Band, headquarters, A, B, C, E, F, L, and M, First Tennessee Infantry. Total, 24 officers and 543 enlisted men.

Fourteenth.—Col. John C. Loper, Fifty-first Iowa Volunteers. Sailed November 3, on the *Pennsylvania*, and arrived December 5, 1898. Fifty-first Iowa Infantry. Total, 47 officers and 987 enlisted men.

Fifteenth.—Lieut. Col. Gracey Childers, First Tennessee Infantry. Sailed November 6, on the *City of Pueblo*, and arrived December 5, 1898. D, H, G, I, and K, First Tennessee Infantry, detachment California Artillery, and First Troop Nevada Cavalry. Total, 27 officers and 571 enlisted men.

Sixteenth.—Brig. Gen. M. P. Miller. Sailed November 9, and arrived December 6, 1898, on the *Newport*. A, B, F, and L, Twentieth Kansas, and Wyoming Battery. Total, 24 officers and 466 enlisted men.

Seventeenth.—Maj. Gen. H. W. Lawton. Sailed from New York City January 19, 1899, on *Grant*, and arrived March 10, 1899. Fourth Infantry, B, G, I, and M, Seventeenth Infantry. Total, 42 officers and 1,716 enlisted men.

Eighteenth.—Brig. Gen. Loyd Wheaton. Sailed from San Francisco on transport *Scandia* and *Morgan City* January 26, 1899, and arrived February 23, 1899. Twentieth United States Infantry. Total, 41 officers and 1,213 enlisted men.

Nineteenth.—Col. H. C. Egbert, Twenty-second Infantry. Sailed February 1 on *Ohio* and *Senator*, and arrived March 4, 1899. Twenty-second United States Infantry. Total, 37 officers and 1,230 enlisted men.

Twentieth.—Col. J. H. Page, Third Infantry. Sailed from New York on the *Sherman* February 3, 1899, and arrived March 22, 1899. Third Infantry, D, H, K, and L, Seventeenth Infantry. Total, 34 officers and 1,702 enlisted men.

Twenty-first.—Lieut. Col. J. H. Smith, Twelfth Infantry. Sailed February 19, 1899, from New York City on *Sheridan*, and arrived April 14, 1899. Twelfth Infantry, and headquarters A, C, E, and F, Seventeenth Infantry. Total, 57 officers and 1,790 enlisted men, and 56 wives and children.

Twenty-second.—Capt. James Regan, Ninth Infantry. Sailed March 24 on the *City of Pueblo*, and arrived April 22, 1899. Headquarters A, F, G, I, L, and M, Ninth Infantry. Total, 20 officers and 693 enlisted men.

Twenty-third.—Capt. C. M. Rockefeller, Ninth Infantry, sailed March 28 on the *Zealandia*, and arrived April 26, 1899. B, C, D, E, H, and K, Ninth Infantry. Total, 14 officers and 599 enlisted men.

Twenty-fourth.—Col. Jacob Kline, Twenty-first Infantry, sailed April 18, 1899, on *Hancock*, and arrived May 11, 1899. Twenty-first Infantry, Light Battery E, First Artillery. Total, 39 officers and 1,451 enlisted men.

Twenty-fifth.—Colonel Pope, Marine Corps, sailed April 20 on transport *Newport*, and arrived May 23, 1899. Fifteen officers and 260 enlisted men of marines, Light Batteries F, Fourth, and F, Fifth Artillery, under Major Tienon, 8 officers and 223 enlisted men.

The *Warren* sailed same date with headquarters, B, C, E, F, H, L, M, and O, Sixth Artillery, and detachment of recruits, all under command of Gen. E. B. Williston. Total, 25 officers and 1,235 enlisted men. Arrived May 18, 1899.

Twenty-sixth.—Col. A. T. Smith, Thirteenth Infantry, sailed April 28 on the *Senator*, and arrived May 29, 1899. Headquarters, A, C, F, G, H, and I, Thirteenth Infantry. Total, 19 officers and 724 enlisted men.

Sailed on *Ohio*, same date, and arrived May 29, 1899. Capt. J. H. H. Peshino, Thirteenth Infantry, commanding, B, D, E, K, L, and M, Thirteenth Infantry. Total, 13 officers and 729 enlisted men.

Twenty-seventh.—Brig. Gens. J. C. Bates and F. D. Grant. Sailed May 22, on the *Sherman*, and arrived June 19, 1899. Sixth United States Infantry and recruits. Total, 41 officers and 1,858 enlisted men.

Twenty-eighth.—Lieut. Col. W. F. Spurgin, Sixteenth Infantry. Sailed May 30, on the *Grant*, and arrived June 27, 1899. Sixteenth Infantry and recruits. Total, 40 officers and 1,695 enlisted men.

Twenty-ninth.—Maj. J. M. Thompson, Twenty-fourth Infantry. Sailed June 22, on the *Zealandia*, and arrived July 22, 1899. C, E, G, and I, Twenty-fourth Infantry, and detachments. Total, 8 officers and 573 enlisted men.

Thirtieth.—Brig. Gen. S. B. M. Young. Sailed on *Sheridan*, June 24, and arrived July 24, 1899. A and F, Fourth Cavalry, B and H, Fourteenth Infantry, and recruits. Total, 35 officers and 1,629 enlisted men.

Thirty-first.—Maj. Charles Morton, Fourth Cavalry. Sailed June 28, on the *Valencia*, and arrived July 29, 1899. Headquarters, B and M, Fourth Cavalry, and E and H, Twenty-fifth Infantry. Total, 10 officers and 454 enlisted men.

Thirty-second.—Col. A. S. Burt, Twenty-fifth Infantry. Sailed July 1 on *Pennsylvania*, and arrived August 1, 1899. Headquarters, B, F, I, K, L, and M, Twenty-fifth Infantry. Total, 22 officers and 917 enlisted men.

Thirty-third.—Lieut. E. B. Winans, jr., Fourth Cavalry. Sailed July 25 on the *Conemaugh*, and arrived August 18, 1899. Detachment 33 men, Fourth Cavalry, and 275 horses.

Thirty-fourth.—Brig. Gen. T. Schwan. Sailed July 13 on the *City of Para*, and arrived August 11, 1899. D and H, Fourth Cavalry; headquarters, A, F, H, and K, Twenty-fourth Infantry, and B, Engineer Battalion. Total, 36 officers and 911 enlisted men.

Thirty-fifth.—Col. S. Snyder, Nineteenth Infantry. Sailed July 25 on the *Tartar*, and arrived August 20, 1899. Headquarters, B, D, F, G, H, I, K, and M, Nineteenth Infantry. Total, 41 officers and 1,163 enlisted men.

Thirty-sixth.—Maj. O. J. Sweet, Twenty-third Infantry. Sailed July 26 on the *Ohio*, and arrived August 25, 1899. C and L, Nineteenth Infantry, and recruits. Total, 11 officers and 728 enlisted men.

Thirty-seventh.—Capt. G. O. Cress, Fourth Cavalry. Sailed July 26 on the *Tacoma*, and arrived October 13, 1899. Total, 39 enlisted men and 200 horses.

Sailed on the same date on the *Newport*, and arrived August 24, 1899. Capt. F. H. French, Nineteenth Infantry, commanding. A and E, Nineteenth Infantry, and detachment recruits. Total, 11 officers and 489 enlisted men.

Thirty-eighth.—Col. C. C. Hood, Sixteenth Infantry. Sailed August 2 on the *Indiana*, and arrived September 1, 1899. Total, 10 officers and 807 recruits and casuals.

Thirty-ninth.—Maj. W. Wittich, Twenty-first Infantry. Sailed August 10 on the *Morgan City*, and arrived September 19, 1899. Total, 8 officers and 689 recruits.

Fortieth.—Lieut. Col. E. M. Hayes, Fourth Cavalry. Sailed August 15 on the *Senator*, and arrived September 10, 1899. Total, 10 officers and 660 recruits.

Forty-first.—Major Elliott, Marine Corps, and Capt. F. H. Albright, Twenty-fifth Infantry. Sailed August 18 on the *City of Sydney*, and arrived September 19, 1899. Battalion Marine Corps. Total, 17 officers and 362 enlisted men, and 2 officers and 351 recruits, U. S. Army, under Captain Albright.

Forty-second.—First Lieut. E. M. Suplee, Third Cavalry. Sailed August 20 from Seattle on the *Garrone*, and arrived September 30, 1899. Total, 2 officers and 74 enlisted men and 389 horses.

Forty-third.—Lieut. Col. H. W. Wessels, jr., Third Cavalry. Sailed August 25 from Seattle on the *St. Paul*, and arrived October 1, 1899. Headquarters A, C, E, F, K, L, and M, Third Cavalry. Total, 18 officers and 705 enlisted men.

Sailed same date on the *Athenian*, and arrived October 3, 1899. Capt. G. F. Chase, Third Cavalry, commanding. D, Third Cavalry. Total, 3 officers and 102 enlisted men.

Forty-fourth.—Capt. B. D. Devore, Twenty-third Infantry. Sailed August 29 on the *City of Para* from San Francisco, and arrived September 25, 1899. Total, 6 officers and 659 recruits.

Forty-fifth.—First Lieut. W. T. Johnston, Third Cavalry. Sailed September 1, 1899, from Tacoma, on the *Victoria*, and arrived October 9, 1899. Total, 3 officers and 80 enlisted men, Third Cavalry.

Forty-sixth.—First Lieut. B. H. Dorsey, Fourth Cavalry. Sailed September 2, 1899, from San Francisco on the *Leclawna*, and arrived at Honolulu September 14, where the whole command was transferred to the *Athenian*, leaving there November 12, and arriving at Manila December 2, 1899. One officer and 16 men, Fourth Cavalry; 250 horses and 17 teamsters.

Forty-seventh.—Capt. T. W. Moore, Twenty-first Infantry. Sailed September 2, 1899, from San Francisco on the *Warren*, and arrived October 9, 1899. Three hundred and eighty-one recruits; 20 men Signal Corps; 652 recruits for Eleventh Volunteer Cavalry, Thirty-sixth, and Thirty-seventh Volunteer Infantry; 3 Hospital Corps men. Total, 10 officers and 1,056 enlisted men.

Forty-eighth.—Col. L. W. V. Kennon, Thirty-fourth Volunteer Infantry. Sailed September 8, 1899, on the *Columbia*, and arrived October 11, 1899. Headquarters band, E, F, G, H, and L, Thirty-fourth Volunteer Infantry. Total, 18 officers and 563 enlisted men; 3 Hospital Corps men, and Captain Brewster, Ninth Infantry.

Forty-ninth.—Lieut. Col. R. L. Howze, Thirty-fourth Volunteer Infantry. Sailed September 16, 1899, on the *Belgian King*, and arrived October 14, 1899. A, B, C, D, I, K, and M, Thirty-fourth Volunteer Infantry; 29 officers and 740 enlisted men; 9 Hospital Corps men, and 30 recruits. Total, 26 officers and 779 men.

Sailed same date, on the *Aztec*, and arrived October 23, 1899. First Lieut. H. A. Sievert, Fourth Cavalry. Total, 1 officer; 9 enlisted men, volunteers; 366 horses, and 27 civilian employees.

Fiftieth.—Col. J. M. Bell, Twenty-seventh Volunteer Infantry. Sailed September 21, 1899, on the *Tacoma*, and arrived October 27, 1899. Headquarters band, A, B, C, D, I, K, and L, Twenty-seventh Volunteer Infantry. Total, 23 officers and 720 enlisted men, and 6 Hospital Corps men.

Sailed same date, on the *George W. Elder*, and arrived October 21, 1899. Lieut. Col. A. S. Cummins, Twenty-seventh Volunteer Infantry, commanding. E, F, G, H, and M, Twenty-seventh Volunteer Infantry. Total, 20 officers, 488 enlisted men, and 6 Hospital Corps men.

Fifty-first.—Col. C. Gardener, Thirtieth Volunteer Infantry. Sailed September 23, 1899, on the *Sherman*, and arrived October 21, 1899. Thirtieth U. S. Volunteer Infantry, 54 officers, 1,291 enlisted men; 351 recruits, volunteers; 14 Hospital Corps men; 2 men Nineteenth Infantry, and 8 female nurses. Total, 54 officers and 1,658 enlisted men.

Fifty-second.—Col. E. Rice, Twenty-sixth Volunteer Infantry. Sailed September 25, 1899, on the *Grant*, and arrived October 24, 1899. Twenty-sixth U. S. Volunteer Infantry, 49 officers, 1,244 enlisted men; 6 officers, 137 Hospital Corps men, and 250 recruits, United States Army. Total, 55 officers and 1,631 enlisted men.

Fifty-third.—Capt. S. G. Orr, quartermaster Volunteers. Sailed September 27, 1899, on the *Centennial*. (This vessel only went to Honolulu and returned to San Francisco, October 17, 1899.) One acting assistant surgeon, 1 Hospital Corps man, 5 enlisted men, Twenty-sixth Volunteer Infantry; 2 men Thirtieth Volunteer Infantry, and 7 men Thirty-third Volunteer Infantry; 200 public and 40 private horses, and 23 civilian employees.

CORPS, DEPARTMENTS, AND DIVISIONS.

Eighth Army Corps: Troops belonging to, returned from Philippines to August 15, 1899: Regulars, 1 officer, 98 men; Volunteers, 300 officers, 6,671 men.

MEMORANDUM DESCRIPTIVE OF THE CORPS OF ENGINEERS.

The present organization of the Corps of Engineers was fixed by the act of July 5, 1898, which provides "That the Corps of Engineers of the Army shall hereafter consist of one Chief of Engineers, with the rank of brigadier-general, seven colonels, fourteen lieutenant-colonels, twenty-eight majors, thirty-five captains, thirty first lieutenants, twelve second lieutenants, and the battalion of engineers."

The Battalion of Engineers is a body of troops armed and equipped as infantry and drilled in the duties of infantry as well as in special technical duties comprising pontooning and bridging, field fortifications, submarine and land mine service, etc. Its duties correspond to those of the Royal engineer troops of the British army, to the pioneers of the German army, and the sappers and miners of the French army. The officers of the battalion are not permanently attached, but detailed from time to time from among the officers of the Corps of Engineers having suitable rank. The present legal enlisted strength of the battalion consists of five companies of 150 men each, with a battalion sergeant-major and a battalion quartermaster-sergeant. The organization of the Corps of Engineers, therefore, includes an aggregate of 127 commissioned officers and 752 enlisted men. There are now 125 officers in the corps.

The duties of the Corps of Engineers are defined in A. R. 1472, as follows: "The duties of the Corps of Engineers comprise reconnoitering and surveying for military purposes; selection of sites and formation of plans and estimates for military defenses; construction and repair of fortifications and their accessories; planning and superintending of defensive or offensive works of troops in the field; examination of routes of communications for supplies, and for military movements and construction of military roads and bridges; execution of river and harbor improvements assigned to it, and such other duties as the President may order. It collects, arranges, and preserves all correspondence, reports, memoirs, estimates, plans, drawings, deeds, and titles relating to the Washington Aqueduct and public buildings and grounds in the District of Columbia, and models which concern or relate in anywise to the several duties above enumerated."

In addition to the foregoing duties, special duties relating to public engineering questions are from time to time assigned to the Corps of Engineers by laws of Congress, and a considerable number of officers are at all times on detached duty at the United States Military Academy as instructors; in the government of the District of Columbia; as staff officers to commanding generals; on light-house duty, and for other purposes.

The most important duties of the Corps of Engineers at the present time are the planning and construction of permanent works of defense, the works of river and harbor and canal improvement, the water supply of the District of Columbia, and the construction of the Government Printing Office, upon all of which the annual expenditures for several years past have averaged about \$25,000,000. For purposes of administration the country is divided into geographical districts and divisions, each in charge of an officer of suitable rank, who is responsible to the Chief of Engineers for the work in his district or division.

The Chief of Engineers has his headquarters in Washington, and his office is one of the bureaus of the War Department.

All officers of the Corps of Engineers are graduates of the United States Military Academy, and are appointed upon the recommendation of the academic staff from amongst the highest graduates, the number so appointed annually depending upon the vacancies occurring in the corps throughout the year and averaging three or four in number.

Although reference is made to engineer troops and officers in earlier acts of Congress, the Corps of Engineers, as it now exists, originated in the act of March 16, 1802, and was closely connected with the foundation of the United States Military Academy. The present Battalion of Engineers originated in the act of Congress of May 15, 1846, which added to the Corps of Engineers one company of engineer soldiers. The company formed under this act is Company A, of the battalion, which preserves an enviable record for service during the Mexican and civil wars. By successive acts of Congress on different dates, the organization of the Corps of Engineers was changed from time to time as affected its commissioned and enlisted strength until it reached the proportions indicated at the beginning of this article.

Reports to the Adjutant-General to September 30, 1898, show 345 killed and died of wounds, and 2,485 died of disease, in a mean strength of 275,000 men.

Number of those in the Army who died from disease between May 1, 1898, and June 30, 1899: In Cuba, 34 officers, 88 men; in Porto Rico, 4 officers, 251 men; in the Philippines, 11 officers, 369 men.

The total number of deaths in our armies, regular and volunteer, from May 1, 1898, to June 30, 1899, was 6,619. This is equivalent to an annual rate of 33.03 per thousand of strength, the rate for disease being 25.68. The death rate from disease among troops in the United States was 23.81; in Cuba, 45.14; in Porto Rico, 38.15, and in Manila, 17.20, the absolute numbers being, respectively, 3,577, 928, 238, and 402. Deaths on transports en voyage have been included in the total of the country from which the vessel sailed.

Among the regulars in the United States there occurred 809 deaths from disease during the fourteen months, among the volunteers, 2,768 deaths, equivalent, respectively, to an annual death rate of 17.43 and 26.67 per thousand of strength.

Typhoid fever was accountable for more than one-half of the deaths from disease. The total number of deaths from this disease was 2,774, equal to an annual rate of 13.84. Among troops serving in the United States the rate was 14.99, in Cuba 11.23, in Porto Rico 26.93, and in the Philippines 5.30. In Porto Rico the deaths from this disease (168) formed more than two-thirds of the total deaths from disease (238). In the United States the regulars lost 361 and the volunteers 1,890 from this fever, these numbers being equivalent to the respective rates of 7.78 and 18.21 per thousand of strength.

Malarial fevers are held accountable for 476 deaths, constituting an annual rate of 2.38. The rate of death from these fevers was highest in Cuba, 10.80; lowest in Luzon, 0.64—222 deaths having occurred in the former island and only 15 in the latter.

Pneumonia caused 359 deaths. The death rate from this disease was larger in the United States (2.07) than in Cuba (1.60), Porto Rico (0.48), or the Philippines (0.51).

Diarrheal diseases were the cause of 342 deaths, equaling a rate of 1.71. The mortality from these diseases was relatively heaviest in Cuba, the rate there being 5.69.

Yellow fever caused 185 deaths, 178 of which occurred in Cuba, 6 in the United States, and 1 in Porto Rico; and smallpox 98 deaths—90 in the Philippines, 4 in Cuba, 2 in the United States, and 2 in Porto Rico.

Many of the deaths, however, can not be distributed among their causes until the medical records of the Volunteer Army are available for statistical study. The figures just given, together with the minor details presented in Tables VI and VII on pages 347-349 infra, are therefore subject to material change when this study has been completed.

Bodies of Americans returned by the Government from Cuba to the United States, 861; from Porto Rico to the United States, 228; from the Philippine Islands to the United States, 56; from Honolulu to the United States, 17.

Bodies returned from—	
Cuba	891
Porto Rico	250
Philippine Islands	56
Hawaiian Islands	17

Total bodies returned to June 30, 1899..... 1,214
Total yellow-fever cases disinterred which are now stored at Santiago for future disposition..... 72

The remains of 601 of those above reported as returned from Cuba and Porto Rico were reinterred with appropriate ceremonies at the Arlington National Cemetery, near this city, being placed in a burial section specially prepared and set apart for that purpose.

Under orders issued by the Department in January, 1899, a burial corps was organized, which proceeded to Santiago, Cuba, and thence to Porto Rico, and disinterred in those islands and brought to this country the remains of 1,122 American

soldiers, sailors, and marines, 969 of which were identified and 153 unidentified. Six hundred and one of the remains thus returned were reinterred in a special section prepared and set apart for that purpose in the Arlington National Cemetery.

A similar expedition sailed on the 28th of October, 1898, from the port of San Francisco for Manila to perform the same sad office for the Americans who have fallen during the struggles with Spain and the Tagalog insurgents in the Philippine Islands.

Period, July 1, 1899, to June 30, 1900.

Bodies of Americans returned by the Government from Cuba to the United States, 474; sailors and marines, 6; civilians, 13. From Porto Rico to the United States, 83; civilians, 4. From the Philippine Islands to the United States, 1,327; sailors and marines, 7; civilians, 23. From Honolulu to the United States, 2.

El Caney.

El Caney is a village near Santiago de Cuba, which was strongly defended by the Spaniards, and where the battle of the same name was fought on July 1, 1898, the Spanish forces being commanded by General Vara del Rey, who was killed in the action, and the United States forces by Maj. Gen. Henry W. Lawton, U. S. V. The battle raged from daylight until about 3 p. m., when the village was captured by the Americans. The fighting was desperate and the casualties many. This town afterwards became the asylum of many thousands of Cuban refugees and Spanish noncombatants who were allowed to leave Santiago before it was shelled by the American Navy.

ENGINEER DEPARTMENT.

Memoranda of work done under the Engineer Department, United States Army, since the declaration of war with Spain.

1. *River, harbor, canal, and bridge work, roads, water supply, etc.*—Operations have been in progress upon extensive and important works of river and harbor improvement, canal and bridge construction, water supply, Government Printing Office, construction of military roads and surveys, involving the expenditure of many millions of dollars on the Atlantic, Gulf, and Pacific coasts and upon the great inland rivers, canals, etc., throughout the United States.

This work has been pushed vigorously and, as a rule, with most satisfactory results.

2. *Gun and mortar batteries for seacoast defense.*—Existing approved projects for seacoast defenses contemplate the emplacement of about 480 heavy guns of 8, 10, 12, and 16 inch caliber, of about 850 rapid-fire guns, and of about 900 mortars.

Provision has already been made for emplacing 309 heavy guns, 368 rapid-fire guns, and 372 mortars. This armament is disposed of at 77 localities in 30 harbors in the United States.

When diplomatic relations with Spain began to assume a threatening character, orders were given to push work with all possible energy and to mount every available gun as fast as delivered. Operations were carried on with double and, in some cases, with three shifts of workmen, and were pushed regardless of weather and climate. The extraordinary efforts made resulted in most gratifying success, especially in the number of guns available for service, and during the fiscal year ending June 30, 1899, there were mounted six 12-inch guns, fifty-two 10-inch guns, thirty 8-inch guns, twenty-six rapid-fire guns, and seventy-one 12-inch mortars. Work was continued with all reasonable speed during the fiscal year ending June 30, 1899, although night work was suspended after the cessation of hostilities, and during this period the seacoast armament was increased by the addition of thirteen 12-inch guns, fourteen 10-inch guns, twenty-four 8-inch guns, twenty rapid-fire guns, and thirty-two 12-inch mortars.

The work of strengthening and adding to the seacoast defenses has been steadily pushed during the fiscal year ending June 30, 1900, at which date the status of the seacoast armament was as follows:

	12-inch.	10-inch.	8-inch.	Rapid-fire.	12-inch mortars.
Guns mounted	58	105	65	53	240
Ready for armament	22	8	26	*189	84
Under construction	13	9	3	81	48
Not yet begun				45	
Total	93	122	94	369	372

* Including 70 six-pounders not requiring permanent emplacements.

A number of these new batteries have already been equipped with electric-light and power plants for lighting magazines and passageways, and for operating ammunition lifts.

Submarine mines.

At the outbreak of hostilities with Spain there were on hand a considerable number of mine cases and a limited quantity of operating apparatus, but no cable, explosives, search lights, or any of the multitude of minor articles needed to plant and operate the mines. Steps were at once taken to procure as rapidly as possible all needed material for placing in position at every important harbor a preliminary line of mines. Only the more important items of torpedo material purchased can be given here; they comprise about 700 miles of single and multiple cable, 150 tons of explosives, 3,000 mine cases, 44 electric search lights, 17 sets of casemate operating apparatus, besides a large number of compound plugs, circuit closers, and regulators for mines, and a multitude of minor articles absolutely necessary for the proper manipulation of the great submarine mine system; by June 30, 1899, over 1,500 submarine mines had been planted in 28 different harbors with all their cables, anchors, junction boxes, and the necessary operating apparatus installed; work was continued until the cessation of hostilities, when the mines were either exploded or removed, cables taken up, all apparatus cleaned and properly stored for future use.

For the preservation and maintenance of mine fields it was necessary to enforce special rules for the navigation of friendly vessels, involving the employment of a large number of tugs and boats, with a numerous personnel, at an approximate daily cost during the war of about \$3,000.

Since the war efforts have been directed toward supplying proper storage facilities for the immense quantity of material acquired, and toward supplying all needed minor articles for the complete equipment of the mines and cables on hand. On June 30, 1900, practically all articles needed for the equipment of mines and cable on hand had been purchased and stored at the various harbors. With the exception of search-light outfits, of which a considerable number are still needed, the torpedo defenses of the country are at present in excellent condition.

Dynamite batteries.

Dynamite batteries were erected under the supervision of the Ordnance Department at San Francisco and New York harbors, and the Engineer Department constructed the necessary parapets, magazines, etc. Additional dynamite batteries are now being constructed at Fishers Island, N. Y., and Port Royal, S. C., for which the Engineer Department will also build magazines and parapets, the necessary funds therefor having already been appropriated.

Range and position finders.

The work of installing range and position finders forming a part of the fire-control equipment for seacoast forts was commenced during the war with Spain. At the close of the fiscal year ending June 30, 1900, provision had been made for the construction of over 80 stations for type A range finders, many of which were fully completed, and for underground conduits at four artillery posts. A large number of emergency type B range finders had also been installed in the various completed batteries.

Pontoon trains, tools, siege materials, etc.

About 1,000 feet of bridge trains were sent out for the use of troops operating in Cuba and Porto Rico, and 1,000 additional feet with wagons complete was prepared ready for service.

Tools and siege materials were purchased for actual working parties of about 40,000 men, and large amounts sent to the troops in Manila, Cuba, Porto Rico, and to the camps of instruction throughout the country.

Since the war with Spain supplies of tools, instruments, drawing and photographic materials required for the use of the troops operating in our insular possessions have been promptly furnished as called for by the engineer officers on the staffs of corps, division, and department commanders.

Corps and Battalion of Engineers.

The Corps of Engineers furnished for service with volunteer troops in the field during the war with Spain 4 general officers, 2 colonels, 11 lieutenant-colonels, and 2 majors. In addition to these, Company A, of the Battalion of Engineers, fully officered from the corps, served in the Manila campaign and has since been joined in the Philippines by Company C. Company A was highly commended for excellent service, both in engineer and infantry duty. Companies C and E, fully officered from the corps, did splendid service during the Santiago campaign and were commended for the energy and skill shown in the performance of duty under fire and elsewhere. Company D, with details from other companies (in all, 153 men), was engaged in submarine mine duty at 19 harbors on the Atlantic, Gulf, and Pacific coasts.

Company B was constantly engaged at the engineer depot at Willets Point, receiving, storing, and distributing the vast amount of torpedo material, pontoon equipage, siege materials, and instruments purchased and distributed from the depot, under the immediate direction of Maj. J. G. D. Knight, Corps of Engineers, the post commander, and in preparing and maintaining the submarine mine defenses at the eastern entrance to New York Harbor.

Since the war with Spain engineer officers have constantly been on duty in Cuba, Porto Rico, and the Philippines, either as engineer officers on the staffs of division or department commanders or serving with engineer troops. Company E, Battalion of Engineers, was en route to the Orient at the close of the fiscal year, giving three companies of engineer troops for duty in China and the Philippines. The work of the engineers has consisted in map making, road and railroad repairs and construction, bridge and ferry construction, sanitary and municipal engineering work, and duty as guards and outposts. Both officers and men have acquitted themselves creditably and have won the commendation of their superior officers.

GUAM, LADRONES (SEE TREATY OF PEACE).

The island of Guam or Guahan, the largest in the Marianne or Ladron Archipelago, was ceded by Spain to the United States in 1898, and will probably be used as a coaling station for the United States Navy. The island is about 32 miles long and 100 miles in circumference, and has a population of about 9,000, of whom about 6,000 are in Agaña, the capital. The inhabitants are mostly immigrants or the descendants of immigrants from the Philippines, the original race of the Marianne Islands having become extinct. The recognized language is Spanish, but English is spoken. On the island there are 18 schools, and nine-tenths of the islanders can read and write. The island is thickly wooded, well watered and fertile, and possesses a roadstead.

The Marianes extend in a northerly and southerly direction between latitudes 13° 12' north and 20° 52' north, a distance of about 420 miles, and all are volcanic. The island was captured by the U. S. S. *Charleston* on June 21, 1898, and the territory was ceded to the United States in April, 1899.

HAWAIIAN ISLANDS.

The Hawaiian Islands lie between parallels 18° 50' and 23° 5' north latitude, and between meridians 154° 40' and 161° 50' west. Honolulu, the capital and chief city, lies 2,080 miles from San Francisco. In general, the islands are mountainous, covered with verdure, and in parts, especially of Hawaii, possessing very considerable areas of forest whose vegetation is that of the Tropics. The Hawaiian group is composed of eight inhabited and four uninhabited islands. The total area of the inhabited islands is about 6,040 square miles. The total population in 1898 was estimated at 117,281. The chief industry is the cultivation of the sugar cane.

HOSPITALS.

From the declaration of war with Spain to September 20, 1899, there have been established:

	Beds.
20 field division hospitals, averaging 250 beds each.....	5,000
31 general hospitals with a total capacity of about.....	13,800
Railroad ambulance train.....	270
4 hospital ships.....	1,000
Total.....	20,070

In addition to these over 5,000 cases were treated in civil hospitals.

It is difficult even to approximate the number of men treated in these hospitals. During that period somewhat over 100,000 cases were admitted on sick report, a number equal to 2,147 per 1,000 of strength during the year, or to 179 per 1,000 per month—the ratio of admissions to hospital cases being 13 to 8. Using these data as a basis, and assuming the mean strength of the Army (Regulars and Volunteers) to have been 154,000, it would appear that from May 1, 1898, to September 20, 1899, about 275,000 cases have been treated in these hospitals.

HOSPITAL CORPS.

The Hospital Corps, U. S. Army, which was organized by act of Congress approved March 1, 1887, consists of hospital stewards, acting hospital stewards, and privates. The Hospital Corps is attached to the Medical Department and is not included in the effective strength of the Army.

March 31, 1898, there were in service 100 hospital stewards, 103 acting hospital stewards, and 620 privates.

After the declaration of war with Spain an enormous increase in this force was needed for service with the army in the field. Enlistments were not rapidly made at first, the pressure being for enlistments in the volunteers, but by June 30, 1898, the Hospital Corps had increased to—

Hospital stewards.....	133
Acting hospital stewards.....	172
Privates.....	2,940
Total.....	3,245

the larger part of the privates having been gained by transfer from the line.

On September 30, 1898, the Hospital Corps consisted of—

Hospital stewards.....	163
Acting hospital stewards.....	445
Privates.....	5,980

Total..... 6,588

From this maximum the force gradually decreased, mainly through the discharge of men who had enlisted for the war only, until on June 30, 1899, the force present was:

Hospital stewards.....	189
Acting hospital stewards.....	287
Privates.....	2,892

Total..... 3,368

The increase in the strength of the Army for service in the Philippines and the needs of the service in China have made necessary a corresponding increase in the Hospital Corps. Enlistments have been progressing actively of late. The force July 31, 1900, was distributed as follows:

	Hospital stewards.	Acting hospital stewards.	Privates.	Total.
California.....	14	17	217	248
Colorado.....	8	7	42	57
Columbia.....	6	9	39	54
Alaska.....	5	10	39	54
Dakota.....	5	5	43	53
East.....	26	43	269	338
Lakes.....	5	1	35	41
Missouri.....	8	8	81	97
Texas.....	3	6	39	48
Independent posts in the United States.....	16	18	136	170
Total in United States.....	96	124	940	1,160
Cuba.....	17	37	243	297
Porto Rico.....	3	9	58	70
Hawaii.....	1	2	13	16
Philippines.....	45	188	2,072
For Philippine Islands from Hawaiian Islands.....	1	1	10
For Philippine Islands from United States.....	1	2,318
In China from Philippine Islands.....	1	3	37
In China and en route from the United States.....	1	12	109	163
Transports:				
East.....	5	12
West.....	7	30
Hospital ship.....	2	3	34	93
Total Hospital Corps.....	167	391	3,559	4,117

After the declaration of war with Spain the authorized increase of the Regular Army and the muster in of volunteer troops necessitated a corresponding increase of the hospital corps. To hasten this increase of the corps and to utilize the services of suitable men already in the volunteers, General Orders, No. 58, Adjutant-General's Office, May 31, 1898, provided that enlisted men of volunteer organizations could be transferred to the hospital corps of the Regular Army by the commanding general of an army corps, upon the recommendation of the chief surgeon. The corps commander was also given full control of the enlistment, reenlistment, and discharge of members of the hospital corps and the detail of acting hospital stewards, and the provisions of army regulations which conflicted with this order were suspended during the existence of the war. A large number of privates were transferred under this order, most of whom were untrained in hospital corps duties. By General Orders, 178, Adjutant-General's Office, November 8, 1898, the authority over the hospital corps given to corps commanders was extended to commanders of military departments outside the limits of the United States. This order was reaffirmed in a slightly different form by paragraph 2, General Orders, 86, Adjutant-General's Office, May 2, 1899, in which the provision of the original order, which limited its operation to time of war, was omitted. Paragraph 2, General Orders, No. 40, Adjutant-General's Office, May 10, 1898, announced that men enlisted or reenlisted in the Regular Army during the war would be granted their discharges if desired at the close of the war; and Circular 45, Adjutant-General's Office, October 27, 1898, provided that privates of the hospital corps, who had been transferred from volunteer regiments, might be discharged if they so requested at the time their respective regiments were mustered out.

By June 30, 1898, the hospital corps had increased to 133 hospital stewards, 172 acting hospital stewards, and 2,940 privates, most of the privates having been gained by transfers from the line. November 30, 1898, the corps attained its maximum strength—163 hospital stewards, 445 acting hospital stewards, and 5,980 privates, a total of 6,588. After this the force gradually decreased, mainly through the discharge of men enlisted for the war only, until on June 30, 1899, the force present was 189 hospital stewards, 287 acting hospital stewards, and 2,892 privates, a total of 3,368.

The gain to the corps during the fiscal year was 6,185—3,465 by enlistment and 2,720 by transfer. The loss aggregated 6,062 men, 5,086 of whom were discharged by order and only 201 by expiration of term of service. It is of interest to note that 106 died by disease, 4 were killed in action, 6 died of wounds, and 158 were discharged for disability.

For the year from April 30, 1898, to April 30, 1899, the gain to the corps by enlistment and transfer amounted to 8,016 men, while the gain for the year ending June 30, 1897, was only 276. The changes of status of members of the hospital corps in twelve months were increased nearly twenty-four fold on account of the war conditions; in fact, they were nearly as great as those occurring in the entire Army during the time of peace, for in the fiscal year 1896-97 the gain to the Army, exclusive of the hospital corps, amounted only to 8,748.

Paragraph 3, General Orders, No. 178, Adjutant-General's Office, November 8, 1898, allowed a volunteer regiment, in addition to the 3 regimental hospital stewards provided by law, 1 acting hospital steward, 6 privates of the hospital corps as attendants, 1 private as cook, and 1 for each ambulance and wagon, making an average allowance of 12 privates. This order was revoked by General Orders, No. 86, Adjutant-General's Office, May 2, 1899, most of the volunteer regiments having been by that time mustered out, and the allowance to a (regular) regiment serving without the United States was fixed at 1 hospital steward, 3 acting hospital stewards, and 12 privates.

Prior to the war there were in service 100 hospital stewards, the number provided by the act of March 16, 1896. This number was increased to 200, and the requirement of service for twelve months as acting hospital steward prior to appointment as hospital steward was suspended during the continuance of the

war. General Orders, No. 55, Adjutant-General's Office, May 31, 1896, gave authority to the commander of any army corps or of an independent division to appoint hospital stewards from acting hospital stewards, after three months' service, when they were recommended by their medical officers and approved by a board of not less than three medical officers. Under the provisions of this order 44 hospital stewards were appointed by corps commanders. In August, 1898, 13 acting hospital stewards were examined, under the direction of the Surgeon-General, of whom 10 were found qualified and immediately appointed, and in November 65 were examined, of whom 34 were appointed.

The act of March 3, 1899, authorized the increase of the Regular Army to 65,000. It was at first held that this act repealed the provisions of the act of March 1, 1887, which provided that the hospital corps should not be included in the effective strength of the Army, and that this corps was, therefore, included in the 65,000 men. An allowance was published in General Orders, No. 37, Adjutant-General's Office, March 9, 1899, fixing the number of hospital stewards at 175, acting hospital stewards at 325, and privates at 2,100, a total of 2,600 men, or 4 per cent of the total strength. It was, however, decided by the Judge-Advocate-General and the Comptroller of the Treasury that the provisions of the act of March 1, 1887, were not affected by this legislation, and that therefore the hospital corps was not included in the 65,000. This decision removed the limitation as to the number of acting hospital stewards and privates, but the number of hospital stewards, increased by the act of June 2, 1898, only during the existence of the war, reverted to that fixed by the act of March 16, 1896.

Ten hospital stewards were allowed each army corps by General Orders, No. 82, Adjutant-General's Office, June 27, 1898. The same order authorized the detachment of volunteer hospital stewards from their regiments and their assignment to duty at the discretion of corps commanders. By thus making use of the services of these men the needs of field and general hospitals for noncommissioned officers were in a measure supplied, but chief surgeons frequently reported on their inexperience and incapacity.

Acting hospital stewards.—Paragraph 1397, Army Regulations, which provides that a private must serve one year in the Hospital Corps before he can be detailed acting hospital steward, was so amended by paragraph 3, General Orders, No. 20, Adjutant-General's Office, January 27, 1899, as to require but three months' service as private previous to detail as acting hospital steward, because of the need of a greater number of these noncommissioned officers and the desirability of utilizing the services, in this capacity, of privates qualified to perform the duties by virtue of previous training in medicine, pharmacy, or nursing.

Paragraph 1409, Army Regulations, provides that at every post there will be at least one hospital steward, and at every post of two or more companies there will also be an acting steward, if practicable. The limited number of hospital stewards has, however, rendered it impossible to comply with this regulation. On June 30, 1899, there were in the United States 36 garrisoned posts, in Cuba 12, and in Porto Rico 13 posts with no hospital steward, the place of the stewards in these instances being taken by acting hospital stewards, on whom were imposed duties and responsibilities without corresponding rank and pay.

INSPECTOR-GENERAL.

The sphere of inquiry of the Inspector-General's department includes every branch of military affairs except when specially limited in Army Regulations and orders.

The Inspector-General, with his assistants, inspects all military commands, posts, stations, and camps; all depots, rendezvous, and recruiting stations, armories, arsenals, accounts, and business methods of all officers of the Army; all forts, arsenals, public works, fortifications, transports, national cemeteries; the unseizable public property for which Army officers may be accountable, with a view to its transfer, sale, or destruction; the military departments of all civil institutions of learning to which Army officers are detailed; the several branches of the National Home for Disabled Volunteer Soldiers, the United States Soldiers' Home, District of Columbia, and such other inspections and investigations as may be ordered by the Secretary of War and Commanding General of the Army.

During the two years ending June 30, 1900, there have been received in the Inspector-General's Office the following reports of inspections, viz:

Military posts.....	254
Armories, arsenals, depots, camps, etc.....	270
Recruiting rendezvous and stations.....	76
National cemeteries.....	67
Civil institutions of learning.....	93
Transports.....	60
Volunteer regiments.....	30
United States Military Academy.....	1
Special investigations.....	72

Among the special investigations was a thorough inspection, by the Inspector-General in person, of all matters immediately affecting the welfare of troops in Cuba and Porto Rico, occupying more than two months; and another, by one of his assistants, on the beef supplied during the Spanish war, engaging his attention uninterruptedly for more than three months.

During the year 1898-99 682 inspections of the accounts of disbursing officers, involving \$325,882,177.71, were made by officers of this Department, which is by far the largest amount inspected in any one fiscal year since these inspections were authorized by law in 1874, and may indicate one phase of the increased amount of work incident to the increased military establishment.

During the year ending June 30, 1900, 1,306 inspections of accounts were made, which accounts involved an expenditure of \$287,700,522.05.

Unseizable property.—The total number of inventory and inspection reports received during the year ending June 30, 1899, was 3,425, and 210, or 6 per cent, were made by officers of this department; 1,013, or 29 per cent, by officers assigned to the department as acting inspectors-general; 877, or 25 per cent, by inspectors-general of volunteers, and 1,325, or 39 per cent, by special inspectors.

Of the above inspections, 413 were made in Cuba, 182 in Porto Rico, 109 in the Philippines, and 4 in the Sandwich Islands.

During the year ending June 30, 1900, the total number of inventory and inspection reports received aggregated 3,621, of a value of \$10,009,897.93, while property of a value of \$8,689,350.88 was condemned, and that of a value of \$1,320,547.05 continued in service.

Public animals.—Six thousand seven hundred and thirty-seven public animals were offered for inspection during the year ending June 30, 1899, and 5,578 were condemned, and 1,159 retained in service. Many were sold without such inventory and inspection reports. If the law requires modification, so that a regular method can be adopted, the various methods resorted to during the Spanish war may illustrate some one way that can be accepted as best for all Government property. This aspect of the case was hardly decided during the previous investigations by Congress of the sale of property or its destruction when no longer needed.

The cavalry horses offered for inspection, included in the above figures, number 2,734; 2,427 were condemned and 307 retained in service.

In the volunteer service, 954 cavalry horses, aggregating \$83,400.38, the average price of which was \$88.47 when purchased, were eliminated from the service.

Total number of public animals inspected during the year ending June 30, 1900, was 2,748; total number condemned, 2,347; total number retained in service, 401. As the average cost of each animal is \$112, the total value of the animals inspected is \$307,776.

The condemnations of subsistence stores made during the year approximately cost, as shown in the reports received, \$91,089.99.

Among the condemnations since the beginning of the war to the 30th of June, 1899, are: Bacon, 410,808 pounds; beans, navy, 6,978 pounds; bread, hard, 102,661 pounds; 244 cases and 304 boxes; corn meal, 11,558 pounds; crackers, 2,153 pounds; flour, 406,820 pounds and 5 sacks; macaroni, 15,888 pounds; oatmeal, 4,204 pounds; onions, 87,160 pounds; pork, 10,988 pounds; potatoes, 271,853 pounds; rice, 3,834 pounds; sugar, 30,695 pounds; tomatoes, 117,842 cans of different sizes; probably considerably more was disposed of which never got on an inspection report.

Nine hundred inspection reports, in 147 volunteer organizations, of property for which officers directly connected with these organizations were accountable, were received during the year, and property which approximated in value \$363,550.67 was eliminated from the service. Four hundred and eighty-six of these inspections were made by inspectors-general of volunteers, 361 by special inspectors, 46 by acting inspectors-general, and 7 by the regular inspectors of the Department.

Two hundred and two inspections of engineer property were received to June 30, 1899, 4 by inspectors-general of volunteer, 16 by regular inspectors, 60 by special inspectors, and 122 by acting inspectors-general. Last year 168 inspections were made, all by officers connected with this Department.

The total value of subsistence stores condemned during the year ending June 30, 1900, is about \$290,000.

INSURRECTION.

Prior to February 4, 1899, the insurgents, under the leadership of Aguinaldo, had formed a military cabal and instituted a so-called republican form of government. They had secured from various sources arms and ammunition, overthrew the Spanish garrisons existing throughout Luzon, with the exception of that of Manila. Their military lines were drawn very closely round the city, and considerable irritation and friction resulted therefrom after the Americans took possession of Manila.

There no longer exists doubt in the minds of the well informed that the purpose of Aguinaldo and his colleagues was to precipitate an insurrection against the sovereignty of the United States. Every effort was made by the commander of the American forces and the officers and soldiers constituting his command to avoid any overt acts which might result in hostilities. Under the conditions which existed it was impracticable, however, to prolong the strained relations for any length of time. On the night of February 4 hostilities were commenced through efforts of the insurgents to cross the American picket lines, thereby drawing the fire of a sentry, and a general engagement thereupon immediately began.

On February 15 the insurgent government at Malolos issued a proclamation giving directions for the assassination and extermination of all individuals, without regard to race, with the exception of Philippine families.

The history of the insurrection, from its inception on the date above mentioned, is now a matter of general information.

JUDGE-ADVOCATE-GENERAL.

The Judge-Advocate-General is directed by law to "receive, review, and cause to be recorded the proceedings of all courts-martial, courts of inquiry, and military commissions." He also furnishes the Secretary of War information and advice relating to lands under control of the War Department and reports and opinions upon legal questions arising under the laws, regulations, and customs pertaining to the Army, and upon questions arising under the civil law; reports upon applications for clemency in the cases of military prisoners; examines and prepares legal papers relating to the erection of bridges over navigable waters; drafts bonds and examines those given to the United States by disbursing officers, colleges, and others; examines, revises, and drafts charges and specifications against officers and soldiers, and also drafts and examines deeds, contracts, licenses, leases, and legal papers generally.

Year ending June 30, 1899.

Commissioned officers tried by general court-martial:

Regulars (convicted).....	3
Volunteers (convicted, 47; acquitted, 20; sentence disapproved, 11).....	78
Cadets tried by general court-martial (convicted).....	5
Enlisted men tried by general court-martial:	
Regulars (convicted, 2,359; acquitted, 248; sentences disapproved, 70).....	2,677
Volunteers (convicted, 2,405; acquitted, 847; sentences disapproved, 265).....	3,017
Civilians tried by general court-martial:	
Those serving with Army in the field (convicted, 3; acquitted, 3).....	6
Discharged men held as general prisoners (convicted).....	2
Total trials by general court-martial.....	5,788

	Regulars.	Volunteers.	Limit of confinement.
Surrendered:			Months.
After an absence of not more than 30 days..	6	8	12
After an absence of more than 30 days.....	82	12	15
Apprehended:			
In service not more than 6 months at time of desertion.....	70	86	18
In service more than 6 months.....	66	8	30
Total number of desertions.....	174	114	
Average limit of confinement....months..	22.34	18.42	

In connection with this table it is to be observed that the limits of punishment are prescribed for "time of peace" only.

The number of men sentenced to dishonorable discharge in the Regular Army was 975, and in the Volunteer Army 644. Total, 1,619.

Death sentences were imposed in 5 cases on conviction of murder, 4 of the trials being by court-martial and 1 by military commission, but the sentence in each case was commuted by the President to life imprisonment, with dishonorable discharge and forfeiture of all pay and allowances added in the cases of soldiers. Three of the trials by court-martial were of enlisted men and the remaining one of a civilian packer in the employ of the Quartermaster's Department. The trial by a military commission was of a native of Porto Rico for the murder of a soldier.

The records of military commissions received during the year show that 82 persons were tried, of which number 45 were convicted, 35 were acquitted, and the sentences in two cases were disapproved.

LAS GUASIMAS.

Las Guasimas is the name of the location where was fought the first battle between Spanish and American troops on Cuban soil. The engagement took place on June 24, 1896, when 964 officers and men of the U.S. Army, under command of Maj. Gen. Joseph Wheeler, U. S. Volunteers, met and defeated several thousand Spaniards, under command of Gen. Vara del Rey, in a position chosen

by them and strongly protected by barbed wire entanglements and other defenses. This place is only a few miles distant from the city of Santiago de Cuba, and is situated on the main road leading thereto from the coast.

LIEUTENANT-GENERAL COMMANDING THE ARMY.

The Commanding General of the Army has supervision over the military establishment, and is charged with the discipline and efficiency of the Army, and all orders issued to the Army are promulgated in his name.

He is president of the Board of Commissioners, Soldiers' Home, and of the Board of Ordnance and Fortification.

MEDICAL DEPARTMENT.

The Medical Corps of the Army consists of 1 Surgeon-General with the rank of brigadier-general, 6 assistant surgeons-general with the rank of colonel, 10 deputy surgeons-general with the rank of lieutenant-colonel, 50 surgeons with the rank of major, and 125 assistant surgeons with the rank of captain and first lieutenant; in all, 192 commissioned medical officers.

This Medical Corps was found to be scarcely adequate for our Army of 25,000 men before the Spanish-American war. The enlarged Army authorized by Congress calls for a greatly increased force of medical officers. Every volunteer regiment has a surgeon and two assistant surgeons, and by authority of law there are now in service 34 surgeons of volunteers with the rank of major and over 400 contract doctors. This large number of medical officers is made necessary by the fact that in addition to our troops in the Philippines there are at present 153 independent posts having garrisons. These are located within the United States, in Cuba, Porto Rico, and Hawaii. A number of these posts require two or more medical officers.

The principal functions of the Medical Department are to care for the sick, to exercise sanitary supervision over troops in garrison or in the field, and to examine applicants for enlistment for the purpose of ascertaining their physical qualifications.

Medical supplies are purchased and issued under the supervision of the Surgeon-General of the Army, by medical officers detailed in charge of supply depots. The principal medical supply depots are located in New York City, St. Louis, Savannah, San Francisco, Habana, Santiago, San Juan, and Manila. From these supply depots all general and post hospitals and troops in the field are supplied with everything necessary for the comfort and medical treatment of the sick and wounded of our armies, including medicines, antiseptics and disinfectants, hospital stores, microscopical apparatus, surgical instruments, appliances and dressings, hospital furniture and bedding, together with a long list of miscellaneous articles required for use in general and post hospitals.

General hospitals and hospital ships are under the control of the Surgeon-General, who communicates his instructions directly to the surgeon in charge. But the Surgeon-General has no direct authority over medical officers on duty with troops in garrison or in the field. In each military department a chief surgeon, who is a member of the staff of the general commanding, exercises supervision over matters pertaining to the Medical Department.

The expenditures by the Medical Department of the Army during the fiscal year ending June 30, 1899, amounted to \$3,256,589.59.

On June 30, 1899, there were in the service 191 medical officers, the number allowed by law being 192.

Surgeons United States Volunteers.—During the year 140 officers of the United States Volunteers were appointed, 11 as lieutenant-colonels and 129 as majors, in the Medical Department. Forty-five of the appointees were from the Regular Army and 95 from civil life. At the end of the year there remained in service 34 majors and surgeons, 12 of whom were captains in the regular establishment.

Contract surgeons.—On July 1, 1898, 156 surgeons were on duty under contract and 784 contracts were made during the year, making a total of 940. Of this total 546 contracts were annulled during the year, including 8 on June 30, 1899, and 9 contract surgeons died while in service, leaving 385 under contract on July 1, 1899.

Expenditures during fiscal year ended June 30, 1900.

"NATIONAL DEFENSE (WAR)," ACT OF MARCH 9, 1898.

Allotment by the President, April 16, 1898:

A BRIEF STATEMENT OF THE WORK PERFORMED BY THE MILITARY INFORMATION DIVISION SINCE THE DECLARATION OF WAR WITH SPAIN.

Since the declaration of war with Spain, in April, 1898, the Military Information Division has been busily engaged in the preparation and publication of books, notes, and pamphlets on various military subjects, and maps, tracings and blue prints relating to Cuba, Porto Rico, the Philippines, Alaska, Africa, Guam, China, etc. The work of preparation and distribution of the many publications—some 29 in number—and maps, etc., to the Army, to members of Congress, to universities and colleges having military departments, and to applicants from all parts of the country and abroad, have kept the small force constantly engaged.

In addition to the regular office translations and calls for translations from the different bureaus of the War Department, a great many translations have been made of Spanish law books, etc., for publication. These Spanish translations engaged the services of the entire force of translators for about six months, and was a work of considerable magnitude. It should be borne in mind that most of the periodicals and publications received in the Military Information Division

* Actual balances as shown by the books of this office, \$12,715.27, of which \$7,796.61 was pledged to honor drafts made by the medical disbursing officer in the Philippine Islands on the Hongkong and Shanghai Banking Corporation, under a letter of credit issued in his favor. These drafts were paid by the bank and the proceeds thereof were accounted for during the year ending June 30, 1899, as disbursed by that officer or in his possession June 30, 1899. The bank was reimbursed by the Treasury Department in August, 1899.

† Balance as reported by Surgeon-General October 12, 1899, \$1,448,387.37; found subsequently to be erroneous, the balance June 30 having been cabled incorrectly from Manila, P. I.

‡ May 31, 1900, last report.

are published in foreign languages and necessarily have to be translated before their information becomes generally available for ready reference. The reports from our military attachés abroad have been entered and carded, and the information furnished made available for quick reference. The accounts for purchases and expenses have been received, examined, and forwarded to the Auditor for adjustment. A special feature of the recent work of the division has been the preparation and distribution of the Notes on China, Map of Northeastern China, and Map of the Pei-Ho.

The map section has prepared over 200 maps, sketches, and tracings—some of them containing several sheets (plan of defense of Habana 46 sheets) since April, 1898. Of these maps some 17 have been published and distributed to the Army, etc. In addition to these, a number of pen sketches and drawings on military subjects of various kinds have been made.

The photographic section has been engaged in the reproduction of maps, etc., for current use, requiring the making of thousands of negatives and prints of different sizes up to 34 inches square, and supplying from one to many prints of each of the negatives on velox, bromide, or blue-print papers, and bromide enlargements up to 7 feet long. As an instance of this kind of work, it may be stated that there was made an enlarged sectional map of Porto Rico on a scale of 1.5 inches to 1 mile, consisting of 75 sections, each section representing an area of 64 square miles, besides enlarging and reducing to the same scale numerous road sketches of different parts of the island. This section has also been engaged in making copies and enlargements of photographs for the War Atlas (a photographic history of the military operations during the Spanish-American war), one section of which is well under way. In fact, over a thousand negatives of various sizes have been made, and from these and other negatives about 10,000 prints of different kinds have been made.

The division was entrusted with the duty of examining a vast amount of Spanish mail, both official and private, captured on board prize vessels.

A large number of maps and books have been purchased from abroad and added to the files and reference library of the division.

MILITARY COMMISSION OF SANTIAGO.

The Spanish general, Toral, who, during the illness of Lieutenant-General Linare, commanded the Spanish forces in the province of Santiago de Cuba, having, on July 14, 1898, agreed with General Shafter to appoint a joint commission to discuss the terms and conditions of a surrender of the Spanish forces in said province, the commissioners named were as follows:

For the United States.—Commissioners, Maj. Gen. Joseph Wheeler, U. S. V.; Maj. Gen. H. W. Lawton, U. S. V.; Lieut. J. D. Miley, Fourth Artillery, aid-de-camp; secretary, Mr. Leonard Wilson, United States War Department; interpreters, Mr. R. G. Mendoza, Cuban volunteers, aid; Mr. A. E. Mestre, Cuban volunteers, aid.

For the Kingdom of Spain.—Commissioners, Brig. Gen. Don Federico Escario, Lieut. Col. of Staff Don Ventura Frontan; interpreter, Mr. Robert Mason, British vice-consul.

The commission held its meetings under an enormous ceiba tree situated midway between the Spanish and American lines, and, after deliberating under a flag of truce for three days, the surrender was eventually arranged and formally took place at noon on July 17, 1898.

MILITARY COMMISSIONERS, CUBA.

Maj. Gen. J. F. Wade, chairman; Rear-Admiral William T. Sampson; Maj. Gen. M. C. Butler; Lieut. Col. John W. Clous, secretary; Captain Hart, interpreter; Acting Assistant Surgeon Laine, medical officer.

MILITARY COMMISSIONERS, PORTO RICO.

Maj. Gen. John R. Brooke, chairman; Rear-Admiral W. S. Schley; Brig. Gen. W. W. Gordon; Lieut. Col. Edward Hunter, secretary and recorder.

MILITARY TELEGRAPH LINES.

	Miles.
In United States, June 30, 1900, aggregated in length about.....	900
In Cuba, June 30, 1900, operated by Signal Corps, aggregated in length about.....	3,256
In Porto Rico:	
Telegraph lines.....	381
Telephone lines.....	110
In Philippine Islands, telegraph lines.....	2,639

In addition there are 160 miles of telephone line and 210 miles of cable maintained and operated by the Signal Corps in the Philippine Islands.

During the Spanish-American war there were 168 miles of cable laid by the Signal Corps and about 1,000 miles of land line constructed.

Number of Signal Corps stations maintained in—

Cuba.....	41
Porto Rico.....
Philippines.....	275
United States.....	49

TELEGRAPH AND TELEPHONE EQUIPMENT.

During the year 1899 over 800 telephones, complete, have been procured and distributed in Cuba, Porto Rico, and the Philippines, and complete instrumental equipment for 50 telephone offices have been placed in the Philippines alone. In the larger centers, such as Cuba and Manila, where the old forms of batteries are unsuited, steps are being taken to supplant battery power by dynamos, storage

batteries, and rotary transformers, in accordance with the present practice of the best commercial telegraph companies.

While military lines are constructed and maintained primarily for administrative purposes of the army, yet they also subserve commercial interests. It is not to be expected that any degree of accuracy can be observed in keeping account of the volume of business done on these lines, but the following statement is based on partial reports received:

Number of messages sent and received on military lines in Porto Rico by Signal Corps during year ending June 30, 1900.....	232,771
Number of messages sent and received on military lines in Cuba by Signal Corps during year ending June 30, 1900.....	245,470
Number of messages sent and received on military lines in Philippines by Signal Corps during year ending June 30, 1900.....	1,025,400

The tremendous amount of business handled in the Philippines is due to the fact that the Signal Corps has constructed a very extensive telegraph and telephone system there, and a large part of official communication between various bodies of the Army is conducted by wire. A message may only consist of half a dozen words or may comprise several hundred; a fair average would be about 30 words to a message.

NURSES.

Contract nurses.

The value of the services of female nurses has been recognized in a practical way by most military nations since the time of the Crimean war, when Miss Florence Nightingale and her corps of patriotic women aided in caring for the sick and wounded in the hospitals at Scutari. In the armies of Europe provision is made for the assignment of a certain number of trained female nurses, or sisters of religious orders, at large permanent military hospitals; and since the Geneva convention the nurses furnished by the National Red Cross and other aid societies have served in time of war in hospitals at the base of military operations.

During our civil war female nurses, many of them Sisters of Charity, served at many of the large general hospitals. A few who had special ability, intelligence, and experience were employed in nursing particular cases; but male help was preferred in the general wards, and the sphere of the women was usually restricted to the extra diets and supervision over the linen, the laundry, and the contribution room.

Since then, however, the systematically educated and trained female nurse has been developed by the medical profession to insure expert attendance on the patient during the absence of the physician or surgeon. There is a large number of such educated women in the United States at the present time, and they did not hesitate to offer their services to the Government during the recent war.

The emergency which rendered their services acceptable was the product of two causes: First, the inability of the Medical Department of the Army to enlist in a few weeks 6,000 or more men qualified by previous experience to perform certain important duties, or indeed to enlist that number of inexperienced but intelligent men, with the intention of training them subsequently; second, the epidemic prevalence of typhoid fever in our camps.

Trained nurses were required to care for the large number of sick in these hospitals. The Hospital Corps had in its membership many men whose services were invaluable at this time, but there was not a sufficient number of such men for the occasion.

I had already as early as May 10 made contracts with female nurses for service in general hospitals, and in July many were on duty in the hospitals of General Shafter's army at Santiago de Cuba. During the prevalence of typhoid fever in our camps I increased the number of female nurses and placed them on duty, not only in the general hospitals, but in the division and post hospitals and in such regimental hospitals as required their services. The number reached a maximum of 1,158 on September 15. After this date the suppression of the typhoid epidemic and the muster out of volunteer regiments rendered so large a nursing force unnecessary. Contracts were annulled, and on July 1, 1899, there remained in service only 202—65 in the United States, 76 in Cuba, 9 in Porto Rico, 38 in the Philippines, 6 in Honolulu, and 8 on the hospital ship *Relief*. The total number of female nurses with whom contracts were made was 1,563. Among them there were reported 140 cases of typhoid fever; 12 fatal. One nurse died of yellow fever.

American women may well feel proud of the record made by these nurses in 1898-99, for every medical officer with whom they served has testified to their intelligence and skill, their earnestness, devotion, and self-sacrifice.

The contract nurses now in service have been organized into a female nurse corps under the superintendence of Acting Asst. Surg. Anita Newcomb McGee. The corps consists of chief nurses, nurses, and reserve nurses.

OFFICERS OF THE ARMY.

(See Strength of the Army; Casualties in action; General officers.)

Number of officers commissioned in the Volunteer Army from April 1, 1898, to June 30, 1900, was 3,317.

New appointments to the Army from April 1, 1898, to June 30, 1900.

Brigadier-general.....	1
Quartermaster's Department.....	1
Medical Department.....	54
Pay Department.....	11
Engineer Corps.....	17
Record and Pension Office.....	9
Chaplains.....	9
Infantry arm.....	450
Cavalry arm.....	67
Artillery arm.....	115
Total.....	706

ORDNANCE DEPARTMENT.

The duties of the Ordnance Department consist in providing, preserving, distributing, and accounting for every description of artillery, small arms, and all the munitions of war which may be required for the fortresses of the country, the armies in the field, and for the whole body of the militia of the Union. In these duties are comprised that of determining the general principles of construction and of prescribing in detail the models and forms of all military weapons employed in war. They comprise also the duty of prescribing the regulations for the proof and inspection of all these weapons, for maintaining uniformity and economy in their fabrication, for insuring their good quality, and for their preservation and distribution.

The organization of the Ordnance Department comprises 66 officers and 500 enlisted men. The officers consist of 1 Chief of Ordnance with the rank of brigadier-general, 4 colonels, 5 lieutenant-colonels, 12 majors, 24 captains, 17 first lieutenants, and 1 ordnance storekeeper with the rank of major. These officers are distributed at 26 stations, and are employed in the office of the Chief of Ordnance at Washington, at the various arsenals and ordnance depots throughout this country and in the lately acquired foreign possessions, at the United States Military Academy, at the Sandy Hook proving ground, at private powder works, and on inspection duty at the works of contractors for heavy guns and carriages and of projectiles. In many instances the officers at the ordnance posts also perform inspection duty at points in the vicinity, and the officers on inspection duty in cities are frequently required to inspect work at considerable distances from

their regular stations. The enlisted men of the department are distributed at the various arsenals, principally for purposes of guard and police, the detachments numbering from 12 to 82 men, in accordance with the comparative importance of the arsenals.

Ordnance and ordnance stores.

This term includes every article issued by the Ordnance Department—guns, carriages, ammunition, infantry equipments, horse equipments, materials for repair and preservation of stores, etc.

The following representative articles were manufactured or purchased from the date of the declaration of war, April 25, 1898, to June 30, 1900:

Magazine rifles.....	174,139
Magazine carbines.....	10,151
Revolvers.....	17,450
Machetes.....	6,096
Sets of infantry equipments.....	287,500
Sets of horse equipments.....	35,000
Cartridge belts.....	613,226
Rifle-ball cartridges.....	137,839,015
Revolver-ball cartridges.....	5,650,400

Ordnance and ordnance stores have been issued to the Philippine Islands, consisting of field and siege guns, machine guns, automatic and mountain guns, with their carriages, implements, equipments, and ammunition therefor, complete; also, small arms and necessary ammunition therefor, infantry and horse equipments, cavalry accouterments, and large quantities of miscellaneous stores.

Statement of guns mounted and of guns in process of manufacture, for the fiscal years ending June 30, 1898, 1899, and 1900.

PAYMASTER-GENERAL.

The Paymaster-General is charged with the payment of the officers and enlisted men of the Army and civil employees of the Department; with furnishing funds to his officers and seeing that they duly account for the same, and with a preliminary examination of their accounts; also with the payment of Treasury certificates for bounty, back pay, etc., and balance due deceased officers and soldiers of the Volunteer and Regular Army.

Pay of Army.

Payments made to Regular and Volunteer armies engaged during Spanish-American war, from April 21, 1898, to April 11, 1899, \$67,065,629.56.

Report for fiscal year ending June 30, 1898.

On July 1, 1897, officers of the Pay Department were charged with public funds aggregating.....	\$598,883.29
During fiscal year 1898 these officers received—	
From the United States Treasury.....	22,117,948.49
From soldiers' deposits.....	613,513.51
From army paymasters' collections.....	169,624.18
Total balances and receipts.....	23,499,969.47
Accounted for as follows:	
Expended on account of pay of the Army.....	14,632,569.64
Expended on account of pay of the Army (United States Volunteers).....	1,519,150.64
Expended on account of pay of the Army (national defense).....	5,000.00
Expended on account of mileage to officers.....	103,201.80
Expended on account of mileage to officers (national defense).....	37,021.94
Expended on account of pay of Military Academy.....	300,321.99
Expended on account of volunteers (Treasury certificates).....	437,341.28
Surplus funds deposited to credit of United States Treasurer.....	1,205,366.42
Army paymasters' collections deposited to credit of United States Treasurer.....	169,624.18
Balances charged officers June 30, 1898.....	5,090,371.58
Total.....	23,499,969.47

Report for fiscal year ending June 30, 1899.

On July 1, 1898, officers of the Pay Department were charged with public funds aggregating.....	\$5,090,371.58
During the fiscal year 1899 these officers received—	
From the United States Treasury.....	84,148,099.76
From soldiers' deposits.....	1,496,762.31
From army paymasters' collections.....	1,220,311.10
Total balances and receipts.....	91,955,544.75
Accounted for as follows:	
Expended on account of pay of the Army.....	34,141,225.30
Expended on account of pay of the Army (United States Volunteers).....	35,877,177.57
Expended on account of extra pay to Regular Army, war with Spain.....	202,592.92
Expended on account of extra pay to volunteers, war with Spain.....	1,443,932.66
Expended on account of mileage to officers.....	403,173.94
Expended on account of mileage to officers (national defense).....	177,640.28
Expended on account of pay of Military Academy.....	288,362.09
Expended on account of volunteers (Treasury certificates).....	822,125.86
Expended on account of emergency fund, War Department, "to disband the Cuban army".....	905,100.00
Surplus funds deposited to credit of United States Treasurer.....	7,296,776.59
Army paymasters' collections deposited to credit of United States Treasurer.....	1,220,311.10
Balances charged officers June 30, 1899.....	9,682,126.44
Total.....	91,955,544.75

Additional paymasters.

The increase in the Army necessitated an increase in the force of the pay corps to enable the Department to make prompt payments; therefore, on the request of the Paymaster-General, the President had, on June 30, 1898, increased the corps by 72 additional paymasters.

These officers and their clerks entered the service with very little or no knowledge or experience in regard to army accounts, and it appeared necessary to place them under instruction to fit them for their duties.

Accordingly, a school of instruction was organized, in which each was made familiar with the necessary forms to be used in payments, and the principles of making and rendering accounts. Attention was also directed to orders, regulations, etc., governing the payment of accounts. As a result, each officer entered upon his duties with a fair knowledge of the business before him.

During the fiscal year 1899 the officers of the Pay Department of the Army traveled 416,149 miles, paid off 1,872 posts, and made total payments aggregating \$73,756,330.62.

PHILIPPINES.

The Philippine group, lying off the southern coast of Asia, between longitude 120 and 130 and latitude 5 and 20, approximately, number about 2,000 islands, great and small in a land and sea area of 1,200 miles of latitude and 2,400 miles of longitude. The actual land area is about 115,300 miles. The island of Luzon, on which the capital city (Manila) is situated, is the largest member of the group, being about the size of the State of New York. The estimates of population vary from 7,000,000 to 10,000,000. The country has been in the possession of Spain since 1565. There is but one railway on the islands, which is 123 miles long. Tobacco and coffee are the chief products.

Manila Bay was, on May 1, 1898, the scene of a great naval battle between the Asiatic Squadron of the United States under command of Commodore Dewey and the Spanish fleet, in which the latter was completely destroyed. On the arrival of the United States troops shortly afterwards the city of Manila capitulated after a short resistance. By the terms of the treaty of peace these islands were ceded to the United States on the payment to Spain of the sum of \$20,000,000.

PORTO RICO.

The island of Porto Rico is the most eastern of the Greater Antilles in the West Indies, and is separated on the east from the Danish island of St. Thomas by a distance of about 50 miles. Its distance from New York is 1,420 miles.

The island is a parallelogram in general outline, 108 miles from the east to the west, and from 37 to 43 miles across.

The area of Porto Rico, including the adjacent and dependent islands of Vieques, Culebra, Mona, and Muertos, has been found to be 3,606 square miles. But owing to the imperfect surveys on which all maps of Porto Rico are based there must be a considerable and indeterminate margin of possible error in any such measurement. The island is about three times the size of Long Island, which was, in 1890, perhaps the largest insular division of the United States. It is also slightly greater than the eastern shore of Maryland (3,461 square miles).

The relative sizes of the larger West Indies are as follows: Cuba, the greatest, is about equal in area to all the rest combined; Haiti, the second, is about two-thirds the size of Cuba, while, on the other hand, it is seven times the size of Jamaica and eight times the size of Porto Rico; Porto Rico, again, is more than double the size of the fifth island, Trinidad, which is itself about three times the size of the sixth island, Guadeloupe.

The area, population, and density of population of the seven departments of Porto Rico are given below:

Department.	Area in square miles.	Population October 16, 1899.	Persons to a square mile.
Guayama.....	561	111,986	200
Humacao.....	413	88,501	214
Ponce.....	822	203,191	247
Arecibo.....	621	162,308	261
Bayamon.....	542	160,046	295
Mayaguez.....	407	127,566	313
Aguadilla.....	240	99,645	415
Porto Rico.....	3,606	953,243	264

The population of Porto Rico shown by the schedules of the present census taken with reference to the date of October 16, 1899, was 953,243. This was about nine-tenths of the population of Maryland in 1890, the State whose population is nearest to that of Porto Rico. Previous censuses of the island in comparison with the present have shown the following results:

Date of census.	Population of Porto Rico.
December 25, 1860.....	583,308
December 31, 1877.....	731,648
December 31, 1887.....	798,565
December 31, 1897.....	899,439
October 16, 1899.....	953,243

Porto Rico has 264 persons to a square mile. This density of population is about the same as in Massachusetts, twice that in New York State, and thrice that in Ohio. It is more than seven times that of Cuba, and not much less than twice that of Habana province.

The table puts in a clear light the slight difference between the various departments. Aguadilla has hardly more than twice as many people to a square mile as Guayama. In Cuba, on the contrary, Habana province has over nineteen times as many people to a square mile as Puerto Principe. This remarkable evenness of settlement in Porto Rico extends to the sixty-nine municipal districts. The least-settled district has 58 persons to a square mile, or about the same number as Indiana. The densities of these districts range about 264, the density for the island, and depart from it by an average amount of 106 units, or 40 per cent of that number.

It is traversed from east to west by a mountain range dividing the island into two unequal portions. The interior is covered with vast forests. The chief port on the north coast is the capital, San Juan.

Porto Rico is unusually fertile, and its dominant industries are agriculture and lumbering. Large quantities of minerals are found. There are less than 150 miles of railroad on the island. The largest article of export is coffee.

After a short campaign by United States troops in July and August, 1898, which was brought to a sudden termination by the signing of the peace protocol, the

island was ceded to the United States under the terms of the treaty of peace, and the flag of the United States was raised in token of formal possession on October 18, 1898.

PRESIDENT.

The law provides that the President shall be Commander in Chief of the Army and Navy of the United States, and of the militia of the several States when called into the active service of the United States. As Commander in Chief he is authorized to direct the movements of the land and naval forces placed by law at his command, and to employ them in the manner he may deem most effectual to harass, conquer, and subdue the enemy. He may invade the hostile country, and subject it to the sovereignty and authority of the United States, but his conquests do not enlarge the boundaries of this Union, nor extend the operations of our institutions and laws beyond the limits before assigned to them by the legislative power.

By the rules of civilized warfare and the laws of nations, the commander of a belligerent force, engaged in the military occupation of invaded territory, is required to establish and maintain a government of civil affairs for the territory so occupied.

PROCLAMATIONS.

By President for 125,000 volunteers, April 23, 1898. (See Appendix 4.)
By President to people of Cuba. (See Appendix 7.)
By civil commissioners to the people of the Philippine Islands, April 4, 1899. (See Appendix 11.)
By President for 75,000 volunteers, May 25, 1898. (See Appendix 5.)
By President of peace protocol. (See Appendix 8.)
By President of treaty of peace. (See Appendix 12.)
By President establishing blockade on southern coast of Cuba and of San Juan, Porto Rico, June 27, 1898. (See Appendix 6.)
By President establishing blockade on north coast of Cuba, April 22, 1898. (See Appendix 2.)
By President with reference to maritime law, April 26, 1898. (See Appendix 3.)
By President placing Hawaiian Islands under control of Navy Department, December 23, 1898.

PRISONERS OF WAR.

The cost of returning the prisoners from the Philippines incurred during the year 1898-99 has amounted to \$908,583.75.

Estimated number of Filipinos killed, wounded, and captured.

	Killed.	Wounded.	Captured and surrendered.
June 4, 1900.....	10,780	2,104	10,425

Filipino prisoners in possession of United States, about 2,000.
Captured by Navy..... 701
Cost of transportation of 22,864 from Cuba to Spain..... \$613,860.00
Cost of transportation of 8,086 from the Philippines to Spain..... 740,276.25
General Otis advised the War Department, May 17, 1899, that 12,598 Spaniards were repatriated from Philippine Islands from November 8, 1898, to May 6, 1899.

QUARTERMASTER-GENERAL.

The Quartermaster-General, aided by assistants, provides transportation for the Army, also clothing and equipage, horses, mules, and wagons, vessels, forage, stationery, and other miscellaneous quartermaster stores and property for the Army, and of clothing and equipage for the militia; constructs necessary buildings, wharves, roads, and bridges at military posts, and repairs the same; furnishes water, heating, and lighting apparatus; pays guides, spies, and interpreters, and is in charge of national cemeteries.

Statement of approximate number of rations issued during Spanish-American war.

Month ending—	Enlisted strength of Army.			Number of days.	Number of rations.
	Regulars.	Volunteers.	Aggregate strength.		
May 31, 1898.....	36,625	118,555	155,180	31	4,810,580
June 30, 1898.....	45,669	153,210	198,879	30	5,966,370
July 31, 1898.....	51,721	202,841	254,563	31	7,891,453
August 31, 1898.....	54,039	207,361	261,400	31	8,103,400
September 30, 1898.....	57,325	199,805	257,130	30	7,713,900
October 31, 1898.....	58,310	157,612	215,922	31	6,698,582
November 30, 1898.....	61,444	110,202	171,646	30	5,149,380
December 31, 1898.....	63,370	98,481	161,851	31	5,017,381
January 31, 1899.....	63,223	85,938	149,161	31	4,623,991
February 28, 1899.....	57,684	66,181	123,865	28	3,468,220
March 31, 1899.....	61,110	47,586	108,696	31	3,369,576
April 30, 1899.....	60,804	28,277	89,081	30	2,672,430
Total approximate number of rations.....					65,480,263

The approximate value would be at estimated cost of 25 cents per ration: (65,480,263 × .25) = \$16,370,065.75.

RATIONS.

Under the authority of the Secretary of War of August 24 there have been purchased from subsistence funds by officers of the Subsistence Department and issued gratuitously to the troops at Montauk up to September 30, 1898, in addition to the ration and to the 60 cents per day provided by General Order 116, the following quantities of articles:

Ice.....	pounds..	1,065,200
Milk.....	gallons..	54,860
Halibut.....	pounds..	3,000
Lima beans.....	do.....	47,047
Ten.....	do.....	250
Apples (canned).....	3 pound cans..	6,020
Do.....	gallon cans..	1,774
Apples (evaporated).....	pounds..	21,550
Apricots (evaporated).....	do.....	14,500
Butter.....	do.....	34,799
Corn (canned).....	cans.....	13,889
Cocoa.....	pounds..	1,080

Eggs.....	dozen..	53,000
Tea.....	pounds..	250
Fresh milk.....	gallons..	28,000

RECORD AND PENSION OFFICE.

By the act of Congress approved May 9, 1892, establishing the Record and Pension Office as a bureau of the War Department, the chief of that office was charged with the custody, under the Secretary of War, of the military and hospital records of the volunteer armies and the transaction of the business of the War Department connected therewith. Prior to and during the progress of the war with Spain the work of the office consisted in the transaction of the business of the Department relating to the volunteer forces in service during the several wars in which the country had been engaged, including the Revolutionary war, the war of 1812, the various Indian wars, the war with Mexico, and the war of the rebellion. The records of the office embraced those of the Revolutionary armies and of the volunteer forces of all wars subsequent to the Revolution, the records of the Provost-Marshal-General's Bureau, those of the Bureau of Refugees, Freedmen, and Abandoned Lands, and the archives of the legislative, executive, and judicial branches of the Confederate Government.

In the act of April 22, 1898, under which the volunteer army in service during the war with Spain was created, it was provided that upon the disbandment of the volunteer and militia organizations the records pertaining to them, together with the reports of medical officers serving with the volunteer troops and the records kept by such officers, should be filed in the Record and Pension Office.

The work of the Record and Pension Office was largely augmented after the close of hostilities and the muster out of the volunteer forces by the receipt of the records of the disbanded organizations.

The muster out of the volunteer army was begun in September, 1898; the first medical records were received in December, 1898, and the transfer of the military records of the disbanded volunteer regiments, begun in January, 1899, was soon completed.

From January, 1899, to the close of the fiscal year, June 30, 1899, 11,394 calls were received from the Auditor for the War Department for military histories of officers and enlisted men in service during the war with Spain, and 4,141 similar calls were received from the Commissioner of Pensions. During the fiscal year ended June 30, 1900, 44,741 such calls were received from the Auditor, and 29,700 from the Commissioner of Pensions.

These calls for the military histories of officers and enlisted men in service during the war with Spain have resulted in a very material increase in the work of the office. But a more material and perplexing increase of the work has resulted from the general correspondence relating to organizations and individuals of the volunteer forces in service during the Spanish war, involving, as it does, many questions which, owing to the legislation relative to organizations and individual service peculiar to that war, are new to the Department, and necessarily require careful consideration and administrative action.

The number of cases received and disposed of in the Record and Pension Office during the war with Spain and up to June 30, 1900, was as follows:

For the months of May and June, 1898:	
From the Pension Office.....	21,702
From the Auditor for the War Department.....	4,025
Remuster cases.....	902
Desertion cases.....	325
All other cases, miscellaneous.....	4,029
Total.....	31,783

For the fiscal year ended June 30, 1899:	
From the Pension Office.....	116,584
From the Auditor for the War Department.....	35,202
Remuster cases.....	3,605
Desertion cases.....	2,627
All other cases, miscellaneous.....	25,000
Total.....	183,018

For the fiscal year ended June 30, 1900:	
From the Pension Office.....	132,627
From the Auditor for the War Department.....	59,481
Remuster cases.....	3,770
Desertion cases.....	2,381
All other cases, miscellaneous.....	65,397
Total.....	261,836

No separate record has been kept of the number of Spanish war cases received except of the calls from the Pension Office and the Auditor for the War Department for statements of military service. But, deducting from the total receipts for the fiscal year ended June 30, 1900, the average number of receipts for the preceding five years, it is shown that the excess of receipts for the last fiscal year was 79,386, which number fairly represents the increase for that year in the current work of the office resulting from the war with Spain.

As stated in a preceding paragraph, the number of military histories of officers and enlisted men in service during the war with Spain furnished the Commissioner of Pensions and the Auditor for the War Department by this office to June 30, 1900, was as follows:

From, January, 1899, to June 30, 1899:	
To the Commissioner of Pensions.....	4,144
To the Auditor for the War Department.....	11,394
Total.....	15,538

For the fiscal year ended June 30, 1900:

To the Commissioner of Pensions..... 29,700
To the Auditor for the War Department..... 44,741
Total..... 74,441

It is proper to remark that the term "remuster cases," as used in the preceding tables, refers to cases arising under the act of Congress approved February 24, 1897, for the relief of certain officers and enlisted men of the volunteer forces in service during the war of the rebellion, and that the term "desertion cases," as used in the same tables, refers generally to applications for removal of the charge of desertion, under the act of March 2, 1899, in the case of soldiers of the Mexican war and the war of the rebellion. Neither of these acts of Congress has any application to officers or enlisted men of the war with Spain.

The cases classified in the tables as "miscellaneous" include applications for original discharge certificates, applications for certificates in lieu of lost discharges under the act of Congress approved March 3, 1873, applications for certificates of discharge in true name under the act of April 14, 1890, applications for recognition as veteran volunteers under reenlistments during the civil war, applications for medals of honor for ex-soldiers of the civil war, inquiries from the Commissary-General of Subsistence, the Quartermaster-General of the Army, the adjutants-general of States, the Commissioner of the General Land Office, the Comptroller of the Treasury, the Civil Service Commission, the Grand Army of the Republic, the Loyal Legion and kindred patriotic societies, the soldiers' homes, and the general correspondence of the office relative to organizations and individuals which can not be classified.

Shortly after the commencement of the Spanish war the Chief of the Record and Pension Office was assigned to duty as the successor of Brig. Gen. George W. Davis, U. S. V., president of the Board of Publication of the Rebellion Records, War Records Office, relieving him May 31, 1898. By July 1, 1898, the force employed in that office had been reduced to 22 employees—about one-third of its previous number. December 1, 1898, the Board of Publication was dissolved, the work of publication being thereafter carried on under the direction of the Chief of the Record and Pension Office. During the fiscal year ended June 30, 1899, 3 volumes were compiled, and together with 6 others were put in type, involving the reading of over 30,000 pages of proof; 4 volumes were printed and bound, and 4 were distributed; 54,027 copies of volumes were received from the Public Printer, and 46,974 books and parts or plates of the Atlas were sold or distributed—over 50,000 labels being prepared or verified for this purpose. During the same period an Index to Battles, Campaigns, etc., of 76 pages was prepared and printed.

By operation of law the War Records Office was merged into the Record and Pension Office July 1, 1899. During the fiscal year ended June 30, 1900, 1 volume was put in type and 7 were indexed, involving the preparation of about 500 pages of index and the reading of over 4,500 pages of proof; 11 volumes were printed, bound, and distributed, completing the publication with the exception of the General Index; 133,949 books were received and 117,216 were sold or distributed, over 100,000 labels being prepared or verified for the purpose. The Additions and Corrections to the Rebellion Records was compiled and put in type, and work commenced upon the General Index to the entire publication.

War Records Office.

Annual pay roll, May 31, 1898.....	63 employees..	\$75,420.00
Annual pay roll, July 1, 1898.....	22 employees..	34,080.00
Reduction.....	41 employees..	41,340.00
Annual pay roll, June 30, 1899.....	21 employees..	29,080.00
Expenditures for printing and binding:		
1897-98.....		59,177.38
1898-99.....		62,495.00
1899-1900 (appropriation for public printing and binding, War Department), estimated.....		78,000.00

In connection with the expenditures for printing and binding, it may be noted that the increased expenditure for this item was caused by the steadily increasing output by the office of matter to be printed, and this increase in the output was accomplished by a steadily decreasing clerical force. The expenditure for printing and binding in 1897-98 was but 71 per cent of that for salaries, while in 1898-99 it was 2.08 times as large as that for salaries, and in 1899-1900 it was 2.66 times as large.

Besides the transaction of the current business of the office and the prosecution of the work of the publication of the Rebellion Records, such portion of the clerical force as has been available for the purpose has been employed in the work of reproducing, by the index record-card system, the records of individual military service. Promptly upon the receipt of the records of the disbanded Spanish-war organizations the work of the reproduction of those records was begun, and at the close of the last fiscal year about 40 per cent of them had been carried.

On the recommendation of the Chief of the Record and Pension Office a reduction of 22 was made in the clerical force of the office for the fiscal year beginning July 1, 1900, representing a saving in salaries of \$35,340 per annum. This, added to the previous reduction of 300 in 1894, 50 in 1895, and 25 in 1897, makes a total reduction of force in the Record and Pension Office since its organization in 1892 of 407 clerks, representing an annual saving of over \$460,000 in salaries alone, besides the reduction of 42 employees of the War Records Office prior to its consolidation with the Record and Pension Office. Adding to the savings in salaries in the Record and Pension Office alone the savings effected in contingent and other expenses, it is found that the cost of maintaining the office has been permanently reduced by at least \$500,000 per annum.

RECRUITS.

(See Recruiting service.)

Statement showing the number of applicants for individual enlistment in United States Army, from April 21, 1898, to June 30, 1900.

[Does not include volunteers mustered in with organizations.]

	Number enlisted.	Number rejected.	Total number of applicants.
Regular Army.....	107,766	270,163	377,929
Volunteer regiments, Spanish war, recruited to full strength under General Orders, 61, of 1898.....	*41,849	12,892	54,241
Regiments United States Volunteers, under act March 2, 1899, and General Orders, 122, 150, 162, and 166, of 1899.....	35,784	52,315	88,099
Porto Rican Regiment (volunteers).....	914	2,890	3,804
Total.....	186,313	337,760	524,073

*The total number of enlisted men in these regiments, including those mustered in with organizations and those individually enlisted as above, was 213,218.

RECRUITING SERVICE.

Regulars.

Since the declaration of war with Spain the recruiting service for the Regular Army has been conducted practically on the same lines as before that time; that is, by details of officers of the Regular Army for general recruiting service at city recruiting stations. The number of city stations, however, has been increased from time to time as the necessities of the service demanded and the number of officers available would permit. All the recruiting officers have had instructions to enlist not only at their main stations, but at substations in surrounding cities and towns wherever there was a probability of obtaining recruits. Special regimental recruiting parties have also been sent out when practicable; but the withdrawal from the United States, for duty with expeditionary forces, of most of the regular infantry and cavalry regiments and the great need of artillery officers with their batteries have prevented the development of special regimental recruiting since the first two or three months of the war with Spain, making it necessary to depend mostly upon general recruiting stations for recruits. Enlistments at city stations have also been supplemented by enlistments at all military posts and in the field; 29,521 enlistments were made for the Regular Army for the fiscal year ending June 30, 1898, and 62,142 during the fiscal year ending June 30, 1899. These figures do not include enlistments for the Hospital Corps.

Volunteers.

During the war with Spain enlistments for volunteer regiments in the field to fill them to the maximum were made by officers of such regiments detailed under the provisions of General Orders, No. 61, June 1, 1898, to recruit in the localities where their regiments were originally raised. Upward of 40,000 enlistments were thus made during the months of June, July, and August, 1898.

In recruiting the volunteer regiments authorized by the President under the provisions of the act of Congress approved March 2, 1899, enlistments have been made by recruiting officers of the Regular Army at all city stations and at military posts, officers of the volunteer regiments as available being ordered to report at general recruiting stations to assist in recruiting for their regiments in their own immediate neighborhood.

From July 10 to September 20, 1899, 26,442 volunteers had been enlisted for the 25 regiments called for by the President, of whom 1,396 were enlisted in the Philippines.

REVENUES.

From customs at—		
Manila, August, 1898, to March 31, 1900.....		\$5,895,330.12
Iloilo, February, 1899, to March 31, 1900.....		517,565.27
Cebu, April, 1899, to March 31, 1900.....		344,386.11
All other ports, to March 31, 1900.....		13,693.43
Total receipts from customs from date of occupation.....		6,770,974.93

From internal revenue at—		
Manila, August, 1898, to March 31, 1900.....		553,455.41
Iloilo, February, 1899, to March 31, 1900.....		54,586.62
All other offices, to March 31, 1900.....		14,335.32
Total receipts from internal revenue from date of occupation.....		622,377.25

From all other sources at Manila, date of occupation to March 31, 1900 (including \$479,400.03 seized funds).....		824,065.90
From all other sources at all other points, date of occupation to March 31, 1900.....		28,093.03

Total receipts from miscellaneous sources from date of occupation.....		852,158.93
--	--	------------

Grand total receipts from all sources from date of occupation to March 31, 1900.....		8,245,511.11
--	--	--------------

The total revenues in the island of Porto Rico from date of American occupation to April 30, 1900, were \$2,728,390.83, made up as follows:

Customs revenues.....		\$2,152,914.04
Internal revenue.....	\$488,299.83	
Miscellaneous collections.....	5,906.33	
Fees and fines collected by clerks of courts.....	5,646.36	
Licenses to carry arms.....	2,443.96	
Fees for insurance privileges.....	1,500.50	
Miscellaneous fees from sundry sources.....	14,725.03	
Postal revenues.....	49,192.59	
Money-order fees.....	7,762.19	
		56,954.78
Total revenue.....		575,476.79

Receipts from internal revenue in Cuba from January 1, 1899, to May 31, 1900, \$1,158,096.49.	
Customs receipts in Cuba from January 1, 1899, to June 30, 1900, \$23,126,543.48.	

SAN JUAN.

San Juan, or San Juan Hill, which overlooks the city of Santiago de Cuba, has become famous as the scene of the severe conflict which took place between the armies of the United States and Spain in July, 1898. Both sides fought with desperate bravery, but the Spaniards suffered such severe losses that, after the American troops had entirely surrounded the Spanish position and were in readiness to advance upon the city, the Spanish forces, under General Toral, surrendered on July 17, 1898, the city and province of Santiago, together with all arms and ammunition. The signing of the peace protocol, shortly after the surrender had been made, put an end to hostilities between the two countries.

SANTIAGO DE CUBA.

This city was founded in 1514 and is the most southern place of any note in the island of Cuba, being in the twentieth degree of latitude. The surrounding country is very mountainous and the city is built upon a steep slope; the public square or Campo de Marte is 140 to 160 feet above the sea, and some of the houses are located 200 feet high. It is the second city in the island with regard to population, slightly exceeding that of Matanzas and Puerto Principe. The harbor is of the first class and one of the smallest of Cuban ports. From its entrance to its extreme northern limit it is 5 miles long, the city being located 4 miles from this entrance, on the northeastern side of the harbor. It was in this harbor that Cervantes' fleet took refuge, near where they were subsequently destroyed by the American Navy. The city surrendered to the American troops under Maj. Gen. William R. Shafter on July 17, 1898, after a determined resistance and prolonged negotiations, with arms, ammunition, and 22,789 Spanish soldiers.

Agreement for surrender was opened by Toral July 14, 1898; concluded July 16, and formal surrender of the city and province to American forces July 17, 1898.

SECRETARY OF WAR.

The Secretary of War is at the head of the War Department, and performs such duties as the President may enjoin upon him concerning the military service.

He has supervision of all the estimates of appropriations for the expenses of the Department, of all purchases of Army supplies, and of all expenditures for the support and transportation of the Army, and of such expenditures for a civil nature as are by law placed under his direction.

He also has supervision of the publication of the official records of the war of the rebellion, and of the Board of Ordnance and Fortification.

He has charge of all matters relating to river and harbor improvements, the prevention of obstruction to navigation, the establishment of harbor lines, and approves the plans and location of bridges authorized by Congress to be constructed over the navigable waters of the United States.

SIGNAL CORPS.

Total strength of Signal Corps, June 30, 1900: Officers, 46; enlisted men, 695; in addition to a large and fluctuating number of civilian employees—operators, repair men, etc.

Signal Corps, U. S. A., stationed as follows, August 20, 1900:

	Officers.	Enlisted men.
Alaska.....	3	55
Cuba.....	4	44
Philippine Islands.....	32	437
Porto Rico.....	1	44
United States.....	10	152
	50	732

The approach of war found the Signal Corps with 8 available officers and 50 enlisted men, with an equipment that was barely sufficient in time of peace.

The first call made on the Signal Corps was to place all military posts in the Department of the East in direct telegraphic communication with Department Headquarters, and to establish a system of intercommunication at all harbors where the defense consisted of separate batteries and forts.

All allotment was made from the National Defense Fund, and the following lines were constructed:

In New York Harbor Fort Hancock, N. J., was connected by a cable to Fort Wadsworth, N. Y., 12½ miles in length. The cable is a three-conductor, two conductors being utilized for telephonic and one for telegraphic intercommunication between these two posts. Between the terminal of the cable and Navesink light, New Jersey, 25 miles of overhead telephone wires for the purpose of intercommunication and range-finding systems were erected. From Fort Wadsworth a six-conductor cable was laid, 1½ miles long, to Fort Hamilton, N. Y., two of the conductors being for intercommunication between Forts Hancock, Wadsworth, and Hamilton, and the remaining four conductors for range-finding system.

The following briefly sets forth the electrical installation at fortifications on the Atlantic seaboard which the Signal Corps of the Army was compelled to install within a few weeks after the beginning of hostilities.

Fort Warren, Mass.—Cable to Long Island Head, Mass., 9,500 feet; from this point a short land line connects with the Boston municipal line, thence via Deer Island and Winthrop Head, connecting with the New England Telephone Company's wires.

Fort Greble, R. I.—A cable 3,000 feet long, three-conductor, connecting at Fox Hill with the lines of the Providence Telephone Company, giving service to Newport and thence to Fort Adams, R. I.

Block Island to Narragansett Pier, R. I.—Nineteen miles of two-conductor cable. **Fort Schuyler to Fort Totten, N. Y.**—One and one-fourth miles of six-conductor cable for intercommunication and range finding between these two posts.

Fort Delaware, Del.—Connected with Battery Point, Del., and Fort Mott, N. J., by a three-conductor cable, 3 miles in length. In addition, 7 miles of land line constructed from Fort Mott to Salem, N. J., giving the post direct telegraphic communication.

Fort Washington, Md., Sheridan Point, Va., line.—It being essential to connect the fortifications on the Potomac River below Washington City, 1 mile of three-conductor cable was laid between Fort Washington and Sheridan Point. From Sheridan Point a land line was constructed connecting the post with Fort Myer, Va., from whence there is a commercial line direct to the War Department. An alternate line was also constructed from Fort Washington, Md., to the naval Indian Head line, and on the poles of the Navy Department line to Anacostia, D. C.

Baltimore Harbor.—An overhead telephone line was constructed from Fort McHenry to North Point, about 3 miles, to connect with the lines of the Chesapeake and Potomac Telephone Company in the Sparrow Point road; from Hawkins Point to Fort McHenry by an overhead wire to Shedd's Point; from Hawkins Point to Quarantine, some 2 miles, both poles and wire the property of the Signal Corps; from Quarantine to Shedd's Point, about 1½ miles—wire, belongs to the Signal Corps, which is strung on the poles of the Chesapeake and Potomac Telephone Company; from Shedd's Point a three-pair cable crosses Curtis Creek to Floods Point, and from there to Fort McHenry, over the wire of the telephone company; at Hawkins Point a telephone system about 1½ miles long on the base line of the 8-inch B. L. R. battery at that point.

Fort Adams, R. I.—A single wire was stretched to connect with the commercial line at Newport, R. I.

Fort Cassell, N. C.—A land line connects the fortification with Southport, a distance of almost 2 miles.

Fort Monroe, Va.—At this post 850 yards of overhead line was constructed for the signal system and 600 yards of line for post intercommunication.

Fort Slocum, N. Y.—Connected to Neptune Dock, New Rochelle, N. Y., by 4,100 feet three-conductor cable, one conductor being used for telegraph and two for telephone service. A short land line then connects the cable with the Western Union wire.

Fort Trumbull, Conn.—About 14 miles of one-conductor cable was furnished by the Engineer Corps and laid by the Signal Corps from Goshen Point, Conn., to Gull Island; thence to Plum Island and across Plum Island by one-half mile of land line, connecting with the cable running to Gardiners Point. Connection is to be made at Goshen Point with the line of the commercial company, which work is not yet completed and will require 1,483 yards of twelve-conductor, twisted-pair, insulated wire, crossing river from New London to Groton Point, for use of range-finding system.

Fort Preble.—Connected with Portland by a telephone line, which line is intersected by the post line.

Governors Island, N. Y.—About three-fourths of a mile of fifteen-conductor cable was laid between this island and the barge office, in connection with the Treasury Department. Three of these conductors are for the use of the Signal Corps.

In the vicinity of San Francisco land lines were constructed from Point Bonita to Fort Baker and Sausalito; also from the Presidio wharf to Point Lobos. A cable for connecting the important forts of the harbor is yet to be provided.

Considerable work in connection with electrical intercommunication was also done at the various fortifications in the Department of the Gulf.

The following table shows the location and length of the United States military telegraph lines in the several military departments in the United States:

Sections and stations.	Length.
<i>Department of the Colorado.</i>	
Holbrook-Wilcox section:	Miles.
Holbrook, Ariz.....	0
Snowflake, Ariz.....	32

Fort Clark, Tex.....	0
Spofford Junction.....	10

For the purpose of maintaining communication between Key West and base of operations in Cuba a ship of about 1,000 tons was chartered in New York and equipped as a cable ship.

From the very inception of the enterprise the want of means for its execution was apparent. There was no cable ship under the American flag, and efforts to procure a suitable foreign ship were unavailing. The stock of available deep-sea cable in the United States was limited to small amounts held by different companies for repairs, and the cable factories were all working to their full capacity on orders already given by the War Department. The Western Union Telegraph Company had at Key West a set of machinery suitable for the work, which was placed at the disposal of the Department. A ship was immediately chartered with a view of sending her to Key West and completing her equipment there, but on returning to the Western Union office after an absence of an hour it was found that the Secretary of the Navy desired the immediate use of this machinery, and as he had a ship at Key West on which the installation could be made at once, all claims of the War Department were instantly released.

The Department, through the Western Union Company, was put in communication with President Scrymser, of the Mexican Telegraph Company, who placed at the disposal of the Department all the machinery, etc., of that company, which was installed on the *Adria* under the direction of Mr. Robertson, of the Mexican Company. The ship was sent to Boston and there took 24 miles of deep-sea cable, furnished by the Western Union Company, then returned to New York, took on 29 miles of intermediate-type cable and 60 miles insulated, but unarmed, wire, also telephones, telegraph instruments, and supplies for land lines, and proceeded to Key West.

The ship left Key West on May 28, 1898, and arrived at Santiago June 1, 1898, and immediately proceeded with the work of destroying communication with Cuba. Two cables were destroyed, one of them in over 1,000 fathoms of water.

This ship then repaired the cable between Guantanamo and Mole St. Nicholas, and between Guantanamo and Siboney. Material was landed from the ship, with which a line was built to the headquarters of the army in front of Santiago, and from these headquarters to the various commanding officers along the line.

A cable was also laid from Guantanamo to Daiquiri, a distance of 46 miles, the first war cable ever established during the active prosecution of hostilities.

STRENGTH OF THE ARMY.

The strength of the Regular Army on the 1st of April, 1898, just before the breaking out of the war, was as follows:

	Officers.	Enlisted men.
General officers and staff corps.....	532	2,025
Cavalry.....	437	6,047
Artillery.....	288	4,486
Infantry.....	886	12,828
Miscellaneous.....		653
Total.....	2,143	25,040

The Regular Army was authorized to be increased to 65,000 men as a war footing.

Strength of the armies of the United States.

Date.	Regulars.	Volunteers.	Total.
April 15, 1898.....	28,183		28,183
May 31, 1898.....	38,816	124,776	162,592
August 31, 1898.....	66,362	216,256	272,618
January 31, 1899.....	65,531	90,241	155,772
June 30, 1899.....	63,535	16,550	80,085

Maximum force at any one time during Spanish-American war, 274,717 officers and men.

On the 29th of November, 1898, the Army of the United States consisted of 2,324 officers and 61,444 enlisted men of the regular force, and of 5,216 officers and 110,202 enlisted men of the volunteer force, making an aggregate of 7,540 officers and 171,646 enlisted men.

The military forces in the service of the United States in 1899 were composed follows:

Regular Army.

	Officers.	Enlisted men.	Total.
General officers.....	7		7
Adjutant-General's Department.....	14		14
Inspector-General's Department.....	8		8
Judge-Advocate-General's Department.....	7		7
Quartermaster's Department.....	39	105	144

Ordnance Department.....	62	681	743
Signal Corps.....	5	550	555
Chaplains.....	30		30
Record and Pension Office.....	2		2
Military Academy.....		246	246
Electrician sergeants.....		15	15
Total.....	509	5,702	6,211
10 regiments of cavalry.....		12,022	12,022
7 regiments of artillery.....		10,191	10,191
25 regiments of infantry.....		34,583	34,583
Indian scouts and recruits.....		1,579	1,579
Total.....			64,586

U. S. VOLUNTEERS.

General officers and staff corps.....	260
1 regiment of cavalry.....	1,284
24 regiments of infantry.....	32,616
Porto Rico battalion.....	414
Total.....	34,574

RECAPITULATION.

Regular Army.....	64,586
U. S. Volunteers.....	34,574
Grand total.....	99,160

In 1899 the Regular Army was distributed as follows:

	Officers.	Enlisted men.
In Cuba.....	334	10,796
In Porto Rico.....	87	2,885
On the continent of North America.....	910	17,317
In Hawaii.....	12	453
In the Philippine Islands.....	905	30,578
Total.....	2,248	61,999

American forces in the Philippines, August 15, 1899, approximately, 31,000.

The approximate strength of the Army of the United States on June 30, 1900, consisted of:

	Officers.	Enlisted men.
Regulars.....	2,550	65,000
Volunteers.....	1,250	31,000

SUBSISTENCE DEPARTMENT.

Number of claims on hand received and disposed of during the fiscal year ending June 30, 1899:

	Claims for commutation of rations.		Total.
	While held as prisoner of war in rebel States.	While on furlough and miscellaneous claims.	
There were on hand June 30, 1898.....	32	357	389
Received during the fiscal year.....	320	5,320	5,640
Total.....	352	5,677	6,029
Disposed of during the year.....	284	4,020	4,304
On hand June 30, 1899.....	68	1,657	1,725

The number of letters, indorsements, and postal cards written during the year in connection with the above claims was 7,091.

Depots of supplies.

Subsistence stores in vast quantities were accumulated at various points during the period of the war with Spain. The principal places at which these accumulations took place were Tampa, Savannah, Huntsville, Chickamauga Park, Atlanta, and Camp Meade. As soon as practicable after the removal of troops from the vicinity of these places such of the stores as were in fit condition were distributed to other points where needed, and such as had undergone deterioration were disposed of by condemnation and sale. The leaving of these accumulations on hand was in large part due to the sudden termination of the war, and the consequent early dissolution of the Volunteer Army.

Issues to Spanish prisoners of war were made to the value of \$206,398.06.

Special issues have been made up to June 30, 1899, as follows:

Persons, etc., to whom issued.	Value.	Refunded.
United States marines en route from San Francisco to Manila.....	\$1,574.34	\$1,574.34
United States marines at San Juan, Porto Rico.....	1,319.61	1,137.27
Sufferers by overflow of Chattahoochee River.....	13,780.04	
Tidal-wave sufferers in Georgia.....	3,577.14	
Texas flood sufferers.....	430.96	
Porto Rican forces.....	537.83	
Destitute Porto Ricans.....	6,319.74	324.71
Cuban destitutes.....	1,417,554.07	52,285.15
Cuban army.....	26,654.08	
Cuban guards.....	485.15	
Cuban rural police.....	7,988.31	7,988.31
Insane asylum at Ferso, Cuba.....	681.42	681.42
Post-office clerks at Ponce and Utuado, Porto Rico.....	65.59	
Red Cross hospital at Ponce, Porto Rico.....	94.05

Destitute Filipinos.....	1,161.71	
Destitute Macabebes.....	1,141.90	

Clerical work, office Commissary-General of Subsistence.

Statement of accounts current and returns on hand June 30, 1898, received and examined during fiscal year ending June 30, 1899, and on hand at close of same awaiting examination:

	Accounts current.	Returns of stores.	Returns of property.	Total.
On hand June 30, 1898.....	29	52	1	82
Received during fiscal year 1899.....	7,111	4,439	1,738	13,318
Total.....	7,140	4,491	1,739	13,470
Examined during the year.....	6,802	3,326	1,502	11,730
On hand June 30, 1899.....	338	1,165	237	1,740

The examination of the accounts current required the verification of 158,242 vouchers; the returns of subsistence stores, 40,923, and the returns of subsistence property, 4,828 vouchers.

In connection with the examinations 5,947 postal cards were used, and 8,150 letters and 6,188 indorsements were written and recorded.

Contracts for supplies, etc., to the number of 386 were received and acted on. Certificates of services as acting commissary of subsistence were issued to the number of 607, and of nonindebtedness to the number of 6,156.

SURGEON-GENERAL.

The Surgeon-General, under the immediate direction of the Secretary of War, is charged with the administrative duties of the Medical Department, the designation of the stations of medical officers, and the issuing of all orders and instructions relating to their professional duties. He directs as to the selection, purchase, and distribution of the medical supplies of the Army. The Army Medical Museum and the official publications of the Surgeon-General's Office are also under his direct control.

TRANSPORTATION OF SPANISH PRISONERS OF WAR TO SPAIN.

The following is a statement showing the dates of embarkation, names of vessels, and number of officers, enlisted men, and others who took passage:

Date of embarkation.	Name of vessel.	Officers.	Enlisted men.	Women and children over 5 years of age.	Priests and Sisters of Charity.	Total.
Aug. 9	Alicante	38	1,069	6	11	1,124

QUARTERMASTER'S DEPARTMENT.

The records of the Quartermaster's Department show that troops and civilian employees were transported by sea between April 1 and September 15, 1898, as follows:

	Men.
To Cuba	28,195
To Porto Rico	17,460
To Manila	16,405
To Honolulu	629
Returned from Cuba	21,686
Returned from Porto Rico	5,541
Civilian employees transported	2,920
Total	92,836

TRANSPORTATION OF THE ARMY.

Transport service, Army.—Transports, freighters, and stock boats chartered, 104; tugs and lighters, 18; transports purchased, 18; hospital ships, 2; tugs and lighters, 12.

American troops transported by, from declaration of the war with Spain to August 15, 1899: To Cuba, 65,800; to Manila, 39,350; to Porto Rico, 23,299; to Hawaii, 1,408. From Cuba, 54,377; from Manila, 12,000; from Porto Rico, 20,784; from Hawaii, 920. Total movement, 217,938.

Vessels in, plying between United States, Cuba, Porto Rico, and Philippine Islands, for troops, 36; animals, 12.

Repatriation of American troops from the Philippines to August 15, 1899: Regulars, 5 officers, 95 men; volunteers, 309 officers, 6,671 men.

American, returned from Philippines to August 15, 1899: Regulars, 1 officer, 98 men; volunteers, 309 officers, 6,671 men.

Wagons, mules, and horses purchased since declaration of war, April 25, 1898, to August 15, 1899: Wagons, 6,462; mules, 20,521; horses, 19,170.

Rail.—Number of American troops transported by rail from declaration of war to August 15, 1899, 716,890 officers and men.

This transportation has involved the use of nearly every railroad in the United States, as well as the transportation of every organization connected with the Army, and some of these organizations have been transported several times, thus accounting for the large aggregate of officers and men.

Competition, after public advertisement, has governed all of the movements of troops, and the lowest rates by desirable routes have always been accepted. This has conduced the cost to not exceeding one-half the rates charged the general public by these railroads in published tariffs, and all the movements have been effected with a phenomenal absence of accidents or any perplexing delay, so that the troops have been placed from point to point where required, with a rapidity and safety which has been alike creditable to the railway companies and to the officers of the Quartermaster's Department who were charged with making the necessary arrangements.

On all journeys requiring more than one night's travel the men as well as the officers have been provided with sleeping-car accommodations, or else a full double seat in coach for each man.

A hospital train, consisting of Pullman equipments and all necessary outfit for proper care and nourishment en route, was kept in constant service during the war to move the sick from camps to the large improved hospitals situated in different parts of the country, and no expense or care was omitted to furnish them with every convenience and comfort on their journeys.

In addition to the 716,890 officers and men transported by the Quartermaster's Department up to August 15, 1899, there have been reported to June 30, 1900, 33,494, making a total number of 750,384 to that date.

Number of officers, enlisted men, and civilians transported on army transports between August 15, 1899, and June 30, 1900.

From the United States to the Philippines:	
Officers	1,542
Enlisted men	37,602
Civilians	1,346
	40,490
From the Philippines to the United States:	
Officers	518
Enlisted men	10,200
Civilians	143
	10,861
From the United States to Honolulu:	
Officers	5
Enlisted men	44
Civilians	76
	125
From New York to Cuba:	
Officers	137
Enlisted men	2,230
Civilians	602
	2,969

Number of officers, enlisted men, and civilians, etc.—Continued.

From Cuba to New York:	
Officers	89
Enlisted men	2,104
Civilians	3,383
Remains	310
	5,886
From New York to Porto Rico:	
Officers	60
Enlisted men	617
Civilians	376
	1,053
From Porto Rico to New York:	
Officers	15
Enlisted men	375
Civilians	198
	588
Total	61,972

Between August 15, 1899, and June 30, 1900, there were 23 vessels chartered, 18 of which were discharged before June 30, 1900.

Between same dates there were 6 vessels purchased.

Statement of Spanish prisoners sent from Manila to Spain from November 7, 1898, to June 5, 1900.

Officers	1,579
Soldiers	13,425

Spring wagons	200
Wagonettes	38
Miscellaneous wagons	248
Ambulances:	
Rucker	1
Red Cross	140

On the 20th of November, 1898, we had 8 vessels owned by the United States engaged in the transportation of troops and freight between the United States and the Philippines, 25 vessels chartered and fitted up by us engaged in the same service, and 18 vessels chartered and fitted up by us engaged in the transportation of animals, forage, and freight, making a total transport fleet in the Philippine service of 51 steam vessels.

The report of the Quartermaster-General shows that during the fiscal year ending June 30, 1899, that branch of the service transported between Cuba, Porto Rico, Honolulu, the Philippines, and the United States, 202,587 passengers, 27,353 animals, and 86,150 tons of freight, and that transportation was furnished during the same period, by rail and water, exclusive of the army transport service, for 1,664,383 persons, 72,711 animals, and 544,644 tons of material. The efficiency and safety of this service and the freedom from disease and accident which have characterized it are very gratifying.

The transport service on the Atlantic is conducted entirely by vessels owned by the Government, which now make regular trips between New York, Habana, Santiago, and Porto Rico. They carried during the six months from January 1 to June 30, 1899, 45,507 passengers, 29,133 tons of freight, 2,449 parcels and pieces of baggage, and 6,558 animals. The total cost of that service for this period was \$1,697,744.49, including the cost of rations, amounting to \$90,500.

The following is a list of the army transports purchased during the last fiscal year, showing their new names, class, cost, and where they are now employed:

Old name of vessel.	New name.	Tonnage.	Class.	Cost.	Where employed.
Mohawk	Grant	5,658	Troop ship	\$660,000	In Pacific fleet.
Mobile	Sherman	5,780	do	660,000	Do.

Total number of passengers transported during the fiscal year to Manila from San Francisco	30,643
From New York	5,582
Total	36,225

Since the close of the last fiscal year 701 officers, 20,905 enlisted men, and 194 civilians have been transported to Manila from San Francisco.

	Passengers.
From the United States to Cuba	54,136
From Cuba to the United States	58,113
From the United States to Porto Rico	25,459
From Porto Rico to the United States	22,903
From the United States to the Philippines	36,225
From the Philippines to the United States	2,400
From the United States to Honolulu	1,901
From Honolulu to the United States	1,450
Total	202,587

From May 25, 1898, to October 10, 1899, a total of 270,154 passengers have been

transported to Cuba, Porto Rico, Honolulu, and the Philippines, and returned to the United States from those places by the army transports of this Department.

The reports received show that during the year there were shipped—

From the United States to—	Animals.
Cuba	17,141
Porto Rico	5,722
Manila	865
From Cuba to the United States	1,772
From Porto Rico to the United States	1,853
Total	27,353

The shipments of freight, as shown by the reports received, have been on the—	Tons.
Atlantic	49,074
Pacific	37,076
Total	86,150

In addition there have been transported large quantities of miscellaneous packages and baggage not included in the above.

The sum of \$5,355,470.23 was paid during the past fiscal year for charter of all classes of vessels employed in the transport service; the sum of \$7,445,700 for the purchase of all classes of vessels, and the sum of \$2,654,696.92 for fitting up army transport ships and for supplies purchased for their maintenance at the two principal ports of the transport service, including pay of employees connected therewith.

The total amount of coal purchased during the fiscal year for use of transport vessels, as far as reported, is 121,200 tons.

VOLUNTEER ENGINEERS.

By the act approved May 11, 1898, Congress authorized the organization of a volunteer brigade of engineers from the nation at large, to consist of not more than three regiments and not more than 3,500 men possessing the special qualifications for engineer troops, the officers of the brigade to be appointed by the Secretary of War.

The same act authorized the organization of an additional volunteer force not exceeding 10,000 men possessing immunity from disease incident to tropical climates, the officers of the regiment being appointed by the President by and with the consent of the Senate. Ten regiments were organized under this act, designated "United States Volunteer Infantry, numbered from 1 to 10, inclusive." Four of these regiments, namely, 7, 8, 9, and 10, were composed of colored enlisted men and colored commissioned officers below the grade of captain. All of these regiments were raised in the Southern States.

Under section 7 of the act approved April 22, 1898, three regiments of volunteer cavalry were raised among the "cowboys" of the Western frontier, and known as the First, Second, and Third United States Volunteer Cavalry.

Under the provisions of the act approved March 2, 1899, "to meet the present exigencies of the military service the President is hereby authorized to maintain the Regular Army at a strength of not exceeding 65,000 enlisted men," etc., "and raise a force of not more than 35,000 volunteers, to be recruited as he may determine from the country at large * * * and to organize the same into not more than 27 regiments organized as are infantry regiments of war strength in the Regular Army, and 3 regiments to be composed of men of special qualifications in horsemanship and marksmanship to be organized as cavalry for service, mounted or dismounted," and "such increased regular and volunteer force shall continue in service only during the necessity therefor, and not later than July 1, 1901."

Within the President's discretion on July 5, 1899, he authorized the enlistment of 10 regiments of infantry, known as U. S. Volunteer Infantry, and numbered from 26 to 35 consecutively, and General Otis was authorized to raise 3 regiments from among those soldiers in the Philippines who desired to reenlist, and these regiments are known as 11th U. S. Volunteer Cavalry, 36th and 37th U. S. Volunteer Infantry, and subsequently on August 17 10 additional regiments of infantry was authorized to be raised, and are numbered from 38 to 47 consecutively, and 2 regiments of colored troops are being recruited and are known as the 48th and 49th U. S. Volunteer Infantry. In these regiments the full quota of men authorized by the above-mentioned act are to be enlisted, and together with the Regular Army, already at its maximum, the present strength of the two branches of the services is approximately 100,000 men.

VESELS.

Spanish vessels destroyed by United States Navy, 17; captured, 9; prizes captured, 113.

Destruction of Spanish fleet, consisting of *Maria Teresa*, *Oquendo*, *Cristobal Colon*, *Furor*, and *Pluton*, under Admiral Cervera, by American Navy, under Admirals Sampson and Schley, which included the *Brooklyn*, *Oregon*, *Iowa*, *Texas*, and *Gloucester*, July 3, 1898. American loss, 1 killed, 2 wounded. Cervera and Spanish officers taken prisoners.

WAR DEPARTMENT.

The law provides that there shall be at the seat of government an executive department to be known as the Department of War, and a Secretary of War, who shall be the head thereof. The Department of War and the office of the Secretary of War were created by the act of August 7, 1789. The Secretary of War succeeded to the office and functions of the Secretary at War, whose powers and duties were defined in an ordinance of Congress dated January 27, 1785. The office of the Secretary of War included that of Secretary of the Navy until April 30, 1798, when the Department of the Navy was established.

APPENDIX 1.

MESSAGE OF THE PRESIDENT OF THE UNITED STATES, COMMUNICATED TO THE TWO HOUSES OF CONGRESS, ON THE RELATIONS OF THE UNITED STATES TO SPAIN BY REASON OF WARFARE IN THE ISLAND OF CUBA

To the Congress of the United States:

Obedient to that precept of the Constitution which commands the President to give from time to time to the Congress information of the state of the Union and to recommend to their consideration such measures as he shall judge necessary and expedient, it becomes my duty now to address your body with regard to the grave crisis that has arisen in the relations of the United States to Spain by reason of the warfare that for more than three years has raged in the neighboring island of Cuba.

I do so because of the intimate connection of the Cuban question with the state of our own Union and the grave relation the course which it is now incumbent upon the nation to adopt must needs bear to the traditional policy of our Government if it is to accord with the precepts laid down by the founders of the Republic and religiously observed by succeeding Administrations to the present day.

The present revolution is but the successor of other similar insurrections which have occurred in Cuba against the dominion of Spain, extending over a period of nearly half a century, each of which, during its progress, has subjected the United States to great effort and expense in enforcing its neutrality laws, caused enormous losses to American trade and commerce, caused irritation, annoyance,

and disturbance among our citizens, and, by the exercise of cruel, barbarous, and uncivilized practices of warfare, shocked the sensibilities and offended the humane sympathies of our people.

Since the present revolution began, in February, 1895, this country has seen the fertile domain at our threshold ravaged by fire and sword in the course of a struggle unequalled in the history of the island and rarely paralleled as to the numbers of the combatants and the bitterness of the contest by any revolution of modern times where a dependent people striving to be free have been opposed by the power of the sovereign state.

Our people have beheld a once prosperous community reduced to comparative want, its lucrative commerce virtually paralyzed, its exceptional productiveness diminished, its fields laid waste, its mills in ruins, and its people perishing by tens of thousands from hunger and destitution. We have found ourselves constrained, in the observance of that strict neutrality which our laws enjoin and which the law of nations commands, to police our own waters and watch our own seaports in prevention of any unlawful act in aid of the Cubans.

Our trade has suffered; the capital invested by our citizens in Cuba has been largely lost, and the temper and forbearance of our people have been so sorely tried as to beget a perilous unrest among our own citizens which has inevitably found its expression from time to time in the National Legislature, so that issues wholly external to our own body politic engross attention and stand in the way of that close devotion to domestic advancement that becomes a self-contained commonwealth whose primal maxim has been the avoidance of all foreign entanglements. All this must needs awaken, and has, indeed, aroused the utmost concern on the part of this Government, as well during my predecessor's term as in my own.

In April, 1896, the evils from which our country suffered through the Cuban war became so onerous that my predecessor made an effort to bring about a peace through the mediation of this Government in any way that might tend to an honorable adjustment of the contest between Spain and her revolted colony, on the basis of some effective scheme of self-government for Cuba under the flag and sovereignty of Spain. It failed through the refusal of the Spanish Government then in power to consider any form of mediation or, indeed, any plan of settlement which did not begin with the actual submission of the insurgents to the mother country, and then only on such terms as Spain herself might see fit to grant. The war continued unabated. The resistance of the insurgents was in no wise diminished.

The efforts of Spain were increased, both by the dispatch of fresh levies to Cuba and by the addition to the horrors of the strife of a new and inhuman phase happily unprecedented in the modern history of civilized Christian peoples. The policy of devastation and concentration, inaugurated by the captain-general's bando of October 21, 1896, in the province of Pinar del Rio, was thence extended to embrace all of the island to which the power of the Spanish arms was able to reach by occupation or by military operations. The peasantry, including all dwelling in the open agricultural interior, were driven into the garrison towns or isolated places held by the troops.

The raising and movement of provisions of all kinds were interdicted. The fields were laid waste, dwellings unroofed and fired, mills destroyed, and, in short, everything that could desolate the land and render it unfit for human habitation or support was commanded by one or the other of the contending parties and executed by all the powers at their disposal.

By the time the present Administration took office, a year ago, reconcentration—so called—had been made effective over the better part of the four central and western provinces—Santa Clara, Matanzas, Habana, and Pinar del Rio.

The agricultural population to the estimated number of 300,000 or more was herded within the towns and their immediate vicinity, deprived of the means of support, rendered destitute of shelter, left poorly clad, and exposed to the most unsanitary conditions. As the scarcity of food increased with the devastation of the depopulated areas of production, destitution and want became misery and starvation. Month by month the death rate increased in an alarming ratio. By March, 1897, according to conservative estimates from official Spanish sources, the mortality among the reconcentrados, from starvation and the diseases thereto incident, exceeded 50 per centum of their total number.

No practical relief was accorded to the destitute. The overburdened towns, already suffering from the general dearth, could give no aid. So-called "zones of cultivation" established within the immediate areas of effective military control about the cities and fortified camps proved illusory as a remedy for the suffering. The unfortunate, being for the most part women and children, with aged and helpless men, enfeebled by disease and hunger, could not have tilled the soil without tools, seed, or shelter for their own support or for the supply of the cities. Reconcentration, adopted avowedly as a war measure in order to cut off the resources of the insurgents, worked its predestined result. As I said in my message of last December, it was not civilized warfare; it was extermination. The only peace it could beget was that of the wilderness and the grave.

Meanwhile the military situation in the island had undergone a noticeable change. The extraordinary activity that characterized the second year of the war, when the insurgents invaded even the hitherto unharmed fields of Pinar del Rio and carried havoc and destruction up to the walls of the city of Habana itself, had relapsed into a dogged struggle in the central and eastern provinces. The Spanish arms regained a measure of control in Pinar del Rio and parts of Havana, but, under the existing conditions of the rural country, without immediate improvement of their productive situation. Even thus partially restricted, the revolutionists held their own, and their conquest and submission, put forward by Spain as the essential and sole basis of peace, seemed as far distant as at the outset.

In this state of affairs my Administration found itself confronted with the grave problem of its duty. My message of last December reviewed the situation, and narrated the steps taken with a view to relieving its acuteness and opening the way to some form of honorable settlement. The assassination of the prime minister, Canovas, led to a change of government in Spain. The former administration, pledged to subjugation without concession, gave place to that of a more liberal party, committed long in advance to a policy of reform involving the wider principle of home rule for Cuba and Porto Rico.

The overtures of this Government, made through its new envoy, General Woodford, and looking to an immediate and effective amelioration of the condition of the island, although not accepted to the extent of admitted mediation in any shape, were met by assurances that home rule, in an advanced phase, would be forthwith offered to Cuba, without waiting for the war to end, and that more humane methods should thenceforth prevail in the conduct of hostilities. Coincidentally with these declarations, the new Government of Spain continued and completed the policy already begun by its predecessor, of testifying friendly regard for this nation by releasing American citizens held under one charge or another connected with the insurrection, so that by the end of November not a single person entitled in any way to our national protection remained in a Spanish prison.

While these negotiations were in progress the increasing destitution of the unfortunate reconcentrados and the alarming mortality among them claimed earnest attention. The success which had attended the limited measure of relief extended to the suffering American citizens among them by the judicious expenditure through the consular agencies of the money appropriated expressly for their succor by the joint resolution approved May 24, 1897, prompted the humane extension of a similar scheme of aid to the great body of sufferers. A suggestion to this end was acquiesced in by the Spanish authorities. On the 24th of December last I caused to be issued an appeal to the American people, inviting

contributions in money or in kind for the succor of the starving sufferers in Cuba, following this on the 8th of January by a similar public announcement of the formation of a central Cuban relief committee, with headquarters in New York City, composed of three members, representing the American National Red Cross and the religious and business elements of the community.

The efforts of that committee have been untiring and have accomplished much. Arrangements for free transportation to Cuba have greatly aided the charitable work. The president of the American Red Cross and representatives of other contributory organizations have generously visited Cuba and cooperated with the consul-general and the local authorities to make effective distribution of the relief collected through the efforts of the central committee. Nearly \$200,000 in money and supplies has already reached the sufferers, and more is forthcoming. The supplies are admitted duty free, and transportation to the interior has been arranged, so that the relief, at first necessarily confined to Habana and the larger cities, is now extended through most, if not all, of the towns where suffering exists.

Thousands of lives have already been saved. The necessity for a change in the condition of the reconcentrados is recognized by the Spanish Government. Within a few days past the orders of General Weyler have been revoked; the reconcentrados, it is said, are to be permitted to return to their homes, and aided to resume the self-supporting pursuits of peace. Public works have been ordered to give them employment, and a sum of \$600,000 has been appropriated for their relief.

The war in Cuba is of such a nature that short of subjugation or extermination a final military victory for either side seems impracticable. The alternative lies in the physical exhaustion of the one or the other party, or perhaps of both—a condition which in effect ended the ten years' war by the truce of Zanjón. The prospect of such a protraction and conclusion of the present strife is a contingency hardly to be contemplated with equanimity by the civilized world, and least of all by the United States, affected and injured as we are, deeply and intimately, by its very existence.

Realizing this, it appeared to be my duty, in a spirit of true friendliness, no less to Spain than to the Cubans, who have so much to lose by the prolongation of the struggle, to seek to bring about an immediate termination of the war. To this end I submitted, on the 27th ultimo, as a result of much representation and correspondence, through the United States minister at Madrid, propositions to the Spanish Government looking to an armistice until October 1 for the negotiation of peace with the good offices of the President.

In addition, I asked the immediate revocation of the order of reconcentration, so as to permit the people to return to their farms and the needy to be relieved with provisions and supplies from the United States, cooperating with the Spanish authorities, so as to afford full relief.

The reply of the Spanish cabinet was received on the night of the 31st ultimo. It offered, as the means to bring about peace in Cuba, to confide the preparation thereof to the Insular Parliament, inasmuch as the concurrence of that body would be necessary to reach a final result, it being, however, understood that the powers reserved by the constitution to the Central Government are not lessened or diminished. As the Cuban Parliament does not meet until the 4th of May next, the Spanish Government would not object, for its part, to accept at once a suspension of hostilities if asked for by the insurgents from the general in chief, to whom it would pertain, in such case, to determine the duration and conditions of the armistice.

The propositions submitted by General Woodford and the reply of the Spanish Government were both in the form of brief memoranda, the texts of which are before me, and are substantially in the language above given. The function of the Cuban Parliament in the matter of "preparing" peace and the manner of its doing so are not expressed in the Spanish memorandum; but from General Woodford's explanatory reports of preliminary discussions preceding the final conference it is understood that the Spanish Government stands ready to give the Insular Congress full powers to settle the terms of peace with the insurgents—whether by direct negotiation or indirectly by means of legislation does not appear.

With this last overture in the direction of immediate peace, and its disappointing reception by Spain, the Executive is brought to the end of his effort.

In my annual message of December last I said: "Of the untied measures there remain only: Recognition of the insurgents as belligerents; recognition of the independence of Cuba; neutral intervention to end the war by imposing a rational compromise between the contestants, and intervention in favor of one or the other party. I speak not of forcible annexation, for that can not be thought of. That, by our code of morality, would be criminal aggression."

Thereupon I reviewed these alternatives, in the light of President Grant's measured words, uttered in 1875, when after seven years of sanguinary, destructive, and cruel hostilities in Cuba he reached the conclusion that the recognition of the independence of Cuba was impracticable and indefensible; and that the recognition of belligerence was not warranted by the facts according to the tests of public law. I commented especially upon the latter aspect of the question, pointing out the inconveniences and positive dangers of a recognition of belligerence which, while adding to the already onerous burdens of neutrality within our own jurisdiction, could not in any way extend our influence or effective offices in the territory of hostilities.

Nothing has since occurred to change my view in this regard; and I recognize as fully now as then that the issuance of a proclamation of neutrality, by which process the so-called recognition of belligerents is published, could, of itself and unattended by other action, accomplish nothing toward the one end for which we labor—the instant pacification of Cuba and the cessation of the misery that afflicts the island.

Turning to the question of recognizing at this time the independence of the present insurgent government in Cuba, we find safe precedents in our history from an early day. They are well summed up in President Jackson's message to Congress, December 21, 1836, on the subject of the recognition of the independence of Texas. He said:

"In all the contests that have arisen out of the revolutions of France, out of the disputes relating to the Crowns of Portugal and Spain, out of the separation of the American possessions of both from the European Governments, and out of the numerous and constantly occurring struggles for dominion in Spanish America, so wisely consistent with our just principles has been the action of our Government that we have, under the most critical circumstances, avoided all censures, and encountered no other evil than that produced by a transient estrangement of good will in those against whom we have been by force of evidence compelled to decide.

"It has thus made known to the world that the uniform policy and practice of the United States is to avoid all interference in disputes which merely relate to the internal government of other nations, and eventually to recognize the authority of the prevailing party without reference to our particular interests and views or to the merits of the original controversy."

"* * * But on this, as on every other trying occasion, safety is to be found in a rigid adherence to principle.

"In the contest between Spain and the revolted colonies we stood aloof, and waited not only until the ability of the new States to protect themselves was fully established, but until the danger of their being again subjugated had entirely passed away. Then, and not until then, were they recognized."

"Such was our course in regard to Mexico herself. * * * It is true that with regard to Texas the civil authority of Mexico has been expelled, its invading army

defeated, the chief of the Republic himself captured, and all present power to control the newly-organized government of Texas annihilated within its confines; but, on the other hand, there is, in appearance at least, an immense disparity of physical force on the side of Texas. The Mexican Republic, under another Executive, is rallying its forces under a new leader and menacing a fresh invasion to recover its lost dominion.

"Upon the issue of this threatened invasion the independence of Texas may be considered as suspended; and were there nothing peculiar in the relative situation of the United States and Texas, our acknowledgment of its independence at such a crisis could scarcely be regarded as consistent with that prudent reserve with which we have hitherto held ourselves bound to treat all similar questions."

Thereupon Andrew Jackson proceeded to consider the risk that there might be imputed to the United States motives of selfish interest in view of the former claim on our part to the territory of Texas, and of the avowed purpose of the Texans in seeking recognition of independence as an incident to the incorporation of Texas in the Union, concluding thus:

"Prudence, therefore, seems to dictate that we should still stand aloof and maintain our present attitude, if not until Mexico itself or one of the great foreign powers shall recognize the independence of the new government, at least until the lapse of time or the course of events shall have proved beyond cavil or dispute the ability of the people of that country to maintain their separate sovereignty and to uphold the government constituted by them. Neither of the contending parties can justly complain of this course. By pursuing it we are but carrying out the long-established policy of our Government, a policy which has secured to us respect and influence abroad and inspired confidence at home."

These are the words of the resolute and patriotic Jackson. They are evidence that the United States, in addition to the test imposed by public law as the condition of the recognition of independence by a neutral state (to wit, that the revolted state shall "constitute in fact a body politic, having a government in substance as well as in name, possessed of the elements of stability," and forming de facto, "if left to itself, a state among the nations, reasonably capable of discharging the duties of a state"), has imposed for its own governance in dealing with cases like these the further condition that recognition of independent statehood is not due to a revolted dependency until the danger of its being again subjugated by the parent state has entirely passed away.

This extreme test was, in fact, applied in the case of Texas. The Congress, to whom President Jackson referred the question as one "probably leading to war," and therefore a proper subject for "a previous understanding with that body, by whom war can alone be declared, and by whom all the provisions for sustaining its perils must be furnished," left the matter of the recognition of Texas to the discretion of the Executive, providing merely for the sending of a diplomatic agent when the President should be satisfied that the Republic of Texas had become "an independent State." It was so recognized by President Van Buren, who commissioned a chargé d'affaires March 7, 1837, after Mexico had abandoned an attempt to reconquer the Texan territory, and when there was at the time no bona fide contest going on between the insurgent province and its former sovereign.

I said in my message of December last, "It is to be seriously considered whether the Cuban insurrection possesses beyond dispute the attributes of statehood which alone can demand the recognition of belligerency in its favor." The same requirement must certainly be no less seriously considered when the graver issue of recognizing independence is in question, for no less positive test can be applied to the greater act than to the lesser; while, on the other hand, the influences and consequences of the struggle upon the internal policy of the recognizing State, which form important factors when the recognition of belligerency is concerned, are secondary, if not rightly eliminable, factors when the real question is whether the community claiming recognition is or is not independent beyond peradventure.

Nor from the standpoint of expediency do I think it would be wise or prudent for this Government to recognize at the present time the independence of the so-called Cuban republic. Such recognition is not necessary in order to enable the United States to intervene and pacify the island. To commit this country now to the recognition of any particular government in Cuba might subject us to embarrassing conditions of international obligation toward the organization so recognized. In case of intervention our conduct would be subject to the approval or disapproval of such government. We would be required to submit to its direction and to assume to it the mere relation of a friendly ally.

When it shall appear hereafter that there is within the island a government capable of performing the duties and discharging the functions of a separate nation, and having, as a matter of fact, the proper forms and attributes of nationality, such government can be promptly and readily recognized and the relations and interests of the United States with such nation adjusted.

There remain the alternative forms of intervention to end the war, either as an impartial neutral by imposing a rational compromise between the contestants, or as the active ally of the one party or the other.

As to the first, it is not to be forgotten that during the last few months the relation of the United States has virtually been one of friendly intervention in many ways, each not of itself conclusive, but all tending to the exertion of a potential influence toward an ultimate pacific result, just and honorable to all interests concerned. The spirit of all our acts hitherto has been an earnest, unselfish desire for peace and prosperity in Cuba, untarnished by differences between us and Spain, and unstained by the blood of American citizens.

The forcible intervention of the United States as a neutral to stop the war, according to the large dictates of humanity and following many historical precedents where neighboring States have interfered to check the hopeless sacrifices of life by internecine conflicts beyond their borders, is justifiable on rational grounds. It involves, however, hostile constraint upon both the parties to the contest as well to enforce a truce as to guide the eventual settlement.

The grounds for such intervention may be briefly summarized as follows:

First. In the cause of humanity and to put an end to the barbarities, bloodshed, starvation, and horrible miseries now existing there, and which the parties to the conflict are either unable or unwilling to stop or mitigate. It is no answer to say this is all in another country, belonging to another nation, and is therefore none of our business. It is specially our duty, for it is right at our door.

Second. We owe it to our citizens in Cuba to afford them that protection and indemnity for life and property which no government there can or will afford, and to that end to terminate the conditions that deprive them of legal protection.

Third. The right to intervene may be justified by the very serious injury to the commerce, trade, and business of our people, and by the wanton destruction of property and devastation of the island.

Fourth, and which is of the utmost importance. The present condition of affairs in Cuba is a constant menace to our peace, and entails upon this Government an enormous expense. With such a conflict waged for years in an island so near us, and with which our people have such trade and business relations—when the lives and liberty of our citizens are in constant danger and their property destroyed and themselves ruined—where our trading vessels are liable to seizure and are seized at our very door by war ships of a foreign nation, the expeditions of filibustering that we are powerless to prevent altogether, and the irritating questions and entanglements thus arising—all these, and others that I need not mention, with the resulting strained relations, are a constant menace to our peace, and compel us to keep on a semiwar footing with a nation with which we are at peace.

These elements of danger and disorder already pointed out have been strikingly illustrated by a tragic event which has deeply and justly moved the Amer-

ican people. I have already transmitted to Congress the report of the naval court of inquiry on the destruction of the battle ship *Maine* in the harbor of Habana during the night of the 15th of February. The destruction of that noble vessel has filled the national heart with inexpressible horror. Two hundred and fifty-eight brave sailors and marines and two officers of our Navy, reposing in the fancied security of a friendly harbor, have been hurled to death, grief and want brought to their homes and sorrow to the nation.

The naval court of inquiry, which, it is needless to say, commands the unqualified confidence of the Government, was unanimous in its conclusion that the destruction of the *Maine* was caused by an exterior explosion, that of a submarine mine. It did not assume to place the responsibility. That remains to be fixed.

In any event the destruction of the *Maine*, by whatever exterior cause, is a patent and impressive proof of a state of things in Cuba that is intolerable. That condition is thus shown to be such that the Spanish Government can not assure safety and security to a vessel of the American Navy in the harbor of Habana on a mission of peace, and rightfully there.

Further referring in this connection to recent diplomatic correspondence, a dispatch from our minister to Spain, of the 26th ultimo, contained the statement that the Spanish minister for foreign affairs assured him positively that Spain will do all that the highest honor and justice require in the matter of the *Maine*. The reply above referred to of the 31st ultimo also contained an expression of the readiness of Spain to submit to an arbitration all the differences which can arise in this matter, which is subsequently explained by the note of the Spanish minister at Washington of the 10th instant, as follows:

"As to the question of fact which springs from the diversity of views between the reports of the American and Spanish boards, Spain proposes that the facts be ascertained by an impartial investigation by experts, whose decision Spain accepts in advance."

To this I have made no reply.

President Grant, in 1875, after discussing the phases of the contest as it then appeared, and its hopeless and apparent indefinite prolongation, said:

"In such an event, I am of opinion that other nations will be compelled to assume the responsibility which devolves upon them, and to seriously consider the only remaining measures possible—mediation and intervention. Owing, perhaps, to the large expanse of water separating the island from the peninsula, the contending parties appear to have within themselves no depository of common confidence, to suggest wisdom when passion and excitement have their sway, and to assume the part of peacemaker."

"In this view in the earlier days of the contest the good offices of the United States as a mediator were tendered in good faith, without any selfish purpose, in the interest of humanity and in sincere friendship for both parties, but were at the time declined by Spain, with the declaration, nevertheless, that at a future time they would be indispensable. No intimation has been received that in the opinion of Spain that time has been reached. And yet the strife continues with all its dread horrors and all its injuries to the interests of the United States and of other nations."

"Each party seems quite capable of working great injury and damage to the other, as well as to all the relations and interests dependent on the existence of peace in the island; but they seem incapable of reaching any adjustment, and both have thus far failed of achieving any success whereby one party shall possess and control the island to the exclusion of the other. Under these circumstances, the agency of others, either by mediation or by intervention, seems to be the only alternative which must sooner or later be invoked for the termination of the strife."

In the last annual message of my immediate predecessor during the pending struggle, it was said:

"When the inability of Spain to deal successfully with the insurrection has become manifest, and it is demonstrated that her sovereignty is extinct in Cuba for all purposes of its rightful existence, and when a hopeless struggle for its reestablishment has degenerated into a strife which means nothing more than the useless sacrifice of human life and the utter destruction of the very subject-matter of the conflict, a situation will be presented in which our obligations to the sovereignty of Spain will be superseded by higher obligations, which we can hardly hesitate to recognize and discharge."

In my annual message to Congress, December last, speaking to this question, I said:

"The near future will demonstrate whether the indispensable condition of a righteous peace, just alike to the Cubans and to Spain, as well as equitable to all our interests so intimately involved in the welfare of Cuba, is likely to be attained. If not, the exigency of further and other action by the United States will remain to be taken. When that time comes that action will be determined in the line of indisputable right and duty. It will be faced, without misgiving or hesitancy, in the light of the obligation this Government owes to itself, to the people who have confided to it the protection of their interests and honor, and to humanity."

"Sure of the right, keeping free from all offense ourselves, actuated only by upright and patriotic considerations, moved neither by passion nor selfishness, the Government will continue its watchful care over the rights and property of American citizens and will abate none of its efforts to bring about by peaceful agencies a peace which shall be honorable and enduring. If it shall hereafter appear to be a duty imposed by our obligations to ourselves, to civilization, and humanity to intervene with force, it shall be without fault on our part, and only because the necessity for such action will be so clear as to command the support and approval of the civilized world."

The long trial has proved that the object for which Spain has waged the war can not be attained. The fire of insurrection may flame or may smolder with varying seasons, but it has not been and it is plain that it can not be extinguished by present methods. The only hope of relief and repose from a condition which can no longer be endured is the enforced pacification of Cuba. In the name of humanity, in the name of civilization, in behalf of endangered American interests which give us the right and the duty to speak and to act, the war in Cuba must stop.

In view of these facts and of these considerations, I ask the Congress to authorize and empower the President to take measures to secure a full and final termination of hostilities between the Government of Spain and the people of Cuba, and to secure in the island the establishment of a stable government, capable of maintaining order and observing its international obligations, insuring peace and tranquility and the security of its citizens as well as our own, and to use the military and naval forces of the United States as may be necessary for these purposes.

And in the interest of humanity and to aid in preserving the lives of the starving people of the island I recommend that the distribution of food and supplies be continued, and that an appropriation be made out of the public Treasury to supplement the charity of our citizens.

The issue is now with the Congress. It is a solemn responsibility. I have exhausted every effort to relieve the intolerable condition of affairs which is at our doors. Prepared to execute every obligation imposed upon me by the Constitution and the law, I await your action.

Yesterday, and since the preparation of the foregoing message, official information was received by me that the latest decree of the Queen Regent of Spain directs General Blanco, in order to prepare and facilitate peace, to proclaim a suspension of hostilities, the duration and details of which have not yet been communicated to me.

This fact with every other pertinent consideration will, I am sure, have your just and careful attention in the solemn deliberations upon which you are about to enter. If this measure attains a successful result, then our aspirations as a Christian, peace-loving people will be realized. If it fails, it will be only another justification for our contemplated action.

WILLIAM MCKINLEY.

EXECUTIVE MANSION, April 11, 1898.

APPENDIX 2.

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION.

Whereas, by a joint resolution passed by the Congress and approved April 20, 1898, and communicated to the Government of Spain, it was demanded that said Government at once relinquish its authority and Government in the Island of Cuba, and withdraw its land and Naval forces from Cuba and Cuban waters; and the President of the United States was directed and empowered to use the entire land and Naval forces of the United States, and to call into the actual service of the United States the militia of the several States to such an extent as might be necessary to carry said resolution into effect; and

Whereas, in carrying into effect said resolution, the President of the United States deems it necessary to set on foot and maintain a blockade of the north coast of Cuba, including all ports on said coast between Cardenas and Bahia Honda and the port of Cienfuegos on the south coast of Cuba:

Now, therefore, I, William McKinley, President of the United States, in order to enforce the said resolution, do hereby declare and proclaim that the United States of America have instituted and will maintain a blockade of the north coast of Cuba, including ports on said coast between Cardenas and Bahia Honda and the port of Cienfuegos on the south coast of Cuba, aforesaid, in pursuance of the laws of the United States and the law of nations applicable to such cases. An efficient force will be posted so as to prevent the entrance and exit of vessels from the ports aforesaid. Any neutral vessel approaching any of said ports, or attempting to leave the same, without notice or knowledge of the establishment of such blockade, will be duly warned by the commander of the blockading forces, who will indorse on her register the fact and the date of such warning, where such indorsement was made; and if the same vessel shall again attempt to enter any blockaded port, she will be captured and sent to the nearest convenient port for such proceedings against her and her cargo as prize, as may be deemed advisable.

Neutral vessels lying in any of said ports at the time of the establishment of such blockade will be allowed thirty days to issue therefrom.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this 23d day of April, A. D. 1898, and of the Independence of the United States the one hundred and twenty-second.

[SEAL.]

WILLIAM MCKINLEY.

By the President:

JOHN SHERMAN,
Secretary of State.

APPENDIX 3.

[Existence of war—Spain.]

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION.

Whereas by an act of Congress approved April 25, 1898, it is declared that war exists and that war has existed since the 21st day of April, A. D. 1898, including said day, between the United States of America and the Kingdom of Spain; and

Whereas, it being desirable that such war should be conducted upon principles in harmony with the present views of nations and sanctioned by their recent practice, it has already been announced that the policy of this Government will be not to resort to privateering, but to adhere to the rules of the Declaration of Paris:

Now, therefore, I, William McKinley, President of the United States of America, by virtue of the power vested in me by the Constitution and the laws, do hereby declare and proclaim:

1. The neutral flag covers enemy's goods, with the exception of contraband of war.

2. Neutral goods, not contraband of war, are not liable to confiscation under the enemy's flag.

3. Blockades in order to be binding must be effective.

4. Spanish merchant vessels, in any ports or places within the United States, shall be allowed till May 21, 1898, inclusive, for loading their cargoes and departing from such ports or places; and such Spanish merchant vessels, if met at sea by any United States ship, shall be permitted to continue their voyage, if, on examination of their papers, it shall appear that their cargoes were taken on board before the expiration of the above term; provided, that nothing herein contained shall apply to Spanish vessels having on board any officer in the military or naval service of the enemy, or any coal (except such as may be necessary for their voyage), or any other article prohibited or contraband of war, or any dispatch of or to the Spanish Government.

5. Any Spanish merchant vessel which, prior to April 21, 1898, shall have sailed from any foreign port bound for any port or place in the United States, shall be permitted to enter such port or place, and to discharge her cargo, and afterward forthwith to depart without molestation; and any such vessel, if met at sea by any United States ship, shall be permitted to continue her voyage to any port not blockaded.

6. The right of search is to be exercised with strict regard for the rights of neutrals, and the voyages of mail steamers are not to be interfered with except on the clearest grounds of suspicion of a violation of law in respect of contraband or blockade.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, on the twenty-sixth day of April, in the year of our Lord one thousand eight hundred and ninety-eight, and of the Independence of the United States the one hundred and twenty-second.

[SEAL.]

WILLIAM MCKINLEY.

By the President:

ALVEY A. ADEE,
Acting Secretary of State.

APPENDIX 4.

[Call for volunteers—Spain.]

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION.

Whereas a joint resolution of Congress was approved on the 20th day of April, 1898, entitled "Joint resolution for the recognition of the independence of the people of Cuba, demanding that the Government of Spain relinquish its authority and government in the island of Cuba, and to withdraw its land and naval forces from Cuba and Cuban waters, and directing the President of the United States to use the land and naval forces of the United States to carry these resolutions into effect;" and

Whereas, by an act of Congress entitled "An act to provide for temporarily increasing the military establishment of the United States in time of war, and for other purposes," approved April 22, 1898, the President is authorized, in order to

raise a volunteer army, to issue his proclamation calling for volunteers to serve in the Army of the United States:

Now, therefore, I, William McKinley, President of the United States, by virtue of the power vested in me by the Constitution and the laws, and deeming sufficient occasion to exist, have thought fit to call forth, and hereby do call forth, volunteers to the aggregate number of 125,000, in order to carry into effect the purpose of the said resolution; the same to be apportioned, as far as practicable, among the several States and Territories and the District of Columbia, according to population, and to serve for two years, unless sooner discharged. The details for this object will be immediately communicated to the proper authorities through the War Department.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this twenty-third day of April, A. D. 1898, and of the Independence of the United States the one hundred and twenty-second.

[SEAL.]

WILLIAM MCKINLEY.

By the President:

JOHN SHERMAN,
Secretary of State.

APPENDIX 5.

[Second call for volunteers—Spain.]

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION.

Whereas an act of Congress was approved on the twenty-fifth day of April, 1898, entitled "An act declaring that war exists between the United States of America and the Kingdom of Spain," and

Whereas, by an act of Congress entitled "An act to provide for temporarily increasing the military establishment of the United States in time of war and for other purposes," approved April 22, 1898; the President is authorized, in order to raise a volunteer army, to issue his proclamation calling for volunteers to serve in the Army of the United States:

Now, therefore, I, William McKinley, President of the United States, by virtue of the power vested in me by the Constitution and the laws, and deeming sufficient occasion to exist, have thought fit to call forth and hereby do call forth, volunteers to the aggregate number of 75,000 in addition to the volunteers called forth by my proclamation of the twenty-third of April in the present year, the same to be apportioned, as far as practical, among the several States and Territories and the District of Columbia, according to population, and to serve for two years, unless sooner discharged. The proportion of each arm and the details of enlistment and organization will be made known through the War Department.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington, this twenty-fifth day of May, in the year of our Lord one thousand eight hundred and ninety-eight, and of the Independence of the United States the one hundred and twenty-second.

[SEAL.]

WILLIAM MCKINLEY.

By the President:

WILLIAM R. DAY,
Secretary of State.

APPENDIX 6.

[Blockade—Southern Cuba and San Juan, Porto Rico.]

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION.

Whereas, for the reasons set forth in my proclamation of April 22, 1898, a blockade of the ports on the northern coast of Cuba, from Cardenas to Bahia Honda, inclusive, and of the port of Cienfuegos, on the south coast of Cuba, was declared to have been instituted; and

Whereas, it has become desirable to extend the blockade to other Spanish ports:

Now, therefore, I, William McKinley, President of the United States, do hereby declare and proclaim that, in addition to the blockade of the ports specified in my proclamation of April 22, 1898, the United States of America has instituted and will maintain an effective blockade of all the ports on the south coast of Cuba, from Cape Frances to Cape Cruz, inclusive, and also of the port of San Juan, in the island of Porto Rico.

Neutral vessels lying in any of the ports to which the blockade is by the present proclamation extended, will be allowed thirty days to issue therefrom, with cargo.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this twenty-seventh day of June, A. D. 1898, and of the Independence of the United States the one hundred and twenty-second.

[SEAL.]

WILLIAM MCKINLEY.

By the President:

J. B. MOORE,
Acting Secretary of State.

APPENDIX 7.

[Telegram.]

ADJUTANT-GENERAL'S OFFICE,
Washington, July 18, 1898—6.30 p. m.

General SHAFTER, Santiago, Cuba:

The following is sent you for your information and guidance. It will be published in such manner, in both English and Spanish, as will give it the widest circulation in the territory under your control:

"THE SECRETARY OF WAR.

"SIR: The capitulation of the Spanish forces in Santiago de Cuba and in the eastern part of the province of Santiago, and the occupation of the territory by the forces of the United States as to the conduct which he is to observe during the military occupation.

"The first effect of the military occupation of the enemy's territory is the severance of the former political relations of the inhabitants and the establishment of a new political power. Under this changed condition of things the inhabitants, so long as they perform their duties, are entitled to security in their persons and property, and in all their private rights and relations. It is my desire that the inhabitants of Cuba should be acquainted with the purpose of the United States to discharge to the fullest extent its obligation in this regard. It will therefore be the duty of the commander of the army of occupation to announce and proclaim, in the most public manner, that we come not to make war upon the inhabitants of Cuba, nor upon any party or faction among them, but to protect them in their homes, in their employments, and in their personal and religious rights. All persons who, either by active aid or by honest submission, cooperate with the United States in its efforts to give effect to this beneficent

purpose will receive the reward of its support and protection. Our occupation should be as free from severity as possible.

"Though the powers of the military occupant are absolute and supreme, and immediately operate upon the political condition of the inhabitants, the municipal laws of the conquered territory, such as affect private rights of person and property and provide for the punishment of crime, are considered as continuing in force, so far as they are compatible with the new order of things, until they are suspended or superseded by the occupying belligerent; and in practice they are not usually abrogated, but are allowed to remain in force, and to be administered by the ordinary tribunals, substantially as they were before the occupation. This enlightened practice is, so far as possible, to be adhered to on the present occasion. The judges and the other officials connected with the administration of justice may, if they accept the supremacy of the United States, continue to administer the ordinary law of the land, as between man and man, under the supervision of the American commander in chief.

"The native constabulary will, so far as may be practicable, be preserved. The freedom of the people to pursue their accustomed occupations will be abridged only when it may be necessary to do so.

"While the rule of conduct of the American commander in chief will be such as has just been defined, it will be his duty to adopt measures of a different kind if, unfortunately, the course of the people should render such measures indispensable to the maintenance of law and order. He will then possess the power to replace or expel the native officials in part or altogether, to substitute new courts of his own constitution for those that now exist, or to create such new or supplementary tribunals as may be necessary. In the exercise of these high powers the commander must be guided by his judgment and his experience and a high sense of justice.

"One of the most important and most practical problems with which it will be necessary to deal is that of the treatment of property and the collection and administration of the revenues. It is conceded that all public funds and securities belonging to the government of the country in its own right, and all arms and supplies and other movable property of such government, may be seized by the military occupant and converted to his own use. The real property of the state he may hold and administer, at the same time enjoying the revenues thereof, but he is not to destroy it save in the case of military necessity. All public means of transportation, such as telegraph lines, cables, railways, and boats, belonging to the state may be appropriated to his use, but, unless in case of military necessity, they are not to be destroyed. All churches and buildings devoted to religious worship and to the arts and sciences, all schoolhouses, are, so far as possible, to be protected, and all destruction or intentional defacement of such places, of historical monuments or archives, or of works of science or art is prohibited, save when required by urgent military necessity.

"Private property, whether belonging to individuals or corporations, is to be respected, and can be confiscated only for cause. Means of transportation, such as telegraph lines and cables, railways and boats, may, although they belong to private individuals or corporations, be seized by the military occupant, but unless destroyed under military necessity are not to be retained.

"While it is held to be the right of the conqueror to levy contributions upon the enemy in their reports, towns, or provinces which may be in his military possession by conquest, and to apply the proceeds to defray the expense of the war, this right is to be exercised within such limitations that it may not savor of confiscation. As the result of military occupation the taxes and duties payable by the inhabitants to the former government become payable to the military occupant, unless he sees fit to substitute for them other rates or modes of contribution to the expenses of the government. The moneys so collected are to be used for the purpose of paying the expenses of government under the military occupation, such as the salaries of the judges and the police, and for the payment of the expenses of the Army.

"Private property taken for the use of the Army is to be paid for, when possible, in cash at a fair valuation, and when payment in cash is not possible receipts are to be given.

"All ports and places in Cuba which may be in the actual possession of our land and naval forces will be opened to the commerce of all neutral nations, as well as our own, in articles not contraband of war, upon payment of the prescribed rates of duty which may be in force at the time of the importation.

"WILLIAM MCKINLEY."

By order Secretary of War:

H. C. CORBIN, *Adjutant-General.*

APPENDIX 8.

[Spain—suspension of hostilities.]

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION.

Whereas, by a protocol concluded and signed August 12, 1898, by William R. Day, Secretary of State of the United States, and his excellency Jules Cambon, ambassador extraordinary and plenipotentiary of the Republic of France at Washington, respectively representing for this purpose the Government of the United States and the Government of Spain, the United States and Spain have formally agreed upon the terms on which negotiations for the establishment of peace between the two countries shall be undertaken; and

Whereas it is in said protocol agreed that upon its conclusion and signature hostilities between the two countries shall be suspended, and that notice to that effect shall be given as soon as possible by each Government to the commanders of its military and naval forces;

Now, therefore, I, William McKinley, President of the United States, do, in accordance with the stipulations of the protocol, declare and proclaim on the part of the United States a suspension of hostilities, and do hereby command that orders be immediately given through the proper channels to the commanders of the military and naval forces of the United States to abstain from all acts inconsistent with this proclamation.

In witness thereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this 12th day of August, in the year of our Lord one thousand eight hundred and ninety-eight, and of the Independence of the United States the one hundred and twenty-third.

[SEAL.]

WILLIAM MCKINLEY.

By the President:

WILLIAM R. DAY,
Secretary of State.

APPENDIX 9.

PROTOCOL.

William R. Day, Secretary of State of the United States, and His Excellency Jules Cambon, Ambassador Extraordinary and Plenipotentiary of the Republic of France at Washington, respectively possessing for this purpose full authority from the Government of the United States and the Government of Spain, have concluded and signed the following articles, embodying the terms on which the two Governments have agreed in respect to the matters hereinafter set forth, having in view the establishment of peace between the two countries, that is to say:

ARTICLE I.

Spain will relinquish all claim of sovereignty over and title to Cuba.

ARTICLE II.

Spain will cede to the United States the island of Porto Rico and other islands now under Spanish sovereignty in the West Indies, and also an island in the Ladrones to be selected by the United States.

ARTICLE III.

The United States will occupy and hold the city, bay and harbor of Manila, pending the conclusion of a treaty of peace which shall determine the control, disposition and government of the Philippines.

ARTICLE IV.

Spain will immediately evacuate Cuba, Porto Rico and other islands now under Spanish sovereignty in the West Indies; and to this end each Government will, within ten days after the signing of this protocol, appoint Commissioners, and the Commissioners so appointed shall, within thirty days after the signing of this protocol, meet at Havana for the purpose of arranging and carrying out the details of the aforesaid evacuation of Cuba and the adjacent Spanish islands; and each Government will, within ten days after the signing of this protocol, also appoint other Commissioners, who shall, within thirty days after the signing of this protocol, meet at San Juan, in Porto Rico, for the purpose of arranging and carrying out the details of the aforesaid evacuation of Porto Rico and other islands now under Spanish sovereignty in the West Indies.

ARTICLE V.

The United States and Spain will each appoint not more than five commissioners to treat of peace, and the commissioners so appointed shall meet at Paris not later than October 1, 1898, and proceed to the negotiation and conclusion of a treaty of peace, which treaty shall be subject to ratification according to the respective constitutional forms of the two countries.

ARTICLE VI.

Upon the conclusion and signing of this protocol, hostilities between the two countries shall be suspended, and notice to that effect shall be given as soon as possible by each Government to the commanders of its military and naval forces.

Done at Washington in duplicate, in English and in French, by the undersigned, who have hereunto set their hands and seals, the 12th day of August, 1898.

[SEAL.]
[SEAL.]

WILLIAM R. DAY,
JULES CAMBON.

APPENDIX 10.

[Circular No. 4. Division of Customs and Insular Affairs.]

WAR DEPARTMENT, Washington, January 16, 1899.

The following order of the President is published for the information and guidance of all concerned:

EXECUTIVE MANSION, Washington, December 21, 1898.

THE SECRETARY OF WAR.

SIR: The destruction of the Spanish fleet in the harbor of Manila by the United States naval squadron commanded by Real-Admiral Dewey, followed by the reduction of the city and the surrender of the Spanish forces, practically effected the conquest of the Philippine Islands and the suspension of Spanish sovereignty therein.

With the signature of the treaty of peace between the United States and Spain by their respective plenipotentiaries at Paris on the 10th instant, and as the result of the victories of American arms, the future control, disposition, and government of the Philippine Islands are ceded to the United States. In fulfillment of the rights of sovereignty thus acquired, and the responsible obligations of government thus assumed, the actual occupation and administration of the entire group of the Philippine Islands becomes immediately necessary, and the military government heretofore maintained by the United States in the city, harbor, and bay of Manila is to be extended with all possible dispatch to the whole of the ceded territory.

In performing this duty the military commander of the United States is enjoined to make known to the inhabitants of the Philippine Islands that, in succeeding to the sovereignty of Spain, in severing the former political relations of the inhabitants, and in establishing a new political power, the authority of the United States is to be exerted for the security of the persons and property of the people of the islands and for the confirmation of all their private rights and relations. It will be the duty of the commander of the forces of occupation to announce and proclaim in the most public manner that we come, not as invaders or conquerors, but as friends, to protect the natives in their homes, in their employments, and in their personal and religious rights. All persons who, either by active aid or by honest submission, cooperate with the Government of the United States to give effect to these beneficent purposes, will receive the reward of its support and protection. All others will be brought within the lawful rule we have assumed, with firmness if need be, but without severity so far as may be possible.

Within the absolute domain of military authority, which necessarily is and must remain supreme in the ceded territory until the legislation of the United States shall otherwise provide, the municipal laws of the territory, in respect to private rights and property and the repression of crime are to be considered as continuing in force, and to be administered by the ordinary tribunals so far as practicable. The operations of civil and municipal government are to be performed by such officers as may accept the supremacy of the United States by taking the oath of allegiance, or by officers chosen as far as may be practicable from the inhabitants of the islands.

While the control of all the public property and the revenues of the State passes with the cession, and while the use and management of all public means of transportation are necessarily reserved to the authority of the United States, private property, whether belonging to individuals or corporations, is to be respected, except for cause duly established. The taxes and duties heretofore payable by the inhabitants to the late Government become payable to the authorities of the United States, unless it be seen fit to substitute for them other reasonable rates or modes of contribution to the expenses of government, whether general or local. If private property be taken for military use, it shall be paid for when possible in cash, at a fair valuation, and when payment in cash is not practicable, receipts are to be given.

All ports and places in the Philippine Islands in the actual possession of the land and naval forces of the United States will be opened to the commerce of all friendly nations. All goods and wares, not prohibited for military reasons by due announcement of the military authority, will be admitted upon payment of such duties and other charges as shall be in force at the time of their importation.

Finally, it should be the earnest and paramount aim of the military administration to win the confidence, respect, and affection of the inhabitants of the Philippines by assuring to them in every possible way that full measure of individual rights and liberties which is the heritage of free peoples, and by proving to them that the mission of the United States is one of benevolent assimilation, substituting the mild way of justice and right for arbitrary rule. In the fulfillment of this high mission, supporting the temporary administration of affairs for the greatest good of the governed, there must be sedulously maintained the strong arm of authority, to repress disturbance and to overcome all obstacles to

the bestowal of the blessings of good and stable government upon the people of the Philippine Islands under the free flag of the United States.

This order will be duly proclaimed and enforced.

WILLIAM MCKINLEY,
G. D. MEIKLEJOHN,
Assistant Secretary of War.

APPENDIX 11. PROCLAMATION.

To the people of the Philippine Islands:

The treaty of peace between the United States and Spain, ratified several weeks ago by the former, having on March 20 been ratified by the latter, the cession to the United States, as stipulated by the treaty, of the sovereignty which Spain possessed and exercised over the Philippine Islands has now, in accordance with the laws of nations, received a complete and indefeasible consummation.

In order that the high responsibilities and obligations with which the United States has thus become definitely charged may be fulfilled in a way calculated to promote the best interests of the inhabitants of the Philippine Islands, His Excellency, the President of the United States, has appointed the undersigned a civil commission on Philippine affairs, clothing them with all the powers necessary for the exercise of that office.

The Commission desire to assure the people of the Philippine Islands of the cordial good will and fraternal feeling which is entertained for them by His Excellency the President of the United States and by the American people. The aim and object of the American Government, apart from the fulfillment of the solemn obligations it has assumed toward the family of nations by the acceptance of sovereignty over the Philippine Islands, is the well-being, the prosperity, and the happiness of the Philippine people, and their elevation and advancement to a position among the most civilized peoples of the world.

His Excellency the President of the United States believes that this felicity and perfection of the Philippine people is to be brought about by the assurance of peace and order; by the guaranty of civil and religious liberty; by the establishment of justice; by the cultivation of letters, science, and the liberal and practical arts; by the enlargement of intercourse with foreign nations; by the expansion of industrial pursuits, trade, and commerce; by the multiplication and improvement of the means of internal communication; by the development, with the aid of modern mechanical inventions, of the great natural resources of the archipelago; and, in a word, by the uninterrupted devotion of the people to the pursuit of those useful objects and the realization of those noble ideals which constitute the higher civilization of mankind.

Unfortunately, the pure aims and purposes of the American Government and people have been misinterpreted to some of the inhabitants of certain of the islands. As a consequence, the friendly American forces have, without provocation or cause, been openly attacked.

And why these hostilities? What do the best Filipinos desire? Can it be more than the United States is ready to give? They are patriots and want liberty, it is said. The Commission emphatically asserts that the United States is not only willing, but anxious, to establish in the Philippine Islands an enlightened system of government under which the Philippine people may enjoy the largest measure of home rule and the amplest liberty consonant with the supreme ends of government and compatible with those obligations which the United States has assumed toward the civilized nations of the world.

The United States striving earnestly for the welfare and advancement of the inhabitants of the Philippine Islands, there can be no real conflict between American sovereignty and the rights and liberties of the Philippine people. For, just as the United States stands ready to furnish armies, navies, and all the infinite resources of a great and powerful nation to maintain and support its rightful supremacy over the Philippine Islands, so it is even more solicitous to spread peace and happiness among the Philippine people; to guarantee them a rightful freedom; to protect them in their just privileges and immunities; to accustom them to free self-government in an ever-increasing measure; and to encourage them in those democratic aspirations, sentiments, and ideals which are the promise and potency of a fruitful national development.

It is the expectation of the commission to visit the Philippine people in their respective provinces, both for the purpose of cultivating a more intimate mutual acquaintance and also with a view to ascertaining from enlightened native opinion what form or forms of government seem best adapted to the Philippine peoples, most apt to conduce to their highest welfare, and most conformable to their customs, traditions, sentiments, and cherished ideals. Both in the establishment and maintenance of government in the Philippine Islands, it will be the policy of the United States to consult the views and wishes, and to secure the advice, cooperation, and aid of the Philippine people themselves.

In the meantime the attention of the Philippine people is invited to certain regulative principles by which the United States will be guided in its relations with them. The following are deemed of cardinal importance:

1. The supremacy of the United States must and will be enforced throughout every part of the archipelago, and those who resist it can accomplish no end other than their own ruin.
2. The most ample liberty of self-government will be granted to the Philippine people which is reconcilable with the maintenance of a wise, just, stable, effective, and economical administration of public affairs and compatible with the sovereign and international rights and obligations of the United States.
3. The civil rights of the Philippine people will be guaranteed and protected to the fullest extent, religious freedom assured, and all persons shall have an equal standing before the law.
4. Honor, justice, and friendship forbid the use of the Philippine people or Islands as an object or means of exploitation. The purpose of the American Government is the welfare and advancement of the Philippine people.
5. There shall be guaranteed to the Philippine people an honest and effective civil service, in which, to the fullest extent practicable, natives shall be employed.
6. The collection and application of taxes and revenues will be put upon a sound, honest, and economical basis. Public funds, raised justly and collected honestly, will be applied only in defraying the regular and proper expenses incurred by and for the establishment and maintenance of the Philippine government and for such general improvements as public interests may demand. Local funds, collected for local purposes, shall not be diverted to other ends. With such a prudent and honest fiscal administration, it is believed that the needs of the government will in a short time become compatible with a considerable reduction in taxation.
7. A pure, speedy, and effective administration of justice will be established whereby the evils of delay, corruption, and exploitation will be effectually eradicated.
8. The construction of roads, railroads, and other means of communication and transportation, as well as other public works of manifest advantage to the Philippine people, will be promoted.
9. Domestic and foreign trade and commerce, agriculture, and other industrial pursuits, and the general development of the country in the interest of its inhabitants will be constant objects of solicitude and fostering care.
10. Effective provision will be made for the establishment of elementary schools in which the children of the people shall be educated. Appropriate facilities will also be provided for higher education.
11. Reforms in all departments of the government, in all branches of the public service, and in all corporations closely touching the common life of the people, must be undertaken without delay and effected, conformably to right and justice,

in a way that will satisfy the well-founded demands and the highest sentiments and aspirations of the Philippine people.

Such is the spirit in which the United States comes to the people of the Philippine Islands. His Excellency the President has instructed the commission to make it publicly known. And in obeying this behest, the commission desire to join with His Excellency the President in expressing their own good will toward the Philippine people, and to extend to their leading and representative men a cordial invitation to meet them for personal acquaintance and for the exchange of views and opinions.

JACOB GOULD SCHURMAN,
President of Commission.
GEORGE DEWEY,
Admiral U. S. N.
ELWELL S. OTIS,
Major-General, United States Volunteers.

Secretary of Commission.
MANILA, April 4, 1899.

APPENDIX 12.

TREATY OF PEACE BETWEEN THE UNITED STATES OF AMERICA AND THE KINGDOM OF SPAIN.

Signed at Paris, December 10, 1898.

Ratification advised by the Senate, February 6, 1899.

Ratified by the President, February 6, 1899.

Ratified by Her Majesty the Queen Regent of Spain, March 19, 1899.

Ratifications exchanged at Washington, April 11, 1899.

Proclaimed, Washington, April 11, 1899.

BY THE PRESIDENT OF THE UNITED STATES OF AMERICA—A PROCLAMATION.

Whereas, a Treaty of Peace between the United States of America and Her Majesty the Queen Regent of Spain, in the name of her August Son, Don Alfonso XIII, was concluded and signed by their respective plenipotentiaries at Paris on the tenth day of December, 1898, the original of which Convention being in the English and Spanish languages, is word for word as follows:

The United States of America and Her Majesty the Queen Regent of Spain, in the name of Her August Son Don Alfonso XIII, desiring to end the state of war now existing between the two countries, have for that purpose appointed as plenipotentiaries:

The President of the United States,
William R. Day, Cushman K. Davis, William P. Frye, George Gray, and Whitelaw Reid, citizens of the United States;
And Her Majesty the Queen Regent of Spain,
Don Eugenio Montero Rios, President of the Senate,
Don Buenaventura de Abarzuza, Senator of the Kingdom and ex-Minister of the Crown,
Don José de Garnica, Deputy to the Cortes and Associate Justice of the Supreme Court;

Don Wenceslao Ramirez de Villa-Urrutia, Envoy Extraordinary and Minister Plenipotentiary at Brussels, and
Don Rafael Cerero, General of Division;

Who, having assembled in Paris, and having exchanged their full powers, which were found to be in due and proper form, have, after discussion of the matters before them, agreed upon the following articles:

ARTICLE I.

Spain relinquishes all claim of sovereignty over and title to Cuba.

And as the island is, upon its evacuation by Spain, to be occupied by the United States, the United States will, so long as such occupation shall last, assume and discharge the obligations that may under international law result from the fact of its occupation, for the protection of life and property.

ARTICLE II.

Spain cedes to the United States the island of Porto Rico and other islands now under Spanish sovereignty in the West Indies, and the island of Guam in the Marianas or Ladrões.

ARTICLE III.

Spain cedes to the United States the archipelago known as the Philippine Islands, and comprehending the islands lying within the following line:

A line running from west to east along or near the twentieth parallel of north latitude, and through the middle of the navigable channel of Bachi, from the one hundred and eighteenth (18th) to the one hundred and twenty-seventh (27th) degree meridian of longitude east of Greenwich, thence along the one hundred and twenty-seventh (27th) degree meridian of longitude east of Greenwich to the parallel of four degrees and forty-five minutes (4° 45') north latitude, thence along the parallel of four degrees and forty-five minutes (4° 45') north latitude to its intersection with the meridian of longitude one hundred and nineteen degrees and thirty-five minutes (119° 35') east of Greenwich, thence along the meridian of longitude one hundred and nineteen degrees and thirty-five minutes (119° 35') east of Greenwich to the parallel of latitude seven degrees and forty minutes (7° 40') north, thence along the parallel of latitude seven degrees and forty minutes (7° 40') north to its intersection with the one hundred and sixteenth (16th) degree meridian of longitude east of Greenwich, thence by a direct line to the intersection of the tenth (10th) degree parallel of north latitude with the one hundred and eighteenth (18th) degree meridian of longitude east of Greenwich, and thence along the one hundred and eighteenth (18th) degree meridian of longitude east of Greenwich to the point of beginning.

The United States will pay to Spain the sum of twenty million dollars (\$20,000,000) within three months after the exchange of the ratifications of the present treaty.

ARTICLE IV.

The United States will, for the term of ten years from the date of the exchange of the ratifications of the present treaty, admit Spanish ships and merchandise to the ports of the Philippine Islands on the same terms as ships and merchandise of the United States.

ARTICLE V.

The United States will, upon the signature of the present treaty, send back to Spain, at its own cost, the Spanish soldiers taken as prisoners of war on the capture of Manila by the American forces. The arms of the soldiers in question shall be restored to them.

Spain will, upon the exchange of the ratifications of the present treaty, proceed to evacuate the Philippines, as well as the island of Guam, on terms similar to those agreed upon by the Commissioners appointed to arrange for the evacuation of Porto Rico and other islands in the West Indies, under the Protocol of August 12, 1898, which is to continue in force till its provisions are completely executed.

The time within which the evacuation of the Philippine Islands and Guam shall be completed shall be fixed by the two Governments. Stands of colors, uncapacitated war vessels, small arms, guns of all calibres, with their carriages and accessories, powder, ammunition, livestock, and materials and supplies of all kinds, belonging to the land and naval forces of Spain in the Philippines and Guam, remain the property of Spain. Pieces of heavy ordnance, exclusive of field artillery, in the fortifications and coast defences, shall remain in their emplacements for the term of six months, to be reckoned from the exchange of

ratifications of the treaty; and the United States may, in the mean time, purchase such material from Spain, if a satisfactory agreement between the two Governments on the subject shall be reached.

ARTICLE VI.

Spain will, upon the signature of the present treaty, release all prisoners of war, and all persons detained or imprisoned for political offences, in connection with the insurrections in Cuba and the Philippines and the war with the United States. Reciprocally, the United States will release all persons made prisoners of war by the American forces, and will undertake to obtain the release of all Spanish prisoners in the hands of the insurgents in Cuba and the Philippines.

The Government of the United States will at its own cost return to Spain and the Government of Spain will at its own cost return to the United States, Cuba, Porto-Rico, and the Philippines, according to the situation of their respective homes, prisoners released or caused to be released by them, respectively, under this article.

ARTICLE VII.

The United States and Spain mutually relinquish all claims for indemnity, national and individual, of every kind, of either Government, or of its citizens or subjects, against the other Government, that may have arisen since the beginning of the late insurrection in Cuba and prior to the exchange of ratifications of the present treaty, including all claims for indemnity for the cost of the war.

The United States will adjudicate and settle the claims of its citizens against Spain relinquished in this article.

ARTICLE VIII.

In conformity with the provisions of Articles I, II, and III, of this treaty, Spain relinquishes in Cuba, and cedes in Porto Rico and other islands in the West Indies, in the island of Guam, and in the Philippine Archipelago, all the buildings, wharves, barracks, forts, structures, public highways and other immovable property which, in conformity with law, belong to the public domain, and as such belong to the Crown of Spain.

And it is hereby declared that the relinquishment or cession, as the case may be, to which the preceding paragraph refers, cannot in any respect impair the property or rights which by law belong to the peaceful possession of property of all kinds, of provinces, municipalities, public or private establishments, ecclesiastical or civil bodies, or any other associations having legal capacity to acquire and possess property in the aforesaid territories renounced or ceded, or of private individuals, of whatsoever nationality such individuals may be.

The aforesaid relinquishment or cession, as the case may be, includes all documents exclusively referring to the sovereignty relinquished or ceded that may exist in the archives of the Peninsula. Where any document in such archives only in part relates to said sovereignty, a copy of such part will be furnished whenever it shall be requested. Like rules shall be reciprocally observed in favor of Spain in respect of documents in the archives of the islands above referred to.

In the aforesaid relinquishment or cession, as the case may be, are also included such rights as the Crown of Spain and its authorities possess in respect of the official archives and records, executive as well as judicial, in the islands above referred to, which relate to said islands or the rights and property of their inhabitants. Such archives and records shall be carefully preserved, and private persons shall without distinction have the right to require, in accordance with law, authenticated copies of the contracts, wills and other instruments forming part of notarial protocols or files, or which may be contained in the executive or judicial archives, be the latter in Spain or in the islands aforesaid.

ARTICLE IX.

Spanish subjects, natives of the Peninsula, residing in the territory over which Spain by the present treaty relinquishes or cedes her sovereignty, may remain in such territory or may remove therefrom, retaining in either event all their rights of property, including the right to sell or dispose of such property or of its proceeds; and they shall also have the right to carry on their industry, commerce and professions, being subject in respect thereof to such laws as are applicable to other foreigners. In case they remain in the territory they may preserve their allegiance to the Crown of Spain by making, before a court of record, within a year from the date of the exchange of ratifications of this treaty, a declaration of their decision to preserve such allegiance; in default of which declaration they shall be held to have renounced it and to have adopted the nationality of the territory in which they may reside.

The civil rights and political status of the native inhabitants of the territories hereby ceded to the United States shall be determined by the Congress.

ARTICLE X.

The inhabitants of the territories over which Spain relinquishes or cedes her sovereignty shall be secured in the free exercise of their religion.

ARTICLE XI.

The Spaniards residing in the territories over which Spain by this treaty cedes or relinquishes her sovereignty shall be subject in matters civil as well as criminal to the jurisdiction of the courts of the country wherein they reside, pursuant to the ordinary laws governing the same; and they shall have the right to appear before such courts, and to pursue the same course as citizens of the country to which the courts belong.

ARTICLE XII.

Judicial proceedings pending at the time of the exchange of ratifications of this treaty in the territories over which Spain relinquishes or cedes her sovereignty shall be determined according to the following rules:

1. Judgments rendered either in civil suits between private individuals, or in criminal matters, before the date mentioned, and with respect to which there is no recourse or right of review under the Spanish law, shall be deemed to be final, and shall be executed in due form by competent authority in the territory within which such judgments should be carried out.

2. Civil suits between private individuals which may on the date mentioned be undetermined shall be prosecuted to judgment before the court in which they may then be pending or in the court that may be substituted therefor.

3. Criminal actions pending on the date mentioned before the Supreme Court of Spain against citizens of the territory which by this treaty ceases to be Spanish shall continue under its jurisdiction until final judgment; but, such judgment having been rendered, the execution thereof shall be committed to the competent authority of the place in which the case arose.

ARTICLE XIII.

The rights of property secured by copyrights and patents acquired by Spaniards in the island of Cuba, and in Porto Rico, the Philippines and other ceded territories, at the time of the exchange of the ratifications of this treaty, shall continue to be respected. Spanish scientific, literary and artistic works, not subversive of public order in the territories in question, shall continue to be admitted free of duty into such territories, for the period of ten years, to be reckoned from the date of the exchange of the ratifications of this treaty.

ARTICLE XIV.

Spain shall have the power to establish consular officers in the ports and places of the territories, the sovereignty over which has been either relinquished or ceded by the present treaty.

ARTICLE XV.

The Government of each country will, for the term of ten years, accord to the merchant vessels of the other country the same treatment in respect of all port

charges, including entrance and clearance dues, light dues, and tonnage duties, as it accords to its own merchant vessels, not engaged in the coastwise trade.

This article may at any time be terminated on six months' notice given by either Government to the other.

ARTICLE XVI.

It is understood that any obligations assumed in this treaty by the United States with respect to Cuba are limited to the time of its occupancy thereof; but it will upon the termination of such occupancy, advise any Government established in the island to assume the same obligations.

ARTICLE XVII.

The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by Her Majesty the Queen Regent of Spain; and the ratifications shall be exchanged at Washington within six months from the date hereof, or earlier if possible.

In faith whereof, we, the respective plenipotentiaries, have signed this treaty and have hereunto affixed our seals.

Done in duplicate at Paris, the tenth day of December, in the year of Our Lord one thousand eight hundred and ninety-eight.

And whereas the said convention has been duly ratified on both parts, and the ratifications of the two Governments were exchanged in the city of Washington on the 11th day of April, 1899:

Now, therefore, be it known that I, William McKinley, President of the United States of America, have caused the said convention to be made public, to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington this 11th day of April, in the year of our Lord one thousand eight hundred and ninety-nine and of the Independence of the United States the one hundred and twenty-third.

WILLIAM MCKINLEY.

By the President:

JOHN HAY,
Secretary of State.

APPENDIX 13.

EXECUTIVE MANSION, Washington, July 1, 1899.

OTIS, Manila:

By direction of the Secretary of War the following is transmitted.

CORBIN.

OTIS, Manila:

The President desires to express in the most public manner his appreciation of the lofty patriotism shown by the volunteers and regulars of the Eighth Army Corps in performing willing service through severe campaigns and battles against the insurgents in Luzon, when under the terms of their enlistment they would have been entitled to discharge upon the ratification of the treaty of peace with Spain.

This action on their part was noble and heroic. It will stand forth as an example of the self-sacrifice and public consecration which have ever characterized the American soldier.

In recognition thereof I shall recommend to Congress that a special medal of honor be given to the officers and soldiers of the Eighth Army Corps, who performed this great duty voluntarily and enthusiastically for their country.

(SEAL.)

WILLIAM MCKINLEY.

APPENDIX 14.

An act for increasing the efficiency of the Army of the United States, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the date of approval of this Act the Army of the United States shall consist of three major generals, six brigadier generals, ten regiments of cavalry, seven regiments of artillery, twenty-five regiments of infantry, an Adjutant General's Department, an Inspector General's Department, a Judge Advocate General's Department, a Quartermaster's Department, a Subsistence Department, a Medical Department, a Pay Department, a Corps of Engineers, an Ordnance Department, a Signal Corps, thirty chaplains, to be assigned to regiments or posts in the discretion of the Secretary of War, the officers of the Record and Pension Office, the officers and enlisted men of the Army on the retired list, the professors, corps of cadets, an army service detachment and band at the United States Military Academy, and such other officers and enlisted men as may hereinafter be provided for: *Provided,* That when a vacancy shall occur through death, retirement, or other separation from active service, in the office of storekeeper in the Quartermaster's Department and Ordnance Department, respectively, now provided for by law, said offices shall cease to exist.

SEC. 2. That each regiment of cavalry shall consist of one colonel; one lieutenant colonel; three majors; fourteen captains, two of whom shall be available for detail as adjutant and quartermaster; sixteen first lieutenants, of whom one shall be available for detail as commissary, and three for detail as squadron adjutants; twelve second lieutenants, two veterinarians, one sergeant major, one quartermaster sergeant, one commissary sergeant, who shall have the rank, pay, and allowances of a regimental quartermaster sergeant of cavalry; three squadron sergeant majors, who shall be senior to and have the pay and allowances of first sergeants of cavalry; one band; and twelve troops organized into three squadrons of four troops each: *Provided,* That nothing herein contained shall be construed as abolishing the office of chaplain in each regiment of colored cavalry. Each cavalry band shall consist of one chief musician; one chief trumpeter; one principal musician; one drum major, who shall have the rank, pay, and allowances of a first sergeant; four sergeants; eight corporals; one cook, and eleven privates. Each troop of cavalry shall consist of one captain; one first lieutenant; one second lieutenant; one first sergeant; one quartermaster sergeant, who shall have the pay and allowances of a sergeant; six sergeants, six corporals, two cooks, two farriers and blacksmiths, one saddler, one wagoner, two trumpeters, and forty-three privates. Of the veterinarians provided for in this Act, one shall have the pay and allowances of a second lieutenant of cavalry and one shall have the pay of seventy-five dollars per month and the allowances of a sergeant major: *Provided,* That the veterinarian appointed to the first grade shall not be so appointed until he shall have passed an examination, to be prescribed by the Secretary of War, as to his physical, moral, and professional qualifications: *Provided further,* That the veterinarians now in the service who do not pass such competitive examination shall be eligible to the positions of the second class under such rules as are now prescribed by the regulations. The regimental sergeant major and the

regimental quartermaster sergeant provided for in this section shall have the pay and allowances of ordnance sergeants.

SEC. 3. That each regiment of artillery shall consist of one colonel, one lieutenant colonel, three majors, sixteen captains, two of whom shall be available for detail as adjutant and quartermaster; sixteen first lieutenants, fourteen second lieutenants, one sergeant major, one quartermaster sergeant, one band, and fourteen batteries, of which two may be organized as field artillery.

Each artillery band shall consist of one chief musician, one chief trumpeter, one principal musician, one drum major, who shall have the rank, pay, and allowances of a first sergeant; four sergeants, eight corporals, one cook, and eleven privates.

Each battery of heavy artillery shall consist of one captain, one first lieutenant, one second lieutenant, one first sergeant, one quartermaster sergeant, who shall have the pay and allowances of a sergeant; eight sergeants, twelve corporals, two musicians, two mechanics, who shall have the pay and allowances of sergeants of artillery; two cooks, and fifty-two privates.

Each battery of field artillery shall consist of one captain, two first lieutenants, one second lieutenant, one first sergeant, one stable sergeant, one quartermaster sergeant, six sergeants, twelve corporals, four artificers, two musicians, two cooks, and fifty-one privates.

In addition to the enlisted men specified there shall be one electrician sergeant to each post garrisoned by coast artillery having electrical appliances, who shall have the pay and allowances of an ordnance sergeant.

SEC. 4. That each regiment of infantry shall consist of one colonel; one lieutenant colonel; three majors; fourteen captains, two of whom shall be available for detail as adjutant and quartermaster; sixteen first lieutenants, of whom one shall be available for detail as commissary and three for detail as battalion adjutants; twelve second lieutenants; one sergeant major; one quartermaster sergeant; one commissary sergeant, who shall have the rank, pay, and allowances of a regimental quartermaster sergeant of infantry; three battalion sergeant majors, who shall be senior to and have the pay and allowances of a first sergeant; one band, and twelve companies, organized into three battalions of four companies each: *Provided*, That nothing herein contained shall be construed as abolishing the office of chaplain in each regiment of colored infantry.

Each infantry band shall consist of one chief musician, one principal musician, one drum major, who shall have the rank, pay, and allowances of a first sergeant, four sergeants, eight corporals, one cook, and twelve privates.

Each infantry company shall consist of one captain, one first lieutenant, one second lieutenant, one first sergeant, one quartermaster sergeant, who shall have the pay and allowances of a sergeant; four sergeants, six corporals, two cooks, two musicians, one artificer, and forty-eight privates: *Provided*, That the limits of age for original enlistments in the Army shall be eighteen and thirty-five years.

SEC. 5. That all vacancies created or caused by the provisions of this Act above the grade of second lieutenant in the line of the Army shall be filled by promotion according to seniority in the several arms, subject to the examinations now prescribed by law: *Provided*, That the additional second lieutenants now attached to each regiment of artillery shall be absorbed in the artillery or transferred to other arms where vacancies exist without loss of relative rank, leaving but one second lieutenant in each battery.

Vacancies in the grade of second lieutenant shall be filled as now provided by law, except that no person shall be appointed from civil life before he shall have reached the age of twenty-one years nor after he shall have reached the age of twenty-seven years, nor until he shall have passed a satisfactory examination as to his moral, physical, and educational qualifications.

SEC. 6. That the Adjutant General's and Inspector General's departments shall consist of the number of officers now in those departments, respectively: *Provided*, That vacancies in the grade of major occurring in either department shall hereafter be filled from captains in the line of the Army: *And provided further*, That all such captains who have evinced marked aptitude in the command of troops shall be reported by their regimental commanders to the War Department and shall be entitled to compete for any such vacancy under such system of examination as the President shall prescribe.

SEC. 7. That the Judge Advocate General's Department, Quartermaster's Department, Subsistence Department, Medical Department, Pay Department, Corps of Engineers, Ordnance Department, and Signal Corps shall consist of the officers and enlisted men now provided by law: *Provided*, That the battalion of engineers, and the officers serving therewith, shall constitute a part of the line of the Army: *Provided further*, That in time of war retired officers of the Army may, in the discretion of the President, be employed on active duty, other than in the command of troops, and when so employed they shall receive the full pay and allowances of their grades: *And provided also*, That no person in civil life shall hereafter be appointed a judge advocate, paymaster, or chaplain until he shall have passed satisfactorily such examination as to his moral, mental, and physical qualifications as may be prescribed by the President; and no such person shall be appointed who is more than forty-four years of age: *Provided further*, That in case of the appointment of an officer who has served in a similar capacity during the war with Spain and has demonstrated his moral, mental, and physical qualifications for the position, then such examination shall not be required.

SEC. 8. That the Chief of the Record and Pension Office of the War Department shall hereafter have the rank, pay, and allowances of a brigadier-general, and there shall be an assistant chief of said office, who shall have the rank, pay, and allowances of a major and who may be appointed from civil life: *Provided*, That whenever a vacancy shall occur in the office of Chief of the Record and Pension Office subsequent to the passage of this Act said grade shall cease and determine, and thereafter the chief of said office shall have the rank, pay, and allowances of a colonel.

SEC. 9. That the cooks authorized by this Act shall have the pay and allowances of sergeants of infantry.

SEC. 10. That the corps of cadets shall consist of one from each Congressional district, one from each Territory, one from the District of Columbia, and twenty from the United States at large. They shall be appointed by the President, and shall, with the exception of the twenty cadets appointed at large, be actual residents of the Congressional or Territorial districts, or of the District of Columbia, or of the States, respectively, from which they purport to be appointed.

SEC. 11. That so much of the acts approved July seventh, eighteen hundred and ninety-eight, as authorizes the assignment of certain officers of the Quartermaster's and Subsistence departments with increased rank, and the continuance in service of certain volunteer officers of those departments for a period of one year after the close of the present war, is repealed.

SEC. 12. That to meet the present exigencies of the military service the President is hereby authorized to maintain the Regular Army at a strength of not exceeding sixty-five thousand enlisted men, to be distributed amongst the several branches of the service, including the Signal Corps, according to the needs of each, and raise a force of not more than thirty-five thousand volunteers to be recruited as he may determine from the country at large, or from the localities where their services are needed, without restriction as to citizenship or educational qualifications, and to organize the same into not more than twenty-seven regiments organized as are infantry regiments of war strength in the Regular Army, and three regiments to be composed of men of special qualifications in horsemanship and marksmanship, to be organized as cavalry for service mounted or dismounted: *Provided*, That each regiment shall have one surgeon, with the rank of major; two assistant surgeons, one of whom shall have the rank of captain and one that of first lieutenant, and three hospital stewards: *Provided further*, That such increased regular and volunteer force shall continue in service only

during the necessity therefor, and not later than July first, nineteen hundred and one.

All enlistments for the volunteer force herein authorized shall be for the term of two years and four months, unless sooner discharged.

SEC. 13. That the President shall have power to continue in service or to appoint, by and with the advice and consent of the Senate, brigadier generals of volunteers, who, including the brigadier generals of the Regular Army, shall not exceed one for every four thousand enlisted men actually in service, and major generals of volunteers, who, including the major generals of the Regular Army, shall not exceed one for every twelve thousand enlisted men: *Provided*, That Regular Army officers continued or appointed as general officers or as field or staff officers of volunteers, under the provisions of this Act shall not vacate their Regular Army commissions: *And provided further*, That no general officers appointed under the provisions of this section shall be continued in service as such beyond July first, nineteen hundred and one: *And provided also*, That any officer now in the Army, who was graduated at the head of his class at the United States Military Academy and who is not now in the Corps of Engineers, may be appointed to the Corps of Engineers with the same grade and date of commission that he would have if he had been appointed to the Corps of Engineers on graduation; but said commission shall not entitle an officer to any back pay or allowance.

SEC. 14. That the President is hereby authorized to continue in service, or to appoint by and with the advice and consent of the Senate, officers of the volunteer staff as follows:

Three assistant adjutant generals with the rank of lieutenant colonel, and six assistant adjutant generals with the rank of major.

Three inspectors general with the rank of lieutenant colonel, and six inspectors general with the rank of major.

Five judge advocates with the rank of major.

Thirty quartermasters with the rank of major, and forty assistant quartermasters with the rank of captain.

Six commissaries of subsistence with the rank of major, and twelve assistant commissaries of subsistence with the rank of captain.

Thirty-four surgeons with the rank of major.

Thirty additional paymasters with the rank of major.

Four signal officers with the rank of major, nine signal officers with the rank of captain, nine signal officers with the rank of first lieutenant, and nine signal officers with the rank of second lieutenant.

Provided, That for each Regular Army officer of a staff corps or department who may be retained in or appointed to a higher volunteer rank in said staff corps or department than that actually held by him in the regular establishment, there may be appointed one officer of volunteers of the lowest grade mentioned in this section for such staff corps or department, but no appointment shall be made which will increase the total number of officers, regular and volunteer, serving in any grade, above the number authorized by this Act: *And provided also*, That all the volunteer staff officers herein authorized to be appointed or retained in the service shall be honorably discharged on July first, nineteen hundred and one, or sooner if their services are no longer required: *And provided further*, That the officers herein authorized shall be appointed by the President, by and with the advice and consent of the Senate.

SEC. 15. That the officers and enlisted men of the volunteer army shall be mustered out of the military service of the United States and discharged as provided in the Act of April twenty-second, eighteen hundred and ninety-eight: *Provided*, That enlisted men of volunteers who desire to remain in the military service of the United States or the temporary force authorized by this Act, may, if found qualified therefor, be transferred to and enlisted in such batteries, troops, or companies as may be below the maximum authorized strength, and when so transferred and enlisted shall be credited on their new enlistment with the periods of service rendered by them, respectively, as volunteers: *And provided further*, That the President is authorized to enlist temporarily in service for absolutely necessary purposes in the Philippine Islands volunteers, officers and men, individually or by organization, now in those islands and about to be discharged, provided their retention shall not extend beyond the time necessary to replace them by troops authorized to be maintained under the provisions of this Act and not beyond a period of six months: *Provided also*, That each and every provision of this act shall continue in force until July first, nineteen hundred and one; and on and after that date all the general, staff, and line officers appointed to the Army under this Act shall be discharged and the numbers restored in each grade to those existing at the passage of this Act, and the enlisted force of the line of the Army shall be reduced to the number as provided for by a law prior to April first, eighteen hundred and ninety-eight, exclusive of such additions as have been, or may be, made under this Act to the artillery, and except the cadets provided for by this Act, who may be appointed prior to July first, nineteen hundred and one: *And provided further*, That no officer who has been, or may be, promoted under existing law, or under the rules of seniority, shall be disturbed in his rank.

SEC. 16. That the Secretary of War be, and he is hereby, authorized to permit enlisted men of the United States Army to make allotments of their pay, under such regulations as he may prescribe, for the support of their families or relatives, for their own savings, or for other purposes, during such time as they may be absent on distant duty, or under other circumstances warranting such action.

SEC. 17. That no officer or private soldier shall be detailed to sell intoxicating drinks, as a bartender or otherwise, in any post exchange or canteen, nor shall any other person be required or allowed to sell such liquors in any encampment or fort or on any premises used for military purposes by the United States; and the Secretary of War is hereby directed to issue such general order as may be necessary to carry the provisions of this section into full force and effect.

SEC. 18. That all laws or parts of laws which conflict with the provisions of this act are hereby repealed.

Approved, March 2, 1899.

APPENDIX 15. DISTINGUISHED SERVICE.

The following-named officers and enlisted men, U. S. Army, and civilians, engaged in military operations, distinguished themselves by "especially meritorious acts or conduct in service" on the dates and at the places specified:

November, 1897.—Hospital Steward Ernst Grossjohann, Privates Harry Cook, James Smith, and James Q. Baber, Hospital Corps, U. S. Army; Jasper M. Lawrence and Garrett F. Hodnett, now out of service (then privates, Hospital Corps, U. S. Army), and the following-named patients in hospital: Privates John E. Simpson, Frederick Williams, Leslie S. Caldwell, Howard S. Potter, Battery H, First U. S. Artillery; Sergt. Robert A. Pahren, Battery B, Sixth U. S. Artillery, and Private John J. McKenzie, U. S. Hospital Corps (then privates, Battery H, First U. S. Artillery), and Private John F. Tobin, Battery M, Third U. S. Artillery (then private, Battery L, First U. S. Artillery): For meritorious conduct in voluntarily nursing yellow fever patients in hospital, Fort Barrancas, Fla., during the epidemic.

March 15, 1898.—Second Lieut. Walter S. Volkmar, Fourth U. S. Artillery (then sergeant, Signal Corps, U. S. Army): For bravery at the fire at Fort Sam Houston, Tex. (Certificate of merit.)

May, 1898.—First Lieut. Henry H. Whitney, Fourth U. S. Artillery (then captain and assistant adjutant-general, U. S. Volunteers): For extremely hazardous services, under disguise and at the imminent risk of his life, in reconnaissance

sance of the island of Porto Rico, in which he obtained most valuable information.

May 15, 1898.—Private Patrick O'Brien, Company H, Seventh U. S. Infantry (then corporal, Company E, First U. S. Infantry); Private Joseph Metzler, general service, U. S. Army (then lance corporal, Company E, First U. S. Infantry); Second-Class Private Michael J. Vickers, Ordnance Corps, U. S. Army (then private, Company E, First U. S. Infantry); and Richard C. Rush, now out of service (then first sergeant, Company E, First U. S. Infantry): For distinguished gallantry in repelling the attack of the enemy and for meritorious service at Point Arbolitas, Cuba.

May 15, 1898.—James F. J. Archibald, a volunteer aid-de-camp: For especially meritorious service in assisting in repelling an attack by the enemy on the guard from the steamer Gussie at Point Arbolitas, Cuba, in which act he was wounded.

June, 1898.—First Lieut. Matthew A. Batson, Fourth U. S. Cavalry (then second lieutenant, Ninth U. S. Cavalry), and First Lieut. (then second lieutenant) Guy H. B. Smith, Fourth U. S. Infantry: For hazardous services in reconnoitering and accurately locating the enemy's position at El Caney, Cuba.

June 2 to 5, 1898.—Lieut. Col. James Allen, Signal Corps, U. S. Army (then lieutenant colonel, Signal Corps, U. S. Volunteers), and Martin L. Hellings, out of service (then captain, Signal Corps, U. S. Volunteers): For persistent and successful efforts on an unarmed transport and within range of the Spanish batteries at the entrance of the harbor of Santiago, Cuba, in raising and severing two submarine cables used by the enemy.

June 13, 1898.—Private Edward G. Walby, Company C, Seventh U. S. Infantry (then artificer, Company A, Twenty-first U. S. Infantry): For meritorious conduct in preventing, at the risk of his own life, the swamping of a boat containing an officer and 7 enlisted men, and thus saving their lives; this 10 miles offshore in Tampa Bay, Fla.

June 24, 1898.—First Lieut. Thomas Ryan, Fortieth Infantry, U. S. V. (then first sergeant, Troop K, First U. S. Cavalry): For distinguished service in battle, Las Guasimas, Cuba. (Certificate of merit.)

June 24, 1898.—Corporal (then private) Elzie Jones and Farrier Sherman Harris, Troop I, Tenth U. S. Cavalry: For conspicuous coolness and gallantry under fire in the battle of Las Guasimas, Cuba.

June 24, 1898.—William F. Johnson, killed in action (then corporal, Troop B, Tenth U. S. Cavalry): For efficiency and coolness under fire in the battle of Las Guasimas, Cuba.

June 24, 1898.—John Boland, cook (then wagoner), Troop I, Tenth U. S. Cavalry: For conspicuous courage in exposing himself and killing, while under a heavy fire, a Spaniard who was standing on the stone intrenchments directing Spanish soldiers where to shoot, thus materially assisting in causing the cessation of the enemy's fire, in battle of Las Guasimas, Cuba.

June 24, and July 1 to 5, 1898.—Dr. John Guiteras, now out of service (then acting assistant surgeon, U. S. Army): For gallant and meritorious conduct in attending the sick and wounded on the field of battle at Las Guasimas and Santiago, Cuba.

June 24, 1898.—Private Thomas J. Isabell, Troop L, First U. S. Volunteer Cavalry: For distinguished service in battle of Las Guasimas, Cuba. (Certificate of merit.)

June 24, 1898.—Dr. Jose M. Delgado, acting assistant surgeon, U. S. Army: For distinguished service, being constantly on the firing line, exposing himself in the most conspicuous manner to the fire of the enemy, in the care of the wounded, in the battle of Las Guasimas, Cuba.

June 30, 1898.—Dr. Maximilian Lund, then acting assistant surgeon, U. S. Army: For especially meritorious conduct attending the sick and wounded under fire, during the reconnaissance at Tayabacoa, Cuba, and subsequently in making extraordinary efforts to secure their embarkation on the transports.

June 30, 1898.—Corpl. William H. Thompkins, Troop A (then private, Troop G); Fitz Lee, now out of service (then private, Troop M); Private Dennis Bell, Troop H, and George H. Wanton, now out of service (then private, Troop M, Tenth U. S. Cavalry): For distinguished gallantry at Tayabacoa, Cuba, where, after a force had succeeded in landing and had been compelled to withdraw to the boats, leaving a number of killed and wounded ashore, they voluntarily went ashore, in the face of the enemy, and aided in the rescue of their wounded comrades, who would otherwise have fallen into the hands of the enemy; this after several previous attempts had been frustrated. (Medals of honor.)

June, July, 1898.—Edward Ferrer, volunteer aid-de-camp to the commanding general Third Brigade, Second Division, Fifth Army Corps: For gallant conduct in the battle of El Caney, Cuba, July 1, 1898, and for most valuable service, voluntarily rendered without pay, during the campaign.

July 1, 1898.—First Lieut. Benjamin F. Hardaway, Seventeenth United States Infantry: For distinguished bravery in battle, El Caney, Cuba, in rescuing, with the voluntary aid of others, wounded from in front of the lines, under heavy fire of the enemy. (Medal of honor.)

July 1, 1898.—First Lieut. (then second lieutenant) Charles D. Roberts, Sergt. (then corporal) Ulysses G. Buzzard, Sergt. (then private) Bruno Wende, Artificer (then private) Thomas J. Graves, Private George Burg, and Oscar Brooklin, now out of service (then private), Company C, Seventeenth United States Infantry: For distinguished bravery in battle, El Caney, Cuba, in assisting in rescuing wounded from in front of the lines, under heavy fire of the enemy. (Medals of honor.)

July 1, 1898.—Second Lieut. Ethelbert L. D. Breckinridge, Seventh United States Infantry: For distinguished service in the presence of the enemy at the battle of Santiago, Cuba, while voluntarily serving as aid-de-camp.

July 1, 1898.—Second Lieut. Fred W. Bugbee, Fortieth Infantry, U. S. V. (then private, Troop A, First Volunteer Cavalry): For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 1, 1898.—Second Lieut. Ernest E. Haskell, Twenty-first United States Infantry (then acting second lieutenant, First U. S. Volunteer Cavalry): For especially meritorious and conspicuous conduct in battle of Santiago, Cuba.

July 1, 1898.—First Lieut. Granville R. Fortesque, Twenty-sixth Infantry, U. S. V. (then corporal, Troop E, First Volunteer Cavalry): For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 1, 1898.—Post Chaplain Henry Swift, U. S. Army: For distinguished service at the battle of San Juan, Cuba, where he worked unceasingly, caring for the wounded, reading the burial service over the dead, and assisting in their burial.

July 1, 1898.—Post Chaplain Charles S. Walkley, U. S. Army: For gallant conduct in aiding the wounded at the battle of El Caney, Cuba.

July 1, 1898.—First Lieut. George A. Densmore, Thirty-second Infantry, U. S. V. (then private, Company G, Fourth U. S. Infantry): For distinguished service in battle, El Caney, Cuba. (Certificate of merit.)

July 1, 1898.—Post Chaplain Edward H. Fitz Gerald, U. S. Army: For conspicuous bravery in administering to the wounded, while exposed to a very severe fire of the enemy, in the battle of El Caney, Cuba.

July 1, 1898.—Second Lieut. Frank T. McNarney, Thirty-sixth Infantry, U. S. V. (then sergeant, Company H, Tenth U. S. Infantry): For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 1, 1898.—Post Chaplain Halsey C. Gavitt, U. S. Army: For meritorious service during the battle of Santiago, Cuba, in caring for the sick and wounded.

July 1, 1898.—First Lieut. Peter McConn, Forty-eighth Infantry, U. S. V. (then first sergeant, Troop E, Tenth U. S. Cavalry): For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 1, 1898.—Second Lieut. John Oliver, Twenty-seventh Infantry, U. S. V. (then first sergeant, Troop F, Sixth U. S. Cavalry): For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 1, 1898.—Capt. Thomas R. Marshall, assistant surgeon, Forty-first Infantry, U. S. V. (then acting assistant surgeon, U. S. Army): For gallant and meritorious conduct during the battle of Santiago, Cuba, where, under fire, he cared for the sick and wounded.

July 1, 1898.—First Lieut. John S. E. Young, Thirty-seventh Infantry, U. S. V. (then sergeant-major, Twelfth U. S. Infantry): For faithful, zealous, and intelligent performance of duty at the battle of Santiago, and during the Cuban campaign.

July 1, 1898.—Private Andrew Haring, Hospital Corps, U. S. Army: For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 1, 1898.—Regimental Com. Sergt. Charles Karsten (then first sergeant, Troop D), and William Britton, died of wounds received in action (then quartermaster-sergeant, Troop G), First U. S. Cavalry: For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 1, 1898.—Charles B. Jackson (then private), John H. Waller (then wagoner), Troop A, David L. Hughes (then sergeant, Troop B), John D. Rhoades (then corporal, Troop D), Edward C. Waller, Jr. (then corporal, Troop E), Charles E. McKinley (then private, Troop E), Edward J. Albertson, John G. Winter, Herbert P. McGregor, and Ray V. Clark (then privates, Troop F), Louis Gevers, George Roland, and Winslow Clark (then privates, Troop G), Sherman M. Bell (then private, Troop K), and Frank R. McDonald (then trumpeter, Troop L), First U. S. Volunteer Cavalry: For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 1, 1898.—George O. Ravenstein, now out of service (then corporal, Troop B); First Sergt. (then sergeant) Bartholomew Mulhern, Troop E; Private Henry W. Elliott, Troop A (then corporal, Troop H), and John Lundmark, now out of service (then corporal, Troop K), Third U. S. Cavalry: For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 1, 1898.—Sergt. Maj. Julius Moll, Sixth U. S. Cavalry, and Tilden Hughes, now out of service (then private, Troop G, Sixth U. S. Cavalry): For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 1, 1898.—Sergt. James Lee, Adam Moore, now out of service (then sergeant, Troop C), Sergt. (then corporal) James W. Henderson, Sergt. (then corporal) Corbin B. Finney, Corp. (then private) Elijah J. Taylor, Sergt. (then wagoner) Edward Strother, and Private Marshall Sheppard, Troop C, Ninth U. S. Cavalry: For gallantry in the charge on San Juan Hill, in the battle of Santiago, Cuba.

July 1, 1898.—Sergt. John Mason and Private Edward D. Nelson, Troop H, Ninth U. S. Cavalry: For gallantry in charging, at the head of the troops, up San Juan Hill in battle of Santiago, Cuba, in which act they were seriously wounded.

July 1, 1898.—John Jackson, deceased (then first sergeant, Troop C); Elisha Jackson, now out of service (then sergeant); Sergt. George W. Pumphrey (then corporal), and Privates Edward Davis and James Bates, Troop H, and George W. Goff, now out of service (then sergeant), Troop K, Ninth U. S. Cavalry. (Certificates of merit.)

July 1, 1898.—Squadron Sergt. Maj. Horace W. Blivins (then sergeant, Troop G), Tenth U. S. Cavalry: For conspicuous bravery in the battle of Santiago, Cuba.

July 1, 1898.—First Sergt. William H. Givens, Troop D, Tenth U. S. Cavalry: For exercising a steady and encouraging influence upon the men of his troop and conducting himself in a thoroughly efficient manner in the battle of Santiago, Cuba.

July 1, 1898.—William H. Daniels, now out of service (then private, Troop F, Tenth U. S. Cavalry): For conspicuous bravery in the battle of Santiago, Cuba.

July 1, 1898.—First Sergt. Adam Houston, Troop C; Sergt. James Elliott; Sergt. (then corporal) John Walker; Luchious Smith, now out of service (then private, Troop D); Q. M. Sergt. (then sergeant, Troop E) William Payne; Ozrow Gather, now out of service (then sergeant, Troop E); Sergt. John Graham; Private Benjamin Fasit, Company D, Twenty-fifth U. S. Infantry (then sergeant); and Private Thomas H. Herbert (then corporal, Troop E); Trumpeter Oscar N. Oden, Troop I, Tenth U. S. Cavalry: For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 1, 1898.—Herbert D. Keene, now out of service (then corporal, Battery A, Second U. S. Artillery): For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 1, 1898.—Nicholas Arnett and Charles T. Vaughan, now out of service (then privates), and Private Charles McP. Eggleston, Company A, Second U. S. Infantry: For especially meritorious service at the battle of Santiago, Cuba, in remaining on duty in the trenches after having been wounded and not retiring to have their wounds dressed until after the firing ceased.

July 1, 1898.—Hance Strother, now out of service (then private, Company F, Second U. S. Infantry); Q. M. Sergt. John T. Duffy, Company M, Seventh U. S. Infantry (then sergeant, Company F, Second U. S. Infantry); Sergt. John S. Buff, Company L, Second U. S. Infantry (then corporal, Company E, Second U. S. Infantry); and Sergt. (then private) John M. Mooney, Company E, Second U. S. Infantry: For gallantry at the battle of Santiago, Cuba, continuing on duty, after having been wounded, until after the firing ceased.

July 1, 1898.—Private William Dales, Company H, Fourteenth U. S. Infantry (then corporal, Company H, Second U. S. Infantry): For especially meritorious service at the battle of Santiago, Cuba, in remaining, after having been painfully wounded in the knee, on the firing line with his company until it was relieved.

July 1, 1898.—Private Paul F. H. Kesse, band, Fifth U. S. Artillery (then private, band); Sergt. Robert J. Marsh, Troop G, Seventh U. S. Cavalry (then musician), and Henry H. Tyler, now out of service (then private, Company A); Private Orion L. Clark, Company F, Seventh U. S. Infantry (then private, Company B); Corp. (then private) William H. Saunders, and Private (then corporal) August Bauman, Company H, Second U. S. Infantry (then Companies H and B, respectively, Second U. S. Infantry), and Artificer Charles L. Vierke, Company I, Seventh U. S. Infantry (then artificer, Company H, Second U. S. Infantry): For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 1, 1898.—Q. M. Sergt. John J. A. Clark and Private John C. Young, Company L, Third U. S. Infantry (then sergeant major); Musician Godfred Kampher, Company B, Seventh U. S. Infantry (then musician, Company D); and Willie R. Cuffman, now out of service (then private, Company G, Third U. S. Infantry): For distinguished service in battle, El Caney, Cuba. (Certificates of merit.)

July 1, 1898.—Joseph Hagan, now deceased (then private, Company B); Q. M. Sergt. James H. Pirie (then first sergeant, Company C); First Sergt. Henry C. Osborn; Guy Teter, now out of service (then private); Cook (then private) Frank M. Thompson, Company G; First Sergt. Herman Hecht, and Edwin E. Follett, now out of service (then private), Company H, Fourth U. S. Infantry: For distinguished service in battle, El Caney, Cuba. (Certificates of merit.)

July 1, 1898.—First Sergt. Thomas Farrell, Company B, Sixth U. S. Infantry; First Sergt. Harold M. Hallman, Company A, Sixth U. S. Infantry; Regimental Q. M. Sergt. Joseph Bennett, Sixth U. S. Infantry (then first sergeant, Company E, Sixth U. S. Infantry); First Sergt. Alexander Wyley, Company D, Sixth U. S. Infantry; John Murray, deceased (then first sergeant, Company C, Sixth U. S. Infantry); and Com. Sergt. William J. Browne, U. S. A. (then first sergeant, Company H, Sixth U. S. Infantry): For bravery and efficiency in the battle of Santiago, Cuba.

July 1, 1898.—James M. Irvin, now out of service (then sergeant, Company E, Sixth Infantry): For gallantry in remaining on the field after having been

severely wounded and until ordered to go to the hospital, at the battle of Santiago, Cuba.

July 1, 1898.—Sergt. (then first sergeant) Dick Carter, Company F, Sixth U. S. Infantry: For marked bravery and coolness under fire in the battle of Santiago, Cuba.

July 1, 1898.—James M. Mullen, killed in action (then private, Company F, Sixth U. S. Infantry): For gallantry in the battle of Santiago, Cuba, his entire indifference to danger offering a most excellent example.

July 1, 1898.—Corpl. (then private) Henry Edwards and Private Joseph H. Bias, Company F, Sixth U. S. Infantry, and Corpl. Edward Fairchild, Company D, Eleventh U. S. Infantry (then private, Company F, Sixth U. S. Infantry): For conspicuous bravery in rushing forward in the front line, and by their example encouraging others, in the charges on the blockhouse at San Juan Hill, battle of Santiago, Cuba.

July 1, 1898.—Corpl. (then private) Edward F. Moore, Company F, Sixth U. S. Infantry: For conspicuous gallantry in rushing forward in the front line, and by his example encouraging others, in the charges on the blockhouse on San Juan Hill, battle of Santiago, Cuba, and again in the second charge upon San Juan Hill, when he continued on duty, although he was wounded in the first charge.

July 1, 1898.—Private Granville W. Buckland, Company E, Sixth U. S. Infantry; Private Edward Harrison, Company B, Seventh U. S. Infantry (then private, Company E, Sixth U. S. Infantry); and William Taphorn, now out of service (then private, Company E, Sixth U. S. Infantry): For distinguished bravery and coolness under fire at the battle of Santiago, Cuba.

July 1, 1898.—Corpl. Holger C. Kieme, Company B, Seventh U. S. Infantry (then sergeant, Company F, Sixth U. S. Infantry); Charles P. Kilkary, now out of service (then private, Company F, Sixth U. S. Infantry); Corpl. (then private) William C. Lynch, Company F, Sixth U. S. Infantry; Q. M. Sergt. Charles Crisler, Company F, Sixth U. S. Infantry; George Koehler, now out of service (then artificer, Company F, Sixth U. S. Infantry); and William Young, now out of service (then private, Company F, Sixth U. S. Infantry): For marked bravery and coolness under fire at the battle of Santiago, Cuba.

July 1, 1898.—Sergt. (then corporal) Norman W. Ressler, Company D, Seventh U. S. Infantry: For distinguished bravery in battle, El Caney, Cuba, in rescuing wounded from in front of the lines, under heavy fire of the enemy. (Medal of honor.)

July 1, 1898.—Warren J. Shepherd, now out of service (then corporal, Company D, Seventh U. S. Infantry): For distinguished bravery in battle, El Caney, Cuba, in assisting in rescuing wounded from in front of the lines, under heavy fire of the enemy. (Medal of honor.)

July 1, 1898.—Sergt. Maj. Samuel W. Shaffer; Sergt. Michael Barrett, Company K, now Company A; William McFarlane, now out of service (then corporal); Corpl. (then private) Laxton McMurray; Corpl. Thomas O'Rourke, Company I (then private); and Private George Smith, Company H (then corporal), Company A; Private Robert M. Smith, Company M (then corporal, Company B); Thomas Priestly, deceased (then sergeant); and Frank P. McMurphy, now out of service (then corporal), Company D; Q. M. Sergt. George Selmiré (then sergeant, Company H), Seventh U. S. Infantry: For distinguished service in battle, El Caney, Cuba. (Certificates of merit.)

July 1, 1898.—First Sergt. Frederick Stones, U. S. Army, retired (then first sergeant, Company C, Eighth U. S. Infantry): For distinguished service in battle, El Caney, Cuba. (Certificate of merit.)

July 1, 1898.—Private Howard F. Alexander, Company M, Ninth U. S. Infantry (then attached to Company C): For coolness and bravery at the assault of San Juan Hill, Cuba.

July 1, 1898.—Corpl. James F. O'Reilly, Company B, Eleventh U. S. Infantry (then corporal, Company B); Sergeant Solomon Balmer, U. S. Army, retired (then sergeant, Company C); and Morgan Gardner, now out of service (then sergeant, Company D), Ninth U. S. Infantry: For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 1, 1898.—Q. M. Sergt. Herman Roth and Com. Sergt. (then quartermaster sergeant) Frank McCaffrey, Tenth U. S. Infantry: For repeatedly carrying orders from the regimental to battalion commanders under a heavy fire at the battle of Santiago, Cuba, and for gallantry and coolness throughout the siege.

July 1, 1898.—First Sergt. John A. Wise, Company C, Tenth U. S. Infantry; Sergt. Maj. Benjamin F. Lewis, U. S. Army, retired (then first sergeant, Company F, Tenth U. S. Infantry); First Sergt. George R. Langan, Company B, Tenth U. S. Infantry; First Sergt. Samuel Jones, Company M, Tenth U. S. Infantry; First Sergt. Cortez J. Moss, Company A, Tenth U. S. Infantry; Com. Sergt. Theodore F. Derrick, U. S. Army (then first sergeant, Company H, Tenth U. S. Infantry): For gallantry in action at the battle of Santiago, Cuba, where they rendered valuable service in assisting their company officers to preserve good order and a strict fire discipline.

July 1, 1898.—Com. Sergt. John McCarthy, U. S. Army (then first sergeant, Company G, Tenth U. S. Infantry); Corporal Mosheim Feaster, Company H, Third U. S. Infantry (then sergeant, Company G, Tenth U. S. Infantry); Q. M. Sergt. John Lagan, Company M, Tenth U. S. Infantry (then sergeant, Company G, Tenth U. S. Infantry); Corpl. Jabe N. Griffing, Company G, Tenth U. S. Infantry (then private, Company G, Tenth U. S. Infantry); Sergt. Samuel Hart, Company G, Tenth U. S. Infantry (then private, Company G, Tenth U. S. Infantry); Sergt. Harry Weeks, Company G, Tenth U. S. Infantry (then private, Company G, Tenth U. S. Infantry); and Walter E. Reynolds, out of service (then private, Company G, Tenth U. S. Infantry): For gallantry in advancing beyond the general line in the battle of Santiago, Cuba.

July 1-2, 1898.—Sergt. (then corporal) Joseph A. Ross and Private William H. Collins, Company E, Tenth U. S. Infantry; Elbert C. Plummer, out of service (then private); Sergt. (then private) Albert C. Venn, Company E, Tenth U. S. Infantry; and Private James Carter, unassigned (then Company E, Tenth U. S. Infantry): For advancing farther and remaining under fire longer than other members of the company on the 1st of July at the battle of Santiago, Cuba, and for remaining in the trenches and fearlessly exposing themselves to fire of the enemy, though almost overcome by the intense heat on the 2d of July.

July 1, 1898.—Sergt. (then private) Alfred Polond; Private James J. Nash; Andrew J. Cummins, out of service (then sergeant); Charles P. Cantrell, out of service (then private); and William Keller, out of service (then private), Company F, Tenth U. S. Infantry: For distinguished bravery in battle of Santiago, Cuba, in assisting in rescuing wounded from in front of the lines under heavy fire of the enemy. (Medals of honor.)

July 1, 1898.—Junior Parrish, now out of service (then sergeant, Company A); Corpl. Robert N. Moseley, Company H, Second U. S. Infantry (then private, Company B); and Corpl. Hans Villumsen, Ordnance Corps, U. S. Army (then sergeant, Company D), Tenth U. S. Infantry: For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 1, 1898.—Q. M. Sergt. Hamilton J. Carroll (then first sergeant, Company C); Daniel Arundell, now out of service (then first sergeant, Company D); Sergt. (then corporal) Edward Myers; Joseph E. Abele, now out of service (then private); Company E, and First Sergt. John B. Murphy, Company H, Twelfth U. S. Infantry: For distinguished service in battle, El Caney, Cuba. (Certificates of merit.)

July 1, 1898.—John W. Blair, deceased (then quartermaster-sergeant, Twelfth U. S. Infantry): For faithful, zealous, and intelligent performance of duty in the battle of Santiago, Cuba, and during the Cuban campaign, during which he died of fever.

July 1, 1898.—Private James L. McMillin, and Corpl. (then private) James W. Smith, Company H, Twelfth U. S. Infantry: For voluntarily and, under the fire of the enemy, bravely cutting some 5 miles of wire entanglements, thus opening the way for the advance of the troops at the battle of El Caney, Cuba.

July 1, 1898.—Sergt. Alexander M. Quinn, Company A, Thirteenth U. S. Infantry: For distinguished bravery in battle, Santiago, Cuba, in rescuing wounded from in front of the lines under heavy fire of the enemy. (Medal of honor.)

July 1, 1898.—Corpl. (then private) Rupert L. Bishop, Company B, Thirteenth U. S. Infantry: For voluntarily bringing up provisions to the men, at the risk of being shot by the enemy's sharpshooters concealed along his route, in the battle of Santiago, Cuba.

July 1, 1898.—Musician Joseph G. Devine, Company B, Thirteenth U. S. Infantry: For gallantry in the battle of Santiago, Cuba, where, armed with only a revolver, he secured a rifle and belt, and again taking his place on the firing line, remained doing noticeably good service during the whole fight.

July 1, 1898.—First Sergt. Otto Sydow, Company C, Thirteenth U. S. Infantry: For gallantly taking command of a platoon in advance of the attack on San Juan Hill at the battle of Santiago, Cuba, until he was left unconscious on the field, and for hastening to rejoin the American forces after he recovered; also for untiring and unceasing energy and efficiency in looking after the welfare of the enlisted men of the company in the trenches and during the entire campaign of Santiago.

July 1, 1898.—Sergt. James Touhey, Company F, Thirteenth U. S. Infantry: For zeal and energy in the battle of Santiago, Cuba, in dressing the wounds of his comrades and removing them to a place of safety and then joining his company without delay, and doing his share of the outpost duty during the night.

July 1, 1898.—Sergt. (then corporal) Irving S. Grady and Sergt. (then corporal) Frank M. Laird, Company G, Thirteenth U. S. Infantry; Private Howard Brady, Company K, Seventh U. S. Infantry (then private, Company G, Thirteenth U. S. Infantry); Q. M. Sergt. (then private) Thomas G. Cinnamon, Company G, Thirteenth U. S. Infantry; Private Henry J. Thorp, Company G, Thirteenth U. S. Infantry; Private John H. Samuel, Company D, Seventh U. S. Infantry (then private, Company G, Thirteenth U. S. Infantry); Frank A. Perry, now out of service (then private, Company G, Thirteenth U. S. Infantry); Cook Michael McQuinn, Company L (then private, Company G, Thirteenth U. S. Infantry); and Second-class Private Richard Voigt, Ordnance Corps, U. S. Army (then artificer, Company G, Thirteenth U. S. Infantry): For fearlessness during the most trying part of the attack, and for the good firing their coolness enabled them to do, in the battle of Santiago, Cuba.

July 1, 1898.—Sergt. Montague D. Williams, Company M (then sergeant, Company G), Thirteenth U. S. Infantry; Private Louis Salender, general service, U. S. Army (then private, Company G, Thirteenth U. S. Infantry); Private Joseph Pettit, general service, U. S. Army (then private, Company G, Thirteenth U. S. Infantry); Musician John J. Davitt, Company A, Seventh U. S. Infantry (then musician, Company K (then Company G), Thirteenth U. S. Infantry); and Sergt. (then private) John Pierson, Company G, Thirteenth U. S. Infantry: For conspicuous gallantry in the battle of Santiago, Cuba.

July 1, 1898.—Corpl. William F. Green, Company G, Thirteenth U. S. Infantry; Corpl. (then private) Frederick Russ, Company G, Thirteenth U. S. Infantry; and James W. Blair, now out of service (then private, Company G, Thirteenth U. S. Infantry): For being noticeably cool during the most trying part of the battle of Santiago, Cuba.

July 1, 1898.—First Sergt. Theodore Nagel, Q. M. Sergt. William Dillman, William F. Buckalew, now out of service (then sergeant); Sergt. (then private) John T. Davis, Corpl. (then private) Frederick M. Anthony, and Charles C. Steigerwald, now out of service (then corporal), Company A; Murtha Hennessey, deceased (then first sergeant), Sergt. William Marshall, Battery O, Fifth U. S. Artillery (then quartermaster sergeant); Jack Burk, now out of service (then sergeant); and Samuel C. Middleton, now out of service (then private), Company B; Q. M. Sergt. John A. Heller, Sergt. James J. Kelly, Company C; Corpl. Mathew Doyle, Company K, Seventh U. S. Infantry (then Company C, Thirteenth U. S. Infantry); Corpl. Jason Kretser, Company C; Corpl. John B. Bond, Company L (then private, Company C); Corpl. William C. Cook (then private), Company C; Corpl. John A. Leakins (then private), Company C; Private John Loftus, Company C; Private Charles O'Hanly, Company A, Seventh U. S. Infantry (then private, Company C); and Irvin E. Brock, now out of service (then private), Company C; Ord. Sergt. Michael J. Murphy, U. S. Army (then first sergeant), and Private Frank Janowski (then artificer), Company D; Corpl. John Fuerstenberg, Company C, Fifteenth U. S. Infantry (then first sergeant); and Artificer Samuel W. Hilyard, Company E; Sergt. Arthur R. Alexander (then private); and Cook Edward Kelly (then private), Company F; First Sergt. Albert Ott, Private James McCutcheon, Company D, Seventh U. S. Infantry (then private); and Private John Bremer, Company H, Third U. S. Infantry (then private); Fred L. Smith, now out of service (then sergeant); Newton J. Greene, died out of service (then sergeant); Corpl. Louis P. Seufert, general service; Corpl. Arthur Agnew (then private); First Sergt. Frederic Binckli (then private); Alfred C. Petty, now out of service (then private); and Private Paul Klick, Company H, Thirteenth U. S. Infantry: For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 1, 1898.—John Thompson, now out of service (then corporal, Company H, Thirteenth U. S. Infantry): For conspicuous gallantry in the charge on San Juan Hill, where he was among the first to reach the enemy's works, and for especially meritorious conduct throughout the campaign.

July 1, 1898.—Harvey M. Hone, died of wound (then corporal); Homer W. Lyons, now out of service (then private), wounded in action; Frank L. Clark, now out of service (then private), wounded in action; John F. Jansen, now out of service (then sergeant); Bernard Braddick, now out of service (then private); Private Ellis F. Ledgerwood (then first sergeant); Marin Donker, now out of service (then corporal); Charles D. Hunt, sergeant, Company A, Sixteenth U. S. Infantry; and Sergt. Fred E. Wheaton, Company K, Fourteenth U. S. Infantry (then private, Company A, Sixteenth U. S. Infantry): For gallantry and meritorious conduct in the charge upon San Juan blockhouse, being among the first to gain the enemy's works at the battle of Santiago, Cuba.

July 1, 1898.—Holmes Harris, now out of service (then corporal, Company A, Sixteenth U. S. Infantry): For meritorious conduct in the charge upon San Juan blockhouse, being among the first to gain the enemy's works, and for conspicuous gallantry throughout the battle of Santiago, Cuba.

July 1, 1898.—Sebring C. McGill, now out of service (then corporal, Company B, Sixteenth U. S. Infantry): For gallantry in the battle of Santiago, Cuba.

July 1, 1898.—Private Thru A. Strand, Company B, Sixteenth U. S. Infantry: For gallantry, being in front in the charge and among those who first reached the enemy's trenches, and in the attack on the blockhouse on San Juan Hill, in the battle of Santiago, Cuba.

July 1, 1898.—Clifton M. Spears, now out of service (then private, Company B, Sixteenth U. S. Infantry): For conspicuous bravery in front of and far in advance of the line, and being among those who first reached the enemy's trenches in the attack on San Juan Hill, battle of Santiago, Cuba.

July 1, 1898.—Charles McGillin, now out of service (then corporal, Company B, Sixteenth U. S. Infantry): For gallant conduct in the first line of the charge, continuing in pursuit of the enemy some distance beyond their trenches and blockhouse, and in front of line established for the night, at the battle of Santiago, Cuba.

July 1, 1898.—Sergt. (then corporal) John Hanavan; Corpl. Edward Berg, now

of Battery M, Third U. S. Artillery; Corpl. (then private) Robert Borchart; Daniel F. Meadows, deceased (then corporal); Emanuel Sammet, now out of service (then musician); William Morrow, now out of service (then private), and John D. Hess, now out of service (then private), all of Company C, Sixteenth U. S. Infantry: For conspicuous gallantry and loyalty to their company commanders in the charge on San Juan Hill, battle of Santiago, Cuba.

July 1, 1898.—Sergt. (then musician) Henry F. Schroeder, Company L, Sixteenth U. S. Infantry, and Musician Leicester Doras, Company G, Seventh U. S. Infantry (then musician, Company C, Sixteenth U. S. Infantry): For being of the utmost assistance in securing the simultaneous advance of the line, by repeating the sound of the "forward," although each call of the trumpet was sure to attract heavy fire: this at the battle of Santiago, Cuba.

July 1, 1898.—Artificer (then private) Edward W. Stewart; Frank S. Boone, now out of service (then corporal), and John C. Goad, deceased (then private), Company E, Sixteenth U. S. Infantry: For conspicuous gallantry, being far in advance of the line near the crest of San Juan Hill, in the battle of Santiago, Cuba.

July 1, 1898.—Richard N. Davidson, now out of service (then sergeant, Company G, Sixteenth U. S. Infantry): For coolness and deliberation in the attack on San Juan Hill, battle of Santiago, Cuba, during the hottest fire from the enemy, and for valuable services in estimating at the critical period his distances, and instructing and advising the men about as to distances and objective.

July 1, 1898.—Regimental Com. Sergt. Alvah T. Kase, Sixteenth U. S. Infantry (then sergeant, Company H, Sixteenth U. S. Infantry): For meritorious conduct, being fearless and active in the proper discharge of his duties, while under heavy fire for the first time, at the battle of Santiago, Cuba.

July 1, 1898.—Sergt. (then private) John Allen, Corpl. (then private) Robert M. McCrory; Fred G. Schroeder, now out of service, and Otto A. Hasenfuss, now out of service (then private), Company H, Sixteenth U. S. Infantry: For gallantry, being among the first to ascend San Juan Hill, at the battle of Santiago, Cuba.

July 1, 1898.—Sergt. (then corporal) Patrick Shea, Corpl. (then private) Fred Moseley, Cook (then private) William Litzinger, Private (then corporal) William O'Brien, Corpl. (then private) John Rummel, Private Benjamin M. Brodie, all of Company H, Sixteenth U. S. Infantry, and Private John T. Smith, Hospital Corps, U. S. Army (then private Company H, Sixteenth U. S. Infantry): For gallantry, being among the first to reach the crest of the hill in the charge of San Juan Hill, in the battle of Santiago, Cuba, and being at all times during the Cuban campaign conspicuous for courage and attention to duty.

July 1, 1898.—Corpl. Ned M. Green, Company D, Seventh U. S. Infantry (then private, Company H, Sixteenth U. S. Infantry): For conspicuous coolness and courage, being among the first in the charge on San Juan Hill, in the battle of Santiago, Cuba.

July 1, 1898.—Q. M. Sergt. (then corporal) Frederick Harfes, Company H, Sixteenth U. S. Infantry: For conspicuous courage while under fire for the first time in the battle of Santiago, Cuba, being among the first to reach the crest of San Juan Hill, and for courage and attention to duty during the Cuban campaign.

July 1, 1898.—James A. Austin, now out of service (then private, Company A, Sixteenth U. S. Infantry): For being among the first to reach the crest of the hill in the charge on San Juan Blockhouse, in the battle of Santiago, Cuba, where he was wounded.

July 1, 1898.—Walter T. Noyes, deceased (then private, Company H, Sixteenth U. S. Infantry): For distinguished bravery in going forward under fire, as a scout, to find the position of a regiment in the front of his company, at the battle of Santiago, Cuba.

July 1, 1898.—Charles E. Morgan, now out of service (then corporal, Company H, Sixteenth U. S. Infantry): For conspicuous courage and attention to duty in the front line of the charge upon San Juan Hill, at the battle of Santiago, Cuba, going beyond the enemy's ditches and blockhouse and assisting in disarming a Spanish prisoner; also for bravery in pursuit of the enemy.

July 1, 1898.—Frederick J. Liesmann, now out of service (then corporal, Company B); First Sergt. Frank Stevens; Sergt. James Sloan (then private); Sergt. William Graff and William F. Gilooly, now out of service (then private, Company G); Corpl. John Dudley, Company D, Nineteenth U. S. Infantry (then sergeant, Company H, Sixteenth U. S. Infantry): For distinguished service in battle, Santiago de Cuba. (Certificates of merit.)

July 1, 1898.—Ord. Sergt. John O'Rourke, U. S. Army (then first sergeant, Company C, Seventeenth U. S. Infantry): For distinguished service in battle, El Caney, Cuba. (Certificate of merit.)

July 1, 1898.—Com. Sergt. Julius Jensen, U. S. Army (then sergeant-major); Sergt. (then first sergeant) Henry S. Groff; Private John C. Barnard, Company I (then Company A); First Sergt. George T. Rollins; William E. Loomis, now out of service (then corporal), and Corpl. (then private) William W. Mulford, Company B; First Sergt. Michael Kelly, Company C; First Sergt. Edward T. Nichols, Company L (then first sergeant, Company D), and Private Wesley W. Smith, Company K (then private, Company D); First Sergt. Ormsby Wolf, Company E; Polybe Rosat, now out of service (then first sergeant, Company F); First Sergt. Joseph Kassehmer, Company G; Q. M. Sergt. Julius Schulz, Company G (then sergeant); Sergt. Edward Flynn (then quartermaster-sergeant), Company G, and First Sergt. George Merdinger, Company H, Twenty-first U. S. Infantry: For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 1, 1898.—Edwin G. Clarke, now out of service (then chief musician, Twenty-first U. S. Infantry): For gallantry in carrying orders under fire at the battle of Santiago, Cuba.

July 1, 1898.—Sergt. Philip Gallagher, Company B, Twenty-first U. S. Infantry: For gallantry in carrying the colors under fire, by the side of the lieutenant-colonel, in the advance on the blockhouse, at the battle of Santiago, Cuba.

July 1, 1898.—Q. M. Sergt. Charles Shearman, Company M (then musician, Company B), Twenty-first U. S. Infantry: For bravery and coolness, voluntarily and unhesitatingly carrying messages several times through severe fire in the battle of Santiago, Cuba.

July 1, 1898.—Xafer Mauz, now out of service, and Oscar Moody, deceased (then private, Company F, Twenty-first U. S. Infantry): For gallantry, in bringing up rations and water under fire.

July 1, 1898.—Thomas M. Doherty, general service (then corporal, Company H); Corpl. George H. Nee, Company H (then private, Company F); Artificer Thomas Kelly, Company K (then private, Company H); Corpl. John F. De Swan and Frank O. Fournia, now out of service (then private, Company H), and Pvt. Herman Pfisterer, Company C, Seventh U. S. Infantry (then musician, Company H), Twenty-first U. S. Infantry: For distinguished bravery in battle, Santiago, Cuba, in assisting in rescuing wounded from in front of the lines under heavy fire of the enemy. (Medals of honor.)

July 1, 1898.—Corpl. (then first sergeant) John J. Byrne, Company F, Twenty-second U. S. Infantry: For gallantry, commanding platoon, at the battle of El Caney, Cuba.

July 1, 1898.—Corpl. William Parnell, Company B, Seventh U. S. Infantry (then sergeant, Company F, Twenty-second U. S. Infantry): For gallantry in battle of El Caney, Cuba.

July 1, 1898.—Mechanic Cornelius Cullinan, Battery C, Fourth U. S. Artillery (then sergeant, Company F, Twenty-second U. S. Infantry): For gallantry in battle of El Caney, Cuba.

July 1, 1898.—Sergt. James Satchell, Company A; Corpl. (then private) Scott Crosby, Company A; Corpl. Loney Moore, Company L (then private, Company A); Sergt. (then corporal) Richard Williams, Company B; Com. Sergt. William Thornton (then corporal, Company G); Sergt. (then corporal) Abram Hagen; Sergt. (then corporal) Peter Jackson, and John T. Williams, now out of service (then

sergeant), Company G, Twenty-fourth U. S. Infantry: For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 1, 1898.—Seth E. Beers, now out of service (then corporal, Company G, Thirty-third Michigan Volunteers: For distinguished service in engagement at Auguadores, Cuba.

July 1, 1898.—Dr. Thomas Y. Aby, now out of service (then acting assistant surgeon, U. S. Army): For gallant conduct in attending to the wounded on the battlefield and the sick in the trenches, while himself ill from the fever and heat; this at the battle of Santiago, Cuba.

July 1, 1898.—Dr. Harry W. Danforth, deceased (then acting assistant surgeon, U. S. Army): For especially meritorious service rendered during battle of Santiago, Cuba, in caring for the sick and wounded. He was killed while at work at the dressing station at the "Bloody Ford," on the morning of July 2.

July 1, 1898.—Dr. Francisco E. Menocal, now out of service (then acting assistant surgeon, U. S. Army): For gallant and meritorious conduct during the battle of Santiago, Cuba, where, under fire, he cared for the sick and wounded.

July 1, 1898.—Ramon G. Mendoza (civilian): For distinguished service in the presence of the enemy at the battle of Santiago, Cuba.

July 2, 1898.—Second Lieut. Ira C. Welborn, Ninth U. S. Infantry: For distinguished bravery in battle, Santiago, Cuba, voluntarily leaving his shelter and rushing, under fire, to the aid of a private of his company who was wounded. (Medal of honor.)

July 2, 1898.—Capt. Charles H. Muir, Second U. S. Infantry: For distinguished bravery in voluntarily exposing himself, at the risk of his life, to a heavy fire from artillery and infantry of the enemy, in a successful attempt as a sharpshooter to silence a piece of Spanish artillery at the battle of Santiago, Cuba, and for rare judgment and scientific skill in making reconnoissances, selecting positions, obtaining ranges, directing sharpshooters, and himself doing effective shooting.

July 2, 1898.—First-Class Sergt. (then sergeant) John Kennedy, Sergt. (then first-class private) James Richards, and Private Harry M. Bunce, Troop A, Sixth U. S. Cavalry (then first-class private), U. S. Signal Corps: For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 2, 1898.—George O. Ravenstein, out of service (then corporal, Troop B, Third U. S. Cavalry, commanding the detachment); Saddler Frank Maresch, Troop E, Third U. S. Cavalry; Cornelius J. Donohue, now out of service (then private, Troop E, Third U. S. Cavalry); Private Jeremiah L. Hooley, Troop E, Third U. S. Cavalry, and Wesley C. Kollo, killed in action (then private, Troop E, Third U. S. Cavalry): For holding their position and firing some fifty rounds of ammunition each, some 200 yards in front, while throwing up an intrenchment between the American firing line and that of the enemy, and exposed to the fire of each, holding their ground until the enemy retreated.

July 2, 1898.—John O'Brien, now out of service (then sergeant, Light Battery F, Second U. S. Artillery), and William G. Underwood, now out of service (then corporal, Light Battery F, Second U. S. Artillery): For coolness and courage in serving their guns under fire at the battle of Santiago, Cuba.

July 2, 1898.—William R. Logan, deceased (then private, Light Battery F, Second U. S. Artillery): For persisting in staying by his gun till compelled by physical disability to withdraw; this at the battle of Santiago, Cuba.

July 2, 1898.—James H. Cooke, now out of service (then sergeant); Artificer (then sergeant) Martin J. Murphy, and Corp. (then musician) Otto Scheu, Company B, and Private Alfred G. Simpson, Company C, Third U. S. Infantry: For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 2, 1898.—John H. Worthington, now out of service (then sergeant, Company A, Seventh U. S. Infantry): For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 2, 1898.—Sergt. (then corporal) Oscar F. Winters, Company F, Ninth U. S. Infantry: For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 2, 1898.—Thomas Flynn, deceased (then private); Frank M. De Pew, jr., and Thomas Glenning (then private and now out of service), Company B, Twenty-first U. S. Infantry: For gallantry in remaining out in front of the trenches during the furious firing of July 2, at the battle of Santiago, Cuba.

July 2, 1898.—Sergt. Michael Heffron, Company A, and Private Daniel Shields, general service (then corporal, Company G, Twenty-first U. S. Infantry): For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 2, 1898.—A. C. Munoz, volunteer aid-de-camp and acting engineer officer on the staff of the commanding general First Division, Fifth Army Corps: For gallant conduct in battle of San Juan, Cuba, where he was wounded.

July 6, 1898.—Corpl. (then sergeant) Alois Weishaar, Company A, Thirteenth U. S. Infantry, and Private William Ryder, general service (then sergeant, Company G, Thirteenth U. S. Infantry): For distinguished service in battle, Santiago, Cuba. (Certificates of merit.)

July 7, 1898.—Private (then corporal) Michael Grogan, Company B, Thirteenth U. S. Infantry: For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 10, 1898.—Capt. Charles W. Jefferson, Forty-ninth Infantry, U. S. V. (then first sergeant, Troop B, Ninth U. S. Cavalry): For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 10, 1898.—Private John O'Conner, Company K (then first sergeant, Company A), Second U. S. Infantry: For distinguished service in battle, Santiago, Cuba. (Certificate of merit.)

July 13, 1898.—Capt. Frank L. Graham, Twenty-seventh Infantry, U. S. V. (then captain, First District of Columbia Volunteer Infantry): For meritorious conduct in saving, at the risk of his own life, two soldiers from drowning in the San Juan River, near Santiago, Cuba.

July 17, 1898.—Q. M. Sergt. Richard Curtis, Company G, Twenty-fourth U. S. Infantry (then corporal, Company G, Twenty-fourth U. S. Volunteer Infantry): For voluntarily reporting for duty at the yellow-fever hospital, Cuba, for any services he might be required to perform.

July 23, 1898.—Capt. (then first lieutenant) John W. Heard, Third U. S. Cavalry: For distinguished gallantry in action at the mouth of the Manimani River, west of Bahia Honda, Cuba, after two men had been shot down by Spaniards while transmitting orders to the engine room on board the steamship *Wanderer*; the ship having been disabled, Lieutenant Heard took the position held by them and personally transmitted orders, remaining at his post until the ship was out of danger. (Medal of honor.)

July 23, 1898.—Sergt. John McBride, Troop A, Third U. S. Cavalry: For distinguished service in action at Manimani River, Cuba. (Certificate of merit.)

July 31, 1898.—Sergt. (then corporal) Philip Sauer, Battery H; Corpl. Henry Stockfleth, Battery O (then Battery H), and Loid Neal, now out of service (then musician, Battery H), Third U. S. Artillery: For distinguished service in an engagement near Manila, P. I. (Certificates of merit.)

July 31, 1898.—Q. M. Sergt. John F. Wentling, jr., Tenth Pennsylvania Volunteer Infantry: For distinguished service in an engagement near Manila, P. I. (Certificate of merit.)

July 31, 1898.—Richard F. Stapleton, now out of service (then private, Company A, First California Volunteer Infantry): For voluntarily carrying messages under heavy fire from the trenches back to the reserve at Passy Crossroad, near Manila, P. I.

July, 1898.—First Lieut. Walter C. Short, Tenth Cavalry (then second lieutenant, Sixth Cavalry): For especially meritorious conduct in that, having been wounded in the assault on San Juan Hill, Cuba, July 1, 1898, and having been sent to the hospital at Key West, Fla., he, upon learning that his regiment had suffered severe losses since he left it, applied for and secured passage back to Santiago, and

within a few days rejoined his regiment and remained with it throughout the Santiago campaign.

July, 1898.—Maj. Frederick J. Combe, brigade surgeon, U. S. Volunteers (then acting assistant surgeon, U. S. Army): For especially meritorious service during the Santiago campaign, in establishing, with the aid of others, the division hospital at the extreme front, carrying a portion of the supplies for several miles on his back during drenching rains and in deep mud.

July, 1898.—Private Frank Martinez, band, Thirteenth U. S. Infantry: For voluntarily nursing yellow-fever patients in the yellow-fever camp near Siboney, Cuba, for five weeks, during which period, although often ill himself, his patience, kindness, and devotion to duty were remarkable.

July, 1898.—First Sergt. (then sergeant) Alexander Arnett, Company E, Twenty-fourth U. S. Infantry: For voluntarily nursing the fever-stricken officers of his regiment for weeks, under particularly trying conditions, in the most faithful and self-sacrificing manner in the Cuban campaign.

July, 1898.—Private Charles Edwards, Company I, Seventy-first New York Volunteer Infantry: For voluntarily rendering efficient and unremitting care to the sick and wounded in battle near Santiago, Cuba.

July, 1898.—Drs. Hamilton P. Jones and William W. Calhoun, acting assistant surgeons, U. S. Army: For especially meritorious service during the Santiago campaign, in establishing, with the aid of others, the division hospital at the extreme front, carry a large portion of the supplies for several miles on their backs during drenching rains and in deep mud.

July, 1898.—Dr. G. Goodfellow, civilian, and volunteer aid to Gen. William R. Shafter: For especially meritorious services, professional and military, during the campaign in Cuba.

July, 1898.—George F. Hawkins, civilian and volunteer aid to Gen. William R. Shafter: For especially meritorious service during the Cuban campaign.

July, 1898.—Leonard Wilson, clerk, Inspector-General's Office, War Department: For faithful and valuable services throughout the campaign at Major-General Wheeler's headquarters, and especially during the battles around Santiago, and also while secretary of the commission which met between the lines and negotiated the surrender of the enemy.

July and August, 1898.—Dr. Nicholas Senn, now out of service (then lieutenant-colonel and chief surgeon, U. S. Volunteers): For his surgical work during the Cuban campaign, and for making a scientific study into the causes of typhoid fever among the troops.

July 31 to August 13, 1898.—Harry A. Young, killed in action (then quartermaster-sergeant Battery A, Utah Light Artillery): For voluntarily spending every night, when there was firing, in attending the wounded; this near Manila, P. I., the battery having no medical officer.

August 2, 1898.—William H. Shearer, now out of service (then corporal): George H. Hudson, killed in action (then private), and Richard H. Ralph, deceased (then private), Battery B, Utah Light Artillery: For leaping on top of the trenches and, under heavy infantry fire, removing the debris so that a partially disabled gun could resume firing; this during attack near Manila, P. I.

August 2, 1898.—Corpl. Joseph S. Oviatt, Company A, and Private Lawrence B. Conner, Company E, First Nebraska Volunteer Infantry: For distinguished service in an engagement near Manila, P. I. (Certificates of merit.)

August 5, 1898.—Chaplain James C. Schindel, Fourth Ohio Volunteer Infantry (now out of service): For gallant and meritorious services in the action at Guayama, P. R., where, by his intelligence and bravery under fire, he did much to encourage the men.

August 5, 1898.—First-class Sergt. Ernest Dodier and Sergt. Marshall S. Greene, U. S. Volunteer Signal Corps: For distinguished service in an engagement near Manila, P. I. (Certificates of merit.)

August 5, 1898.—Private Patrick H. Sullivan, Company F, Twenty-third U. S. Infantry: For distinguished service in an engagement near Manila, P. I. (Certificate of merit.)

August 9, 1898.—First Sergt. Cecil B. West, Company E; Sergt. Henry L. Clotworthy, Company I, and Louis I. Bigelow, Company E, First Colorado Volunteer Infantry: For distinguished service in battle near Manila, P. I. (Certificates of merit.)

August 10, 1898.—Col. J. Franklin Bell, Thirty-sixth U. S. Volunteer Infantry (then major and engineer officer, U. S. Volunteers): For especially meritorious service in making a bold reconnaissance of the creek in front of Fort San Antonio de Abad, and ascertaining not only that it was fordable, but the exact width of the ford at the beach, and swimming in the bay to a point from which he could examine the Spanish line from the rear, thus facilitating the planning of the successful attack of August 13, 1898, on Manila, P. I.

August, 1898.—Post Chaplain William D. McKinnon, U. S. Army (then chaplain First California Volunteer Infantry): For gallantry in attempting to enter the Spanish lines at Manila, P. I., when he was driven back by the fire of the enemy, and on a second attempt, also under the enemy's fire, succeeded in entering said lines and securing an interview with the Spanish officials with view to the surrender of the city; also in continuing to aid a wounded soldier after he himself had been wounded.

August 10, 1898.—Lieut. Col. Lewis H. Strother, Thirty-second U. S. Volunteer Infantry (then major and engineer officer, U. S. Volunteers): For meritorious service in assisting in reconnaissance work and for conduct which involved great risk of life and was characterized by coolness, courage, and other soldierly qualities in action at Manila, P. I.

August 13, 1898.—First Lieut. William G. Haan, Third U. S. Artillery: For distinguished conduct in the attack on Manila, P. I.

August 13, 1898.—Second Lieut. Joseph W. Beacham, Jr., First U. S. Infantry (then sergeant, Astor Battery, U. S. Volunteers): For gallantry in action at the battle of Manila, P. I.

August 13, 1898.—Second Lieut. William B. Baker, Eighteenth U. S. Infantry (then sergeant, Astor Battery, U. S. Volunteers): For distinguished service in battle of Manila, P. I. (Certificate of merit.)

August 13, 1898.—First Sergt. (then sergeant) Byron K. Smith, Company C, Twenty-third U. S. Infantry, and George P. Clark and Bishop Turner, now out of service (then privates), Company C, Twenty-third U. S. Infantry: For preparing shelter, under a heavy fire of the enemy, for the men, and holding an exposed position to the close of the action, at Manila, P. I.

August 13, 1898.—Sergt. Harry L. Burdick, Astor Battery, U. S. Volunteers: For gallantry in action at the battle of Manila, P. I.

August 13, 1898.—Musician Max H. Miller, Company E, First California Volunteer Infantry: For arresting, single handed, about thirty armed Filipinos plundering a Spanish vessel loaded with Government property, and marching them to the headquarters of his battalion, where they were disarmed and confined, at Manila, P. I.

August 13, 1898.—Private James J. Watkins, Company D, First California Volunteer Infantry: For distinguished service in battle, Malate, P. I. (Certificate of merit.)

August 13, 1898.—Private Samuel Hickman, Company F, First Colorado Volunteer Infantry: For distinguished service in battle, Manila, P. I. (Certificate of merit.)

August 13, 1898.—Charley Phenix, deceased (then private, Company I, First Colorado Volunteer Infantry): For raising the American flag near Malate, at the battle of Manila, P. I., in which act he was seriously wounded.

August 13, 1898.—Capt. John N. Loye, Forty-fifth U. S. Volunteer Infantry (then battalion sergeant-major, Thirteenth Minnesota Volunteer Infantry): For valuable services rendered at the battle of Manila, P. I., where he was the first

to respond to the order of the commanding general to construct defenses for the protection of the most exposed part of the line.

August 13, 1898.—Marcus E. Holmes, killed in action (then sergeant, Astor Battery, U. S. Volunteers): For distinguished service in battle of Manila, P. I. (Certificate of merit.)

August 13, 1898.—Maj. Frank H. Titus, surgeon, U. S. Volunteer Staff (then acting assistant surgeon, U. S. Army): For establishing a first-aid hospital in the village church, and for the manner in which he came to the front with a detachment of the Hospital Corps through a heavy indirect fire, and the efficient manner in which he rendered services to the wounded at the battle of Manila, P. I.

August 13, 1898.—F. D. Millet and G. L. Rathbone, civilians and volunteer aids to Brig. Gen. Francis V. Greene, U. S. Volunteers: For valuable services rendered in the trenches at the attack on Manila, P. I.

August 16, 1898.—Q. M. Sergt. Reginald B. Looker, Company H, First District of Columbia Volunteer Infantry: For meritorious conduct in saving, at the risk of his own life, a soldier from drowning in the Bay of Guanica, off Fort Capron, P. R.

August 21, 28, 1897.—First Sergt. Richard Wolfe, Company I, Sixth U. S. Volunteer Infantry: For meritorious conduct in saving, at the risk of his own life, August 21, 1898, a soldier from drowning in Chickamauga Creek, near Camp Thomas, Georgia; and August 28, 1898, for meritorious action in saving the lives of three inmates of a vehicle, by stopping a runaway horse, at Lytle, Ga.

August, 1898.—Col. Charles R. Greenleaf, assistant surgeon-general, U. S. Army: For most efficient and hazardous services in the medical department in Cuba and during the Porto Rican campaign, especially in the yellow-fever camps.

August, 1898.—Capt. Andrew S. Rowan, Nineteenth U. S. Infantry (then lieutenant-colonel, Sixth U. S. Volunteer Infantry): For distinguished service in Cuba preceding and following the campaign, securing most valuable information under perilous circumstances, and also for rendering most efficient and valuable services in Porto Rico.

August, 1898.—Lieut. Col. William R. Grove, Thirty-sixth U. S. Volunteer Infantry (then captain, First Colorado Volunteer Infantry): For meritorious conduct in being particularly active in reconnaissance work and fearless in penetrating beyond the American lines and close to those of the enemy; also assisting in making a careful examination of the ground between the American trenches and Fort San Antonio de Abad, previous to the attack of Manila, P. I.

August, 1898.—Second Lieut. Rice W. Means, Company E, First Colorado Volunteer Infantry: For conduct in the Manila campaign involving great risk of life, characterized by coolness and courage; also for being particularly active in reconnaissance work, and fearless in penetrating beyond the American lines and close to those of the enemy, and for assisting in a careful examination of the ground between the American trenches and Fort San Antonio de Abad.

September 1, 1898.—George W. Garnsey and John M. Claxton (then privates), and James C. McCarty (then trumpeter), Company B; Louis A. Sillito (then private), Company C, and William L. Irving (then private), Company D, Third U. S. Volunteer Infantry: For voluntarily nursing yellow-fever patients at Guantanamo, Cuba.

October 5, 1898.—Acting Hosp. Steward Oscar Burkard (then private), U. S. Hospital Corps: For distinguished bravery in action against hostile Indians at Leech Lake, Minn. (Medal of honor.)

October 14, 1898.—Corpl. Frank L. Owens and Private Edgar A. Taylor, Company M, First California Volunteer Infantry: For meritorious conduct in saving, at the risk of their own lives, a soldier from drowning in the Pasig River, Manila, Luzon, Philippine Islands.

November 2, 1898.—Thaddeus R. Hyatt, now out of service (then corporal, Company L, Nineteenth U. S. Infantry): For capturing two of the worst criminals in Porto Rico, near Guayama, P. R. (Certificate of merit.)

November 15, 1898.—Second Lieut. William B. Baker, Eighteenth U. S. Infantry (then private, Astor Battery, U. S. Volunteers): For meritorious action in saving (with the aid of others), at the risk of his own life, a Filipino from drowning in the Pasig River, Philippine Islands.

November 15, 1898.—Corpl. Frank J. Hutchinson, Astor Battery, U. S. Volunteers, and Private Harry E. Duffy, Company H, Tenth Pennsylvania Volunteer Infantry: For meritorious action in saving (with the aid of another), at the risk of their own lives, a Filipino from drowning in the Pasig River, Philippine Islands.

November 16, 1898.—Robert Healy, civilian: For meritorious conduct in saving, at the risk of his own life, a Filipino from drowning in the Pasig River, near Manila, P. I.

November 26, 1898.—Sergt. Edmond Barry, Battery H, Second U. S. Artillery: For meritorious conduct in saving, at the risk of his own life, a soldier from drowning, in Long Island Sound, off New London, Conn.

February 13, 1899.—First Sergt. Irvin L. Hunsaker, Company H, Eighteenth U. S. Infantry: For distinguished gallantry in battle, Jaro, Panay, P. I. (Certificate of merit.)

February 21, 1899.—Corpl. James B. Patterson, Company K, First Tennessee Volunteer Infantry: For saving the life of a comrade by shooting an insurgent who was about to fire upon the same, on the banks of the La Pas River, Panay, P. I. (Certificate of merit.)

February 23, 1899.—Sergt. Leon H. Chick (then sergeant, Battery H), Battery O, Third U. S. Artillery: For risking his life in order to check a fire at Manila, P. I. (Certificate of merit.)

February 23, 1899.—Charles Ohmer, now out of service (then private, Company F, Nineteenth U. S. Infantry): For attacking and defeating robbers near Adjuntas, P. R. (Certificate of merit.)

March 3, 1899.—Forrest F. Farmer, now out of service (then private, Company C, Eighteenth U. S. Infantry): For coolness and courage on picket duty near Jaro, P. I. (Certificate of merit.)

May 20, 1899.—Charles J. Lavier (then corporal, Company H, Ninth U. S. Infantry), died of wounds received in action: For meritorious conduct in saving, at the risk of his own life, a soldier from drowning in the Rio Grande, near Candaba, Luzon, P. I.

May 23, 1899.—Capt. John E. Boyer, First Washington Volunteer Infantry: For meritorious conduct in saving, at the risk of his own life, a soldier from drowning in the Pasig River, at Pasig, Luzon, P. I.

June 14, 1899.—Private Harry Shields, Hospital Corps, U. S. Army: For distinguished conduct in the flood at Brackettville, Tex. (Certificate of merit.)

June 17, 1899.—Corp. Michael J. Sullivan, Battery N, Fifth U. S. Artillery (then corporal, Battery G, First U. S. Artillery), and Private Thomas W. Parks, Battery G, First U. S. Artillery: For meritorious conduct in saving, at the risk of their own lives, seven persons from drowning in the Gulf of Mexico, at Galveston, Tex.

June 20, 1899.—Second Lieut. Robert H. C. Kelton, First U. S. Artillery: First Sergt. Harald Rasmussen; Sergts. Charles L. Thierry and Archie H. Dubeau; Corp. Edgar Steele (now private, Battery L, Seventh U. S. Artillery); Privates Thomas E. Brodeser, John F. Napier, Patrick O'Day, John R. Stone, Birchard Wilson, and Leonard Clark, Battery H, First U. S. Artillery: For heroic and energetic efforts in extinguishing the fire in the ordnance storehouse and consequent explosion of the powder magazine, at Fort Pickens, Fla., in which efforts Lieutenant Kelton led his men in the hazardous work.

October 6, 1899.—Capt. Edward L. King, Eleventh U. S. Volunteer Cavalry (second lieutenant, Eighth U. S. Cavalry, and then serving with that regiment): For saving the life of an officer in disarming a hostile Filipino who was about to shoot that officer at Binacayani, P. I.

November 27, 1899.—Second Lieut. Edwin H. Martin, Fifth U. S. Artillery: For meritorious conduct in saving, at risk of his own life, a soldier from drowning in the New York harbor.

Reapportionment Bill.

SPEECH
OF

HON. HENRY C. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 5, 1901,

On the bill (H. R. 12740) making an apportionment of Representatives in Congress among the several States under the Twelfth Census.

Mr. HENRY C. SMITH said:

Mr. SPEAKER: There are three bills before the House for consideration—the one reported by the chairman of the Committee on the Twelfth Census, the one reported by the minority of that committee, and the one reported by the gentleman from Indiana [Mr. CRUMPACKER], also a member of the same committee.

The first two named are based upon the tables furnished by the Director of the Census, and do not differ essentially in the method used to apportion the Representatives among the several States.

The aim of the first is to keep the House at its present numerical size. The aim of the second is to increase the number of the Representatives in such a manner that the Representatives in none of the States shall be less than at the present time. The third proposes to reduce the number of Representatives in some of the States because of the fact that a large number of voters in these States have been deprived of the constitutional right to vote, in violation of section 2 of Article XIV of the Federal Constitution, which provides that:

Representatives shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a State, or the members of the legislature thereof, is denied to any of the male inhabitants of such State, being 21 years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in such State.

There is much force and justice in this proposition. It may have been a mistake in the beginning to have granted the right of suffrage to the colored men of the South in their condition, so lately freed from bondage. The people of the Southland claim that the colored man can not be trusted; that he belongs, by nature, to an inferior race, and can not become the equal of his white brother, and that for this reason he ought not be permitted to vote. Our brothers of the South are so firm in this belief that it is not disguised that by various methods, fair or foul, the rights of franchise of their late slaves have been abridged, and they have firmly determined that they will not have the black man to rule over them. At first, by the aid of force and intimidation, he was discouraged, to say the least—to put it mildly and politely—from using the ballot.

Now a more genteel way is found—a method that is sustained by the courts—a method of fixing qualifications which the colored voter can not meet and comply with. The conditions are such, and the fact is, that they do not vote. An inspection of the Congressional Directory will show this. Take the State of Georgia, one of the most advanced and progressive of the Southern States, where intelligence and patriotism are of a high order. In 1898 there were cast for all the candidates for Congress of all the political parties in the whole eleven districts only 71,709 votes.

In the Second district of Michigan, which I have the honor to represent, there were cast at the same election, for the candidates for Congress in that district, 41,816. Think of it! Nearly as many votes were cast in my district as were voted in seven districts of Georgia. There were cast in the First, Third, Fourth, Fifth, Sixth, Eighth, and Tenth districts of Georgia only 42,438. In Michigan, one Congressman has nearly 42,000 votes. In Georgia, he has 3,000. Upon what theory of justice and fair play can this be justified? It is a mere farce. It is natural that man should desire to "wield the scepter of empire;" that he should vote. If he does not desire to vote, there is some reason for this condition. It is not shown or contended that his brother of the dark skin does not want to vote.

Now, for one, I think he should be given the full franchise, or no franchise whatever. It is idle to give him the letter of the law and not the spirit of it. It is the "spirit that maketh alive." He has been deceived and tampered with quite long enough. This continual agitation keeps alive sectional hatred in our country, where none should exist. Let it be settled once for all. If he is to be permitted to vote, let that permission be free and full. If he is not, let this, too, be determined, and be beyond doubt and beyond dispute.

I believe he can be trusted. When his master took up arms

against the North and went out to fight against the Union for what he understood to be his rights, and he left his lands, his property, his wife, his daughters, his all, in the keeping of this black man—his bondman—when he went away to fight against the liberty of this man; oh, wonderful trust! oh, faithful obedience! And when he returned, vanquished, yet proud, he found that this trust and confidence had not been betrayed. The colored man is intelligent. There has never been a tribe or a race in the world's history which has made the strides of progress he has made. Think of the hundreds of years of bondage in which he lived. Generation after generation born and lived without hope, without opportunity, and without ability to better or improve conditions. Now, in these few years he is a leader among men—a virtuous, intelligent, and progressive citizen. The white race under the same circumstances could scarcely have done better.

He is patriotic, too. Witness the courage and bravery of the Twenty-fourth United States Volunteers on San Juan Hill. There is nothing in history or in fiction more noble than the conduct of these patriotic colored men. They volunteered to cut the barbed wire that hindered the forward march of our soldiers to meet the Spanish arms. It was certain death to all who went. They cut the wire in the very rain of Spanish bullets, that the Stars and Stripes might march on—that our standard might be placed on foreign soil. No man of them came back alive. They sleep this day by the silent sea, but their spirits will march on and their brave deeds will be read in song and in story by all the generations yet to come.

Can it be that such men ought not to have the right to cast an honest vote "where no man shall make him afraid," and that unchallenged by conditions he can not meet and comply with. Conditions which would not be reasonable to men who represent generations of culture, refinement, and education would be most unreasonable to be imposed upon men lately emerged from a condition of bondage, and when these conditions are imposed deliberately, for the purpose of preventing the exercise of the franchise, they are obnoxious, intolerable, and find no warrant in our civilization. Even the courts may sustain them. There is a law the courts and all must respect—the absolute right of every man to equal advantage and opportunity.

The trouble is, as it seems to me, this proposition of the gentleman from Indiana either comes too late or is not the proper method of treatment of the subject. It seems not practicable now at this time to determine for what reason or cause or by what means voters were disfranchised. It seems not fair to determine, with no facts, but upon inferences, that voters were disfranchised by unconstitutional inhibitions, and that therefore representation should be cut off. To enact into law such a proposition would amount to this. It seems to me that the provisions of the Constitution are mandatory, and that if it should appear that a Representative is returned from a district where voters are under the constitution disfranchised, such Representative is not legally here, and should not be permitted to retain and hold his place.

The whole matter could be adjusted by an amendment to the Constitution and then the passage of a law by Congress making the qualifications of voters uniform throughout the Union, in the same manner as it is proposed to make the laws of marriage and divorce, the law concerning the protest of commercial paper, and such like laws uniform. With such a law the whole problem might be solved, and solved equitably and fairly. I have submitted a resolution for such an amendment. The only men who do not vote are the insane and the criminals. The man who can vote and will not is worse than any other. He is an enemy to his country and an undesirable citizen. There is a greater enemy to society, however—the man who deliberately and intentionally prevents another from performing this sacred duty, upon the proper performance of which depends the good future of our great Republic.

I will now discuss the so-called Hopkins bill. It is urged that the membership of the House must be cut down, or at least kept with the present number. That we should be satisfied with ourselves is quite natural, but the main reasons urged are that the Hall is too small to admit of a larger number, and that the House now has ceased to be a deliberative body, and that the members can not give proper attention to public affairs under consideration.

I desire to urge, in the first place, that the aim of our Constitution and the design of the framers thereof was that the House should be the representative body; that it should be for the people and near the people; that the constituency of the Congressman should know him and have opportunity to confer with him. He is required to live in the district he represents. This plan and aim of the Constitution and of the framers ought not to be thwarted for the want of a proper place in which Congress should transact the public business. Are we to confine ourselves to any particular hall or place? The body ought to be paramount, not the hall.

In most, if not all, of the other countries of the world the direct

representative of the people has a much smaller constituency than in our country, and yet a way is found to transact the public affairs. American genius and intelligence should not despair—a way will be found, even without copying the "Magnificent discomforts of royalty." If the House has, in fact, become unwieldy and has ceased to be a deliberative body, this should and can be remedied. In the first place, much confusion would be avoided if the desks were removed, which subserve no good or useful purpose. Members use them only for workbenches and storerooms for newspapers, which are read during the consideration of the gravest subjects. With the desks out, the space could be narrowed so that there would be no difficulty in hearing and understanding all of the proceedings.

If the listener could hear, there would then be full attention. When the listener can only half hear it can not be expected that there will be rapt attention. There is nothing more disagreeable, or that will tend more to disorder than just partly hearing. With the desks out and the space contracted, the remainder of the Hall could be used for work and business purposes, where pressing business could be done and conferences might be had, so that all who were within the Hall would have and could have no purpose there except to listen, and then quiet and orderly attention would obtain.

Then, again, what inducement is there for a member to listen to proceedings in which he can not take a part; which he can not without severe criticism oppose or even inquire into? He can not, under the rules, get time or opportunity for debate or even recognition to inquire or to make a motion or an objection without the consent of the chairman having the matter in charge or without the consent of the Speaker. The report of the committee is sacred, and can not be opposed, criticised, or even inquired into. The member must bow to the conclusions of the committee or be branded a kicker and a traitor. Under such conditions who, forsooth, would listen? Stifle not the individual member, and the proceedings of the House will have attention.

The House is governed by committees, and an independent opinion of an individual member is absolutely suppressed, or at least such is the design. From time to time men come here, liberty-loving men, full of courage, who rise above the rules, but their path is not strewn with roses. If the committee is to be supreme, of what use is the member who is not fortunate enough to be on the committee? These members are only expected to respond to the patriotic call for a quorum. What a noble occupation for the representatives of a free and independent and self-governing people, the representatives of a government "of the people, for the people, and by the people." The conditions here are the logical conclusions of the spirit of the times—consolidation and combination; all must bend and yield to organization. This is the menace of the age. The thinking, planning, reasonable man is lost, and he is lost and swallowed up here, as elsewhere. Hope that "riseth eternal ever" is lost here, or at least such is the design.

As has been said during this debate, the fault is with the House; the remedy is with the House. If the members would rise to the full measure of their manhood, rise to the old heroic heights, the evils would disappear.

The Senate, with few members, is proverbially slow—that branch of Congress, the tomb wherein sleeps, against the impatient protest of the people, legislation until the need for it is almost past; and yet that body is in session more hours than is the House. I need only call attention to the Dingley law, which passed the House, the members of which were fresh from the instructions of the people, in a very few days. But it lingered for weary weeks in the Senate, until the impatient people were almost ready to rise and protest against the Senate.

River and Harbor Bill.

SPEECH OF

HON. GEORGE EDMUND FOSS,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 14, 1901,

On the bill (H. R. 13189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. FOSS said:

Mr. CHAIRMAN: I desire to call the attention of the committee briefly to the item on page 27, lines 12 to 24, which reads:

Improving harbor at Waukegan, Ill.: Continuing improvement in accordance with the report submitted in House Doc. No. 343, Fifty-sixth Congress, first session, \$100,000: *Provided*, That a contract or contracts may be entered into by the Secretary of War for such materials and work as may be neces-

sary to complete the project recommended in said report, to be paid for as appropriations may from time to time be made by law, not to exceed in the aggregate \$245,000, exclusive of the amounts herein and heretofore appropriated—

and trace the growth of a harbor that is likely to become one of the important ports on Lake Michigan.

Its first great advocate and defender was Daniel Webster, who upon one occasion, in a speech in the Senate, painted in glowing colors its future. The first appropriation was made for this harbor in 1853, when Congress appropriated \$15,000 for "the improvement of the harbor breakwater at Waukegan."

The first plan adopted was a breakwater parallel to the shore in 20 feet of water. One crib 30 by 125 feet was placed in position, but was carried away by storm, and work was abandoned. This is known as the project of 1852. The object was to provide a harbor for vessels engaged in the lake commerce of the city of Waukegan, with an entrance channel and basin 13 feet deep below plane of reference of the coast chart of Lake Michigan, being 3.6 feet below high-water rates of 1838. This is substantiated by the report of the Chief of Engineers, United States Army, page 2520, 1896.

So far as I have been able to learn, nothing was then done until 1872 by the Federal Government.

In 1872 an examination and report were authorized in the river and harbor bill of that year, but no action was taken upon this.

In 1880 Congress made an appropriation of \$15,000 toward carrying out a certain project which is known in the Chief of Engineer's Reports as the project of 1880. This project of 1880 was:

To inclose a portion of Lake Michigan by projecting piers from the shore. North pier to begin at a point 2,370 feet north of the bridge pier, extend easterly into the lake 300 feet, then south 1,650 feet, thence southeast 142 feet, thence east 300 feet. South pier to begin 240 feet north of the bridge pier and extend easterly into the lake 900 feet. Area between piers and shore to be dredged to not less than 13 feet and shore line revetted. About 630 feet of the north pier was built under this project. A strip of land about 100 feet wide and 2,294 feet long was transferred to the United States by the city of Waukegan for harbor purposes August 24, 1880.

In 1881 Congress appropriated \$15,000 for continuance of the 1880 project, but in 1882 the provision of two years previous was modified—

by locating the south pier about 850 feet south of the shore end of the north pier and extending the north pier easterly from its outer end as it stood at that time. Since this diminished very considerably the area of the harbor, additional room was to be obtained by dredging an interior basin in the low ground between the shore and bluff connected by a narrow channel with the exterior basin. (Report of the Chief of Engineers, United States Army, Part IV, 1896, p. 2520.)

In every river and harbor bill appropriations to continue work upon the Waukegan Harbor along lines of project of 1880 as modified in 1882, and later in 1896, have been made as follows:

Act of—	
August 30, 1852, for breakwater (outer)	\$15,000
June 14, 1880	15,000
March 3, 1881	15,000
August 2, 1882	20,000
July 5, 1884	20,000
August 15, 1886	25,000
August 11, 1888	25,000
September 19, 1890	35,000
July 13, 1892	25,000
August 18, 1894	20,000
June 3, 1896	20,000
March 3, 1899	5,500

Total appropriations for harbor

Appropriation for outer breakwater (1852)

Total for present harbor

(Appendix L L—Report of Captain Warren. Report of the Chief of Engineers, United States Army, p. 3811, part 5.)

This statement shows \$220,500 appropriated for the present harbor to March 3, 1899.

In 1896 report (pp. 2519, 2520) the Chief of Engineers, United States Army, states:

The modifications of original projects of 1880 and 1882, as approved July 28, 1896, are as follows: The north and south arm of the north pier to be connected by a revetment with the American Mortar Company's revetment; the entrance to the harbor to be dredged to a depth of 13 feet below the plane of reference of the coast charts of Lake Michigan, viz, 3.05 feet below high water of 1838, with a width of 200 feet, and the harbor itself to be dredged to the same depth, and with a width of 300 feet, beginning at the northern boundary line of the Government land; and the new shore line in the harbor to be riprapped with heavy blocks of stone for a length of about 400 feet, beginning at the south pier.

Both piers were completed to full length in 1895, and the dredging in 1897, and since then expenditures have been for repairs and maintenance.

This is stated in the report of the Chief of Engineers, United States Army, in 1900, and I beg to quote his language as to the present condition of the improvement, as follows:

Soundings taken in April, 1900, showed a channel between the piers 13 feet deep below datum, and with a least width of about 100 feet.

The city of Waukegan obtained permission and caused the dredging of a channel, situated midway between the harbor piers, 50 feet wide and 18 feet deep below datum, and in the basin the same depth and about 300 feet wide, which connects with a slip constructed by the Elgin, Joliet and Eastern

Railway Company for the Western Coal and Dock Company, of Chicago. The railway company also dredged their slip to a depth of 18 feet. This dredging was completed in May, 1899.

Soundings taken in April, 1900, showed that the channel dredged by the city authorities had decreased in depth to about 16 feet, and had a minimum width of but 40 feet, and the Western Coal and Dock Company obtained permission to dredge it. This was done in April and May, 1900, resulting, they report it, in the removal of 33,650 cubic yards of material and a channel about 75 feet wide, with a depth of 18 feet.

With the exception of dredging done by the city of Waukegan and private parties, it is probable no material change in depth has occurred since soundings were taken. The actual depth June 30, 1900, was about 13 feet for a width of 140 feet, that had been obtained by the United States, within which for a least width of 75 feet a depth of 17 feet had been obtained by the city of Waukegan and other parties.

Thus we find that the project for a harbor at Waukegan in 1880, modified in 1882 and again in 1896, has been carried out by the Government.

Realizing the growing importance of Waukegan, with a constantly increasing commerce under adverse circumstances, I, as the Representative of the district in which the city of Waukegan is located, introduced a resolution in the House of Representatives in the first session of the Fifty-sixth Congress, directing the Secretary of War to cause a preliminary examination and survey, embracing information concerning the commercial importance, present and prospective, and the advisability of improvement to be made at the Waukegan Harbor, with a view of obtaining a channel 300 feet wide and 20 feet deep. This resolution was referred to the Committee on Rivers and Harbors and, after a careful consideration, the committee acted favorably upon the subject-matter of the resolution and inserted the Waukegan item on page 40 of the river and harbor act approved March 3, 1899 (Public Document 189).

The Chief of Engineers of the Army complied with the law in this act, and submitted to Congress, through the Secretary of War, a report known as House Document 343, Fifty-sixth Congress, first session. After a careful investigation, the Chief of Engineers recommended a 20-foot channel, in accordance with the plans submitted by Captain Warren, of the Corps of Engineers, United States Army, on January 5, 1900, as follows:

SURVEY OF WAUKEGAN HARBOR, ILLINOIS, WITH A VIEW TO OBTAINING A CHANNEL 300 FEET WIDE AND 20 FEET DEEP.

UNITED STATES ENGINEER OFFICE,
Milwaukee, Wis., January 5, 1900.

GENERAL: I have the honor to submit the following report of a survey and estimate of cost of improvement of Waukegan Harbor, with a view to obtaining a channel 300 feet wide and 20 feet deep, in accordance with the requirements of section 22, river and harbor act, approved March 3, 1899, together with a map of the survey.

The harbor of Waukegan, Ill., is situated on the western shore of Lake Michigan, about 35 miles north of Chicago and about 50 miles south of Milwaukee. The present harbor is entirely artificial, it not being located at the mouth of a river. The Waukegan River, which empties into Lake Michigan just south of the harbor, is a comparatively insignificant stream and of no importance or utility for harbor purposes. The only feature favorable for the construction of a harbor is the low ground between the shore line and the bluff and which is composed of sand and other material easily removed by dredging.

The earliest project for improvement of this harbor was adopted in 1852 and was for a breakwater parallel to the shore. One crib, 30 by 25 feet, was placed in position, but was carried away, and the work was then abandoned.

A definite plan for the construction for a harbor was adopted in 1880, modified in 1882 and again in 1896. The present project, as finally modified, provides for a channel 13 feet deep below the datum plane of harbor improvements, between parallel piers about 235 feet apart, together with a basin having the same depth and width of 300 feet, and extending north to the northerly boundary line of United States property. The piers were completed in 1895 and the dredging in channel and basin in 1897.

To obtain a channel 300 feet wide and 20 feet deep it will be necessary to build a new north pier parallel to the present pier, to extend the south pier, and to construct a breakwater, all to be located as shown on the accompanying map. The estimated cost of this work, together with the dredging, necessary repairs to present piers, etc., is \$305,000.

It is believed, however, that the main object sought, viz, to obtain a harbor having a depth of 20 feet, and that shall be accessible to and sufficiently commodious for the largest class of vessels engaged in the commerce of the Great Lakes, can be attained at a less cost by the adoption of the following plan:

The north pier to be extended 1,000 feet and the south pier 1,400 feet, by timber cribs, each 100 feet by 24 feet by 22½ feet, placed on pile foundation, filled with stone, and rippedraped.

A breakwater 600 feet long to be built, the proposed location of which is shown on accompanying map, the breakwater to consist of six cribs, each 100 feet by 30 feet by 25½ feet, on a pile foundation, filled and rippedraped with stone.

The outer end of the south pier and the southerly end of the breakwater to be protected by suitable bulkheads.

All that portion of the present north pier along the east side of the basin and as far out as the angle, a total distance of about 95 feet, to be removed, and a pile dock to be built on the line shown on map.

Rebuilding about 1,000 feet of the inner and older portion of the south pier above the water surface, making necessary repairs to the remaining portions of both piers, and refilling them with stone, where necessary.

Dredging in the harbor and basin to a depth of 20 feet below datum.

The proposed general plan of harbor entrance is similar to the plans adopted for Racine and Kenosha harbors, at both of which a project for a channel 21 feet deep is now in course of completion. It is believed that by extending the piers and locating the breakwater as proposed and as indicated on the map, disturbances in the basin by reason of storms from either northeasterly or southeasterly quarters will be prevented, and that safe entrance to the harbor can be had at all times. Experience indicates that whenever harbors in this district are deepened to 20 or 21 feet storms from a northeasterly direction produce serious disturbances not only in the harbor entrance, but for a considerable distance beyond, causing much dock front that should be available at all times to be useless during a gale from that quarter. Whenever in other projects for deepening and enlarging the har-

bors along the western shore of Lake Michigan a breakwater has not been included in the original project for such enlargement, it has been found necessary to subsequently modify the project to the extent of providing for a breakwater. It is therefore considered best to include the construction of the breakwater in the original project for the 20-foot channel.

Many complaints having been made of the difficulty of turning large vessels from the entrance channel into the basin, it is proposed to increase the area of the basin by dredging the triangular portion lying between the present north pier and the line of the proposed dock to a depth of 20 feet. The greater part of that portion of the north pier to be removed is in a decayed and dilapidated condition, and would require immediate removal above the water surface. It is believed that the pile dock can be built at a cost no greater, and possibly less, than the cost of renewing the pier. The additional cost of enlarging the basin would therefore be the cost of dredging, and which is estimated at \$17,000.

The estimated cost of the improvement is as follows:

Extending north pier 1,000 feet and south pier 1,400 feet by cribs 100 feet by 24 feet by 22½ feet on pile foundation, 2,400 linear feet, at \$70.	\$168,000
Breakwater, 6 cribs, each 100 feet by 30 feet by 25½ feet on pile foundation, 600 linear feet, at \$105.	63,000
Bulkheads for protecting outer end of south pier and southerly end of breakwater.	1,000
770 linear feet pile dock, at \$12.	9,240
Removing portion of north pier, 95 feet pile pier, at \$5.	4,675
Rebuilding 1,000 linear feet superstructure of south pier, at \$10.	10,000
Repairing portions of present piers.	2,000
334 cords stone for refilling piers, at \$6.	2,000
Dredging 332,000 cubic yards, at 15 cents.	54,300
Contingencies, superintendence, inspection, etc.	30,785
Total.	345,000

This estimate is based on present prices for material and labor, as determined by the latest bids received for doing similar work. The price of dredging is placed at 15 cents, to cover the cost of dredging hardpan, a certain percentage of which will probably be encountered.

It is therefore estimated that by maintaining the present width of entrance of 235 feet the main purpose of the proposed improvement can be secured at a saving of \$50,000.

It is believed that the present width of 235 feet is and will be sufficient for the requirements of commerce, and that the benefits to be derived from increasing the width 65 feet would not be worth the additional \$50,000.

With the exception of Menominee Harbor, none of the harbors in this district have so great a width of entrance as 300 feet. The widths of entrance to the most important harbors in this district are as follows:

Kenosha, 250 feet; Racine, 250 feet; Milwaukee, 234 feet, and least width between piers of 200 feet; Sheboygan, 275 feet; Manitowoc, 250 feet.

While the width of entrance to Waukegan Harbor is less than any of the foregoing, it is nevertheless believed it is sufficient, protected as the entrance will be by a breakwater.

It is therefore recommended that the present width of entrance be not increased, and that the extension to the piers and location of the breakwater be as shown by full red lines on the accompanying map.

Since the completion of the 13-foot channel by the United States extensive improvements have been made to the harbor by the city of Waukegan and by the Elgin, Joliet and Eastern Railway Company.

The entrance channel, basin, and adjacent slip have been dredged by the city of Waukegan and by the Elgin, Joliet and Eastern Railway Company, so as to afford a narrow but navigable channel having a depth of 17 feet below datum, thus making the harbor accessible to vessels engaged in the coal-carrying trade, the projected depth of 13 feet maintained by the United States being entirely inadequate for the requirements of the growing commerce of this port.

In accordance with the terms of a lease from the Secretary of War to the city of Waukegan, dated September 4, 1897, and granting to the city of Waukegan the use of a portion of the Government land, a description of which is given in Annual Report of Chief of Engineers for 1897, page 270, the city of Waukegan has built a pile dock along the westerly harbor line extending southerly for a distance of about 500 feet. The Elgin, Joliet and Eastern Railway Company have constructed the slip shown on the accompanying map, and it is understood to be the intention of the company to construct another slip similar to the present one in the near future.

The Western Coal and Dock Company, of Chicago, Ill., have obtained the dock privileges fronting on the south side of Slip No. 1 and have erected extensive coal sheds adjacent thereto, equipped with modern appliances for the rapid handling of coal.

It is understood that the Peavy Elevator Company, who now have large elevators at South Chicago, have obtained the dock privileges pertaining to Slip No. 2, the slip yet to be constructed.

Waukegan is provided with railroad facilities leading north and south and is the northern terminus of the Elgin, Joliet and Eastern Railway, commonly known as the "Chicago Outer Belt Line," and which makes direct connection with every railway entering Chicago.

It is believed that if the channel depth be increased to 20 feet, as proposed, it would greatly increase the commerce of the port and be of general benefit to a large section of country. It would also relieve the congested condition of Chicago Harbor to a considerable extent, in a similar manner to South Chicago Harbor.

The harbor is considered worthy of the proposed improvement by the United States.

Very respectfully, your obedient servant,

J. G. WARREN,
Captain, Corps of Engineers.

(Vol. 5, Appendix L L, p. 3773, Report Chief of Engineers, U. S. A., 1900.)

I beg to make this report a part of my remarks.

On May 23, 1900, I had the honor to appear before the River and Harbor Committee and urged them to carefully consider the importance of the Waukegan Harbor, as follows:

MR. CHAIRMAN AND GENTLEMEN OF THE COMMITTEE: I desire simply and briefly to call your attention to the harbor of Waukegan. While of course I am interested in all harbor facilities in the city of Chicago in view of the fact that the larger portion of my district is in that city, yet I do not appear here at this time for the harbor there, but more particularly for the harbor at Waukegan. This is the only harbor situated and located in my district.

Waukegan is a city which, according to the census of 1890, had a population of 6,000. I think the census of 1900 will show a population of 10,000—that is to say, during the last ten years it has nearly doubled, if not more, in population. In fact I do not know of any city in northern Illinois which has shown such progress and growth during the last ten years as Waukegan. It is about 35 miles from Chicago and about 50 miles south of Milwaukee and within 6 or 7 miles of the Wisconsin State line.

The first improvement made by the Government at Waukegan on its

harbor was in 1852. In 1880 a plan was adopted for the construction of a harbor, and was afterwards modified in 1882 and again in 1896, which provides for a channel 13 feet deep and an entrance to the harbor of 235 feet. That plan has been completed, as I understand, so that Waukegan Harbor to-day has a depth of water of about 13 feet, although the main channel of the river, I may say, is much more than that by reason of the fact that the city has expended money there and has obtained a much deeper channel, and in some places, I think, it runs to 15, 17, or even 18 feet deep. Now, in the last river and harbor act, which was passed March 3, 1899, there was a provision for a preliminary examination of this harbor, with a view of obtaining a channel 300 feet wide and 20 feet deep, and under that provision the Chief of Engineers went to work and made a survey and estimate of cost, and he states here in this document, House Document 343, in reference to this matter, that—

"To obtain a channel 300 feet wide and 20 feet deep will necessitate the construction of a new north pier parallel to the present pier, the extension of the south pier, and the construction of a breakwater, all to be located as shown by broken red lines on the accompanying map, the estimated cost, including dredging, repairs to present pier, etc., being \$305,000."

The resolution I drew up myself, but I was not aware at that time what the actual entrance to the harbor was, so I put it in at 300 feet. As a matter of fact it is only 235 feet, and I think that would be all that is necessary, and if so, it would not be necessary to make a new entrance or change the piers in any way, shape, manner, or form. The Chief of Engineers also made an estimate, keeping the entrance at the present time of 235 feet, showing there would be a saving of \$50,000, making, then, the total estimate of cost for improving this harbor 20 feet and leaving its present entrance at 235 feet at \$345,000.

I may say in this connection that there are a great many important industries at Waukegan. There are several large manufacturing establishments, some of them employing as high as from 500 to 600 men, and it is a growing manufacturing city.

Captain Warren, of the Corps of Engineers, makes this recommendation at the end of this statement which I will file with you. Among other things, he says:

"The Western Coal and Dock Company, of Chicago, Ill., have obtained the dock privileges for running on the south side of Slip No. 1, and have erected extensive coal sheds adjacent thereto, equipped with modern appliances for the rapid handling of coal."

He also says:

"Waukegan is provided with railroad facilities leading north and south and is the northern terminus of the Elgin, Joliet and Eastern Railway, commonly known as the 'Chicago Outer Belt Line,' and which makes direct connection with every railroad in Chicago."

And he further states:

"It is believed that if the channel depth be increased to 20 feet, as proposed, it would greatly increase the commerce of the port and be of general benefit to a large section of country. It would also relieve the congested condition of Chicago Harbor to a considerable extent, in a similar manner to South Chicago Harbor. The harbor is considered worthy of the proposed improvement by the United States."

I trust the committee will give this careful consideration, and I would be very much pleased, if in their judgment they think it wise, that the Government should be committed to the work and the work placed upon the continuing contract plan.

It is a matter of great gratification to me, and I know it will be to the city of Waukegan and the surrounding country, that the committee has seen fit to insert in this bill a provision for improvements at Waukegan to the extent of \$345,000.

This will be sufficient, as stated by the Chief of Engineers, to give a channel of 20 feet, making a harbor at Waukegan of the same depth as the great harbors on the lakes, and thereby encouraging manufacturing plants to locate where they can obtain the benefits of cheap freights in an enterprising, growing, and healthy city.

There is not a more meritorious project in this bill than the improvement of the Waukegan Harbor. During last year 747 vessels cleared from that port—a marked increase, and it is believed that with the increased depth of the channel ships of large tonnage bearing more merchandise will come and go and increase the commerce of the port until in time Waukegan will become one of the important ports on the Great Lakes.

Certainly there is no harbor in the country that has a more brilliant future than Waukegan.

Everything that I said in my speech before the committee a year ago has been verified by time. At that time I stated that I believed the census of 1900 would show a population for Waukegan of about 10,000. I also stated that I did not know a place in northern Illinois that had shown in the last decade such progress and growth according to its population. That has been verified by the census; and not only has the city doubled in population, but Lake County, in which Waukegan is situated, shows the enormous increase of 42.3 per cent, standing second in the list of percentage of increase in Illinois, Cook being first.

The people of this city are energetic and alive to the commercial needs and demands of this port.

Time and time again the city has expended large sums of money in aiding the Government in improving this harbor. Land has been donated to the Federal Government, and in every possible way the people of this growing city have shown themselves willing to spend of their time and money in developing the commerce of this harbor. Their acts have not only benefited Waukegan, but the commercial interests of the country.

They are a patriotic people, and never in the history of a national crisis have they failed to give of their bone and sinew to maintain the integrity of our institutions and support the honor of the country and our flag. On the roll of the nation's honored dead during the civil war and the recent Spanish conflict will be found the names of its patriotic and noblest sons, and many of its citizens to-day are bearing the scars of the nation's true nobility.

Therefore from every standpoint and consideration the people of Waukegan are worthy of your favorable action, and I trust the provision of the bill recommended by the committee and the War Department as a proper object of Government aid will not meet with objection from any member of this House, but, on the contrary, will receive general approval and become the fixed law of the land.

River and Harbor Bill.

SPEECH

OF

HON. STEPHEN M. SPARKMAN,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 14, 1901.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 13189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes—

Mr. SPARKMAN said:

Mr. CHAIRMAN: I did not intend speaking on the pending measure at all, preferring to leave it to the House with the lucid statement and the able argument of the chairman of the Committee on Rivers and Harbors made in behalf of the bill; but certain criticisms have been indulged in by one or two gentlemen on this floor, some of which have been leveled at my own State, and lest my silence might be construed into an admission of the justice of these criticisms, I have changed my intention to remain silent and will ask the indulgence of the House while I discuss some of the provisions in the bill and reply to some of the claims made by those opposing the measure.

Not that we object to criticism. On the contrary, the Committee on Rivers and Harbors courts the most searching inquiry into every provision in this bill. The chairman has, indeed, thrown wide open the door for discussion, and out of the alembic of criticism may come justice if injustice or wrong has been done any section or State or any member on this floor; but I claim, Mr. Chairman, that no injustice, certainly no intentional injustice, has been done anyone.

Disappointments have occurred, to be sure. Members have not gotten as much out of this bill as they had wished, and the members of the committee are no exception to this rule. I dare say if a poll could be taken of the committee itself it would be ascertained that several pet schemes of some of them have not been taken care of. They have not received all that was hoped for by them for their States or districts. But, sir, in a bill carrying only \$60,000,000 this is impossible, if a distribution of that amount is to be made on the basis of commerce, present or prospective. The country is too large, the worthy projects are too numerous, the demands of commerce too great to hope that all can be fully taken care of in one such bill.

Now, I am glad there has been no criticism of this bill on the ground that it carries too much, for it is certainly not open to criticism on that score; on the contrary, if I were called upon to criticize the bill at all, I should do it on the ground that it carries too little instead of too much. Not that I complain of the size of the bill. It makes as large an appropriation as the committee thought the bill should carry, considering the necessities of other departments of the Government. But, sir, this is a great country; it is growing rapidly in every direction—in population, in wealth, in agriculture, in manufacturing, and in commerce. Cheap transportation, not only from the United States to foreign countries, but between the different parts of our own country, is the great desideratum.

The producer needs the lowest freight rates possible, whether he seeks a foreign or a home market, and is consequently interested beyond measure in the development of all the harbors and commerce-bearing streams of the country. When, therefore, we consider the importance of river and harbor work, the intimate relations it bears to the commercial and business growth of the country, we could certainly, it seems to me, justify a bill carrying an amount much larger than that appropriated by this bill; and we may expect to see such appropriations going on and increasing until the necessities of commerce are completely met. The people will demand it, and we could not resist those demands here if we would.

But, Mr. Chairman, one or two members have criticised this bill on account of the appropriations which go to the States represented by members on the committee, or perhaps it would be more correct to say that the committee has been thus criticised,

for no one has undertaken as yet to say that the appropriations have been unworthily bestowed. The cry is that the States represented on the committee have received too much as compared with those States not thus represented, and that especially the districts represented by members on the committee have been unduly favored. The gentleman from Washington [Mr. CUSHMAN] was especially severe on that line, and my own State came in for a share of his invective.

Now, I shall not undertake to reply at length to the insinuation that in the aggregate the States represented on the committee received too much, for that charge was shown to be inaccurate by my colleague on the committee, the gentleman from New York [Mr. ALEXANDER]. It was demonstrated by him that the 17 States represented on the committee, receiving only three-fourths of the \$60,000,000 appropriated and authorized, actually have more than 80 per cent of all the commerce of the country, and that if commerce alone is to be considered, then these 17 States are entitled to even more than they get in the bill. This is the way, at least, it presents itself when aggregates alone are considered. The same would no doubt be true if a like test were applied to the individual States.

But, Mr. Chairman, it is with regard to the criticisms of myself and of the State which I have the honor in part to represent on this floor that I intend to reply more particularly. If the gentleman will cast his eye over the map of the State of Florida, he will see a long peninsula extending from the lower edge of the State of Georgia way out into the southern seas, almost to Cuba and to the Bermudas, with a coast line of more than 1,400 miles on straight lines, but if he were to follow the sinuosities of the shore line he would travel more than 1,800 miles going from the Perdido River, on the west, around by the Tortugas to Fernandina.

On this coast line he would find 9 large deep-water harbors, 3 on the Atlantic and 6 on the Gulf of Mexico; all of them of national importance, but 3 of which, namely, Pensacola, Tampa, and Key West, have been classed among the 12 or 15 natural deep-water harbors of the country. Besides these there are many rivers and smaller harbors, all important to the commerce of the State, and incidentally to the country at large.

It is over and through these that the productions of that State can be carried to the seaboard or other distributing centers, where the surplus, which is great, is carried and distributed throughout the United States. Through these harbors comes and goes a large and rapidly increasing coastwise and foreign commerce, the estimated value of which is upward of \$60,000,000 per annum. Who, then, can say that Florida, with all these rivers and harbors and all this commerce, receives too much at the hands of the River and Harbor Committee?

But, Mr. Chairman, that is not all. The income which the Government derives from Florida entitles her to generous treatment at the hands of this body. From all sources—from the custom-houses, internal-revenue department, post-offices, etc.—for the year ending December 31 last Florida paid about \$2,000,000 into the Government till, and from my own town, the city of Tampa, which gets only \$150,000 in this bill, the Government received for the same period the magnificent sum of about \$1,500,000, or more than was paid into the National Treasury by the whole State of Washington combined for the fiscal year ending June 30, 1900.

Florida receives in this bill, in cash and in authorizations, a little more than \$1,700,000, or about \$850,000 per annum, supposing that the cash and the amount authorized can all be spent during the next two years; so it will be seen that she does not get one-half of what she will pay into the National Treasury during the same period of time.

In that connection I wish to advert to another matter to which the gentleman alluded. He intimated, or at least I understood him as intimating, that I had favored my district at the expense of the other district of the State of Florida. If my friend will look at the figures, he will change his mind, for out of the seventeen hundred and odd thousand dollars given to Florida \$1,335,000, or about three-fourths, goes to the Second district, represented by my colleague, not counting \$20,000 appropriated, together with the sum of \$35,000 given by the Fifty-fifth Congress, for the building of a dredge to be used throughout the State.

Thus it will be seen that I have not only not favored my district, but have given to the Second district the lion's share of the appropriation, and that, too, whilst in the First district, which I have the honor to represent here, there are many more projects demanding and which should receive the attention of Congress than happen to be in the Second Congressional district, so ably represented by my colleague, Mr. DAVIS; and yet that district does not receive any more than its just dues, even if it could be claimed that it has received more in this bill.

Then, too, the gentleman stated, as one of the reasons for condemning the bill, or the members of the Committee on Rivers and Harbors, that one river, viz, the Anclote, in my district, could not be found on the latest edition of Rand & McNally's map. Well, Mr. Chairman, I am sorry the gentleman could not find

this river on the map which he happened to examine, but I am not in any way responsible for his failure so to do. I did not make the map. If I had, I can assure him the river would not have been overlooked, but would have been placed on the map, properly marked, named, and designated, for, in the language of the gentleman, "the river is there."

It rises in the lake region, on the border line between my own and an adjoining county, and flows thence in a westerly direction into the Gulf of Mexico, some thirty-five or forty miles north of the entrance to Tampa. It is also a commerce-bearing stream, of importance not only to the locality, but to the shipping interests for quite a distance up and down the coast and as far south as Key West. Just off the mouth of this river are some of the finest fishing and sponging grounds in the Gulf.

An immense traffic is carried on in these two industries, as well as many others, which the carrying capacity of this stream aids very materially; but when the Government project for the improvement of this stream is carried out the river will not only be more serviceable in the way just suggested, but will furnish a harbor of refuge to boats and other shipping engaged in that business.

When a northwesterly, westerly, or southwesterly gale is blowing these vessels are compelled to seek a safe harbor, and at present the nearest is at Tampa Bay, more than 40 miles away, as I have stated. Hence, when the waters leading from the Gulf into this river are deepened, as they will be when this project is carried out, these boats will be afforded easy access to a harbor right at hand when the storms come and they are compelled to seek shelter.

But, Mr. Chairman, Florida deserves much at the hands of the Federal Government, when her geographical position is considered. Her more southerly harbors lie nearer to the Tropics than any others on the continent, which gives those harbors an importance not only local and national, but international in their character. Already we have Porto Rico; we will always sustain the closest relations commercially and perhaps politically with Cuba; the Nicaragua Canal, the pride and the hope of America, will soon be constructed; we are reaching out to the two Americas, South and Central, and to the West Indies, for trade; and, if the path of our destiny lies, as is hoped by many, to the southward as well as to the westward, then our rivers and harbors are not local in their character, for there is not a section or State in the Union not interested in this southern trade and, consequently, in the development of those harbors; and every large port on her coast thus assumes a national importance.

Already Pensacola, Apalachicola, and Carrabelle, Tampa, Key West, and Miami, have a rapidly increasing commerce with Cuba and Central America, while Fernandina, Jacksonville, and again Miami are developing theirs with the Bermudas.

I have heard it said, Mr. Chairman, that the long railroad haul on freight would act as a deterrent to commerce through Florida ports, and especially those located in the far South; but this is not true for many reasons, prominent among which is the fact that the tendency is everywhere toward the cheapening of railroad freight rates, brought about to some extent by the improved facilities for loading and unloading of cars, for hauling them rapidly over long distances, by the increase in the carrying capacity of cars, in the power of the engines, and in the improvement of the rails and roadbeds over which these freight-laden cars are to be hauled.

Hence the difference in the cost of transportation between the longer and shorter hauls being so slight will soon cease to enter into the calculation of shippers, while rapid transit will become more and more the chief consideration; thus the Florida ports will continue to increase in importance over those on the Atlantic and Gulf farther to the northward. Who, then, can say that Florida, with all these advantages, does not deserve the few hundred thousand dollars she receives in this bill?

But, sir, her people merit some consideration at the hands of Congress, if pluck and energy count for anything. The State has been swept by tornadoes, stricken by pestilence, and visited (tropically situated though she is) by killing frosts, all within the last few years, and yet her progress has not been impeded. For many years the chief production of the largest portion of Florida has been the orange, in which industry no State or country in the world excelled her.

Millions of dollars had been invested in this industry alone, but the frosts came, and in a single night it has been estimated that more than \$25,000,000 of property was destroyed. In numerous instances the hard-earned accumulations of a lifetime were swept away; but the people were not discouraged, and that pioneer spirit which braved the savage in the early days of Florida's history, which met calmly and unflinchingly the dangers and hardships of frontier life, which cleared the forests, builded homes, and planted the garden, orchard, and farm until no land was more inviting than theirs, came to the rescue of her people in this their day of adversity, and, without a dollar of outside aid, with naught but their indomitable will and the wonderful resources of that

great State, they went to work to mend their shattered fortunes, with the result that to-day there is not a State in the Union whose people are more prosperous than are the people of my own State; her resources are being more rapidly developed than ever before, her wealth has been augmented, and her population increased, until this Congress has found it necessary to increase our representation on this floor.

The gentleman from Washington has paid a glowing tribute to his own State, and well, no doubt, does she deserve the encomium. Her people are progressive and bright has been her career in the field of advancement. But all this is true of my own State. There is no Commonwealth in this wide Union, from the East to the West, or from lake to Gulf, whose people are more progressive or which has moved more rapidly along every line of human advancement than has Florida during the last two decades.

None has a greater variety of resources, of climate, or productions; none rests beneath clearer skies or is fanned by softer breezes; none possesses more majestic rivers or more commodious and important harbors; and if the gentleman's State, lying well toward the setting sun, can draw inspiration from the fact that she approaches nearer to the Orient and our possessions in the Pacific, between which and this country thousands of miles yet intervene, the State of Florida, touching almost the shores of the Antilles, is the gateway to the countries which lie to the south of us, and she will continue to grow great and rich by reason of the commerce that will go hence to those countries and come back from them through our ports, to be scattered throughout the Atlantic seaboard and the Southern, Middle, and Northwestern States. [Applause.]

River and Harbor Bill.

SPEECH

OF

HON. CHARLES R. THOMAS,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, January 14, 1901,

On the bill (H. R. 13189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. THOMAS of North Carolina said:

Mr. CHAIRMAN: The pending bill carries an appropriation of \$10,000 only for Cape Fear River above Wilmington, N. C. This appropriation is for maintenance and a continuance of work under the old and existing project.

For many years past the improvement of the Cape Fear River, North Carolina, has been divided into two parts or projects, namely, one for the improvement of the Cape Fear River at and below Wilmington, N. C., the other for the improvement of the Cape Fear River above Wilmington, N. C. The improvement of this river at and below Wilmington was begun on the river channels as far back as 1829, and on the ocean bar in 1853.

Up to June 30, 1889, the Government had expended upon this project \$2,836,516.37. I mention this fact to show to the committee how important in the estimation of the Government has been the improvement of this river at its mouth and entrance into the Atlantic Ocean.

The existing project for the improvement of the Cape Fear River above Wilmington, N. C., or as it is popularly known, the Upper Cape Fear, bears date January 26, 1881, and is to clear the river to Fayetteville and to obtain a continuous channel (depth not stated) by jettying and dredging; cost estimated in July, 1893, at \$275,000 for a 4-foot depth to Elizabethtown and a 3-foot depth to Fayetteville. Of this estimated amount the sum of \$136,762.81 had been expended up to June 30, 1899. Most of this money has been expended in removing obstructions and some jettying and dredging has been done.

While the amount expended under the existing project has improved somewhat the governing low-water depth of this river and aided somewhat commerce and navigation, the improvement of the river under the existing project has been by no means adequate to the demands of or importance of the commerce of this river and its growing importance to the people of the Cape Fear section of North Carolina. Hence some fifteen months ago the business men of this section began to agitate the subject of improving the Cape Fear River between the city of Fayetteville, in my district, and the city of Wilmington, so as to secure a uniform depth of water throughout the year of 4, 6, or 8 feet. The present governing low-water depths are 2½ feet to Elizabethtown and 2 feet to Fayetteville only; and while steamers regularly navigate this river, there are seasons of the year in which navigation is delayed or is impracticable.

This movement on the part of the citizens of the city of Fayetteville has received the indorsement not only of the chamber of

commerce of that city, but of numerous chambers of commerce throughout the State, including the Wilmington Chamber of Commerce, the Wilmington Produce Exchange, the Wilmington Merchants' Association (the city of Wilmington being also greatly interested in the proposed improvement of the river), and it has also received the indorsement, by resolution, of the general assembly of North Carolina.

In fact, the improvement of the river is regarded with interest not only by the people of the Cape Fear section, but by the people of the whole State of North Carolina. The improvement of the river has attracted the attention of the State as well as the people of that section, not only because of the necessities of the case, but because of the past commercial history of the river and of the city of Fayetteville as the head of navigation thereon.

A leading newspaper of my State recently said: "The improvement of the Upper Cape Fear is a matter of great importance, in which the whole State will cooperate with Fayetteville," and one of the justices of the supreme court of North Carolina, in a paper which he was requested by the Raleigh Chamber of Commerce to write on the subject of the commercial needs of that city, urged the importance of securing the competition of water rates at our nearest river port—Fayetteville.

In the improvement of the river the pecuniary interests as well as the convenience of a large part of the population of North Carolina is involved. Competition of water rates would eventually have little effect upon the railways, because it would in time secure to them a large accession of business which the restoration of the natural trade route of the State would create, and this would many times repay them for the present small business which they would lose.

It is a well-recognized fact in North Carolina, and has been recognized for many years, that the Cape Fear River is not only the great commercial highway by water of the entire Cape Fear section of the State, and the section of country tributary thereto, but is of importance to all the State's citizens. It is the only river in the State which empties directly into the Atlantic Ocean and upon which there is foreign commerce, the port of Wilmington exporting cotton and naval stores to Europe.

In view of these facts and the importance and necessity of the improvement of this river, not only at and below the port of Wilmington, but between Wilmington and Fayetteville, and in view of the popular demand, there was incorporated in the emergency river and harbor act approved June 6, 1900, an authorization of a survey of the Upper Cape Fear River between Wilmington and Fayetteville "with a view of obtaining a navigable channel from Wilmington to Fayetteville of 4, 6, or 8 feet at mean low water." During the recess of Congress this survey was made by the local engineers, and I will append as a part of my remarks the report of Capt. E. W. Van C. Lucas of this survey.

Captain Lucas recommends, in lieu of the old and existing project, which provides only for removing obstructions and obtaining a continuous channel by means of jettying and dredging, a new project which provides for deepening the navigation of the river by means of a set of three locks, with movable dams, at an estimated cost of \$1,320,000 for a 4-foot depth and \$1,350,000 for an 8-foot depth.

It will be noted that the difference of cost between the proposed 4-foot depth and 8-foot depth amounts to the comparatively small sum of \$30,000, and the engineers recommend the adoption of one or the other of these proposed depths; and in view of the small difference in the estimated costs for the 4-foot and 8-foot depths, no estimate is submitted for the medium depth of 6 feet named by the act. Of course if the new project is adopted by Congress, the existing project of improvement by jettying and dredging will be abandoned, as recommended by Captain Lucas.

Mr. Chairman, I am most heartily in favor of the adoption of this new project and its substitution in lieu of the old project, which is entirely inadequate to meet the demands of the commerce of this river. If Congress is unwilling at this particular time to make appropriations to the extent indicated by Captain Lucas in his report, it seems to me that the importance of the commerce of the river and the past expenditures thereon will justify an appropriation of at least \$250,000, or a part of the sum estimated by Captain Lucas as the cost of the proposed depth of 8 feet from Wilmington to Fayetteville.

If it be asked why Government aid for such a large scheme of improvement should be sought for this particular river, I would say, in addition to the reasons which I have already given, in the language of the circular issued by the citizens of Fayetteville, from which I read, "A glance at the map of the Atlantic seaboard States will answer the question."

It will be seen that the coast of North Carolina juts out far beyond the general coast line; that Fayetteville, at the head of navigation on the Cape Fear River and 100 miles inland, lies on an air line between the seaports of New York and Savannah; that it is 50 miles farther west (that is, farther inland) than an air line between Norfolk and Charleston, the nearest existing "basing points for freight rates;" that the Cape Fear is the only river in North Carolina, with its 300 miles of seacoast, which flows directly into the sea; that it reaches the sea at a point where the abnormal coast line has

receded almost to the general line, and that these geographical peculiarities result in placing the head of navigation of this river nearer to a large, populous, and highly developed territory than that of any other river south of the James.

In harmony with this fact, and before natural conditions were disturbed by the north-and-south-going railways and by deforestation at the head waters of the river, Fayetteville was the shipping and receiving port for the immense territory comprised in central and western North Carolina and for parts of Virginia and South Carolina; its banking capital in 1827, when the population of this tributary territory was but half a million, was \$1,050,000, whereas its present banking capital is but \$300,000, with the population increased to 2,000,000. It was in that former period the seat of the only branch of the Bank of the United States in the State, and of an arsenal the largest, with one exception, in the Union; and it has since been distinguished from other river towns by being made a port of entry. Finally, by this last-named act, the Government in effect converted the river from Wilmington to Fayetteville into the harbor of Fayetteville, and placed itself under obligation to treat the port of Fayetteville on a plane with other ports having 2,000,000 of people dependent on them for economy in transportation.

I would also urge as an additional reason the growing advancement of the Cape Fear section of North Carolina in the manufacture of cotton goods and other manufactures and the necessity for getting the products of the cotton mills of the Cape Fear section to market by the cheapest and most accessible route. In the territory which would be opened by the increased depth of the river there are more than 40 different cotton mills, averaging from 3,000 to 20,000 spindles each; and assurances have been given that if river transportation can be secured during the entire year, twelve to fifteen new plants will be erected.

The population of the Cape Fear section benefited and involved can be stated to be, in round numbers, 61,000, including Fayetteville and Cumberland County, 30,000; Sampson County, 7,000; Bladen County, 5,000; Robeson County, 9,000; Moore County, 6,000; Harnett County, 4,000, and besides the entire territory of North Carolina east of the Blue Ridge, including a population thirty times as great, would be given a new avenue by water to market.

The estimated present commerce of the river is about 115,000 tons annually, valued about \$1,150,000, and with navigation all the year round this present business would probably at once increase 50 per cent—to 150,000 tons, valued about \$1,700,000. With certain navigation throughout the year much of the product of the aforesaid 40 mills now operating at and near Fayetteville would be shipped by river to Wilmington and thence by steamer to the North, instead of, as now, by rail to Norfolk and thence by steamer to the North. This Fayetteville mill product has an estimated value of \$5,800,000, of which three-fourths, valued at \$4,350,000, could be shipped by river. This makes a total of about \$6,000,000 worth of annual present shipments which would probably utilize the river if certain navigation were established.

There is also a possibility, and perhaps a probability, that the improvement of the river would result in the reestablishment of Fayetteville as a distributing point for a large section of the country. This point is brought out and explained in the accompanying letter from the Fayetteville citizens' committee, their claim being that Fayetteville would, under such circumstances, become such a distributing point for a section of country the business of which is estimated in their letter at 6,000,000 tons annually, valued at \$165,000,000.

I append this letter as part of my remarks. With certain navigation there would be a proper development of the Cape Fear Valley, much of which is good farming land, but under present conditions a successful crop depends entirely on the use of the river for transportation to market. During the low-water stages the farmers have the alternative of a long, costly haul or the loss of their crops, if perishable.

This section of the country is also interested in the improvement because it will afford much better mail and passenger carrying facilities than now exist. The wholesale merchants of Wilmington are much interested in the proposed improvement because it means to them a chance of extending their business to Fayetteville and vicinity.

Fayetteville, N. C., is also a port of entry, and in connection with the city of Wilmington would afford and open up a new avenue of commerce not only to Cape Fear section, but the entire State, giving for most of the year the competition of water rates at the nearest North Carolina port. Probably there is no stream in North Carolina that would bring so much in return for every dollar expended in its improvement by the Government as the Cape Fear River. The city of Fayetteville for almost a century enjoyed the advantage and distinction of being, commercially, one of the most important inland towns in the State.

This condition was brought about by its position at the head of the Cape Fear River, upon whose splendid waters all the heavy shipments of salt, iron, molasses, coffee, and merchandise generally found their way through Fayetteville all over the western counties of the State, reaching into East Tennessee and into the States to the north and south of us. The building of railroads in the last quarter of a century has deflected these shipments elsewhere, and the Cape Fear River has not received that attention which its importance to the people of a large section of North

Carolina would seem to have warranted. Latterly Fayetteville, N. C., has attracted the attention of manufacturing capitalists and is beginning to be regarded as a promising manufacturing center, as is shown by the following industries, the most of which have been erected very recently there and in vicinity:

Hope Mills, 15,000 spindles, 750 looms; Holt-Morgan Mills, 10,000 spindles, 500 looms; Holt-Williamson Mills, 5,200 spindles; Fayetteville Cotton Mills, 3,120 spindles; Bluff Mills, 200 looms; Murchison, 3,000 spindles, 100 looms; Cumberland Mills, 3,000 spindles; Ashley-Baily Mills, 100 looms; Lafayette Knitting Mills; Macy Manufacturing Company Furniture Mills; Fayetteville Cotton Oil and Fertilizer Company, 40 tons daily; Carolina Machine Shops; Ward's Foundry; Emmitt's Roller Corn Mill; Williams's Furniture Factory; McNeill's Roller Rice and Grist Mill; Clark's Machine Shop; Carolina Roller and Grist Mill; Watson Planing Machine Mill; Tobacco warehouse; Fayetteville Wooden Ware Company; Tolar-Hart-Holt Mills, 15,000 spindles; E. A. Poe's Brickyard Works; several sawmills and other industries.

It has been a source of regret to me, as the Representative of a district in which is located that portion of the Cape Fear between Fayetteville and Wilmington, that the report of the engineers upon the proposed improvement has been transmitted to Congress at so late a date as, in the opinion of the Committee on Rivers and Harbors of the House, to preclude the consideration of the new project in the pending bill under discussion, and that they have made provision for this river only under the old project, by the small appropriation carried in the present bill.

I think the Committee on Rivers and Harbors of the House will bear me out in the statement that I have made every effort in my power to secure the adoption of the new project; and the matter has been urged also by a special committee of the citizens of Fayetteville in a hearing before the Rivers and Harbors Committee.

Whatever action this Congress may take, I desire to show to the House the importance of the new project, and to put in a permanent form the advantages to accrue to the people of my district and State from improvement under the new project of this great river highway of commerce, and this great gateway of foreign commerce at the port of Wilmington, to the people of North Carolina.

I append, Mr. Chairman, as a part of my remarks, an article from the Fayetteville Observer upon this important subject; also letters which appeared in that paper from the citizens' committee which has been specially organized for the improvement of the Upper Cape Fear River, and also the report of the engineers:

IMPROVEMENT OF THE CAPE FEAR.

On the 8th of September, 1899, the following appeared as the leading editorial in the Observer:

"CANALIZATION OF THE CAPE FEAR.

"We do not know how nearly the jetty system which the Government has been applying to the improvement of the Cape Fear River between Wilmington and Fayetteville for some years past approaches what would be the cost of canalizing the river if that should be undertaken—we have no idea at all—but we do know that it does not begin to approach it in results.

"The improvement of waterways is carried on on a much larger and more complete scale in Europe than with us. The conditions of life are very much harder in those old countries than in this comparatively virgin land, and the incentive to make every edge cut is correspondingly greater there. But conditions are constantly growing harder with us as our population becomes denser and more 'civilized,' and we believe that the subject of the canalization of the Cape Fear is one to which serious thought may be given with a view to bringing it to the attention of Congress. Mr. THOMAS, our member, is very anxious to do everything in his power for his constituents. He will bring up the matter of the restoration to Fayetteville of a United States arsenal, and, no doubt, would take up this matter if found to be feasible.

"If the canalization project should turn out to be capable of accomplishment, so that we might have a uniform depth of, say, 6 feet of water between here and Wilmington the year round, the completion of such work would give an impetus to the growth of Fayetteville which would be phenomenal.

"By the canalization of rivers we mean such work as has been done on the Weser in Germany, on the Clyde and Tees in Scotland, and on the Seine in France. We do not know what may be the state of the work on those rivers now—no doubt far in advance of their condition at the time we are going to speak of.

"But in 1890, at the International Congress on Internal Navigation, Herr Franzius, of Germany, Voisin Bey (chief engineer of the Suez Canal), and Mr. Vernon Harcourt, of England, all engineers of the first order, gave minute descriptions of improvements on the rivers mentioned, and others, which had been effected by a system of longitudinal dikes—narrowing the channel and producing the scouring effect which Captain Eads accomplished with his sunken wicker 'mattresses' in the Mississippi below New Orleans years ago—that were astonishing. Cross dikes, where needed, and sluices for high water and storage dams for low water, are details of the general system familiar to engineers.

"Herr Franzius said (at the time we allude to) that between Bremen and Bremerhaven the Weser had been greatly deepened and when the work was completed (in four years more) it would be navigable at all seasons at a uniform depth.

"The matter is worth looking into, now that we have undertaken to put Fayetteville in the front rank of towns."

This article attracted widespread interest and engaged the attention of Captain Lucas, the Government engineer officer at Wilmington, who subsequently, upon invitation, visited our chamber of commerce. The result of his visit was his determination to look carefully into the matter of permanently improving the Cape Fear River between Wilmington and Fayetteville, either by canalization proper or by slack water—that is, the use of dams and locks—as a survey might demonstrate to be suited to this particular stream.

In November following we reprinted the subjoined article from the Raleigh News and Observer:

"THE WHOLE STATE WILL COOPERATE WITH FAYETTEVILLE."

"The Fayetteville Chamber of Commerce is moving to secure Congressional action looking to the improvement of the Cape Fear River from Fayetteville to Wilmington. This is timely. For many years water transportation by the Cape Fear made Fayetteville the first business center of the State. With its new manufacturing interests and the fact that three railroads are each looking to make Fayetteville their Eastern terminus, the improvement of the Cape Fear becomes a matter of great importance, in which the whole State will cooperate with Fayetteville."

On December 1 following the chamber of commerce addressed a letter to the Wilmington Chamber of Commerce asking its cooperation, which after the removal of some objections arising from a misunderstanding of the effect of the proposed work was cordially and heartily given.

Later, upon the suggestion of Captain Lucas, an appropriation was secured from Congress, just before its adjournment in June last, for a preliminary survey of the river. This was completed a short time since and demonstrated the necessity for adopting the slack-water system (with two locks between here and Wilmington) on account of the insufficiency of the flow of water in the summer for canalization proper—an insufficiency resulting from the increasing effects of deforestation.

While the entire feasibility of the project as a matter of engineering was conceded by Captain Lucas from the start, it was necessary to demonstrate its commercial propriety before he could recommend to his superiors in the War Department the expenditure of the large sum required, and without his recommendation it was understood to be useless to move in the legislative branch of the Government.

In reply to inquiries from Captain Lucas, Secretary Rose, of the chamber of commerce, addressed him the following letter:

CHAMBER OF COMMERCE,
Fayetteville, N. C., October 25, 1900.

E. W. VAN COURT LUCAS,
Captain, Corps of Engineers, U. S. A., Wilmington, N. C.

DEAR SIR: Referring to my letter of August 9, regarding the improvement of the Upper Cape Fear, I will say that the present tonnage of the steamboat lines per month is about 8,000 tons; and the railroad now handles about 1,315 tons of freight per month that would be handled by river traffic if the river was navigable at all times, giving uninterrupted traffic. There is already erected and in operation in the territory which would be benefited by the increased depth of the river 41 different cotton mills, ranging from 3,000 to 20,000 spindles each.

The product of these mills is largely transported by railroad, but would be transported by steamer with assurance of uninterrupted river transportation. There are some twelve to fifteen large mill plants that are only waiting the assurance that the river transportation will be improved to be erected; and in some instances the capital has already been subscribed. The industries mentioned do not include large mercantile interests or small mills and shops other than textile mills; the tonnage of the unmentioned plants will be considerable. We attach hereto a map of North Carolina, marking under red lines the territory that will be largely benefited by an increased depth of the river. You will please calculate the area of territory in the marked lines that will receive direct benefit from the increased depth of the Upper Cape Fear River.

It may be added that two railroads now looking in this direction will seek Fayetteville as their terminus as soon as they have assurance of year-round water in the Cape Fear.

Bearing on this point, please note the following extract from the Raleigh News and Observer of October 21, in which these remarks by Supreme Court Justice Walter Clark are recorded (Supreme Court Justice Walter Clark to Raleigh Chamber of Commerce, in Raleigh News and Observer of October 21, 1900):

"The railroad now running down through southern Wake should be extended to Fayetteville, some 60 miles from Raleigh, thus giving us for most of the year the competition of water rates at our nearest river port."

If there is any further information necessary to secure the improvement of the river, you will please advise me and oblige,

Yours, truly,
F. R. ROSE,
Secretary Chamber of Commerce.

The statistics supplied in the foregoing not being sufficiently explicit, Captain Lucas visited Fayetteville again (on November 15, just past), and explained to a meeting of our citizens the necessity for supplying him with more detailed information. It was pointed out that this would have been done in the first instance except for the political campaign which was then engrossing attention. As the outcome of Captain Lucas's visit, a committee was appointed and immediately set to work. The result was a report sent to him on November 21, a copy of which is appended.

[Improvement of the Cape Fear—Report of the committee.]

FAYETTEVILLE, N. C., November 21, 1900.

Capt. E. W. VAN C. LUCAS,
Corps of Engineers, U. S. A., Wilmington, N. C.

SIR: The undersigned, the committee appointed at the citizens' meeting held on the occasion of your visit on Thursday last, have taken up the subjects of inquiry suggested by you, and have pleasure in reporting as follows:

THE PRESENT RIVER TRAFFIC.

The tonnage of the traffic by the steamboats between this city and Wilmington, as reported to the United States engineer's office at Wilmington for the year ending December 31, 1899, was, in round numbers, 115,000. We are informed that its value would average \$10 per ton, which would give a total value of \$1,150,000.

EXISTING LOCAL RAILWAY TRAFFIC WHICH WOULD SEEK THE RIVER IF IMPROVED.

In reply to printed forms issued to our merchants, traders, and manufacturers, made out, where necessary, under our supervision, we find that there have been received at and shipped from Fayetteville by rail during the past twelve months 112,235 tons of merchandise of all kinds, valued at \$5,812,614. It is estimated that at least three-fourths of this would at once be diverted to the river for transportation if the proposed improvement were made, and the speedy and regular dispatch of freight, which it would make possible, were established.

TRAFFIC FROM A DISTANCE WHICH WOULD BE DIVERTED TO THE RIVER IF FAYETTEVILLE WERE MADE A "BASING POINT."

We are informed that as soon as the proposed improvement in navigation and the dispatch of freights is effected Fayetteville would be made with the traffic managers call a basing point for freight rates. The effect of this, we are informed, will be to cause all railways which run within the territory

thus tributary to Fayetteville to make rates from Fayetteville. By the term "the territory thus tributary to Fayetteville" we mean all the country which is nearer to Fayetteville than to any other basing point, the railway commission laws requiring the rates therein to be proportionately less than to such other basing points.

We inclose a map (see envelope marked Exhibit A) which will show the territory thus delimited as tributary to Fayetteville. The basing points nearest to Fayetteville are Richmond and Norfolk, Va., on the north and Charleston, S. C., on the south. We have drawn lines at right angles across air lines between Fayetteville and the three cities named, respectively, and at points midway between Fayetteville and them. Line A is the dividing line between Richmond and Fayetteville; line B, the dividing line between Norfolk and Fayetteville, and line C, that between Charleston and Fayetteville.

It will be seen that, while the northeast section of North Carolina falls within the territory allotted to Richmond and Norfolk, a considerable portion of southwest Virginia and a considerable portion of northeast South Carolina, each larger than the first mentioned, falls within the territory of Fayetteville. As the improvements referred to would also cause Wilmington to be made a basing point, the map would be changed thereby to a comparatively small extent, the effect of the change being to add more to the joint territory of Wilmington and Fayetteville.

We also inclose a copy of a United States Government report on the Manchester Ship Canal (see envelope marked "Exhibit B"), in which is described (pp. 5-9) the manner employed in Great Britain for "proving" a commercial reason for the granting of a charter by Parliament for such an undertaking. We shall in this case employ the same method, in a general way, because such matters in the older countries have necessarily reached a more exact standard. An important consideration in our favor in relying upon such a method is the fact that the railway commission laws in this country now require connecting lines to transport freight delivered to them, whether a tariff of through rates has been established or not, and, as before mentioned, at rates proportioned to the "length of haul."

Without entering upon a consideration of how far westward beyond the borders of North Carolina the traffic influence of the proposed improvement would extend, we ask attention to the significant coincidence that the territory now delimited on our map is almost the same as that which was tributary to Fayetteville in the last of the eighteenth century and in the first part of the present century up to the railroad era. The fact that Canova's statue of Washington was brought from Italy to Wilmington, was thence landed at Fayetteville, and finally hauled overland to Raleigh in the latter period, is merely an illustration of the general conditions of transportation at that time.

The proposed improvement, therefore, would not establish a novel condition, but would restore the normal relation of the Cape Fear to a vast territory, which the overworking of the railroad idea and the effect of deforestation upon the water courses have disturbed. Or we may state the case this way: That it would be the reestablishment of normal conditions by a development of the problem of transportation, which conditions had been disturbed by a cruder stage of the movement.

Within the limitations of our map, as thus restricted, it will be seen that there is a population equal to that of the State of North Carolina (some 1,900,000). The population which, by a liberal estimate, might be considered as involved, in one way or another, in the production of the existing river traffic and the existing railway traffic divertible to the river, in and out of Fayetteville, may be said to include that of Cumberland County, in which Fayetteville lies (30,000), and one-fourth of that of the contiguous counties of Sampson (7,000), Bladen (5,000), Robeson (9,000), Moore (6,000), and Harnett (4,000)—a total of 61,000. The territory, then, on the map, this side the Blue Ridge, contains a population thirty times as great as the population at present tributary to Fayetteville.

We therefore have this proposition:

	Tons.	Value.
Existing river traffic.....	115,000	\$1,150,000
Three-fourths (the divertible portion) of existing railway traffic, in and out of Fayetteville, $\frac{3}{4}$ by 112,235 tons and $\frac{1}{4}$ by \$5,812,614.....	84,221	4,359,400
In round numbers.....	200,000	5,500,000
Thirty times these figures would give the tonnage and value of traffic which, other things being equal, would find a cheaper route to and from the great markets by way of the Cape Fear River, if improved as suggested; that is, 30 by 200,000 tons, and 30 by \$5,500,000.....	6,000,000	165,000,000

In this connection it is worth noting that Mr. Walter L. Holt, one of the chief owners of cotton mills in this county and in Alamance County, a hundred miles distant, finds that he gets his oils, dyes, and machinery and ships his finished products by river from his Fayetteville (Cumberland) mills for an average of but half the freight rate which he is obliged to pay by rail to and from his Alamance mills.

THE RAILWAY COMMISSION'S FIGURES.

We further inclose a letter from the North Carolina corporation (railway) commission (see envelope marked Exhibit C), from which it will be seen that the actual freight traffic movement for the past year over the roads converging at Fayetteville and within the territory indicated on our map amounted to 1,497,979 tons, or one-fourth of the tonnage (6,000,000) which we have estimated by the per capita method for the whole territory east of the mountains. It will be observed, also, that the commission's letter expresses the hope that "the Government will see the importance of this station (Fayetteville) which, by reason of its situation, should again become the distributing point for the central and western North Carolina territory."

Attention may also be called to the fact that Fayetteville, at the head of navigation 100 miles inland, is the only point on the Atlantic Coast Line between Richmond and Charleston (the present basing points) which is situated on navigable water.

How far the inertia of settled routes of trade may act in restraint of the possibilities indicated above is of course a matter of conjecture.

THE COMMERCIAL CASE.

We assume that while the Government undertakes works of the kind now proposed for the public benefit and without expectation of a direct return for the outlay, it is nevertheless influenced by the same considerations which influence private capitalists. That is to say, if the cost of the proposed improvement should be \$1,000,000, it would be a sound commercial undertaking.

commending itself to the Government from this point of view, if the additional traffic secured by reason of the outlay, or the resultant economies of transportation on existing traffic, should yield 5 per cent on that amount—5 per cent on \$1,000,000 is \$50,000.

It is apparent that the economies of transportation which such an improvement would render possible—twelve months' running of the boats instead of nine months; the cheaper proportionate handling of larger loads, etc.—would leave a margin for tolls for the use of the improved waterway, if the work were done by a private corporation, far in excess of the reasonable rate of 5 per cent on a million dollars. An average of 25 cents a ton on the class of freight (115,000 tons) now carried by the river and of 50 cents a ton on the class of freight (84,221 tons) now carried by the railways in and out of Fayetteville, but divertible to the river, would produce a revenue of \$70,800, or over 7 per cent on the existing Fayetteville traffic alone.

A toll of 10 cents a ton would more than pay for the whole investment of \$1,000,000 in two years if all the traffic of the tributary country were diverted this way. Such speculations as to what might be done if the river were the property of private capitalists instead of that of the Government are useful as indicating how very far within the margin of commercial safety the Government would be acting if it should make such an expenditure.

We desire, in conclusion, to heartily reiterate for ourselves the expression of thanks which the meeting that appointed us unanimously voted to you, sir, for the interest which you have taken in this great work.

We remain, with high esteem, yours, obediently,

E. J. HALE.	W. M. MORGAN.
W. L. HOLT.	A. H. SLOCOMB.
F. R. ROSE.	H. C. BASH.
R. L. WILLIAMS.	J. A. KING.
	W. S. COOK.

Mayor of Fayetteville and Chairman of Citizens' Meeting.

IMPROVEMENT OF THE CAPE FEAR.

The navigation committee is sending out the following letter to mayors and chambers of commerce of North Carolina cities and to members-elect to the legislature:

CITIZENS' COMMITTEE ON IMPROVEMENT OF THE CAPE FEAR,
Fayetteville, N. C., December 6, 1900.

DEAR SIR: Some fifteen months ago the business men of this section began to agitate the subject of improving the Cape Fear River between this city and Wilmington, so as to secure a uniform minimum depth of water throughout the year of 4, 6, or 8 feet. Such control of internal waterways by engineering devices is common in the highly civilized States of western Europe, and it seemed to us that there was no reason why our own great country, with its vaster wealth, should lag behind those naturally less favored nations in its treatment of such an important matter.

In North Carolina the Cape Fear River would, of course, first attract the Government's attention if it should share our views on the general subject, because of the commercial history of the river, and of Fayetteville as the head of navigation thereon, in the period before the railroad era disturbed natural conditions. Even since that era set in, and in the face of the changed conditions of transportation which it established, the Government has felt called upon to take over control of the river between Wilmington and Fayetteville, and to make Fayetteville a port of entry. Replacing the old Cape Fear Navigation Company, which operated under the State's charter, it has sought by a system of jetties to arrest the effect of deforestation upon the river's water supply.

The object of the movement which we are now bringing to your attention is to induce the Government to substitute for this crude and insufficient method the modern system of treatment of internal waterways which is employed in Europe, and which is now being taken up in some portions of this country.

The proposition to this end at once engaged the attention of Captain Lucas, the enlightened engineer officer of the United States Army stationed at Wilmington. At his suggestion, an appropriation for a preliminary survey of the river between Wilmington and Fayetteville was secured just before the adjournment of Congress in June last. The survey was completed in November and the fact demonstrated that, by the construction of two or more locks, a uniform minimum depth of water of 4, 6, or 8 feet could be secured throughout the year, according to the appropriation which might be made by Congress.

The movement for this appropriation has been chiefly conducted by the Chamber of Commerce of Fayetteville, but it has been heartily taken up and approved by the Chamber of Commerce of Wilmington and by the Produce Exchange and the Merchants' Association of that city. It has also attracted widespread interest beyond the Cape Fear section, and so far as we are informed, is approved throughout the State. The Raleigh News and Observer, for example, said: "The improvement of the Cape Fear becomes a matter of great importance, in which the whole State will cooperate with Fayetteville." More recently, Justice Walter Clark, in a paper which he was requested by the Raleigh Chamber of Commerce to write on the subject of the commercial needs of that city, urged the importance of securing "the competition of water rates at our nearest river port," Fayetteville.

On the 15th of November just past Captain Lucas explained to a meeting of our citizens the necessity for demonstrating that the interests involved were sufficient to justify the Government's action before he could recommend such an appropriation as would be required. The undersigned were appointed a committee for that purpose, and their report is appended. By this you will see that the "commercial case" is proved many times over, and that the pecuniary interest of nearly the whole population of North Carolina, as well as the convenience of most of them, is involved.

Attention is asked to the obvious fact that while the proposed improvement would result in a relocation of the points of freight dispersion entirely in the interest of North Carolina the effect upon the railways within our borders would be to secure eventually a large accession of business which the restoration of the natural trade route of the State would create, and that this would many times repay them for the comparatively small business which they would lose.

Our object in addressing this communication to you is to ask your earnest cooperation with us in bringing every available influence to bear on Congress in behalf of this great work.

We request a reply, with such suggestions as may occur to you, and have the honor to be, dear sir,

Yours, respectfully,

E. J. HALE.	W. S. COOK.
W. L. HOLT.	A. H. SLOCOMB.
F. R. ROSE.	H. C. BASH.
R. L. WILLIAMS.	J. A. KING.
W. M. MORGAN.	

PLAN AND ESTIMATE OF COST OF PROVIDING A SUFFICIENT WIDTH AND DEPTH IN WILMINGTON HARBOR, NORTH CAROLINA, TO PERMIT VESSELS NOW USING SAID HARBOR TO TURN OR SWING AROUND THEREIN, AND SURVEY OF CAPE FEAR RIVER WITH A VIEW TO OBTAINING A NAVIGABLE CHANNEL FROM WILMINGTON TO FAYETTEVILLE OF 4, 6, OR 8 FEET AT MEAN LOW WATER.

UNITED STATES ENGINEER OFFICE,
Wilmington, N. C., November 24, 1900.

GENERAL: In compliance with letter from your office dated August 23, 1900, I have the honor to submit the following report on proposed anchorage basin at Wilmington, N. C., and proposed improvement of Cape Fear River between Wilmington and Fayetteville, N. C. This survey was authorized under the emergency river and harbor act of June 6, 1900, as follows:

"Wilmington Harbor: With a view to providing a sufficient width and depth to permit vessels now using said harbor to turn or swing around therein; Cape Fear River, with a view to obtaining a navigable channel from Wilmington to Fayetteville of 4, 6, or 8 feet at mean low water."

The above authority includes two distinct items, which will be considered separately.

IMPROVING CAPE FEAR RIVER BETWEEN WILMINGTON AND FAYETTEVILLE.

The object of this improvement is to obtain all the year round depth of not less than 4 feet, which will involve the improvement of about 70 miles of river on which the present governing depths are 2 feet at ordinary low water and 9 inches at extreme low water. Such low-water depths now result in a practical suspension of navigation during three or four months annually, with the result that the stream is useless for purposes of navigation during a third of the year, and much business which would go to it if certain navigation were assured is now always shipped by rail and at a higher rate.

The estimated present commerce is about 115,000 tons annually, valued at \$1,150,000, and with navigation all the year round this present business would probably at once increase at least 50 per cent, to over 170,000 tons, valued at about \$1,700,000. With certain navigation throughout the year much of the product of about 40 mills now operating at and near Fayetteville would be shipped by river to Wilmington, and thence by steamer to the North, instead of, as now, by rail to Norfolk and thence by steamer to the North. This Fayetteville mill product has an estimated value of \$5,800,000, of which three-fourths, valued at \$4,350,000, could be shipped by river. This makes a total of about \$6,000,000 worth of annual present shipments which would probably utilize the river if certain navigation were established.

As to probable development resulting from the improved navigation, it is claimed in Fayetteville that twelve or fifteen mill enterprises, some with capital already subscribed, are only waiting assurance of certain river navigation to begin the construction of buildings and plant at that city.

There is also a possibility, and perhaps a probability, of the improvement of the river resulting in the reestablishment of Fayetteville as a distributing point for a large section of the country. This point is brought out and explained in the accompanying letter from the Fayetteville citizens' committee, their claim being that Fayetteville would, under such circumstances, become such distributing point for a section of country the business of which is estimated in their letter at 6,000,000 tons annually, valued at \$165,000,000.

With certain navigation there would be a probable development of the Cape Fear River Valley, much of which is good farming land. Under present conditions the success of a year's crop depends entirely on the use of the river for transportation to market. During low-water stages the farmers have the alternative of a long, costly haul or the loss of their crop, if perishable. This section of the country is also interested in the proposed improvement because it will afford much better mail and passenger carrying facilities than now exist.

The wholesale merchants of Wilmington are much interested in the proposed improvement because it means to them a chance of extending their business to Fayetteville and vicinity, which they can not now get because unable to compete with merchants of Richmond and Norfolk, Va., on account of existing rail rates, although Fayetteville is only 83 miles by rail from Wilmington, while it is 211 miles by rail from Richmond and 204 miles from Norfolk.

The interest of Fayetteville is much greater than that of Wilmington, because, although at the head of navigation, its water route to the North can not now compete with the rail routes. North-bound shipments are now usually sent by rail to Norfolk, and thence by water north. All railroads now entering Fayetteville belong to one system, and there is practically no competition. The accompanying letter from the citizens of Fayetteville states the case in a concise and comprehensive form, and shows a probable immediate business affecting Fayetteville of approximately \$5,500,000 annually.

Reference has already been made to the possible much greater interest affected if the improvement of the waterway resulted in the establishment of Fayetteville as a distributing point.

Estimates are called for to obtain a depth of 4 feet, 6 feet, or 8 feet at all seasons. The least depth mentioned, 4 feet, can, in my opinion, be obtained with certainty only by a system of locks and dams, as the low-water discharge at Fayetteville is about 212 cubic feet per second, and the fall in the 70 miles below Fayetteville about 20 feet.

The river has been under improvement about twenty years, under a project to clear the river to Fayetteville and obtain a continuous channel—depth not stated—by jettying and dredging, at a cost estimated, in 1893, at \$275,000, of which about half has been spent. The appropriations have been spread over so many years, and in such small amounts, that the improvement thus far attained is local in character, and the present governing depth between Wilmington and Fayetteville is little, if any, better than it was twenty years ago. With an expenditure of \$135,000, in addition to as much already spent, it is believed that the low-water depth can be increased about 1 foot, making the governing depth 21 inches, instead of about 9 inches, as at present. I do not believe it possible to obtain a navigable channel of 4 feet certain depth at all seasons by jettying and dredging.

The minimum depth proposed, 4 feet, can be obtained with certainty by the construction of 3 locks with movable dams, the locations of which are approximately shown in the accompanying profile sheet of the Cape Fear River; such locks to have a lift of 8 feet. By making the lift 9 feet, instead of 8 feet, and doing a little dredging, the maximum proposed depth, 8 feet, could be obtained. The difference in cost of 4 feet and 8 feet navigation would probably not exceed \$30,000—a little over 2 per cent of the cost of obtaining 4 feet navigation. This difference between costs for 4 feet and 8 feet navigation is so small that it is not deemed necessary to estimate the cost of the intermediate depth of 6 feet.

The form of lock and dam proposed is similar to those used in Kanawha River, and consists of a lock of 8 feet lift, with a chamber 150 feet long and 28 feet wide, and a movable dam about 170 feet long. Such a lock will accommodate any boat capable of navigating the river. Movable dams are deemed necessary because the river is subject to freshets ranging from 40 to 60 feet at Fayetteville to 20 to 30 feet at the lowest proposed lock.

The estimate is as follows:

Three locks, as above described, with movable dams, \$400,000 each.	\$1,200,000
Superintendence and contingencies, 10 per cent.	120,000

Total	1,320,000
-------	-----------

This estimate may appear excessive, but it should be borne in mind that there is no solid rock for foundations, and the estimates are based on bottom of foundations at about 28 feet below low-water surface. In addition, the stream has caving banks, necessitating bank protection for an unusually long distance below each dam, to protect from scour.

This proposed expenditure of \$1,320,000 is for the benefit of an actual present commerce valued at about \$6,000,000 annually, on which, according to the Fayetteville citizens' letter, there would be a resulting saving in rates of about \$70,000 annually, which is over 5 per cent of the estimated cost. On this basis, and for the reasons outlined above and elaborated in the accompanying letters from the citizens' committee of Fayetteville, and the chamber of commerce, produce exchange, and Merchants' Association of Wilmington, I consider the improvement a worthy one and recommend that it be undertaken by the United States.

There are forwarded herewith, under separate cover, a map of Wilmington Harbor, one sheet of profiles of Cape Fear River between Wilmington and Fayetteville, and two sheets of cross sections of river bed and valley at proposed lock and dam sites.

Respectfully submitted.

E. W. VAN C. LUCAS,
Captain, Corps of Engineers.

Brig. Gen. JOHN M. WILSON,
Chief of Engineers, U. S. A.

American Money Should be Spent in American Waters and on American Soil.

SPEECH

OF

HON. HENRY C. SMITH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, January 9, 1901,

On the bill (H. R. 13189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. HENRY C. SMITH said:

Mr. CHAIRMAN: I am anxious to join the harmony among the members from Michigan. [Laughter.] The real fact is that by reason of this kind of harmony or the want of it among the members from Michigan, as I apprehend, there is an item in this bill which should not be there and which, when the time comes, I shall move to strike out. It is found on page 65 of the bill, and provides for an appropriation of \$500,000 for the construction of Plan A, referred to in House Doc. No. 712.

Now, there are three channels in the Detroit River opposite Ecorse, Wyandotte, and Trenton. One is the Canadian channel, which is classed in this report as Plan A. This is the channel on the Canadian side. That is what I object to. I object to the American Congress spending more money to construct, to enlarge, and to maintain a ship channel on the borders of Canada. In the early days the channel was along the American side, extending from Trenton clear up to the city of Detroit. But, for certain reasons which I can not fathom, of late the money has been appropriated for and the channel has been changed over to the Canadian side, where the bottom is all rock, where it has to be blasted out at large expense, and where boats get across the channel and impede navigation.

And I ask gentlemen to read report 712, in which it will be seen that the engineer has made his estimates, wherein he claims it will only take about \$2,000,000 more to complete, according to this plan, the channel on the Canadian side. It will cost about \$10,000,000, according to his statement, to complete the central channel between the two, and he estimates that it will take \$13,000,000 to complete the American channel and make it what it should be. But I respectfully call attention to the fact that these are only estimates. They are stated to be estimates, and I am unable to find that any survey or any soundings have ever been made as a basis upon which this estimate is made.

And I want to say, further, that the engineer or the assistant engineer who makes this report, Mr. Dickinson, as I am informed, lives in Amherstburg, Canada, right across the river from Wyandotte. His property is there, and my constituents in Wyandotte advise me that they have never had an opportunity to have any conference with him or opportunity to make any statements to him. Before the Canadian channel was opened there were three shipyards in Trenton at the south end of the island. When the Canadian channel was built up, these shipyards perished. Within the last three years a shipyard of considerable importance has been built up at Wyandotte. This engineer made no report in favor of any assistance to the harbor at Wyandotte, but I will say in behalf of the committee, all the members of which have been very courteous to me, that they have not neglected that matter.

I want to say further that those who know Colonel BISHOP

know that he needs no defense as to his honor, his ability, or his integrity on the floor of this House. I went to the committee, and when I explained to them the conditions they authorized an appropriation, which is in the bill, which is satisfactory and which will assist the harbor at Wyandotte so that the shipyard may be used. But I want to submit this: It has been stated here that 35,000,000 tons of freight pass through the Detroit River every year; that six times as great a tonnage passes through that river as through the Suez Canal. I will not be outdone by my brother from the First district [Mr. CORLISS] in my praise and my love for my beloved State of Michigan, but I do want to submit that the facts show that the city of Wyandotte, in the district which I have the honor to represent, is the third city in the State of Michigan in the amount of freight handled, the cities in their relative importance as to the amount of freight handled being Detroit, Grand Rapids, and Wyandotte.

In the latter city there originates every year more than one million and a half tons of freight, or about one-thirtieth as much as passes through the entire Detroit River. And I want to say that there is no boat of any kind which ever stops at Wyandotte to get one ton of that freight. This \$20,000,000 spent on our Great Lakes is spent for the benefit of four cities—Chicago, Duluth, Cleveland, and Buffalo. Now, I submit that if we are legislating for the general good of the greatest number, some provision should be made whereby boats might touch the wharves at Wyandotte; that could gather up the million and a half tons of freight that originates there every year.

There is no competition there either. There is the Michigan Central Railroad, and what they call the Lima Northern, a little road 80 miles long, which starts nowhere and ends nowhere as an independent line, something like the railroad spoken of by the chairman of this committee as one of Jules Verne's dreams. Having been one of the promoters of the Detroit and Lima Northern Railroad, I do not want to give it a black eye, but it is said that its initials D. & L. N. stand for "Dead and Left Nothing." [Laughter.] While it has done somewhat to relieve the shippers of our district, it has not accomplished the purpose indicated in the report of the engineer who had under investigation the conditions of the Detroit River at these points.

But really it affords no real, substantial competition. I only speak of it because this report says my constituents have ample shipping facilities and full competition with the Lima Northern and the Michigan Central railroads. I know that the Michigan Central is a great system, and by the courtesy of the committee, when it went through the Wyandotte Channel, I was invited to be its guest, and with that committee was the general attorney of the Michigan Central Railroad. For what purpose? It was not a day that he went for pleasure in the rain; but he was there with the committee. I asked one of the members of the committee why he was there, and he said he did not know. [Laughter.] What I am submitting is this: My constituents are left absolutely at the mercy of the Michigan Central Railroad.

Mr. KLUTTZ. May I interrupt the gentleman one moment?

Mr. HENRY C. SMITH. Yes, sir.

Mr. KLUTTZ. I desire to ask him if it is one of the legitimate purposes of this bill to furnish competition to the shipping interests of the large cities of the country?

Mr. HENRY C. SMITH. I supposed it was for the general interest of the shipping. If I am wrong I should be glad to be put right. I did not suppose it was for the benefit of the great ship-owners and boat owners of this country. I will admit, however, that those great boats have pretty nearly driven the small boats from the lakes up in my country.

Now, I have not, Mr. Chairman, attained that advance in science where I can contemplate the science of the dam proposed by the able Representative of the First district of Michigan. I can not conceive how a dam can be constructed or a breakwater, at Buffalo, which will raise the water 18 inches at Wyandotte when the water is low and will not raise it at all when the water is high. [Laughter.] That is one of those paradoxes that is only equalled by the result of the bill we passed yesterday concerning Colorado. It is a paradox, if any such thing could exist. Let me submit this: In Wyandotte we have one concern that makes 300 tons of its product and ships it every day. It burns 500 tons of coal and 200 tons of coke every day. There are 57 salt wells there, too. These salt wells yield, on an average, 300 barrels of salt every day. If the water at high-water mark or low-water mark were raised 18 inches it would destroy them, and if we should pass a law which destroyed that property, as a legal proposition, I submit we would be bound to pay for it.

In addition to that, if you raise the water by a dam of this kind it would not only flood a great part of my district, but a large part of the low country between Buffalo and the city of Detroit, about Toledo and all those cities, filling up the sewers, flooding the streets, filling the wells, and the damage could not be estimated. So thus far I am in harmony with the committee in this proposition. Mr. Chairman, I yield back the rest of my time.

Mr. BALL. Will the gentleman from Michigan, before he takes his seat, give the balance of the committee a certificate of character as well as Colonel BISHOP?

Mr. HENRY C. SMITH. Every man in Michigan is all right, except one who lived in Texas once. [Laughter.]

Mr. BALL. I mean the balance of the River and Harbor Committee.

Mr. HENRY C. SMITH. Oh, yes; certainly. I have done so already.

During the discussion of this bill by my colleague from the First [Mr. CORLISS] the following took place. I read from the RECORD, page 829:

Mr. HENRY C. SMITH. Will the gentleman permit a question?
Mr. CORLISS. Yes.

Mr. HENRY C. SMITH. How much will your proposed dam raise the water at Wyandotte and Trenton?

Mr. CORLISS. The water at Wyandotte would be raised about 18 inches above low-water mark, but would not be raised a particle above high-water mark.

Mr. HENRY C. SMITH. That would flood much of that territory there, would it not?

Mr. CORLISS. The gentleman did not understand my proposition. The opinion of these engineers can not be questioned either by the gentleman or myself, and their statement is that this dam will raise the mean level of the water 2 feet above low-water mark and maintain it there without raising high-water mark an inch. Consequently the high-water mark at Wyandotte after the construction of the dam will not be one particle higher than it is now without the dam.

Mr. HENRY C. SMITH. Is it not a fact that at high-water mark a good deal of that country is under water?

Mr. CORLISS. At high-water mark some portions of the land along the Detroit River and on Lake Erie are under water. But that condition of affairs has existed ever since white men have lived on the shores of those waters, and that condition of affairs will continue for all time. It is proposed by this dam so to regulate it as not to allow the water to overflow any more than it now does at high water, but the mean level would be maintained 2 feet higher than low-water mark now.

Mr. HENRY C. SMITH. Do you not think that all the riparian owners between Buffalo and Chicago would have a claim against the Government for flooding their property?

Mr. CORLISS. On the contrary, if the water is not raised above what it now is at high water, how can they make any claim? And the engineers state, and give reasons that are absolutely conclusive to any man who will read them, that they will not raise the high-water mark a particle upon any of the waters that they propose to affect. I understand, Mr. Chairman, how it appears to a man who has not studied the question. It seems probable that if you raise the mean level of a body of water you would affect its high-water mark; but when you understand the proposition made by the eminent engineers, which no man with a knowledge of the subject has ever dared to question, you will understand that high-water mark will not be raised a particle. Therefore it does not affect the riparian interest in the slightest degree.

Mr. HENRY C. SMITH. Will the gentleman permit another question?
Mr. CORLISS. Certainly.

Mr. HENRY C. SMITH. As a legal proposition, do you not think that the riparian owner has the right to have the low-water mark maintained during the season of low water?

Mr. CORLISS. I think not, where for a century it has been a well-known fact that these fluctuations have been going on, and the rights of the riparian owner have been acquired since the course of nature was established. A man has no legal right to demand the control of nature, and this does not propose to affect that in the slightest degree.

Mr. HENRY C. SMITH. Is not the legal proposition this, that a man's riparian rights follow the advancing shore?

Mr. CORLISS. The gentleman is trying to discuss a proposition which is not involved in this question, and he either does not understand the position taken by the engineers or does not wish to comprehend the proposition that I have made.

Mr. BISHOP. I should like to ask the gentleman a question.

Mr. CORLISS. Let me answer my colleague [Mr. HENRY C. SMITH] first. I have simply stated that the regulating dam proposed will raise the level of the water on Lake Erie 2 feet above low-water mark and maintain that depth for navigable purposes. It will affect Lake Erie and the harbors of the Detroit River and Lake Huron and Lake Michigan in proportion to the stemming of the tide that flows down and the volume of water that is necessary to regulate its height. It will not affect any property interests, because it will not raise the water at its highest period in the year in the slightest degree. Now I will yield to my colleague [Mr. BISHOP].

Mr. Chairman, I now submit that as a legal proposition my position is a correct one and that my constituents have a right to be protected from such an unwarranted destruction of their property, and that if this plan should be carried out this Government would be made to pay large damages on account of flooding land all the way from Buffalo to Detroit.

Mr. Chairman, the amendments I propose I submit ought to be adopted. Before discussing them I will read them into the RECORD, as follows:

Insert at the end of line 15, page 65, after word "appropriated," the following:

"Provided, That no part of said money shall be available until the further survey mentioned in House Document No. 712, first session Fifty-sixth Congress, shall have been completed, and the detailed plans and estimates therein also mentioned submitted, and the cost according to Plan C ascertained, a report of which shall be submitted to Congress, for its guidance, as soon as practicable: And provided further, That all boats which shall use said channel shall be common carriers and shall touch at all points, wharves, harbors, and docks where the previous year shows 100,000 tons of freight shipped, or more, and shall afford equal, equitable, and just shipping facilities to all shippers."

Mr. Chairman, it will be seen that my proposed amendments only require that the matter should be put off until plans and surveys are made so that it shall be known for certain whether the American channel or the Canadian channel would be the cheapest or the best.

On March 3, 1899, a survey was authorized, looking toward a channel 21 feet deep. On June 4, last, Colonel Lydecker made his preliminary report. General Wilson, in transmitting this, uses, on page 2 of his report, the following language:

Lieutenant-Colonel Lydecker presents three plans, A, B, and C, and while he believes that Plans A and B, or a combination of them, are the only ones calling for serious consideration, neither time nor data now available permit a conclusive discussion of the matter at present. It is proposed to make further surveys during the present season in relation to these plans, and it is expected that a final report, with detailed plans and estimates, will be submitted in time for consideration by Congress at its next session.

Now, it will be seen that these surveys have not been made, and it is not fair to appropriate \$500,000 until it is definitely known which channel is the better one. It will be noted, on the same page, that this is headed "Preliminary report."

Assistant Engineer Dixon, referred to on the same page, lives in Amherstburg, Canada; has his property there, and his sympathies are there; and it is his desire to have the channel there and to have American money spent there, and Canadian laborers, engineers, surveyors, dredgers, and divers employed there; the boats furnished with coal and other supplies there. And I want to say that since the Canadian channel has been in active use the little retail stores over there in Canada have done a wholesale business, and the little coal shops have become wholesale docks. This little burg is waxing fat and growing rich off from the appropriations of the American Congress. This is not fair and it is not right. My constituents believe, with Ruskin, that life without toil is criminal. And they claim this toil as theirs, or at least an opportunity to compete for it.

Further down on the same page he says:

It is therefore requested that this report be regarded as a preliminary one.

It also appears, same page:

The improved channel now has a depth of 18½ feet in its shoalest parts, with a minimum width of 300 feet.

It will be seen that there is no crying need to improve a channel like this.

As seen on page 3, the plan is to complete the Canadian channel, all in Canadian waters, with a low-water depth of 21 feet and a minimum width of 600 feet.

Again, on page 3, he says:

Approximate estimates of the amount of excavation indicate that the cost of this plan would be from one and three-fourths to two millions of dollars.

He further says:

This channel would continue to be wholly in Canadian waters, and its construction would probably be attended with some complications resulting from claims for damages by property owners on the main shore of Canada in the vicinity of Amherstburg, such action having been threatened in connection with operations heretofore undertaken in that locality.

Now, under these circumstances, should we proceed further? I submit that while there may be some question as to whether the Constitution follows the flag, which question will soon be solved in the court over here, that there ought not to be any question but what appropriations should follow the flag, and that appropriations should not be made by this Congress to build, maintain, or improve a channel in foreign soil or in foreign waters. I am for an American channel, for American boats, in American waters, on American soil. And this engineer must be right, too, in his position that this Government may be made to respond in heavy damages for building and enlarging this channel until it shall be 600 feet wide in Canadian waters and on Canadian soil. And what are these all for, anyhow? What great purpose or public benefit is to be subserved? This whole expenditure and the incurring of probable large damages is for the sole and only purpose of shortening the course for these great boats a few rods—a subsidy and benefit to a few large boat owners.

Let us look a little further. On page 4 Colonel Lydecker urges that Plan C, the American channel is not desirable. At the same time he says:

It is proposed to make further surveys during the present season and submit full and final reports, with detailed plans and estimates, in time for consideration when the subject may be taken up by Congress at its next session.

Now my amendments only require that this appropriation shall not be available until this preliminary survey has been made, and it is found that the Canadian channel is the proper one.

A further report was made, December 3 last, by the Secretary of War, found in House Document No. 82. On page 2 it is stated that—

To have a deep-water channel on the west of Grosse Isle the cost would probably be several millions of dollars. * * * But this question will be further discussed in a more full and complete report that will probably be submitted for consideration during the next session of Congress.

So it will be again seen that this is still a guess. His opinion is based upon the report of Assistant Engineers Dixon and Muehle.

On page 3 of his report it is stated that the channel and general conditions are shown on the lake-survey chart, but a note at the bottom says this was not printed. This, too, indicates that the proper information is not yet before Congress to guide it right in

determining the matter. So let us await, with patience, the coming of all needed information before we act. This is all I at present ask.

The opinion of Engineer Muehle, who does not live in Canada, and has no property there, who is unprejudiced, is decidedly at variance with the opinion of Assistant Engineer Dixon, as will be seen on page 5 of the report. He says:

Vessels coming from Lake Erie may approach the Wyandotte wharves by passing to the west of Mama Judy light-house and rounding the head of Grosse Isle, thus adding about 2 miles to the distance between the main channel and Wyandotte. Large freighters are not willing to lose the time required to cover these extra 2 miles in order to either leave or take up part loads of freight on route through the Detroit River; hence all materials for the shipyards (over 9,000 tons during the season) have to be taken to Detroit and reship from there to Wyandotte, and the Michigan Alkali Company can not make any satisfactory or profitable arrangements for shipping by water.

Yet this fair man, this unprejudiced man, who was moved in some degree in sympathy for the shippers of Trenton and Wyandotte, who are at the mercy of one railroad, only spent one day in his investigation of a project which it is estimated will cost several millions of dollars, for he says in his report:

On the 18th instant I visited Wyandotte and Trenton, Mich., and interviewed Mr. M. R. Bacon, manager of the Michigan Alkali Company, which operates two large chemical works, one at the upper and the other at the lower end of the city of Wyandotte. Both are located along the shore of the Detroit River and have superior facilities for shipping by water, yet the company is compelled to receive and ship nearly all materials and the products of their factories by rail, owing to the absence of a convenient and direct connection between the main channel of the Detroit River and the channel on the west side of Grosse Isle, along which the growing cities of Wyandotte and Trenton are situated.

If there were a deep-water channel between the Canada Southern Railroad bridge and Lake Erie, the commerce of the cities of Wyandotte and Trenton would be materially benefited. But in view of the absence of any prospect of securing, in the near future, such desirable southern outlet, an appropriate substitute is suggested in the letter of Mr. Bacon, October 3, 1900, viz, dredging a channel across the head of Grosse Isle, opposite the shipyard, thus furnishing the shortest possible connection between the main channel of the river and the docks at Wyandotte. Hence any improvements of the channel of the Detroit River on the west side of Grosse Isle in the vicinity of the cities of Wyandotte and Trenton, having in view convenient approaches from north and south or direct connections with the main channel, may be deemed worthy of favorable consideration by the Government on account of an extensive and growing commerce to be benefited.

So it will be seen that this man, while he did not make any surveys or measurements or plats or plans, did actually visit the vicinity and spend therein some part of one day—one short October day—and that he stayed there long enough to form an opinion that the commerce originating at and coming to Wyandotte and Trenton should have some consideration and relief, and to learn the fact that large freighters would not turn out of their course to get this freight, and to suggest Mr. Bacon's plan to at least cut across the north point of the island and afford some relief to shippers at these points. He seems to have felt that he was going beyond his instructions; that he was not talking by the card; that he was finding out things and saying things he was not sent to find out and say; for he says in the same report:

I am aware that the discussion of a scheme of this kind is not a proper subject within the scope of this report, etc.

Now, the testimony of this witness gives a faint glimpse of what may be learned from the engineers and from actual plans, diagrams, and measurements made by competent, unprejudiced, and unrestrained engineers.

And therefore I again urge that this appropriation shall not be available until such testimony is before Congress for its right guidance.

The American channel was used at this point from the beginning of the history of navigation, certainly as far back as 1835, continuously and almost exclusively until 1874, when a project was conceived to excavate a channel through the Rock Reef at Limekiln Crossing, and of deepening a section of the river above it known as the Ballards Reef section. No report of what was done was made until 1896, and therefore I assume that this rocky passage was not much used. Up to June 30, 1899, \$793,110.41 had been expended to provide a channel 144 feet wide and 20 feet deep. When this work commenced the original depth was scant 13 feet.

We are entitled to have the channel on the American side, where it was until 1893, and to have American laborers build it.

Mr. Chairman, God forbid that we should have any serious war or trouble with England, with Canada; but if this dire calamity should come to us, I appeal to gentlemen to contemplate our disadvantage—suppose that Michigan should be attacked at any point at or above Detroit, how would our battle ships get through this rocky Canadian channel? For a few hundred dollars this rocky channel could be strung with explosives, and we could be absolutely prevented from passing through. I ask if we should, in the language of the late Bill Nye, put our head in the lion's blasphemous smile?

This American channel was good enough for thirty years and subserved every purpose, and it is good enough now. There were three extensive shipyards at Trenton in those days, and Trenton was a thriving, progressive place. By nature she would have

held her place. The channel there was nearly 17 feet at the shallowest place and nearly a thousand feet in width, and by perverting the course of nature the trade and the prosperity which naturally belongs to Trenton has passed over to the Canadian side. And I raise my voice in protest against this injustice.

Mr. Chairman, the other part of my amendment, too, is just and right. If we were to expend millions of money to build a waterway for these large boats, then they should be made to serve the people who have shipments to make. This engineer, Muehle, reports that these large freighters are unwilling to go out of their course to get the freight which originates at Wyandotte. Suppose it is a little inconvenient, still they can reap large profit. I was told by the man who built one of these large freighters, and she was among the smaller ones, costing only \$230,000, and yet she cleared a net profit last season of over \$76,000. I am also told that such a boat under ordinary circumstances will last over fifty years. Thus it will be seen that such an amendment as I propose would not confiscate the property of these boat owners.

Now, Mr. Chairman, under all these circumstances, I submit that it is our plain duty to adopt these amendments, which I hope to present at the proper time.

I yield back the balance of my time to my colleague [Mr. Bishop], who kindly gave me time, for which I thank him.

River and Harbor Appropriation Bill.

SPEECH

OF

HON. M. H. GLYNN,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 15, 1901,

On the bill (H. R. 13189) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. GLYNN said:

Mr. SPEAKER: I rise, sir, not to address myself in a general way upon this river and harbor bill, but to speak specifically upon some phases of the improvement to the Hudson River, in which the people of my district are commonly interested. No little pleasure has been mine, sir, as I sat in my seat during the past few days and listened to ridicule and irony heaped upon the merits and claims of river after river mentioned in this bill, and noted that none of my colleagues belittled the claims and merits of "our beautiful Hudson," though two of them sitting near me now, sir, are whispering to me, in the parlance of a popular song, that the Hudson "is getting more than is coming to it."

Were it not, sir, that these same two croakers at my elbow here are friends of mine and a little disgruntled because no money is appropriated to Skunk Creek in the district of one, and not a cent to Muskrat Pond in the district of the other, I would call upon them to entertain this House with the delightful minstrel performance of drawing a deadly parallel between their streams, upon whose waters no boats float save those of boys who sail toy ships at the end of a string, and the Hudson, which is a vast estuary of the Atlantic Ocean, rather than a mere flow of purling waters or an outlet of mountain rivulets.

It may be, sir, that my friends here have forgotten the geography of their schoolboy days, and if this be their sad condition I gladly remind them that the immense Mississippi of which they have talked so verbosely the last few days, even at the great cities of St. Louis and New Orleans, looks insignificant when compared with the Hudson at the small settlements of Tarrytown and Haverstraw. And, sir, if those Congressmen who make all-embracing claims for the Mississippi would but turn back the pages of history they would find that Hendrick Hudson's trip up the Hudson was but prophetic of its future. He was looking for a route to the Pacific.

True, he did not find it, but he did find the only pass in the Blue Ridge through which tide water ebbs and flows—for, men of the West, your studies in geology must have taught you that the highlands of the Hudson are the eastern portals to the valley of the Mississippi, and that the Hudson points its index finger toward the West in commerce as well as in geological formation. Every other route to the banks of the Mississippi has mountains from 1,000 to 2,000 feet to climb. But through the valley of the Hudson lies a natural highway, which Governor Clinton, of New York, completed by overcoming a few feet of grade to the level of Lake Erie above Niagara, and which will be further completed some day in the near future by the construction of a ship canal.

The importance, sirs, of the Hudson River as a great waterway

of commerce will be reflected in its naked truth when you remember, members of this House, that it absorbs all the traffic of the Erie, Champlain, and Delaware and Hudson canals, besides the great coal trade of the Pennsylvania Coal Company at Newburgh and the Erie coal trade at Piermont. Why, sirs, the local commerce of the Hudson River in 1897 was 3,682,864 tons; in 1898 it was 4,045,895 tons; in 1899 it was 5,070,800 tons; and in addition to this local commerce it carries each year a through commerce of not less than 10,000,000 tons. That it is also a great avenue of travel is shown by the fact that in 1899 it carried 1,278,000 passengers.

In the face of these facts and figures, is it any wonder that this bill carries an item of \$200,000 for continuing the work of improvement? It would be a matter of greater wonderment if it carried any less sum, and it will be a matter of still greater wonderment if this House should refuse to pass this appropriation. To my mind the sum ought to be more than \$200,000; and if any efforts of mine can bring it about, an additional sum for improvements in the Hudson will be tacked on some other appropriation bill passed by this House during this session.

In a plea for the Missouri River one of the gentlemen from Missouri has glowingly pictured the beauties of that stream. If beauty has any weight for an appropriation in this debate, I would like to remind this House that in his story of the Virginians Thackeray gives the verdict of beauty to the Hudson over the Rhine, and that in one of his essays George William Curtis, in speaking of the Hudson, says:

The Danube has in parts glimpses of such grandeur. The Elbe has sometimes such delicately pencilled effects. But no European river is so lordly in its bearing, none flows in such state to the sea, as the Hudson.

In a scientific sense, too, sirs, has the Hudson its claim upon this House, for it was through its waters that the first steamboat on this side of the Atlantic ever furrowed its way. Inasmuch as the esthetic has come to the front in this debate and a place has been given to beauty and science, we may as well go the gentleman from Missouri a point or two better and take in literature and history.

All students know that there is no stream in the United States around which poetry and romance so strangely blend with the heroic and the historic as they do around the Hudson; no river where the waves of civilization have left so many waifs upon its banks. From its birth in the Adirondacks to its marriage with the sea at New York Bay the Hudson River is a stretch of classic ground, sirs. It is the poet's corner of this country, the author's paradise, the inventor's inspiration, the artist's source of soul—the home of Morris, Willis, and Evans; the home of Field, Fulton, and Morse; the home of Church, Cole, and Audubon.

Of early historic lore the Hudson has a wealth. It is needless to state here that at the beginning of the Revolution New York was already among the foremost seaports, and the Hudson Valley the most populous and important highway to the interior north of the Delaware, and had an especial strategic value from the fact that it furnished a direct water route between the southern seacoast and the English strongholds in Canada. Its possession, therefore, was of vital importance to the American patriots since, if they lost it, New England would be separated by the enemy from the southern colonies.

During the whole war a struggle for the possession of the Hudson went on, and many of the most thrilling and important operations of both armies were conducted in this valley, beginning with the capture of Forts Ticonderoga and Crown Point in May, 1775, and continuing down to the defeat of Burgoyne at Saratoga in October, 1777, and the treason of Arnold linked with arrest and execution of Andre in 1780. So, sirs, if intangible accessories to rivers are to be listened to in this debate, you should hearken carefully to the eloquent words of utility, of commerce, of travel, of literature, of beauty, and of history for a constant improvement and a careful guardianship of the interests of the Hudson River.

These general remarks, sirs, but pave the way to the special target of my aim in this speech. As it is the duty of this Government to foster the advantages of its great waterways for commerce, so comes it as a corollary to this duty that it is an obligation upon the Government to prevent these avenues of commerce from becoming at any time a menace to property and a destroyer of life. The force of this contention has been recognized by this Government in its construction of levees along the Mississippi, and in its efforts to keep other rivers from jumping their banks and spreading devastation in the course of their wild cavortings in realms where they belongeth not.

What I intend to ask, sirs, is that this principle be applied in a mild way to the Hudson at Albany. Nowhere in this bill is there any clause seeking to put an end to the wholesale destruction of property at the capital city of the Empire State which has been caused for years by the Hudson when its waters are swollen and turgid. Almost impossible is it to count the thousands and thousands of dollars' worth of property destroyed there last spring

and the spring before by the waters of the Hudson inundating the lower portion of the business part of the city.

I know that some may contend that the Government can not stop freshets. No, I know it can not; but I do know that this Government is just as much under obligations to try to harness and check such performances on the part of the Hudson as it is to do the same thing along the Mississippi. Albany is entitled, sirs, to as much consideration as any city on the banks of that great Western waterway, and its property just as much deserving of protection.

When things come to such a pass that a river so overjumps its banks as to tie up the street railways of a city, to deprive it of electric lighting, and to transform a portion of its business locality into a second Venice it is time for the Government to step in and try and put an end to such a condition of affairs. And, sirs, this duty becomes doubly imperative when the pilings which the Government has placed in certain parts of the river to protect the channel contribute in a more or less degree to the effects which bring about these annual floodings.

There is something wrong somewhere that causes this destruction of property, and it seems but fair that the Government should take some steps to find this wrong and to right it. This is all I ask, Mr. Speaker, and at the proper time I intend to have offered an amendment to this bill, ordering a preliminary examination from Troy to Coeymans, with a view of finding a plan to prevent this wholesale destruction of property at Albany, and I trust the amendment will prevail. Last session I received assurances from official sources that such an examination, with this purpose in view, would be made.

But, sirs, so important is this matter that I think it justifiable to make assurance doubly sure, and so I plead with you to make my amendment an organic part of this bill. Justice asks that you should do this. The spirit of a fair field to all and special favors to none demands that you do this for the Hudson at Albany as a miniature reflection of what you have done in a larger way for other rivers with threatened cities on their banks. The voice of progress, always pleading for every movement to protect property, begs you to vote for this amendment and the good work which it proposes.

The examination asked for by this amendment will cost the Government but little. If it discloses that nothing can be done to better affairs, all well and good, as what can not be cured must be endured. But I hold that an examination will disclose that the Government can put an end to this destruction of property at a very small expense, and for that reason I trust the amendment will be adopted wherein this House authorizes the examination to be made.

Last session, Mr. Speaker, it was my pleasure to work for an appropriation of \$400,000 for the Hudson River, and the excellent manner in which that money was spent for the benefit of commerce is ably shown in the report of the competent and conservative Chief of Engineers. That the \$200,000 appropriated by this bill will be as advantageously expended for the interests of the Government needs no assurance to anyone familiar with the able men who preside over the work done on that river.

And now, Mr. Speaker, in conclusion, let me pay a little tribute to that grand river that I and all in my part of the country love so well, and surely such a tribute is not out of place in a discussion of the river and harbor bill. The Hudson has been well treated by this Government in appropriations for improvements, but no better than its commercial worth and its manifold claims deserve. The Hudson, sir, is a noble threshold to a great continent.

In varied grandeur and sublimity it has no peer among the rivers of the world. Alongside of its beauty, sunrises on the Bay of Naples and sunset at the Golden Gate of San Francisco lose their luster and their charm. Strip the banks of the Rhine of their castles and there is no comparison between the two rivers. Why, sir, from Dusseldorf to Mannheim the Rhine is only thirteen or fourteen hundred feet wide, while the Hudson from New York to Albany averages more than 5,000 feet from bank to bank. At Tappan Sea the Hudson is ten times as wide as the Rhine at any point above Cologne. At Bonn the Rhine is barely one-third of a mile, whereas the Hudson at Haverstraw Bay is over 4 miles in width. Surely, such a river as this should at once be an object of care and devotion from this Government.

Other Congressmen have presented you with pictures and descriptions of their rivers. Let me give you two of the Hudson.

The first is by Willis, and runs back to the time when the days of chivalry were just giving way to the days of discovery:

Fancy Hendrick Hudson steering his little yacht, the *Haafve Maan*, for the first time through the Highlands of the Hudson. Imagine his anxiety for the channel forgotten, as he gazed up at the towering rocks and round the green shores, and onward past point and opening bend, miles away into the heart of the country; yet with no lessening of the glorious stream before him and no decrease of promise in the bold and luxuriant shores. Picture him lying at anchor below Newburg, with the dark pass of the Wey-Gat frowning behind him, the lofty and blue Catskills beyond, and the hillsides around covered with lords of the soil exhibiting only less wonder than friendliness.

The other picture, sirs, is more modern. It is that of an October day on the Hudson, by Talmage:

Along the river and up and down the sides of the great hills there was an indescribable mingling of gold and orange and crimson and saffron, now sobering into drab and maroon, now flaring up into solferino and scarlet. Here and there the trees looked as if their tips had blossomed into fire. In the morning light the forests seemed as if they had been transfigured, and in the evening hours they looked as if the sunset had burst and dropped upon the leaves. It seemed as if the sea of divine glory had dashed its surf to the top of the crags and it had come dripping down to the lowest leaf and deepest cavern.

The Catskills and the Palisades—tongue can not tell or pencil picture their beauties. What one can fail to say about them can be dreamed of when seen. If not seen, they can not be appreciated even in dreams. And, sirs, as the gentleman from Missouri fell back on a poet to tell about the glories of his river, I propose to give him a Roland for his Oliver, and let Oliver Wendell Holmes speak for—

THE HUDSON.

'Twas a vision of childhood that came with its dawn,
Ere the curtain that covered life's day-star was drawn;
The nurse told the tale when the shadows grew long,
And the mother's soft lullaby breathed it in song.

"There flows a fair stream by the hills of the West,"
She sang to her boy as he lay on her breast;
"Along its smooth margin thy fathers have played;
Beside its deep waters their ashes are laid."

I wandered afar from the land of my birth,
I saw the old rivers, renowned upon earth.
But fancy still painted that wide-flowing stream
With the many-hued pencil of infancy's dream.

I saw the green banks of the castle-crowned Rhine,
Where the grapes drink the moonlight and change it to wine;
I stood by the Avon, whose waves as they glide
Still whisper his glory who sleeps at their side;

But my heart would still yearn for the sound of the waves
That sing as they flow by my forefathers' graves.
If manhood yet honors my cheek with a tear,
I care not who sees it—no blush for it here!

Farewell to the deep-bosomed stream of the West!
I fling this loose blossom to float on its breast;
Nor let the dear love of its children grow cold
Till the channel is dry where its waters have rolled.

Is there Necessity for a Large Standing Army?

SPEECH

OF

HON. MARION BUTLER,

OF NORTH CAROLINA.

IN THE SENATE OF THE UNITED STATES,

Wednesday, January 16, 1901.

The Senate having under consideration the bill (S. 4300) to increase the efficiency of the military establishment of the United States—

Mr. BUTLER said:

Mr. PRESIDENT: I had intended to discuss this bill in detail and at some length, but in view of the time that has already been consumed in discussion, the few remaining days of the session, and the large amount of business before us, I shall content myself with a brief statement of my views as to some of the most important features of the bill.

Nearly half of the discussion during the ten days we have had this bill before us has been on the details, minor details, of the bill. I shall not discuss any of those features; indeed, I shall not discuss any detail of the bill, because, no matter what the details of the bill may be, no matter what minor amendments may be offered and adopted or rejected, if the bill is to stand as it is the evident desire of the Administration to have it stand, there will be two serious and fundamental objections to it; and it is those, and those only, to which I intend to refer.

First, the making of a standing army of 100,000 men a permanent fixture; not only to take that many men from the walks of industry, to organize them, stand them up, drill them, and keep them doing nothing—and I hope always nothing, because their only existence, as they are trained to believe, is to shoot and to shoot other men—but also to make a fixed charge upon the taxpayers of this country not for one year, not for ten years, but for all time, thus occasioning a great expense which seems to me to be unnecessary. Besides, our institutions are not strengthened by the presence of a large standing army, but, on the other hand, it may be a menace.

The second objection, Mr. President, is the radical departure which is made here in clothing an executive officer with legislative power. This feature of the bill is more serious than the question of the expense and the size of the standing Army.

Now, to return, I am ready, as one Senator, to vote for just as large an army as the Administration will tell us it needs for the

present emergency or any emergency that may arise. As I stated nearly ten days ago on this floor, this bill could be passed in half an hour if the Administration would simply call upon Congress to provide for an army of any size that the Administration would say was necessary for the present emergency.

I have paid as close attention as I could to this debate, and I think I am correct when I say that up to this hour neither this Senate nor the country has been furnished with a single reason why the Administration wants a standing army of this size instead of a volunteer army. The chairman of the Committee on Military Affairs has not given us this information. His report does not give us the information; in fact, there is nothing in the report but a plea for the canteen.

The members of the Military Committee who represent the Administration and who have spoken have not given us the information; no newspaper in the country representing the Administration has given us the information; and I say, Mr. President, that it is an unseemly thing for the Administration to put a measure of this kind before the American Senate and attempt to put it through by whip and spur, showing irritation and ill humor at any and all discussion, and yet refuse to give us one single reason why they desire a standing army of 100,000 soldiers.

There is not a Republican Senator on this floor but knows there is not a Senator here who would not join in making the vote unanimous to continue the present military establishment, which is 100,000 soldiers, for one year, for two years, for three years; or, if the Administration desire it, I would be willing, and I believe every other Senator would so vote, to continue it so long as the Philippine war continues.

But all of these overtures are rejected; and when we ask for some reason why they reject our proposition to give them all they need for the Philippine war or any other emergency near or threatened that they will point out, they refuse to do it and complain about our taking time to discuss the question and asking for information which they refuse to give.

The chairman of the committee [Mr. HAWLEY] now sits before me, and I repeat my statement, for I do not know whether he was in the Chamber when I made it before, that up to this hour not one single reason has been furnished to the Senate—it may have been furnished privately to some Senators; but I submit the Senate is entitled to it as a Senate—not one single reason has been furnished to the Senate why a standing army of 100,000 soldiers is desired, and why every overture to give the Administration as large a volunteer army as it needs is rejected. If the Senator can give one reason now, I will pause for an answer.

Mr. HAWLEY. The case is very well stated, and laboriously stated, by the President and the Secretary of War. We do not regard it as a permanent standing army at all. The longest enlistment is for three years, and, of course, Congress will be here next winter to do as it pleases with the whole concern.

Mr. BUTLER. Exactly; and that is why I object to legislating for longer than Congress can come together. I suppose, if the Senator is sincere in what he has just stated, he will accept the amendment offered by the Senator from Colorado [Mr. TELLER], which provides that this Army shall last for three years, the length of the enlistments. What objection has the Senator to that amendment?

Mr. HAWLEY. That is provided for now. We can not make it last longer than three years.

Mr. BUTLER. But the Senator insists on keeping in this bill that the soldiers shall enlist and be reenlisted again without further legislation by Congress. Why not let Congress legislate again at the end of three years or four years or five years, when you can come here and tell us just what you want?

Mr. HAWLEY. The Congress does not require any permission from me or from you or from any of us to dispose of this whole thing in three years. It can do it, if it so desires, when it is in session next winter.

Mr. BUTLER. That is the sham—that is the dodge that we have been met with every time we have asked for some reason or for some information. We have been asked, "Can not you trust yourselves; can not you trust the President?" You can repeal this law when you get ready." That is the lamest excuse for passing an unwise law I have ever heard of. "It is unwise; we can not give any reason for it, but we must pass it, and if you do not like it you can repeal it at some time in the future." Why not give a reason for doing it?

The Senator from Wisconsin [Mr. SPOONER] is very wise in suggesting to the Senator from Connecticut not to attempt to give it. The Senator from Wisconsin knows that no satisfactory reason can be given, and that is the reason the policy has been adopted of sitting still and giving no reason when one has been asked for. I pause, if the chairman of the committee can give us a reason.

Mr. HAWLEY. A reason for what? Has not the Senator discovered that there are tens of thousands of men shooting at our flag and making war upon the United States, so that the raising of an army is absolutely necessary?

Mr. BUTLER. We have had that to occur before. So have other nations, and the testimony of every military expert in the world is that a volunteer army is the most effective to meet a rebellion or invasion. The history of the wars of the world shows that.

Mr. HAWLEY. Every solitary man in that army is a volunteer.

Mr. BUTLER. Then, why does not the Senator let us continue them as volunteers?

Mr. HAWLEY. They would not be volunteers if you voted to continue them.

Mr. BUTLER. Every man in the United States to-day is a soldier of the Republic—every man at the counter, in the workshop, at the desk, in every industry of life is a soldier of the Republic—and there is everything wrong when the Republic does not take them as soldiers when the services of soldiers are needed, and let them return to their industrial pursuits when war and danger are over. Whenever the flag is fired upon, whenever there is any attempt at invasion, there can be brought by the President upon the first flash of news over the wires a million, two million, three million soldiers, tramping to Washington, or wherever else the flag or the Constitution is in danger.

Mr. HAWLEY. And those men coming not knowing how to "shoulder arms," it would take months to make soldiers of them.

Mr. BUTLER. The Senator says that, yet all history shows that whether volunteers know how to shoulder arms or not they know how to "double quick" and to shoot when liberty is at stake. All history has shown that they have been the fighting force in every great battle of the world, and peculiarly so whenever the fight and the struggle has been one for liberty. No soldier in a regular army will show the heroism on the field of battle, will risk as much and dare as much and suffer as much as will the volunteer soldier when he is fighting for liberty and independence or for the preservation of his own government.

Mr. President, there are times and there are purposes and there are uses to which soldiers can be put when the volunteer soldier does not measure up to the standard of the machine soldier. I do not want to believe that in a Republic there can be such a use for soldiers other than volunteer soldiers. Monarchies, despotisms, nations that go into the business of ruling by force, always need a standing army, because they can not rely upon volunteers to murder, plunder, and oppress.

I shall not surmise, I shall not charge that this army would ever be put to any such purpose, for I have no reason to believe it would; but, still, I am met with the condition of things to which I have referred, that when Congress stands ready to vote all the money and all the men that the President will ask us to vote we are told they do not want it; we are told that they want this standing army, and, I repeat, not a single reason has been given why we need this standing army in time of peace.

Mr. President, even if we are to go into the colonial business—if we are going to imitate Great Britain—I submit that we are starting out very extravagantly. Great Britain to-day has colonies embracing about 9,000,000 square miles, and yet her army on a peace footing costs less money than this army that we are now asked to raise will cost. This army will cost all the way from \$100,000,000 to \$160,000,000, as estimated by General Alger when he was Secretary of War and when the Army bill was before us heretofore.

If my memory serves me aright, the peace footing of Great Britain's army costs less than \$100,000,000 when she has to use them to police and guard 9,000,000 square miles of colonies and dependencies. We have only 119,000 square miles so far, that we call by the various names of dependencies, colonies, or possessions, yet we start out to appropriate more than \$100,000,000 to support a standing army of 100,000 men. If we are going to imitate Great Britain, let us imitate her in proportion. She has seventy-five times as many square miles of territory as we have.

Mr. President, three years ago we had a standing Army of 27,000 men. Was the liberty of this people in danger then? Was the American Government in peril then from dangers without or dangers within? Did anybody ever suggest three years ago that the safety of our institutions was trembling in the balance because we had only 27,000 men in the Regular Army? What has occurred in the three years to make it necessary to have that standing Army nearly four times as large? We surely should not do this thing unless there is some reason for it.

If there is a reason and a necessity for a standing army this big, then we ought to have it this big; and I, as one member of this body, stand ready to vote for it to be this big if there is any reason why it ought to be four times as large now as it was in 1897. No one will dare say that what has transpired since then makes it necessary to increase the Regular Army on a peace footing from 27,000 men to 100,000 men.

There is but one reason that anybody will dare to give why this Army should be increased at all, and that is the Philippine situation. That is the only one that has been referred to; it is the only reason advanced. If that is all, then let us legislate separately for

the Philippines; let us keep at home the standing Army of 27,000 or 30,000 men that we had in 1897, and let us raise a separate army, a volunteer army, a temporary army, an emergency army, and send it to the Philippines and keep it there so long as it ought to stay, or so long as the American people will submit for it to stay.

Mr. President, there are some persons in the Republican party who want information as much as I do and who have not obtained it. They have expressed themselves to that effect. In its issue of October 10, 1900, the Chicago Herald, which I think is an Administration paper—I do not read it regularly—but I think it is—

Mr. TELLER. Oh, yes; very strong.

Mr. BUTLER. That is my understanding. I hold in my hand an editorial from that paper, which shows that outside, regardless of party, there are many people inquiring and thinking about this strange proposition before us. This is what that paper says in a leading editorial in its first column:

It is difficult to see why Secretary Root should recommend a permanent Regular Army establishment of 100,000 men, as it is said he will do in his annual report, for, though such an army could not be construed as a menace of militarism in a country of seventy-five millions, it could hardly be regarded as a necessity.

That is raising the very question that I am raising. This editor, a friend of the Administration, a man in sympathy with it in everything, as a rule, who looks at everything through the Administration glasses, says in a leading editorial that, while he sees no danger of the ghost of militarism, he can not see the necessity for such an increased Army. That is the opinion of this intelligent editor who has read all that we have read and who has got all the information, I suppose, which has been furnished to us as a Senate.

That is the question I ask. Where is the necessity beyond providing for an emergency, which every Senator is ready to vote to meet? Continuing, the editor of the Herald says:

The need of professional soldiers on this continent is really reduced to almost nothing.

That sounds like old Abraham Lincoln—"the need of professional soldiers."

Mr. President, there comes an important point of difference between the patriotic soldier, who fights for his country and who is ready always to lay down his life in fighting for it, and the professional machine soldier. This editor realized the difference. He realized that the professional soldier is inferior and, besides, is a burden upon the back of the remainder of the people; that he is useless and expensive, if not dangerous. The editor says the need of professional soldiers is reduced to almost nothing.

Mr. President, when our people have traveled in Europe, when they have gone to those countries that are weighted down with great military establishments, it has been the proud boast of every patriotic American that if he were at home he could ride 3,000 miles, from the Atlantic to the Pacific, and never see an American soldier, and have no need to see one.

Have conditions changed? There is some reason that this editor can not see, and that I can not see, for the professional soldier. You do not need the professional soldier in the Philippines; and if you do, you will need him only for a short time, it is to be hoped. But for whatever time you may need him Congress is ready to vote.

The editor proceeds:

Such a force as we had before the Spanish war began—

And that was 27,000 soldiers—

answered all domestic purposes.

Why? The editor of the Herald answers the question:

Because the instinct for law and order is so strong in the people and the respect for the Federal authority is so great that in any civil commotion where the State authority is exerted feebly the slightest showing of blue-coats is sufficient.

Mr. President, the safety of this Republic is the veneration for law and order which is implanted in the breast of every citizen. The element of our people who may have any sympathy for anarchy, for lawlessness, for disregard of the rights of others, is so small, so infinitesimal, that it does not affect the equation in this country. It is public sentiment; it is that spirit which every man has in him and is ready to enforce.

Mr. President, just look at the great spectacle of an election in this country; the Administration changing hands every four years, just as the people dictate. Is a soldier necessary? It is as peaceful and occasions as little jar to this great governmental fabric as the falling of the driven snow. It is that spirit and that sentiment which is the bulwark of this Government.

The time has not yet come, and I hope to God it never will come, when soldiers are necessary to preserve law and order in this country. Whenever we must have ourselves ruled by soldiers, then the Republic is gone.

The editor of the Herald continues:

The only question is whether as a nucleus for the volunteer organization of a great war it might not serve better if it were somewhat larger, but adding 10,000—

that is, from twenty-seven to thirty-seven thousand men. The editor there recognizes the increase made necessary by the number of coast-defense fortifications, and in sympathy with that argument and responsive to it—for it is one that has been made on this floor—he suggests simply an increase of the Army by 10,000, that being all that seemed to him necessary for that purpose.

Then he suggests further that we provide 40,000 soldiers for the Philippine Islands, to stay there as long as they may be needed. That is a Republican suggestion, and it is one that I heartily approve.

In conclusion, the editor says:

The permanent establishment of 100,000 is therefore beyond all probable requirements.

Mr. President, I regret to say it, but there seems to be a kind of sentiment that is under cover, but that is cropping out more and more while this bill is under discussion, of want of faith in or distrust of or indifference to the volunteer soldier.

All through this bill he has been discriminated against. When did the volunteer soldier lose his standing in America? He had not lost it when Abraham Lincoln was President. President Lincoln, in a speech discussing the possible or probable dangers to this Government, said:

At what point shall we expect the approach of danger? By what means shall we fortify against it?

Now listen. He did not suggest a hundred thousand soldiers as a standing army.

Shall we expect some trans-Atlantic military giant to step across the ocean and crush us at one blow? Never! All the armies of Europe, Asia, and Africa combined, with all the treasure of the earth (our own excepted) in their military chest, with a Bonaparte for a commander, could not by force take a drink from the Ohio River, or make a track on the Blue Ridge in a trial of a thousand years.

At what point, then, is the approach of danger to be expected? I answer, if it ever reaches us, it must spring from amongst us; it can not come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a nation of freemen, we must live through all time or die by suicide.

Mr. President, one of the most fertile ways of national suicide in the past has been, first, by raising large standing armies, loading the people with debt, and then taking power from the people and piling it up in the hands of an executive or a few. I think history will bear me out when I state that in those nations that have committed national suicide it has begun in that way, and that those have been the deepest and most subtle and most poisonous causes of national dissolution. If that is true, then should not we jealously guard any and every step in that direction, and if that is true should we not change this bill, because no one will deny that this bill is a step at least in that direction?

Not only did President Lincoln pay a high tribute to the volunteer soldier in his speech, but also in his messages to Congress in 1861. I hold in my hand a speech made by President McKinley before the Marquette Club, in Chicago, February 12, 1896. His speech was on Abraham Lincoln, and he quoted from Lincoln's message, in which he pays a high and magnificent tribute to the volunteer soldiers. President McKinley not only indorsed those utterances, not only indorsed what Lincoln said about the volunteer soldier being the safety of the Republic, but he said:

What a noble, self-sacrificing army of freemen he describes! The like of it mankind never saw before and will not look upon soon again.

It shows that up to 1896, the year President McKinley was first elected, he still held the views that Abraham Lincoln held; he believed the volunteer soldier was the finest soldier the world ever saw and all we need for the national defense of a republic like ours. It shows that he must think so now, unless he has been deceived or has changed his mind.

Then, if the President thinks that now, I wish to know on what hypothesis or on what reasoning we can be asked by the Administration to pass the pending bill. I indorse the sentiments expressed by President McKinley in 1896. I indorse those expressed by Abraham Lincoln. I think they are the sentiments of the great masses of the people of America. If those sentiments are sound, then this bill is not sound. If those sentiments are patriotic and American, then this bill is unnecessary, unpatriotic, and un-American.

Do we intend to keep the gates of Janus open all the time? We are told that even in pagan Rome they closed the gates in times of peace. Let us open wide the Army in times of war, but let us not keep that burden upon us in times of peace. Let us close the gates of the temple of Janus, and when we close them let us take off the expense. Let us remove these men from idleness. Let them return to the walks of industry. Let them become wealth producers. Let them stay in touch with the great throbbing heart of industrial humanity and keep close in touch with American citizenship and all that it means.

Mr. President, as to the other feature of this bill—and I call attention as I pass to the fact that no one has yet given any reason

for wanting the Army a hundred thousand in time of peace—why shall we put into the hands of the President a discretion to have this Army one size or the other? Why give to the President the power, without any cause or emergency or crisis or exigency being in sight, to double the Army practically at his will?

Senators say, "Oh, you can trust the President." We have trusted him. Congress is ready to trust him again. It is not a question of trust in the President. That is begging the question. It is child's talk. It is a flippant answer when a great principle is involved. It is an attempt to turn from a principle and make the issue a personal one.

What people ever showed more confidence in one man than Congress, with the approval of the people, showed when they put \$50,000,000, at the beginning of the Spanish war, in his hands, without a condition or a limitation? There was an emergency. We had to have some one to act. We put it into the hands of the Executive, but we did it for a specific purpose.

The Senator from Georgia doubts the constitutionality of it, but whether constitutional or not, there was no danger in it, but a necessity for it. It was not a bad precedent, and it was a patriotic thing to do. The President did not abuse that power. I do not say he would abuse this confidence, but I would oppose doing this thing if I knew he would not abuse it.

Mr. President, it has been said that the most perfect form of government ever devised is that of an absolute monarchy, and that it will so continue so long as the absolute monarch is a perfectly wise and a perfectly just man. I am inclined to believe it is true, I am inclined to think that no government could be more perfect, so far as concerns its effectiveness and the harmony of its workings and the justness of its results, than an absolute monarchy, so long as you have for a monarch the embodiment of all that is wise and good and just.

But would we be willing to-day to change our form of government and to establish an absolute monarchy, provided we had furnished to us on a silver platter the most ideal piece of perfection and justice and goodness in the shape of a man for a ruler that the world ever saw or that the Kingdom of Heaven will have hereafter?

No. We prefer to grow by the exercise of our own efforts, and to learn by our own experience and mistakes, if you please, and to let each failure be a stepping-stone on which to rise higher. That is the way a people grow. It is better to make mistakes and to grow than it is to be ruled scientifically and perfectly as subjects. It is because our forefathers thought just that thing that they established this form of government, and in establishing it they were rightly jealous of one-man power.

They were also jealous of the legislative power in the hands of Representatives. They desired to keep the Government close to the people and to keep the influence of the people acting constantly on it. We all have admitted for a hundred years that it was the wisest form of government that was ever evolved from human brain.

Experience has demonstrated it. Now, after we have grown to be a world power by jealously guarding every right kept in the hands of the legislature and the people, and preventing, as far as possible, any of it accumulating in the hands of the Executive, or the one-man power, it is deliberately proposed here in an Army bill, a place where the concentration of one-man power is more dangerous than anywhere else, that we shall abdicate the legislative functions halfway with the Executive and empower him to legislate to the extent of 50,000 soldiers.

But the Senator from Iowa, who is not now in his seat, rose and interrupted the Senator from Nebraska, and said: "The Constitution says that Congress shall provide the funds for the support of the Army. We have not delegated that power." I suppose the Senator from Iowa meant to say that if Congress had delegated the power to raise the means to support the Army, then it would have been unconstitutional and un-American and wrong.

I regret that the Senator is not in his seat, but I call the attention of the Senate to the fact that it is in the same sentence of the Constitution where those two powers of Congress are laid down—that we shall raise armies and support them. If it is unconstitutional to turn over to the President the power to raise the funds to support an army, it is unconstitutional to turn over to the President the power to raise the Army.

Besides, whenever we delegate to the President the power, in his discretion, to raise the Army 50,000, we are to all intents and purposes abdicating both the power to raise the Army and the power to provide for it, because the President makes a contract, he enlists these men, and of course Congress can not refuse to tax the people and raise the money. Congress simply acts as an agent of the President when the President notifies us: "I have increased this Army 50,000 men; the expense is so much; you must tax the people to furnish the money." And so Congress abdicates both of those powers. When it abdicates one, it is bound to abdicate both.

Mr. President, Congressmen are paid by the year. They are

supposed to be in the service of the Government all the time. They are in the service of the Government all the time. They are to represent the people all the time. It is no great hardship and no great danger to American institutions for the President to call Congress together as many times as he sees fit, provided the public interest or the public safety requires it. When an emergency arises, it is better for Congress to convene than it is for the President to have power to legislate to save Congress the necessity of meeting.

I have asked Senators to name some exigency outside of the Philippine situation which they were afraid would arise while Congress was away. No one has anything in mind. Nobody has suggested any other exigency. Then why not let Congress keep its legislative power, which it is sworn to exercise, and say to the President, "When you want us, call us together," which he will do.

Mr. President, this is an un-American thing to do. It reverses the policy of our Government. It is against the genius of our institutions to begin to pile up and invest around one man such extraordinary powers. If there were no objection in the Constitution, if it was constitutional, is it a wise thing to do? Is it good policy? Is it good statesmanship? I think we could try it on that issue, leaving the Constitution out, and it seems to me there could be no difference of opinion as to the verdict.

Mr. President, the junior Senator from West Virginia [Mr. SCOTT] stated the other day that there was no use to waste time in talking about a big standing Army, because, he said, the people had already passed upon that question and settled it. He said it had been passed upon in November. It is not my place to lecture or give advice to the Republican party, and I do not presume to do it to any party, but if there are Republicans who are suffering under the hallucination or the misapprehension, like the Senator from West Virginia, let me say to them that they do not read aright the result of the last election.

I know a little something about the last campaign; probably not so much as others, but I know a little something about the sentiment of the people in the different parts of the country, and I tell you now that I never heard a Republican speaker, when it was charged that his party was going to raise a standing Army of a hundred thousand soldiers, stand up and defend the proposition. Every single one of them denied it, and said the only purpose was to raise an army big enough to defend the flag and put down the rebellion, and that when the war was over the Army would be reduced—that they wanted it only for this emergency.

I venture to say that ninety-nine out of a hundred, if not every Republican speaker, from ocean to ocean, made that pledge and that statement from every stump in the last campaign. So you did not have the question of a standing army of a hundred thousand men in time of peace at issue; you would not have it as an issue; you would not let anybody charge it; you would not defend the proposition. You simply retorted with a statement which took your opponent off his feet, for he was bound to agree with you.

Mr. President, it is very easy for our Republican friends to fool themselves about the last campaign, if they think it decided many things that they are advocating. The last campaign was a peculiar one. The Republican party won, more on account of a peculiar combination of circumstances than it did upon the issues at stake. In fact, it was difficult to have them define any issue. When you charged them with imperialism, they denied it and said the whole question was whether or not we should get out of the Philippine Islands at once in disgrace, or whether we should stay there long enough to establish law and order and give those people a government.

The people voted with them on that. The Senator from Montana [Mr. CARTER] said in his speech the other day that as soon as this war was over it was the purpose to reduce the Army. I do not remember which Senator, but a distinguished Senator on the Republican side said the next day that he had no idea that the Army would ever be reduced, that we should always want a hundred thousand men; and when asked what for, he failed to say. So we are at a loss to know what our friends want now, as the people were at a loss to know in the last campaign.

But I wish to say this: There was one factor that contributed to the Republican success in the last campaign probably more than any other, and one for which the party took no credit and is entitled to none. What was that? They used the full-dinner-pail argument from ocean to ocean. They called the attention of the country to the fact that when Cleveland was President we had depression, hard times, and falling prices.

They then called attention to the fact that now the tendency of prices was up, that labor generally had employment, and that, generally speaking, times were good; and then they said: "Bryan and the Silver men told you four years ago we could not have prosperity without free silver, and you have not free silver and you have prosperity, and therefore Mr. Bryan is wrong." There is the Republican speech. It won.

There were many men who were ardent silver men in the cam-

paign four years ago who had their doubts, whose faith was shaken, and it was largely due to the fact that the speakers on the Bryan side did not meet the issues in many places. The fact is that the condition existing in the last campaign was proof of everything claimed by Mr. Bryan and those who favored more money in 1896. Instead of its being proof that they were wrong and a repudiation of the doctrine, it was a vindication of it.

But I think those on the Bryan side failed to make use properly of the facts, and the Republicans took advantage of the situation most skillfully. Four years ago you told the people on every stump that you did not want any more money. You said we had money enough. You said if you had any more money, it would get to be cheap money; and you said every laborer should have his dollar the dearest dollar in the world, so that it would buy the most.

You said, if anything, there was too much money now. I can hear you say it right now. I have on file the newspapers and your handbooks. We stood upon the other side and we said, "Prices will not stop falling until there is a greater volume of money." We said, "This idle labor will not get employment until there is a larger volume of money." We said that the volume of money had to increase with the increase of population and business for there to be permanent a condition of prosperity. That was our proposition in 1896, and you denied it.

Now, what was the condition in the last campaign? The volume of money in the country had increased. The volume was increased by the enormous output of gold, and it was increased probably more than the increase that would have come from the free and unlimited coinage of silver under normal conditions. It was the most abnormal output of gold that the world has ever seen.

Under the free coinage of gold it all went to the mints and went out into the veins and arteries of trade. It was so patent that President McKinley himself in his letter of acceptance, when congratulating the country upon its prosperity, incidentally referred to the fact that the volume of money had increased about \$6—I speak from memory—per capita. It was good money, too, though the quantity had increased, but no better than if the increase had been silver or greenbacks. Did you know you were going to have an increase of \$6 per capita when you established the gold standard? If you had pledged me that you knew it was coming and would continue, I would not have objected so seriously to the bill.

I am willing that every dollar in circulation shall be gold, provided there is enough of it. It will not be good, however, if there is not enough of it, for there will be falling in prices. There will be misery and hard times, and laborers will be out of employment, and everybody will suffer except the money changer and the man who speculates upon labor and its products.

The only way to have good money is to have not too much and not too little. It is to have its volume increase *pari passu* with the increase of population and business. I should be willing for it to be made out of any substance if I could have that made the law as irrevocable as the law of the Medes and Persians. Any country, which wants to have financial prosperity and a general condition of prosperity, that will guarantee justice to all people and all professions and all classes of society, should have such a law. That is what we contended for in 1896. That is the principle we contended for and the principle you denied; and the great output of gold proved the principle to be correct.

The quantitative theory is what we stand for. The quantitative theory was proven to be true by the output of gold and the increase of \$6 per capita. That, with the large amount of money put into circulation by the war, made prosperity. You would have had the same prosperity if the increase of the number of legal-tender dollars had come through free silver, if it had come through greenbacks, or if it had come through dollars made out of diamonds or platinum. I think it is foolish to waste 50 cents' worth of silver on which to print a dollar. I think it is twice as foolish to waste 200 cents' worth of gold on which to print a dollar.

But I would be willing to make terms with all that kind of cranks. I would be willing to yield to extravagance in the material used in order to get them to stand with me for a principle that would make us all prosperous in spite of even that much extravagance. We can afford to tax ourselves, to be that extravagant, to waste that much raw material, in order to have the principle established and to have it operative, that the amount of money shall increase with the increase of population and business, so as to preserve equity between the producer and consumer, between the lender and the borrower.

Now, you prospered and carried your campaign simply because accident proved that we were right—the accidental output of gold. You did not know it was coming when you passed your gold-standard bill, and you did not want it to come. If you had, you would not have passed the bill. There is not a man in America who voted intelligently for the gold-standard bill but what in his heart to-day is mad and disgusted and nervous about the large output of gold.

He wants to stop it, because what he wants is scarce money and scarcer money. He wants the base gold, and he wants that small,

He wants it so small that the amount of money of the country will have to be bank paper based on it, and then he himself and his son John want to control that paper money, and they want the great Government to abdicate in favor of them and let them say when prices shall rise and when prices shall fall. I can understand how a few men who want the Government to abdicate the sovereign function of issuing money to them would be willing to abdicate the power of raising an army to the President or even to this same gang of bankers.

It is just as logical to vote to abdicate one as the other, and therefore it does not surprise me when a man is willing to tie the hands of the Government and let a little clique of bankers say how much blood of the nation shall be in its veins that he should favor the abdication of power in this bill. If men can think that is patriotic and right, and that we should trust them, I do not see why they do not change the bill and vest this same power to raise an army in the same clique of bankers.

Now, Mr. President, in conclusion I simply want to repeat that there are just two questions, it seems to me, in this bill when everything else is decided, right or wrong. If they are adopted or rejected, these two great questions still stand up here.

First, what is the necessity for this Army? Tell us, and we will vote for it. We will vote for any number you want for the Philippines, but we do not want a great standing army in time of peace. It is expensive; it is unnecessary; it is undemocratic; it is un-American.

Second, we do not want to put into any man's hands—even President McKinley's, even Abraham Lincoln's, if he were living, or Thomas Jefferson's, if he were living, or George Washington's—powers that the framers of the Constitution said should never go into the hands of one man, but should be in the hands of the legislative branch of the Government. It is not safe; it is not necessary, even if the Constitution was not in the way. Pray, tell me why we should do it? Is it good policy?

But they tell us we can repeal this law when we want to. Do you know how much more difficult it is to repeal a law when once you get it on the statute book? The Senator from Connecticut, chairman of the committee, made a parting remark as he left the Chamber, and his last word was that you can repeal it next year if you want to. You have got to get the House to agree; you have got to get the Senate to agree; and then you have got to find in the chair a President who will not veto it. You have got to run the gantlet of the three branches, and if we have one branch of one party and the other of another they are at cross purposes, and probably politics and a little friction may cause them to disagree when they ought to agree.

Why do we want to put ourselves in that condition when it is unnecessary? If any Senator could show me why it is not always feasible for Congress to legislate whenever it is necessary to raise the Army larger than the peace footing; if he will show me that the Government is in danger; if he will show me that our interests anywhere will suffer; if he will show me that our flag anywhere can be dishonored, I then would be constrained to strain my conscience past the Constitution and vote for a measure of doubtful constitutionality, to say the least, as a matter of national safety.

When we ask this question, Mr. President, we are answered that we dillydally and kill time while our flag is being cut down by insurgents, and the word "treason" has been used, as Senators have said, here too often. There has been a studied effort to call attention from the Constitution and from these facts to the flag as an answer to argument. Who has a monopoly of the flag? I do not even object to the Republican party using it as a campaign emblem and calling it "flag day," while it may be of doubtful taste.

I am willing that every wheelbarrow in the country shall have the flag on it, and that everyone shall stick one in his hat and be proud of it. It belongs to all the people. But I want to know what is this purpose to attempt to stick up the flag as an abstraction, as an answer to the argument, to say it is disloyalty to the flag when a man seeks to discuss whether this is constitutional or that is constitutional?

The flag; what is it? Does the blue paint on the flag mean anything by itself? Does the red paint across it mean anything? It means no more by itself than if a streak of red paint were put on that carpet and a streak of blue paint here and a star there. That flag stands for something. When a patriotic American citizen looks upon it floating out over the breezes and his heart swells with pride and that peculiar patriotic thrill runs through his being from head to foot, what is it that causes that emotion?

Is it the paint? No; it is because that flag stands for the Declaration of Independence and the rights of man, as guaranteed by it and the Constitution. It is because the great bulwark of liberty included in those two documents is represented and typified by that piece of cloth with the paint and the stars upon it. Then talk of loyalty to the flag. That man is loyal to the flag who is loyal to the principles it stands for and waves for, and the man who spits upon those principles while he waves that flag is a traitor to it, if we have got any traitors.

I protest against this studied effort to separate the flag and what the flag stands for. Monarchs, tyrants, use a flag as an emblem of their power, but the flag stands for nothing but their tyranny. Our flag stands for the opposite, and no man is loyal to it who is not loyal to everything it stands for.

Now, Mr. President, those men who have been on this floor time and again charged with treason, it was when they were standing up and protecting and defending the principles that the flag stands for as they understood it.

Mr. President, I repeat, let some one show us one reason for this army being this big in time of peace and I will vote for it. Let some one show that the flag and what it stands for and the national safety will be endangered unless we give the President this power, and I will vote for it. Until such a reason is given why should anybody vote for it? Why is it not a dangerous, a disloyal, unpatriotic, and un-American thing to do?

Naval Appropriation Bill.

SPEECHES

OF

HON. WILLIAM H. KING,

OF UTAH,

AND

HON. SYDNEY E. MUDD,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 24, 1901.

The House being in Committee of the Whole House on the state of the Union, having under consideration the bill (H. R. 13705) making appropriations for the naval service for the fiscal year ending June 30, 1902, and for other purposes—

Mr. KING said:

Mr. CHAIRMAN: I desire to ask the chairman of the committee whether these increases in clerks in the various departments and navy-yards are necessitated by the increase of business; and if not, what is the reason for increasing the business?

Mr. FOSS. I would state that it is entirely due to the increase of business.

Mr. KING. Does this bill merely provide for the regular force of clerks in the various navy-yards?

Mr. FOSS. Some of these are new clerks.

Mr. KING. Is there anything in the bill to indicate which are the old positions and which the new ones?

Mr. FOSS. Well, now, would the gentleman refer to any particular navy-yard?

Mr. KING. I notice here, for instance, the navy-yards at Portsmouth, Boston, New York, Philadelphia, and Norfolk.

Mr. FOSS. Now, take for instance, Portsmouth, one writer, at \$950.

Mr. KING. Is that a new office?

Mr. FOSS. Yes.

Mr. KING. Does the increase of business in the office justify the creation of a new office?

Mr. FOSS. Oh, yes; in all these yards there is additional business, owing to the fact that there are more ships to repair and more ships to equip.

Mr. KING. Will these new clerks that are provided for here be appointed from the classified service, or will the law in respect to the appointment of officials and officers be evaded, as it is constantly being evaded, by the higher officials and bureaus of the Government?

Mr. FOSS. Why, I understand that they will be appointed under the civil-service system.

Mr. KING. I desire to know from my friend whether it is a fact that in many of the Departments of the Government, including the War and Navy Departments, the present civil-service law is constantly being evaded, and persons are being placed in office and put into positions in direct contravention of the terms of the law?

Mr. FOSS. I am not aware of that fact.

Mr. KING. I want to ask my friend whether the offices created by this bill will be filled by appointment from the classified service, or will the bureaus and the heads of departments in the Navy Department have absolute and unrestricted power to make such selections as they please?

Mr. FOSS. I would say to the gentleman that this is the first time that I have heard a complaint of this kind. I suppose these persons will be appointed in accordance with law.

Mr. KING. My friend must know there are a great many complaints in regard to the present Administration—that it is constantly violating the terms of the civil-service law, and that the

violations have been so flagrant as to become a national scandal.

Mr. MUDD. I would like the gentleman to point out where there has been any violation of the civil-service laws in the Navy Department. I would be glad to find out where it is done.

Mr. KING. I think I can gratify my friend, but perhaps not at this moment, unless time is granted, as it would delay the consideration of the bill.

Mr. MUDD. I submit to the gentleman from Utah if he does not think it unfair to the Navy Department to say that these violations have become so flagrant as to amount to a public scandal without being able or willing to give a single instance of their occurrence.

Mr. KING. My friend when he proposes to quote a speaker ought to quote correctly.

Mr. MUDD. I tried to do so, and if I have not, I shall take pleasure in being corrected.

Mr. KING. I did not single out the Navy Department and make this charge against that Department specially. What I said, that the gentleman attempted to quote, was that the present Administration (not particularly the Navy Department) is guilty of a violation of the civil-service law, and that such violations are so constant and flagrant as to become a national scandal.

My friend from Maryland will remember the fact that under the pretense of the exigency caused by the Spanish war and the untrue statement that the civil-service list could not respond quickly to the alleged temporary requirements for additional clerks, hundreds of persons were appointed to positions, both in the War and Navy Departments, who never took the civil-service examination; and hundreds of such appointees, without examination, have been transferred to the classified service, still without examination, as I understand, and are now in snug positions for life.

Mr. MUDD. Has the gentleman finished?

Mr. KING. I think I have answered the gentleman's question.

Mr. MUDD. I want to know if the gentleman yields the floor, as I want two or three minutes in my own right?

Mr. KING. Yes, for the present.

Mr. MUDD. Mr. Chairman, I merely want to say a word in reference to the statement made by the gentleman from Utah. I have never been accused of being an ultra civil-service reformer. [Laughter.] In fact, I have stood up whenever that matter was under discussion and manifested my desire for a modification of the system, even to the extent of voting to strike out the appropriation for the support of the commission in lieu of any other plan of expressing opposition to the system as it now stands or then stood; but I am unwilling to sit here silently and hear the Department, I am sure unintentionally, misrepresented. I have often heard charges about the violation of the civil-service law. I have heard them from my own constituents. Some of them have come to me here and wanted me to assist in the violation in order to get people into office.

Mr. WHEELER. May I ask the gentleman a question?

Mr. MUDD. Yes.

Mr. WHEELER. I would like to know if the gentleman did not make an endeavor to assist his constituents? [Laughter.]

Mr. MUDD. No; I never made the endeavor in that manner. I am not much enamored of the law, but as long as it is on the statute book I am in favor of its being lived up to and obeyed. I am in favor of its enforcement in good faith as long as it is a law of the land. But, Mr. Chairman, I have taken occasion very frequently to make the inquiry as to whether or not these violations or evasions as charged by the gentleman have occurred, and I will say that after more numerous inquiries, I think, than have been made by any member of the House—because I take it that everybody knows from evidences that are visible around this Hall at all hours of the day that I have more applications for office than all the members of the House put together [laughter]—I have never found a single instance where that statement was borne out.

I am sure it would be less likely to be found in the Navy Department than any of the other Departments. The Secretary of the Navy, I am sure, not only favors absolute compliance with and obedience to the law in his Department and everywhere else, but further, as I understand—naturally it may be assumed from the environments and prevalent trend of thought of the locality from which he comes—is not only an advocate of but an enthusiast in regard to the merits of the civil-service law. I do not know that there has been any violation in the War Department. I have been able to secure one or two appointments there myself, and I wish I could have secured more, for the temporary list provided in the appropriation bills for clerkships during and following the Spanish war. I do not think the gentleman can point to a single instance in which a clerk in the unclassified service has been transferred to the classified service where he did not take the civil-service examination and place himself in the same category as an outsider.

Mr. KING. If I may be allowed to interrupt the gentleman, is it not a fact that immediately after the Spanish war there were added to the War Department and the Navy Department some one or two thousand clerks?

Mr. MUDD. That may be so.

Mr. KING. Is it not a fact that a great many of these clerks have been placed in the classified service without having taken the civil-service examination?

Mr. MUDD. My answer is that I am aware that a number of such clerks have been placed there, but in the law which created them it is provided that as they were temporarily employed they should not be subjected to the civil-service examination. The law provided it, and there was nothing clandestine or irregular about it. I deny that any have been placed in the classified service without being subjected to the civil-service examination.

Mr. KING. Have they not been made permanent clerks now?

Mr. MUDD. No, sir; they have not.

Mr. KING. Is it not a fact that most of these clerks were appointed for a temporary purpose during the continuance of the Spanish war and are still retained in the Department?

Mr. MUDD. They are still retained there, but their positions are not permanent. They are retained for the same service for which they were appointed, because we have not yet finished up the business growing out of the war.

Mr. KING. Does the gentleman mean to assert that none of the persons appointed for temporary purposes during the continuance of the war have been placed under the classified service without being subjected to the civil-service examination?

Mr. MUDD. I have stated that none have been placed in the classified service unless they were subjected to the same conditions and examinations as would be given an outsider. I do not think the gentleman from Utah ought to make these unqualified statements in the House as to the violation of the law unless he can name one single instance, and that he can not do.

Mr. KING. I will undertake to satisfy the gentleman that my statements are true.

The CHAIRMAN. The time of the gentleman from Maryland has expired.

Mr. KING. Mr. Chairman, it was not my purpose when I interrogated the chairman of the Naval Committee [Mr. Foss] concerning the manner of filling the offices created by the measure under consideration to precipitate a discussion of the civil-service law; nor would I now attempt to contribute anything to the subject were it not for the challenge of my friend from Maryland [Mr. MUDD]. In view of his statements I desire to submit a few observations, and also invite the attention of members to recent publications which fully support my contentions. The merits of civil service are not involved in this collateral inquiry. My specific charge is that this important law is constantly being violated, both in letter and in spirit, by President McKinley and the Executive Departments of the Government.

The purpose of the civil-service act is clear. After exhaustive consideration of the subject, it was determined that the merit system in appointments to political positions and offices under the Government should supersede the system under which the triumph of a political party was regarded as the commission to drive from office those of a different political faith, and to fill the same with ardent supporters of the victorious organization. If the merit system is good, it should be extended. If it is superior to the one against which it had to contend, it should crush the latter, and in the absence of something better should be firmly established and honestly administered.

The Republican party has indulged in loud and tumultuous praise of the civil-service law. It has pretended to be the stalwart defender and undaunted champion of the law. It has boasted of its fidelity to civil-service reform, and with solemn countenance Republican leaders have asseverated their determination to defend its advances and battle for its further extension. But an examination of the record of the Republican party conclusively establishes the fact that its love for civil service is all-consuming only when the Democrats are in power. When it is crowned with victory its boasted friendship is turned to bitter denunciation; it betrays the cause of civil-service reform, but, with lofty phrasing and hypocritical cant, it still affects devotion to that which it would cripple if not destroy.

In national convention in 1896 the Republican party declared in favor of the "merit system," and stated "not only that the law should be thoroughly and honestly enforced, but that it should be extended wherever practicable." Later, President McKinley, in his letter of acceptance, emphatically announced his approval of the party declaration. Notwithstanding this action, the cause of civil service has not only not been extended, but the present Administration has materially weakened it.

I doubt whether in the history of this Government, not forgetting the second Administration of President Grant, there has been such a wanton and unblushing disregard of law or propriety in the appointments and promotions to political and military positions as that which has been witnessed during the past three years and ten months. There can be no doubt but what the power of the President is far greater than was anticipated by the framers of the Constitution, and each year witnesses the assumption of

greater power by him. The patronage belonging to the Presidential office is enormous. Skillfully employed and partisanly used, it becomes corrupting and dangerous.

In the hands of a high-minded, patriotic President, the evils and dangers flowing from its exercise are reduced to a minimum; but in the hands of a weak and vacillating politician, or a partisan so blind as to see none but his supporters, its consequences can not be computed.

The Administration of President McKinley has been essentially one of "spoils." Never have the words "party service" and "pulls" been so significant. The candidate for political or military preferment reached the "promised land" if he had the "political pull." Those are magic words in this commercial, sordid, un-American Administration. It is time to be frank, at least with ourselves. We may endeavor to deceive other nations, and proclaim the transcendent virtues of our civil administration. We may with befitting gravity tell the Cubans we are in their island from disinterested and purely philanthropic and humanitarian purposes, to lead them to a higher civilization and teach them honesty in civic affairs, but neither they nor anyone else will believe us.

We know that the Administration is trying to steal Cuba, and that those for whom our hearts bleed when Spain's sovereignty extended over the island, those who were fighting for liberty, and for whose independence we were sincerely desirous, are now seditious, turbulent sans-culottes, incapable of self-government, and unworthy of independence. Why not tell the Cubans that we are holding their rich and fertile land, first, as a fruitful field in which Neely and Rathbone and other political favorites and beneficiaries of the "pull" can gather abundant harvests. There are so many patriots whose distinguished and wholly unselfish devotion to the country demand recognition that, if there are not enough offices at home to which they can be assigned, Cuba and other countries must prepare to be honored by providing high-salaried positions for these self-sacrificing patriots. And we should further tell them that our declaration, pledging the United States to withdraw from the island of Cuba, was intended to deceive the Cubans and the world; that our predetermined plan is to ultimately annex Cuba with or without the consent of her people.

Pretexts will not be wanting to justify the Administration in violating a solemn promise to withdraw from the island when pacification was assured. The obvious purpose of the Administration, in harmony with its record of extravagance, tyranny, and oppression, "loot and glory," is to impose such terms upon the Cubans, as a condition precedent to the withdrawal of the forces of the United States, that no self-respecting nation or people can accept.

The result will be the seizure of the island and its forcible annexation, if force is necessary.

Mr. Chairman, our nation is fast becoming a bureaucracy. Offices are multiplying and officials are increasing far in excess of the population or the needs of efficient administration. The vast political machinery committed to the care of the Executive makes him omnipotent. His power in the Government is too great to pursue a proper equipoise between the three branches.

Political victories are gained by barter and sale. Part of the consideration is that official positions shall be supplied to the myriads of political satellites, local bosses, and scheming principleless camp followers who infest the party and render questionable service in return for the promise of recognition when success to the party is assured.

Under such influences and party spirit and discipline the advancement of the merit system becomes an "iridescent dream." The wisdom of the system, its "theoretical" advantages, etc., are talked about; its beauties are extolled, but, it is then urged, the peculiar present conditions render its enforcement impracticable and unwise.

And so the power of the Executive is increased. He realizes the thunderbolts at his command and discharges them to confound his political opponents and strengthen his own and his party's position. He crushes opposition to his will and destroys the manhood and independence of national legislators and other high officials in the Government by the use of patronage.

Who does not know that the opposition to a large standing army, which has been a national characteristic, has been undermined and largely destroyed among many Republicans as well as a portion of the people of the country by the adroit and skillful distribution of thousands of commissions for military positions? Conquest and war and bloodshed are popularized by contracts for transports and ships and munitions of war, and the taking from the public Treasury hundreds of millions of dollars for distribution among the people.

No monarch on earth has such patronage as the President of the United States, and never has it been so employed for party advantage, for the insidious destruction of opposition to unwholesome and vicious and un-American policies, as during the incumbency of the present Executive. The ignoble treaty with Spain was predetermined by the President anterior to the selection of

the commissioners from this country. To commit to its support those whose voices were essential to its validity, selections were made of influential Senators. Representing the President, his views governed them. His work became in a measure their work. Thus they were committed to the ratification of the treaty. Of the methods employed to secure further support of the treaty which has brought so much of sorrow and woe to our land it is unnecessary, nor would time permit, that I should speak.

Mr. Chairman, the legislative branch of our Government is being stripped of its functions and power. Congress is now but the echo of the Executive. His will is its law. His desires, "uttered or unexpressed," drive brave men from high ground and rightful positions into servitude and senile sycophancy. There was a time when Congress was respected and was recognized as a coordinate branch of the Government. Under Republican rule, when Congress is not engaged in doing the bidding of the President, it is actively concerned in carrying out the wishes of the trusts and the money power.

The legislative department no longer initiates legislation or determines the policy of the Government.

It has completely abdicated its high mission. The President or the Executive Departments prepare the important measures, and by way of courtesy the legislative branch of the Government is permitted the gracious privilege of assenting to them.

The "President's policy!" These are words common to our ears in this Republican era. Congress has no right to have a policy. The people's representatives must have no policy. What matters it if the traditions of the past, which have brought glory and renown to our country, are violated by the President? We can not protest.

We have a new master—not the people, but the President. He declares war against the Philippines, not Congress. He declares for a colonial policy, for imperial prerogatives, for war, and a big army.

This is his policy, and consequently, under the new system of government, it is our policy. It is the "President's policy" to send commissioners to the Philippine Archipelago, invested by the President with powers arbitrary and despotic and in direct contravention of the provisions of the Federal Constitution; therefore this, it is said, is the "policy" of the American people. It is the "President's policy" to govern extraconstitutionally; to ascribe some vitality to the Constitution as it affects the 45 States, but to treat it as a nullity when he comes to deal with the territory of the United States, and the insular possessions, claimed to be a portion of the domain of the United States.

It is the "President's policy" to "haul down" the flag in Alaska; to negotiate a treaty with Great Britain concerning an isthmian canal which is at variance with accepted principles essential to our honor and security. And is it not the President's policy to regard with indifference the destruction of struggling republics in Africa, and with strenuous effort seek to prevent the establishment of a free republic in the Orient? This being accepted as the "President's policy," forthwith brave and patriotic American citizens, who were wont to speak out for the right, haul down the flag of their independence, capitulate without terms, not even asking for the retention of side arms, and soon are found wildly cheering as they follow the banners of the Executive.

It is the President's policy to impose upon the people of the United States a burden of nearly \$1,000,000,000 of taxation each year in order that militarism may be established, an unholy, unauthorized, and unconstitutional war may be prosecuted, political obligations be discharged, the rapacity of the trusts be appeased, subsidies and bounties granted, the simplicity of our republican institutions destroyed; and so with becoming modesty this is our policy.

And Senators and Congressmen—they crowd the Executive office, seeking with feverish anxiety the falling crumbs of patronage, sweeter by far to their hungry souls than was the manna so mercifully shed from the skies to the wandering Israelites in their dreary pilgrimage.

When will the wanderings of this Republic cease? Let us hope that the people will be aroused from their idolatrous worship of the fetish of modern Republicanism, and will turn from the apotheosis of physical power to the moral principles of righteousness and truth, and at last be crowned with peace and felicity in the "promised land" of a true Republic, the foundations of which were laid by our fathers' hands.

Mr. Chairman, it should be the purpose of every executive officer, and especially the Chief Executive, to have the highest degree of efficiency in all departments of the Government. "Public office" should be regarded as a "public trust," and only persons of character and probity should be selected for positions in the public service. In the administration of private affairs individuals seek for integrity and the elements of virtue in those whom they employ. If possible, a higher standard should be applied when choosing officials for public service. Upon the President devolves the responsibility of determining the character of public

servants. He can say that superior fitness for the position, honesty, and integrity shall be indispensable elements in every person selected.

He may, if he desires, encourage corrupt party organization, the triumph of the machine, and factional politics. The success of the civil-service law depends largely, if not almost wholly, upon the President. I wish to state to my friend from Maryland [Mr. Mudd] that all civic organizations interested in the preservation and extension of the merit system agree that the cause of civil service has had no encouragement from President McKinley. Upon the contrary, he has dealt it serious and staggering blows.

In support of the charge that the present Administration's attitude toward civil service has become a national scandal, I need only call attention to the matter of "reinstatements."

Favoritism, political "pulls," the payment of party obligations—these pernicious causes have secured the appointment, by reinstatement, of more than 40 per cent of the persons selected to fill vacancies in the Washington Departments during the past three years; and in this figure the Government Printing Office is not included.

In other words, though the civil-service law contemplates competitive examination, in order to secure fitness for position, which is by such law regarded as the *sine qua non*, more than 40 per cent of all vacancies in all of the Departments in Washington except the one above mentioned have been filled during the past three years by reinstating persons who were not connected with the service, and many of whom had severed their connection with the Government from five to fifteen years ago.

I believe the Civil Service Commission vigorously protested against this assault upon the law and this degradation of the system, but neither the President nor any of the Executive Departments paid the slightest attention to the protests.

It is known that there were hundreds of reinstatements by the Administration purely for political reasons. In order to do this the President, on May 28, 1899, so amended the civil-service rules as to permit reinstatement regardless of the time when persons were dismissed or discharged from the Government service. Under this provision persons who were dismissed years ago—many, doubtless, for good reasons—are now reinstated, and without examination. No doubt some of these were dropped because of the least competency. This order is a backward step; it was made for political reasons.

Another class of violations of the civil-service law is found in the constant practice, under this Administration, of making appointments to post-offices of nonresidents before classification, followed by transfer to classified positions after classification.

This pernicious and evasive course has especially been pursued when it was arranged to establish rural free delivery in a locality. So bold and defiant was the Post-Office Department in this matter that the Civil Service Commissioners were compelled to interpose.

In the Fifteenth Report of the Commission, pages 388-390, this subject is discussed. I desire to insert in my remarks what is said by the commissioners.

APPOINTMENTS TO POST-OFFICES OF NONRESIDENTS BEFORE CLASSIFICATION FOLLOWED BY TRANSFER TO CLASSIFIED POSITIONS AFTER CLASSIFICATION.

Early in 1898 appointments began to be made in post-offices on the eve of their classification, as the result of the establishment of free delivery therein, and the persons so appointed, almost immediately after the classification of such post-offices, transferred to other positions (usually of higher grade) in other portions of the Government service, sometimes in other Departments. Such persons were frequently not residents of the States in which the post-office to which appointment was made was situated. Since this practice subverted the intent of the civil-service act, the commission brought the matter to the attention of the Post-Office Department and requested its cooperation in abolishing such practice.

In a letter dated February 19, 1898, the First Assistant Postmaster-General stated:

"I have to say that, in compliance with your suggestion, it is the purpose of the Department in the future to confine appointments of persons at post-offices where the establishment of free delivery is contemplated to a period of not less than six weeks prior to the establishment, and the appointments to residents of the city in which the establishment of free delivery is to be made. Unless the emergency is great and necessity extreme, it is our determination to make no appointment at these offices earlier than sixty or ninety days, and, unless the nonresident has expert knowledge of the postal service and his especial abilities are required in the establishment, to refuse all applications for the appointment of others than residents of the city where the establishment is to be effected.

Instances of the abuse continuing to come under the notice of the commission, the matter was on November 7, 1898, and again on April 4, 1899, brought to the attention of the Postmaster-General in letters, in which the commission said:

The commission is in receipt of the Department's request, dated March 29, for the transfer of John Mahin, a clerk in the Webster City, Iowa, post-office, to the position of post-office inspector. Mr. Mahin was appointed to the post-office named on January 30, 1899, and the office was classified, as the result of the establishment of the free-delivery system therein, on February 1, 1899.

Transfers of this character are fast becoming common, and since in this practice inheres the power to cripple and even nullify the intent and purpose of the civil-service act—making appointment and promotion in the public service dependent solely upon fitness, as ascertained through competitive examinations, supplemented by a probationary period of service—it is deemed proper to again bring this matter to your attention.

The instances in which transfers of this character have been made appear on the inclosed sheet, headed "Transfers of persons from newly classified post-offices." The commission knows of no instance antedating that of R. M. Fulton, the first name appearing on the list, the certificate for whose transfer from the Cripple Creek, Colo., post-office to the position of post-office inspector is dated January 20, 1898.

As stated in the commission's first letter upon this subject, dated February 9, each of these cases involves an evasion of the spirit of the civil-service law and rules. In each case the person has been transferred to a position which he could not, under the rules, have entered except as the result of examination. Where employees are classified as the result of the extension of the operations of the civil-service act and rules it is assumed that they demonstrated their fitness for the positions they occupy, and an examination would therefore be unnecessary. It is manifest, however, that this can not be said of an appointee whose incumbency of an office is of but a few days' or weeks' duration.

In subsequent correspondence (see Department's letter of November 24, 1897, F-14720-W) it was stated that "it will be the uniform practice of this office to appoint only residents at new offices at which the civil-service examination had not been held or arranged for prior to November 5," etc. A number, however, of the persons mentioned in the attached list were appointed to positions in post-offices far distant from the State of their legal residence, and in the post-office at Newport News, Va., one of the offices which were the subject of the Department's letter of October 29, 1897, requesting that "only those who are bona fide residents of the cities to which the registers apply shall be certified," a legal resident of Tennessee was appointed.

This evil is not limited to the bounds of one Department, for, as seen in the cases of Messrs. Wasson, Jones, Clark, and others, transfer to another Department may be made under the provisions of civil-service Rule X. There is no limit to the number of persons who may enter the service in this manner. With the establishment of free delivery, at each new post-office a dozen or 50 persons might be brought into the classified civil service, to be transferred later to any vacancies that may arise in other portions of the service, and thus the purpose of the passage of the civil-service act—the improvement of the civil service by making entrance to positions therein depend solely upon fitness as ascertained through competitive examination—might be effectually thwarted.

The system of transfer embodied in the civil-service rules, when employed for the purpose for which it was instituted, is a valuable aid to the service. That it should be used to accomplish the defeat of the merit system of appointment to office was never contemplated by those who framed the civil-service rules. Yet this is precisely what the perversion of Rule X may accomplish.

Section 2 of the civil-service act states that the rules to be prepared are for the purpose of carrying the act into effect, and the most casual reading of the act shows that its primary object was to provide for the filling of all positions coming within its purview as the result of open competitive examinations, practical in their character, except where such positions are already filled by persons familiar with the duties thereof, and for whom an examination would be a superfluity.

Passing by without further comment the widespread possibilities for injury to the public service which this practice makes possible, this custom at the present time operates to defeat the purpose of the civil-service act and injure the Government service by—

1. Filling positions with persons who have not passed an examination prepared with reference to the needs of such positions.
2. Transferring to responsible supervisory positions elsewhere under the Department persons without training for such positions to the exclusion of persons possessing such training. This contrary to the Department's declaration that experience in the public service is essential to the proper discharge of the duties of such positions.
3. Transferring persons to positions in other Departments for which they have not passed the required competitive examination, and to which, in many cases, those already in such Departments should be promoted.
4. Discrediting the Department and this Commission in the eyes of the public by the appointment just prior to classification of post-offices of persons not even legal residents of the State in which the particular post-office is located, and at the same time objecting to the appointment of eligibles who are residents of the same county in which a post-office is located.
5. Defeating the reasonable rights of promotion of those in the classified service by first appointing an excessive number of persons in an office (without examination) and later filling vacancies in such service by the transfer of these persons.

Another notorious abuse has resulted from so-called "reduction of force"—the reduction would be immediately followed by new appointments. This palpable violation of the law has especially characterized the Internal-Revenue Department.

As an illustration of the high-handed and illegal course pursued, I desire to call the committee's attention to the internal-revenue office at Danville, Ky. July 1, 1897, President McKinley appointed a collector for this point. Within eighteen months thereafter, more than 90 per cent of the entire force of officials were taken from the service by the collector. He professed to abolish 91 offices or positions "for the purpose of reducing the force of the district to a number approximate to the requirements of the service."

Within a short time after dismissing these employees of the United States, this Republican appointee of President McKinley filled their places with Republicans. And my friend thinks I can not show violations of the civil-service law by the Republican Administration! Mr. Chairman, I could detain this committee for hours pointing out the wrongful, illegal, bold, criminal, and defiant conduct of the party in power respecting the civil-service law and the rules and regulations promulgated thereunder.

I will cite a few more examples, if the committee will indulge me. Many clerks have been promoted to post-office inspectorships without undergoing the examination prescribed by law. This violation of the law is referred to in the Fifteenth Report of the Civil Service Commission in the following language:

The clerks to the post-office inspectors at New York, Chicago, and San Francisco, having been promoted to post-office inspectorships without passing the required examination, the Commission, on December 14, 1898, wrote the Department as follows concerning these cases:

"The records of the Commission do not show that any of these persons have passed the examination for the position of post-office inspector, for which a

higher examination than that for clerks is required by the first proviso of paragraph 4 of Rule XI, which is as follows:

"That no promotion of a person shall be made, except upon examination provided by the Commission, from one class to another class or from one grade to another grade if for original entrance to said class or grade to which promotion is proposed there is required by these rules an examination involving essential tests different from or higher than those involved in the examination required for original entrance to the class or grade from which promotion is proposed."

"The examination for the position of post-office inspector involves tests that are both different from and higher than those involved in the examination for the position of clerk."

"In the rule relating to the examination required for transfers nearly the same language is used. It has been the practice of the Post-Office Department to request that noncompetitive examination be given for transfer of clerks in the Departments, in the Railway Mail Service, and in the Post-Office Service for transfer to the position of post-office inspector. It would have been consistent with this for the Department to have made request for noncompetitive examination for promotion of these persons. It is clearly apparent that the rules require that these persons be examined, and the commission would be pleased to make arrangements for examination of these persons at places convenient for them, upon receipt of instructions and the proper request."

No reply has been received to this letter, nor to a letter dated September 27, 1898, asking the authority for the appointment, without examination, of an assistant superintendent of free delivery at \$2,000 and a chief clerk at \$2,000, both in the office of the First Assistant Postmaster-General, the positions having previously been officially reported by the Department as included in the examination-required class.

Mr. Chairman, I hold in my hand a letter from the president of the commission, addressed to me, in which he speaks of the number of persons who have been brought into the classified service, in certain Departments, without examination. The President of the United States, in contravention of the eight fundamental principles and provisions of the civil-service rules, promulgated orders January 20, 1899, and May 29, 1899, the effect of which was to ignore the merit system and permit the appointment to the classified service of Republicans who never took the civil-service examination, and this though at the time there were more than 6,000 names of eligibles upon the civil-service list.

The president of the commission, in his letter to me, says:

Under the order of January 20, 1899, * * * affecting the Navy Department only, 134 persons were brought into the classified service without examination by this Commission.

Under the Presidential order of May 29, 1899, * * * there have been, up to December 31, 1900, brought into the classified service, without examination by this Commission, 1,032 persons.

He further states that of this number 627 were "temporary appointments in the War Department" and "were made owing to the exigencies of the war with Spain," and "which were afterwards made permanent." When my friend says that no "temporary appointments" growing out of the war with Spain have been made "permanent," he shows that he is not acquainted with the marvelous fidelity which his Republican Administration has shown toward civil service.

Another instance of a disregard of the law is referred to in the same report of the Commission on page 409:

PENSION EXAMINING SURGEONS.

In the Bureau of Pensions the practice of organizing, without precedent examination and certification, additional boards of pension examining surgeons in those cities where a classified civil-service board already existed, followed by the direction of all work connected with the medical examination of applicants for pension to the new board, has continued despite the repeated protests of the Commission to the Department of the Interior. The prior history of this matter, with the correspondence had by the Commission with the Department in relation thereto, appears in the Fourteenth Report at pages 349-355.

Mr. Chairman, I have here a number of publications, including the last reports of the Civil Service Commission. Their pages are filled with instances of the flagrant and arbitrary manner in which President McKinley and the Executive Departments of the Government have sought to defeat and destroy the operations of the law which he and others have sworn to uphold. Their perfidy and hypocrisy in this matter can not be extenuated.

I have not the time to further call the committee's attention to these publications, but I will print as a part of my remarks a statement recently issued by the National Civil Service Reform League, and also the report of the investigating committee of the same organization, which is printed in the January number of that patriotic and excellent journal which bears the significant title of "Good Government."

A perusal of these papers will convince even my friend from Maryland that all I have said about the evasions and flagrant violations of the civil-service law by the present Administration is true; and it will further demonstrate that the President, though appealed to again and again to uphold the law and redeem the pledges of his party and carry out his own promises, ignored the appeals and persisted in the illegal course.

OFFICE OF THE NATIONAL CIVIL SERVICE REFORM LEAGUE, 54 William Street, New York, June 5, 1899.

The following statement is issued in pursuance of action taken by the executive committee of the league at a meeting held Monday, May 29, 1899:

The National Civil Service Reform League, after mature consideration, regards the order of President McKinley, of May 29, changing the civil-service rules, as a backward step of the most pronounced character.

The order follows a long succession of violations of both the spirit and the literal terms of the law and rules in various branches of the service, and must be considered in its relations to these.

Its immediate effects, which have been understated, may be set forth as follows:

(1) It withdraws from the classified service not merely 3,000 or 4,000 offices and positions, but, as nearly as can now be estimated, 10,100. It removes 3,093 from the class of positions filled hitherto either through competitive examination or through an orderly practice of promotion, and it transfers 6,416 other positions in the War Department filled hitherto through a competitive registration system, under the control of the Civil Service Commission, to a system to be devised and placed in effect by the present Secretary of War.

(2) It declares regular at least 1,000 additional appointments made temporarily, without examination—in many cases in direct disregard of the law—in branches that are not affected by the exceptions, but that remain nominally competitive.

(3) It permits the permanent appointment of persons employed, without examination, for emergency purposes during the course of war with Spain, thus furnishing a standing list of many thousands from which positions in the War Department may be filled, without tests of fitness, for a long time to come.

(4) It alters the rule to the effect that in future any person appointed, with or without competitive examination, or without any examination, may be placed by transfer in any classified position without regard to the character or similarity of the employments interchanged and after noncompetitive examination only.

(5) It permits the reinstatement, within the discretion of the respective Department officer, of persons separated from the service at any previous time for any stated reason.

The effect of these changes in the body of the rules will be of a more serious nature than that of the absolute exceptions made. It will be practicable to fill competitive positions of every description either through arbitrary reinstatement, or through original appointment to a lower grade, or to an excepted position without tests of any sort, or even by transfer from the great emergency force of the War Department, to be followed in any such case by a mere "pass" examination.

As general experience has proven, the "pass" examinations, in the course of time, degenerate almost invariably into farce. It will be practicable also to restore to the service at the incoming of each new Administration those dismissed for any cause during the period of any Administration preceding. That such a practice will lead to wholesale political reprisals, and, coupled with the other provisions referred to, to the reestablishment on a large scale of the spoils system of rotation and favoritism can not be doubted.

The Republican party, at its last national convention, embodied in its platform the following declaration and pledge:

"The civil-service law was placed on the statute book by the Republican party, which has always sustained it, and we renew our repeated declarations that it shall be thoroughly and honestly enforced, and extended wherever practicable."

Mr. McKinley, in accepting the nomination of the party for the Presidency indorsed and reaffirmed that pledge in these words:

"The pledge of the Republican national convention that our civil-service laws 'shall be sustained and thoroughly and honestly enforced wherever practicable,' is in keeping with the position of the party for the past twenty-four years, and will be faithfully observed. Our opponents decry these reforms. They appear willing to abandon all the advantages gained after so many years' agitation and effort. They encourage a return to party favoritism, which both parties have often denounced, that experience has condemned, and that the people have repeatedly disapproved. The Republican party opposes this reactionary and entirely unjustifiable policy. It will take no backward step upon this question. It will seek to improve, but never degrade, the public service."

It must be said, though with profound regret, that the civil-service law as it stood at the date of the convention and at the time of Mr. McKinley's election, has not been "thoroughly and honestly enforced;" that conspicuous opportunities that have been offered for its extension "where practicable" have been rejected; and that, finally, by the personal action of the President steps are taken that undo much of the progress made in the past, and introduce a spirit into the service the influence of which can hardly fail to produce general demoralization.

To make plain the full significance of the situation a brief review of the past attitude of the Administration toward civil-service reform is required.

Congress, by an act of July last, exempted from classification all clerks and others to be employed for the war emergency purposes. This action was based on misrepresentations made on the floor of the House of Representatives respecting the resources of the Civil Service Commission. When it was shown later that the Commission was prepared to offer as many competent clerks as might be required at the shortest notice, the mistake was not corrected.

The Secretary of War, though left free to choose the method of selection, failed to call on the commission. Appointments for field service were made largely through the engineers and were legitimately of the emergency order. Those made by the Secretary directly were not. Many hundreds of these were made, without examination, to the exclusion of candidates regularly qualified and registered as such on the eligible lists of the commission.

At the succeeding session of Congress the Census bill was passed with a positive provision that the great force of clerks and statisticians to be appointed should be selected by the Director without competitive examination if he so chose and without the participation of the Civil Service Commission in any sense. This action had been preceded by a public discussion of the subject, and in the course of this it had been shown, in part by the statements of previous Directors, that the Census of 1890 had been rendered extravagantly costly and imperfect in consequence of the rejection of the competitive plan in organizing the Bureau at that time.

At the height of this discussion the President, in sending his annual message to Congress, urged the passage of the bill, but failed to recommend the application of the competitive merit rules in the manner that had been proposed. Thus the second opportunity to extend the system where plainly practicable was put aside. Neither have other extensions that might be effected by independent Executive action alone as yet been made.

The failure of the Administration to maintain the system as it existed has long been apparent. When President McKinley was inaugurated the revised civil-service rules of President Cleveland had been in operation for nearly a year.

To continue to give these rules effect in the branches newly classified the Civil Service Commission required, essentially, the cooperation of the appointing officers themselves. In many cases such cooperation was refused. In July of 1897 President McKinley promulgated an additional rule, the effect of which was that for the first time the reasons for removals were required to be stated in writing and an opportunity afforded the person concerned to make an explanation—an order which was very generally, and especially by this league, hailed with warm satisfaction as an evidence of his support of civil-service reform.

But in many important branches this rule, as well as those of earlier date governing appointments, was practically ignored. In the Internal Revenue Service and the Department of Justice, in certain bureaus of the Interior Department, in the Government Printing Office, and in many of the larger

post-offices and customs districts the rules in general were violated with impunity. In both these and other branches, moreover, various methods of circumventing the law were practiced, and many temporary appointments were made without examinations, to be followed frequently by the positive failure of the Department officers to aid in securing permanent appointees.

While in those branches of the service where the law has been longest in effect its observance continued to be satisfactory, the transgressions occurring in these others have been so numerous that an unfortunate tone has been given to the whole.

Respecting the Internal Revenue Service and the branches of the Department of Justice outside Washington, the claim was made that certain sections of the Revised Statutes warranted the setting aside of the civil-service law, although the latter was of subsequent enactment and practically all-embracing in its scope.

The fallacy of this contention was clearly shown by the Civil Service Commission in a published brief, and no written opinion in its support has at any time appeared. The violations of law, however, continued. In every part of the country subordinate officers, both in these two Departments and others, maintained a position of open rebellion against the authority of the President and treated the Executive orders with contempt. When an appeal was made by the Civil Service Commission to the Treasury Department to end this condition by declining to allow the payment of salary to persons holding positions illegally, the newly appointed Comptroller, Mr. Tracewell, of North Carolina, gave a remarkable opinion to the effect that the civil-service law had no force other than that given it by the Executive directly, and that whether persons were appointed in accordance with the law or not they must be paid their salaries unless the Executive, in each case, directed otherwise.

Letters were addressed to President McKinley by this league at various times, asking that the necessary steps be taken for the correction of the abuses developed and for the discipline of those officers directly responsible for them. Adequate corrective measures were not, however, taken, and so far as the league has been able to discover, in no case has an individual violator of the law been punished. Not only were these bad examples permitted to stand, but among the unclassified branches removals for avowedly political reasons were made sweepingly. A conspicuous example of this exists in the consular service, where 90 per cent of the salaried officers were changed.

The order that is now issued condones most, if not all, of the infractions of the law itself by removing the positions in question wholly from the competitive class, or by approving the appointments outright. To accomplish this it removes permanently from the competitive lists many positions and classes of positions for which, experience has shown, competition is not only practicable but peculiarly desirable and important.

During last autumn, when the scope of the order was in some degree anticipated, many protests were made to the President by organizations of citizens and by individuals. The protest of this league, submitted under date of October 23, was accompanied by a statement of the arguments against specific changes, arguments that have not as yet been refuted.

It was shown that in case of many of the positions in view Department officers who had fairly tried the merit plan had testified publicly to the successful results, and that for others on the list the Civil Service Commission had held some of the most satisfactory of its examinations. It was shown that officers accepting minor fiduciary positions may be required to furnish a bond in addition to the passage of an examination for appointment or promotion, as is already the practice in many of the most important branches of the classified service.

The speciousness of the claim that exceptions were necessary to permit unrestricted personal selections for positions of confidence or trust was shown by reference to the fact that where positions of this character had already been filled in violation of the law the appointees had been selected generally for political reasons only, not by the superior officer himself but by political agents, and in many cases with so little regard to fitness that the conduct of the public business had suffered in consequence. It was pointed out that the exemption of large classes of positions analogous in character to other classes remaining competitive would serve as a stimulus for fresh demands, and as a precedent for further concessions.

Beyond these considerations it was urged that a retrograde movement in the development in our administrative system would be peculiarly unfortunate and inopportune at a time when it is proposed to extend that system to distant dependencies and to offer the advantages of stable and competent civil service to other peoples.

These arguments, however, had little weight. The order is more comprehensive than had at any time been apprehended. It not only condones grave offenses and in so doing reduces materially the area of the competitive system, but it opens the way widely for practices that may make competitive examination in the future the exception rather than the rule.

It has been said in defense of the action taken that inasmuch as President Cleveland in May, 1896, extended the rules in such a manner that many of his appointees were "protected," and "partisan advantage" thereby gained, some correction of this sort was necessary; and, again, that the attempt to apply the rules in these cases had been attended by "embarrassing friction and delay."

It should be said in fairness to Mr. Cleveland that not a third of the offices classified by him on the date in question were of the class subject to frequent change, and that no person holding any of those was protected from removal on any grounds within the discretion or caprice of his superior officer. Until the order of President McKinley of July, 1897, was signed, the power of removal was practically unrestricted. This has been shown repeatedly, in the public press and on the floor of Congress; it should hardly require repetition.

It has been shown quite as clearly that the friction and delay to which reference has been made was due for the most part to outright opposition to the law on the part of officers whose duty it was to aid in its enforcement. If this were to be taken as a sufficient reason for exceptions it is to be feared that no class of positions whatever would be safe.

The argument in this particular is met completely in fact by the following testimony of the Civil Service Commission, contained in its recent annual report:

"The commission regrets to report that there has not at all times been that cooperation and effort on the part of some officials in carrying out the law and rules which are required by the statute. . . . It has been found that in all cases as soon as the officers in charge give unqualified support to the system and unite with the commission in its suitable and reasonable applications, little embarrassment or difficulty is experienced, and decided benefits to the service have been demonstrated almost from the beginning."

Although, for the first time since the passage of the Pendleton Act, important ground has been lost, it is hoped that the recovery of that ground will not long be delayed. The attempt made to take the "starch" out of the law in New York, with which this backward step is to be classed, has already resulted in a reaction that has placed the reform in that State in a more advanced position than ever before. The league expects, confidently, that the enlightened public opinion of the country, which of late years has so vigorously pronounced itself in favor of the development and extension of the merit system, will not only prevent the restoration of the spoil system in any

degree, but will rally for renewed efforts to carry the civil service reform movement to its final consummation.

GEORGE MCANENY, *Secretary.*

In enacting the civil-service law, in 1883, the committee shows, Congress intended that the system should ultimately embrace the entire subordinate Executive service, or, as the Senate committee declared in reporting the bill, "all that vast number of appointed officials who carry into effect the orders of the President . . . whose duties do not change with a change of Administration, and who have nothing to do with framing the political policies of the Government." Section 6 of the act made provision for a gradual extension of the system, through the action of the President and heads of Departments, until this end might be effected.

From the date of the passage of the act until May 29, 1899, this extension continued almost without interruption, each President making important additions to the classified list and strengthening the rules to guard against evasions. The latest of these additions had been in effect for about a year when the present Administration came into power, but by far the greater part of the work necessary to the completion of the reform remained to be done. With this fact in view the Republican party, at its convention in 1896, had "renewed its repeated declarations not only that the law should be thoroughly and honestly enforced, but that it should be extended wherever practicable."

The committee reports, however, that while in many of the branches that have been longest classified the system has been unimpaired and has continued to produce excellent results, it can not be said that the law has been "thoroughly and honestly enforced," while with the exception of the start made in the establishment of rules for the Philippines service, covered in a separate report to the league, conspicuous and unusual opportunities for its extension, where clearly "practicable," have deliberately been set aside.

The progress of the reform, in its application to the Federal service, has, in brief, been seriously checked. That this is at variance with the declared purposes of President McKinley, and with his professed wishes for the welfare of the service while under his control, is recognized and the committee earnestly recommends that the facts it submits be presented for the President's consideration.

On March 3, 1897, approximately 86,000 positions were in the classified service, while 92,000, including 5,000 Presidential officers, several thousand laborers, and other miscellaneous classes, and the great army of fourth-class postmasters, remained unclassified.

It might naturally have been expected that proper compliance with the law and recognition of its principles on the part of both Congress and the heads of Departments would, at this stage, have secured the appointment through competition of almost all the great number required for service in offices and positions of the sort that are classified. The committee, however, from the data it has at hand, reports surprisingly different results. During the first year following the order of May 29, 1896, that ended on June 1 last, the appointments made within these classes were as follows:

THROUGH COMPETITIVE TESTS.	
Appointments from competitive eligible lists	* 4,640
WITHOUT COMPETITIVE TESTS.	
Appointments to excepted positions, not subject to examination	254
Appointments to excepted positions, subject to noncompetitive examination	800
Appointments under "temporary" certificates	* 2,242
"Temporary" appointments made permanent without examination	973
Reinstatements without examination	1,170
Transfers of unexamined persons within the service	107
Unexamined persons having "special qualifications"	?
Appointments to clerical positions in the Departments under the war appropriation acts	1,200
Appointments to clerical positions in the Census Office	2,400
Total	9,153

These figures show that the "exceptions" from the requirements of the civil-service law, whether brought about through executive or legislative action, have been, during the year they cover, almost twice as numerous as appointments made in the manner the law intended. A certain proportion of the appointments so made were, no doubt, unavoidable, but these cases are exceptional and can not materially affect the totals given.

The committee gives the following summary of the general course of the Administration and of the present Congress in relation to the civil service, incidentally showing more clearly the significance of the above figures:

PRESIDENTIAL APPOINTMENTS.

I. So far as the committee has been able to learn, appointments of local Federal officers of the Presidential class have been controlled almost exclusively by Senators and Representatives or unofficial political leaders, whose selections the President has ratified. While good men are not infrequently secured through this system, in the majority of cases those appointed are active local politicians, whose disposition to provide places for their adherents furnishes a serious obstacle to the satisfactory administration of the civil-service rules at the outset. Among Presidential officers in the general branches—including business officers strictly, and not those that are properly political—the changes have been almost universal. In the consular service, for instance, more than 90 per cent of the salaried offices were refilled during the first year of the Administration, and in the Indian service, during the same period, 62 per cent of the agents.

CHANGES IN "EXCEPTED" POSITIONS.

II. Positions in the classified service excepted from competitive examinations are virtually unclassified, for removals may be made from them without restraint, and appointments are absolutely at the will of the appointing officer. The number of these positions has been greatly increased. On March 3, 1897, at the close of the preceding Administration, there were, all told, only 800, of which number 570 were of assistant postmasters. On July 27, 1897, President McKinley added 533, deputies and others in the customs and internal-revenue services, previously subject to competitive examination, and on May 29, 1899, approximately 4,000 more, in addition to the number removed absolutely from the classified service at that time.

VIOLATIONS IN COMPETITIVE POSITIONS.

III. As the classified service has grown it has been observed that violations of the civil-service law, both now and heretofore, have occurred most frequently in the branches most recently included. After the change of March 3, 1897, there were many irregular appointments in the classes brought under the rules a year or three years before, and not a few in branches longer established, coupled very frequently with irregular removals. These were mainly in the Internal Revenue Service, the Land Office service, the Government Printing Office, the field forces of the Department of Justice and the

* Full returns for last month of 1899 lacking.

Pension Bureau, and in certain of the custom-houses and post-offices—notably at the post-office in Philadelphia.

The Civil Service Commission addressed repeated protests to the Departments concerned in these violations, but in hardly an instance with satisfactory results. The records of their investigations, which the committee has examined carefully, cover 127 pages of their fourteenth report, 114 of the fifteenth, and 67 of the sixteenth. On September 17, 1897, the league addressed a letter directly to the President, inviting attention to the growing number of offenses, and asking that measures be taken to stop them. Where the rules had been most flagrantly disregarded, the dismissal of the guilty officer was urged, and the examples of this sort made by President Cleveland were cited.

On March 12, 1898, the league submitted a report showing the results of its investigations in the Philadelphia post-office, where, it was shown, the postmaster, Mr. Hicks, had removed many subordinates of known inefficiency because of their political or factional affiliations. On March 15, 1898, it presented to the President a general report on violations throughout the service, with exhibits, and again asked that the offending officers be dismissed.

In the great majority of cases, however, there was no correction, except in so far as appointments were nominally validated by the order of May 29, 1899. It is also true that no single officer has been removed for violation of the rules, although the rules themselves, in clearest terms, provide this penalty. The nearest approach to discipline of this sort was in the case of Chenoweth, collector of customs at Nogales, Ariz., who was caught in the theft of question papers in advance of an examination, as well as in other acts of dishonesty showing his unfitness for any trust.

Chenoweth was ordered to be removed by Secretary Gage. Through the apparent intervention of powerful influence, however, this order was withdrawn and a resignation accepted. The man is now serving, presumably not far from the American border at Nogales, as a "special agent of the Treasury Department, for confidential duty in a foreign country," at \$4 per day. This assignment is in itself a violation of the rules, against which the commission has protested, as yet without avail.

Although the President's order of July 27, 1897, seemed to furnish the first substantial check upon removals to be embodied in either the civil-service law or rules—an advance for which Mr. McKinley was most heartily commended at the time by the league—it was feared that through imperfect enforcement the value of this rule also would be greatly impaired, and experience has since shown that it has been.

EVASION OF THE RULES.

IV. While direct violations of the rules have been more or less common, indirect evasions have been more so. "Temporary appointments" are an instance in point. Under the rules persons may be appointed without examination for ninety days' temporary service, in the absence of an eligible list, for emergency work.

It is required that these shall be permitted only when the Civil Service Commission has given its certificate that there is no adequate list. In practice the vast majority of these appointments have been made at pleasure and without inquiry as to the state of the lists, continued indefinitely, and reported as long afterwards as the appointing officer chose. This practice, moreover, has grown alarmingly. During the thirteen months following the amended rules of May 6, 1896, 729 temporary appointments were authorized, and during the eleven months from June 1, 1897, to May 31, 1898, 2,365, of which not more than 80 were authorized by the commission in any manner. The figures do not include War Department appointments in either case.

In many instances appointing officers failed to assist the Civil Service Commission when called on in preparing examinations to secure permanent appointees, and in others, when lists were actually prepared, they have refused to appoint from them.

Another common method of evasion is the appointment of persons (generally women) as "laborers"—in which class examination is not required—and their assignment immediately to duties of a higher class. The growth of this practice the Commission frankly discusses in its fifteenth report. "Excepted" places are also used to bring persons surreptitiously into the competitive service, as in the San Francisco custom-house, where the principal deputy was made chief clerk, and the son of the collector appointed, without examination, to the vacancy, only to change places with the deputy when it came to the assignment of duties.

The Post-Office Department has adopted a device for evasion that the committee deems peculiarly reprehensible. When a small post-office is about to be given free delivery (which of itself brings the office force into the classified service), persons are brought from other cities, and even from other States, to take positions in such offices just before they enter the free-delivery class, to be transferred immediately afterwards to the office for which they are really destined, thus escaping examination altogether. Nearly a hundred appointments of this sort have already occurred, despite the earnest protest of the Civil Service Commission. Five of those so appointed (presumably without the least experience) have been transferred to the important and high-salaried office of post-office inspector, a proceeding which has been made easily possible by the change in the transfer rule contained in the President's order of May, 1899.

RESTRAINT ON IRREGULAR APPOINTMENTS DELIBERATELY REMOVED.

V. One of the most serious features of the situation is that, no matter how plainly or how frequently appointments may be made in violation of the law, the Civil Service Commission is powerless to prevent them. The commission may protest to the Department involved, or appeal from its decision to the President, but, failing to secure relief from either of these authorities, it is obliged to permit abuses to go unchecked. In the cities of New York and Chicago, and in almost every other place where a civil-service system has been established, fiscal officers are forbidden to pay salaries to persons whose appointment is not made in the manner the law prescribes.

The Federal commission assumed that the same rule applied, of necessity, at Washington, and three years ago asked the Secretary of the Treasury to aid it in establishing a proper system of audit. Failing to secure that officer's cooperation, lists of persons known to be illegally in office were sent to the Comptroller, Mr. Tracwell, with the request that their claims for salary be not recognized. The Comptroller declined to interfere, although the commission, under date of December 12, 1898, wrote to him: "A state of anarchy in these appointments obtains at the present time, involving the honor of the administration of the civil-service act. With the information given you by the commission, which is capable of easy verification in case of the slightest doubt concerning the facts, can you not take official cognizance of the matter?"

Mr. Tracwell did not answer this communication, but on April 1 following gave a remarkable opinion, addressed to a United States marshal, to the effect that even though the civil-service act declares that "no officer or clerk shall be appointed" to a classified position except in conformity with its terms, an appointment otherwise made is not illegal; that the civil-service rules have no force except such as the Executive or head of department chooses to give them, and that all persons whose names are on pay rolls presented to him will be assumed to be regularly appointed, the Civil Service Commission's denial notwithstanding. This decision, although directly opposed to rulings of the Supreme Court, is nevertheless binding so long as Mr. Tracwell himself remains undisturbed.

Its effect is disastrous, for though, as the statistics of the commission show, many appointments continue to be made in compliance with the law, the full number that are not so made, and that may never be reported, remains quite unknown and undeterminable. The two following ready instances show what can now be done: In the report of appointments in the Post-Office Department for June, 1899, there appeared the names of twenty-four persons under the head of "temporary clerks appointed under act of Congress approved February, 1899." The act in question merely gave the right to appoint, and did not exempt from civil-service examination. This was promptly explained to Assistant Postmaster-General Heath, but the letter remains unanswered, while the clerks are retained.

Again in the Treasury Department noncompetitive examinations are required, under the President's late order, for certain positions in the customs and internal-revenue services. Few of these have been held, but in cases where they have, and where the candidates have failed absolutely to secure the minimum of 70 per cent, qualifying them for appointment, they are still retained, their rejection by the commission notwithstanding.

THE "WAR EMERGENCY" APPOINTMENTS.

VI. On the plea that the Civil Service Commission had no means of meeting the emergencies growing out of the war with Spain, about 1,300 further appointments without examination were made in different Departments under special provisions in the war appropriation acts.

There is no means of securing exact figures, since these appointments have not been reported to the commission, and the league's request for access to the proper records in the Treasury Department has been denied. On August 1, 1899, however, the number was known to be at least 1,042. At the time of these appointments there were on the commission's list of eligibles 6,180 names, so that practically the entire force required might have been selected therefrom in two or three days. In the subsequent appropriation bills making provision for this force the exemption from examination has been invariably repeated, although the adequacy of the commission's machinery has been clearly explained to respective Congressional committees. Any clerk may now be appointed without examination if it is certified that "the necessity for his employment arises out of the war with Spain."

THE CENSUS FORCE.

VII. Although Mr. Carroll D. Wright, ad interim Director of the Census, informed Congress that more than \$3,000,000 had been added to the cost of the Tenth Census by reason of the failure to select the working force through the merit system, this system was again deliberately set aside in the taking of the present census, and, though the heads of bureaus have been efficient and well-trained men, otherwise the methods adopted in the former census, which proved such a costly failure, were followed almost exactly. The tests required, which were of the "pass" description, probably debarred the absolutely unfit, but the benefit of open competition was lost, and, as the process of selecting clerks and other subordinates continued, only persons endorsed by a Senator or Representative were considered at all.

THE ORDER OF MAY 29, 1899.

VIII. It was while the state of the service was as low as the committee declares that the President's order of May 29, 1899, was issued. That order and its effects are to be reviewed in a separate report. It is stated in connection with the present report, however, that it removed from the competitive to the "excepted" list about 4,000 places, and from the classified to the unclassified service about 6,000 more; that it validated, nominally, many appointments previously made in violation of the law, and weakened the rules governing transfers, reinstatements, and removals, so as to permit new and most serious abuses; and, finally, that it marked the first great reduction in the actual area of the merit system.

The committee presents this review of what it considers a very unfortunate situation, not only that the action of the President may be asked where he has the power to correct, but that every other necessary step may be taken to regain the ground that has been lost, and again to turn the direction of the reform toward the ends the framers and advocates of the civil-service law had in view. The committee will submit a number of specific recommendations for action on the part of the league.

Chicago Post-Office.

SPEECH

OF

HON. JAMES R. MANN,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, January 31, 1901.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 13729) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1902—

Mr. MANN said:

Mr. CHAIRMAN: The pending amendment practically involves the question of an increase in the salaries of clerks throughout the postal service, and especially in the large cities. That involves the question whether the present salaries paid to post-office employees in the large cities are fair and reasonable. I take it that no one will dispute the proposition that the Government ought to pay reasonable living salaries to its employees.

Postal employees are required to be quick of mind and active of body. They must be at all times on the alert when performing duty. A post-office clerk is required to be quick of brain, quick and accurate of eye, and speedy, accurate, and trained with his hands.

All of the mail matter in the cities passes through the hands of the distributing clerks. Many of the letters contain money, and it is often easy for both the clerks and the carriers to know or suspect that money is inclosed in particular letters. With temptations like these before them, it is to the interest of the service that steady and reliable men be employed. That means that, as a rule,

it is better for the service that the employees be married men. Such being the condition, the salaries of the postal clerks and letter carriers in the large cities ought to be large enough to enable a man in those cities to have a wife and to raise up a family of children.

In the Chicago post-office some of these clerks have been working for ten and twelve years, with good records, and yet their salaries to-day do not exceed seven or eight hundred dollars.

The average pay of distributing clerks in the Chicago post-office is less than the average pay of clerks (excepting stampers) in second-class post-offices, and this in spite of the fact that the cost of living in Chicago is much greater than the cost of living in smaller towns which have the second-class offices.

Mr. Chairman, I am aware of the difficulties in the way of increasing the salaries of postal employees. The railway mail clerks are asking for an increase. The letter carriers are asking for an increase. The postal clerks are asking for an increase. The fourth-class postmasters are asking for an increase in compensation. On the other hand, there is a considerable demand that the carrier service be introduced into smaller towns than is now provided by law. Rural free delivery is rapidly eating into the postal appropriations. Fast mail service by special subsidy is demanded in parts of the country. Pneumatic-tube service is being demanded by the large cities. And even without considering these various requests, the Post-Office Department is now run with a considerable deficit.

I remember, too, that the present annual postal deficit would be considerably increased if there were charged against it the cost of the General Post-Office Department in Washington and the cost of construction of the post-office buildings throughout the country, or rental upon the public buildings occupied by the post-offices.

But I insist, Mr. Chairman, that the Government has no right to permit in its employ half-paid laborers or employees. It is one of the strange inconsistencies that the hardest labor is often the poorest paid. Here in Washington the clerks in the Departments work six hours a day with labor that certainly can not be called hard, and yet they start in with higher salaries than the post-office clerks of Chicago receive after ten or twelve years' service. And this is so although the post-office clerks at Chicago are often compelled to work ten, twelve, and sometimes longer hours per day. The clerks in the Departments here, with their high pay and short hours, do not commence work before 9 o'clock and do not continue it after 4 o'clock in the daytime, while the Chicago post-office clerks have their rest and hours of sleep disturbed and broken into, and a large proportion of the postal work there is done after nightfall and continues until 2 or 3 o'clock in the morning.

When the present postmaster at Chicago, Hon. Charles U. Gordon, was appointed in 1897, there was a large number of clerks working in the Chicago post-office at \$400 per year, a trifle over a dollar a day. It is an offense to the human sense of justice to pay so poorly for the efficient work required of these clerks.

I contributed my assistance, with the other members of Congress then representing Chicago, to aid Mr. Gordon in having the lowest-paid clerks in the Chicago office raised to a salary of \$600. And I want to say right here, Mr. Chairman, that in my opinion there is no man in the Government service to-day more able, efficient, and courteous than the gentleman who is at the head of the division of salaries and allowances in the Post-Office Department, Mr. George W. Beavers.

Under the necessary rules of this legislative body general legislation can not be enacted upon appropriation bills, and hence it is impossible for us, in the consideration of this appropriation bill, to insert any provision for the purpose of regulating and classifying the salaries of postal clerks, letter carriers, and railway mail clerks.

As I understand it, this bill increases by 200 the number of postal clerks receiving salaries of \$1,200, \$1,300, and \$1,400, which will result in the promotion of 200 clerks through all the grades below that of \$1,200.

This is good as far as it goes, but it does not go far enough. No clerk who has been in the employ of the Government five years ought now to be receiving only \$700 per year. No clerk in a large city who has been in the employ of the Government for ten years ought to be receiving less than \$1,000 per year, and that is too small in many cases.

But, Mr. Chairman, while we have not been able to get before this House for consideration any of the bills for classifying, reclassifying, or increasing the salaries of the various postal officials, I would like to call the attention of the House to another proposition pending before it. This House has already set down as the next bill for consideration in regular order, subject to appropriation bills, conference reports, and Friday and Monday business, a bill which has for its object an increase in the salaries of revenue-cutter officers of 40 per cent and the retirement of such officers, after thirty years' service, at 75 per cent of their duty salary. This bill would retire 36 of the present 37 captains

of the Revenue-Cutter Service and give them a higher salary on the retired list than they now receive on the active list. That bill proposes to retire them for life on a salary of \$2,625 per annum, as against \$2,500 which they now receive on the active list. Yet these clerks in the post-offices may work harder than these captains do for ten, twenty, or thirty years, and at the end of that time receive a salary of only \$700 to \$1,000, or if, perchance, they are unable to longer perform their labor, they are turned out upon the street by the Government.

What justice is there in a proposition to increase the salaries of revenue-cutter officers to the extent of 40 per cent and retire them at the age of 53 or 54 upon a salary of \$2,625 a year, when the postal clerks and carriers in our post-offices for their onerous labor receive a paltry salary of less than two or three dollars per day? I say that if this House proposes to throw down the applications of the postal clerks and not increase their salaries from grade to grade it would be an unfair proposition to give favorable consideration to the application of officers of the Revenue-Cutter Service for an increase of 40 per cent in their salaries.

No postal clerk or carrier is asking for a 40 per cent increase. They are not asking to be retired on full pay for life. They would be satisfied at present with an increase of 10 per cent and with a gradual increase in the future, and it seems to me that their application is fair. It may be possible that I am biased somewhat by the fact that I reside in and represent in part a great city where there are a large number of these postal employees, but, Mr. Chairman, it is just that these men should be paid fair and reasonable salaries, and there is no comparison between the justice of their application for increased pay and the application of the revenue-cutter officers for a chance to be retired on higher pay for life than they now receive when working.

While I am talking on this subject I wish to say a word, Mr. Chairman, concerning substitute clerks. It is absolutely necessary, in a large city like Chicago, that there should be a considerable number of substitute clerks. Under existing law these clerks receive a salary of \$1 per year, and in addition the full salaries of the persons whose places they take for the time actually at work. These substitute clerks are required to report at the post-office every day, and sometimes twice a day. It is seldom that they earn so much as \$30 a month, not often that they get \$25 per month, and often do not get more than two days' work a week, at an average of \$2 per day, or \$16 per month. They are likely to remain on the substitute list for one or two years, and I ask the gentlemen here whether they believe it is fair for the Government to accept services such as is required in the Post-Office Department for \$16 per month. These substitutes can not take permanent employment elsewhere, because they are required to report every day and may be required to stay and work at any time when they report. They ought to be paid a fixed salary and be put on the regular list when first employed. The postmaster then might be given authority, during the busy days just before and during the holidays, to employ temporarily a number of additional clerks from the eligible list. Such provision as this would meet every emergency.

I know, Mr. Chairman, what the answer always is to this proposition. The answer is that the Post-Office Department is already running behind and that it can not afford to pay large salaries to its employees. The statement is constantly made here that if the Government paid fairly respectable salaries to the postal clerks, carriers, and railway mail clerks, with some regard for the services rendered, the postal deficit would be so large that no one would dare to face it. Mr. Chairman, in this connection I desire to call the attention of the House to the report recently submitted by the "Joint Commission to Investigate the Postal Service."

That commission consisted of eight of the ablest members of the House and Senate. Some of the information contained in the report ought to come with startling force to the members of Congress as well as to the country at large. This shows that the total loss to the Government by reason of the operation of the Post-Office Department for the ten years beginning in 1890 is \$110,000,000.

For the fiscal year ending June 30, 1899, the income of the Post-Office Department from first-class mail matter is stated to be \$65,987,732.98, and from second-class matter \$3,527,032.26. The second-class matter during that year amounted to 414,944,926 pounds. A portion of this second-class matter is carried free, and the balance pays postage at the rate of 1 cent per pound. Every pound of second-class matter is carried at a considerable loss to the Government.

In referring to this subject the joint commission, in their unanimous report, make the following statement:

It is estimated from the recent weighings that of the mail which was transported by the railroads (less equipment) 58 per cent was mail of the second class. The railway mail pay of that year was \$35,774,889.33, 58 per cent of which is \$20,749,435.81. Thus the Government paid in that year \$20,749,435.81 for the railway transportation of this class of mail from which the total income was \$3,527,032.26, a loss of \$17,222,403.55 on this account alone. Adding to this sum a fair proportion of the cost of the postal service, exclusive of railway mail pay, it is believed that the second-class matter alone costs the Government \$35,000,000 more per annum than it pays in postage.

So, Mr. Chairman, while the average loss to the Government during the last ten years on account of the operations of the Post-Office Department was \$11,000,000 per annum, the loss from second-class matter is \$35,000,000 a year. If, then, we abolish this loss on second-class matter the Post-Office Department, as now operated, will show a profit of \$24,000,000 a year.

I ask, is it fair for the Government, in the interest of private publishers, to make a loss of \$35,000,000 a year and then say to the postal employees that because of this loss it is impossible to pay them fair and living salaries?

We are hearing a great deal in these days about subsidies. A proposition to expend \$8,000,000 or \$9,000,000 a year as subsidies for the purpose of building up a merchant marine inspires a doubt in the minds of people generally, and excites the most bitter opposition of the gentlemen on the other side of this Chamber. Almost all of our Democratic friends and many of the leading Republican statesmen and newspapers view with indignation and horror the propositions contained in the ship-subsidy bill. But here we go, year after year, depriving the postal service of needed facilities, keeping the postal employees on niggardly wages, in order that the Government may subsidize the newspaper press and the publishers of cheap and often vicious literature to the extent of \$35,000,000 a year.

When the Loud bill was up at the last session of this Congress for the purpose of, in part, correcting this abuse, most of the gentlemen on the other side of the Chamber voted to retain this enormous \$35,000,000 subsidy to private publishers. In my judgment the subsidy in favor of second-class mail matter is one of the most serious evils existing to-day connected with the administration of our Government.

Mr. Chairman, it is difficult for the members of this House to realize the growth of postal business at Chicago. It is difficult for our own citizens at home to realize the growth of Chicago, but I hope I may be pardoned if I call attention to the business of the Chicago post-office.

The Chicago post-office was established on March 31, 1831, only seventy years ago, and Capt. Jonathan N. Bailey was the first postmaster. During his administration twelve letters a week were considered a heavy mail. The first post-office was located at the old Kinzie house, on the north side of the river, at the foot of Pine street. In 1832 the post-office was removed into a log cabin on South Water street near Franklin street. In 1836 the post-office was moved to No. 7 Clark street, and the total receipts for that year were \$2,148.29.

In 1837 Chicago became a distributing post-office, and a daily mail to the East was established. In 1844, 44 weekly mails were received and dispatched from the Chicago office. By 1846 the receipts of the office had grown to \$7,226.52 and the expenses to \$5,234. In 1850 the receipts were \$14,630, the expenses \$11,863, while the population of the city had increased to over 28,000.

In 1854 Postmaster Cook complained to the Department at Washington: "Our clerks are overworked. We have an insufficient force. Our space is too limited." These words have become familiar through constant use by every postmaster from that time to the present time, and there never has been a moment since the time when they were first used that they were not absolutely true.

The registry system was extended to Chicago on March 3, 1854. Free-delivery system was extended to Chicago in 1863. Money-order system was established and extended to Chicago in 1864. Railway Mail Service was established in 1865.

In 1890 the gross receipts at the office were \$3,142,203. The expenses were \$1,223,433. In 1893 there were employed 998 clerks and 935 carriers. In 1896 there were employed 1,267 clerks and 1,096 carriers. The Chicago office now has employed 1,516 regular clerks and 171 substitute clerks, besides 156 substation clerks located in drug stores, etc. There are 1,310 regular carriers and 230 substitute carriers. Besides the main post-office there are 46 postal stations throughout the city, which are in themselves separate post-offices, having clerks and letter carriers connected with them.

The total area of postal territory covered by the Chicago office is 190 square miles, over which is extended free delivery, and which is a larger area than is covered by any other post-office in the country, if not in the world.

During the first ten days of last October the average number of letters handled by the city mailing division was 1,800,000 per day. The weight of second-class matter for the same period was 1,650,349 pounds, or 825½ tons, an average of 82½ tons per day. During the same period third and fourth class mail matter (not including circular matter) amounted to 924,110 pounds, or 462 tons, an average of 92,411 pounds, or 46 tons, per day. In addition to this third-class matter, there were also handled 4,900 sacks of circular matter containing 3,477,300 pieces, or an average of 347,730 pieces per day.

The gross receipts of the office for the year 1900 were \$7,048,816, which was a gain of \$700,000 over the year 1899 and more than

double the receipts of 1890. During 1900 the Chicago office, in its mailing division, handled 80,568,881 pounds of mail. The second-class mail matter handled amounted to 53,028,065 pounds, representing 700 publications. The total number of letters registered during 1900 at Chicago was 4,980,361 as against 3,904,394 registered at New York; and Chicago registered one-twentieth of the total number of pieces registered in the United States. In the money-order division the transactions numbered 4,393,013, representing \$70,732,686. There were delivered 823,698 special-delivery letters.

As an example of the amount of business done at the Chicago office during the dull season, I give the number of mail pouches and sacks received and dispatched during the month of August last at the Chicago office:

Pouches of mail received.....	31,418
Dispatched.....	37,630
Sacks of mail received.....	117,273
Dispatched.....	210,033

Is it any wonder, Mr. Chairman and gentlemen, that with this rapid increase in business, from receipts of \$2,000 seventy years ago to over \$7,000,000 to-day, the Chicago office has been constantly and earnestly pleading for more help and for better-paid help?

Mr. Chairman, in addition to more help and to higher salaries for our present help, Chicago wants quicker service by the aid of the pneumatic tube. Of the over \$7,000,000 collected at the Chicago office last year \$4,500,000 was turned over to the Treasury of the United States by the Chicago postmaster. I do not claim that this \$4,500,000 is all profit. Most of it is properly chargeable against the cost of mail matter received at and dispatched from Chicago. But I do say that the postal business at Chicago was profitable to the Government; that there was some profit in it—probably one or two million dollars of clear profit. That being the case, I think that Chicago is entitled to have the salaries of her poorly paid postal employees raised, and at the same time to have the postal service expedited.

We have a city of immense proportions. We ought to be able to send letters through the pneumatic tube in an instant between the post-office and the railway stations and between the main post-office and the principal substations, especially the substations on the South Side at Twenty-second street, Thirty-first street, Union Stock Yards, Oakland, Hyde Park, and South Chicago. I know that the pneumatic tube service is yet in an experimental stage, and I am aware of the feeling in this House against continuing, at public expense, such a costly experiment; but I do hope, sirs, that you will give to the large cities of the country an opportunity to continue this experiment to the end that postal service may be quickened and greatly benefited. All parts of the country are interested in the postal service of the great cities, and the country, as well as the city, is interested to have the best postal service obtainable in the cities. [Applause.]

"There is that Scattereth, and yet Increaseth; and there is that Withholdeth More than is Meet, but it Tendeth to Poverty."

SPEECH

OF

HON. MARRIOTT BROSIUS,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 29, 1901,

On the bill (H. R. 13801) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1902.

Mr. BROSIUS said:

Mr. CHAIRMAN: No duty imposed by the Constitution upon Congress requires a more discriminating judgment and a more guarded discretion than the appropriation of money to defray the expenses of Government. Money supplies the motive power to the vast and complicated mechanism which performs all our Federal functions. The amount supplied, if wisely used, determines the effectiveness of every civil agency from the highest to the lowest. The end to be achieved is liberality without extravagance, economy without parsimony, disbursements commensurate with, without exceeding, the real needs of a growing country.

THE TRUE CRITERION.

In political administration, as in commercial business, inattention to the ratio of profit to investment is quite likely to lead to diminishing returns and consequent waste of capital. The true criterion of outlay, within the limits imposed by supply, is the amount that will yield returns in the form of public benefits commensurate with the expenditure. No man with any care for his country or any desire to minimize the burdens of the people

would consent to disbursements on lines of work which promise inadequate returns, and similarly no patriot would desire retrenchment in expenditures which would cripple the functions of any department of the Government and deprive the people of important public utilities greatly exceeding in value the money expended.

Due attention to these simple criteria will enable the House in the apportionment of the revenues among the various departments to be just to the people and at the same time generous to worthy objects of public support.

A comparison of present estimates with past appropriations is not a safe guide to present need. The Department is growing in usefulness and its wants are increasing. The only safe criterion is the intelligent judgment of this House on what is a proper sum, under present circumstances, to set apart for the support of that interest which lies at the foundation of our prosperity and power and the progressive development of which is necessary to maintain our deserved preeminence as the foremost agricultural nation in the world.

The Government, through the Agricultural Department, is rendering important aid to farmers. The money expended in carrying forward that work is a most economic expenditure. Julian Hawthorne, some years ago, stated that this was the only one of all the departments of the Government that returned regularly to the people money value far in excess of its cost. He likened it to a nickel-in-the-slot machine. Put a nickel in the "Department of Agriculture slot" and you pull out a dollar.

SCOPE OF ITS WORK.

The scope of the work embraces improvement in soil and modes of culture, protection to plant life, introduction of new plants for food and fiber, eradication of diseases of domestic animals, discovering utilities in products heretofore wasted, and in other manifold ways promoting diversification of employment and vastly increasing the productiveness of the farm.

The means of accomplishing results on these varied lines are the acquisition of the latest and best information on all subjects relating to agriculture by trained specialists; obtaining the conclusions of the latest science in whatever language it may be locked up; also, the results of the latest experiments wherever made, and the communication of this knowledge, boiled down and crystallized into nuggets of practical information, by printed bulletins and the public prints to the eagerly waiting farmers, thus enabling science to carry to every tiller of the soil a double blessing, widening his intellectual horizon, and, at the same time, multiplying his opportunities and enhancing his gains.

EXPERIMENT STATIONS.

The \$15,000 appropriated every year to each State for the use of experiment stations and the \$25,000 given to each agricultural college annually are gilt-edged investments. The four or five hundred specialists engaged in the work of investigation, scientific and experimental, that farmers may have from time to time the practical results of every new application of science to agriculture, earn their salaries many times over.

These specialists are working bees, winging their way to every land, sipping from every flower of science and experiment the honey they bring to the farmers' hives. The labor of disseminating the knowledge they gather is little understood. Some years there have been over 600 different publications issued, covering 25,000 printed pages, of which over 7,000,000 printed copies were distributed. In the last four years 38,000,000 copies of publications relating to agriculture were placed in the hands of farmers. In addition to this, a half million copies of the Yearbook, containing the garnered fruits of a year's scientific, historical, and practical information for farmers, were distributed.

THE NAVEL ORANGE.

In the Seed, Horticultural, Pomological, and Botanical divisions great results have been achieved. Nature seems to limp and stagger in her distribution of the fruits of the earth. She gave potatoes and corn to this continent; we gave them to the teeming populations of Europe. She gave the eucalyptus tree to Australia; we made it a boon to the treeless plains of Southern California. Apples and fruits of various kinds, trees, grasses, and vines have been imported from foreign lands to enrich the products of our soil. The most notable instance is the navel orange of California. It was first propagated in a hothouse in the Department of Agriculture. The cutting came from Brazil. That unrivaled fruit has been worth more to this country than the total costs of the Agricultural Department since its first establishment. An orange grower from California, visiting the Secretary of Agriculture, said he had raised his hat twice that day—once in honor of the author of his liberty and once in honor of the author of his fortune. In explanation he said he had raised his hat at the tomb of Washington, who was the author of his liberty; then he came to the hothouse of the Agricultural Department and raised it to the old orange tree imported from Brazil, the parent of all the navel-orange trees in this country, and to which he owed his fortune.

FIBER.

Grass and fiber afford striking illustrations of the value of the Government's work. It is expected that investigation and experiment at an early day will be rewarded by the successful production in our own country of fiber that will save us a large portion of the enormous sum paid for imported fiber for manufacturing purposes.

INSECT PESTS.

The Division of Entomology has done a noble work for the farmer. While we have been enriched by plants, fruits, and seeds from foreign lands, we have also been cursed by their insect pests. The Hessian fly, it is said, did us more harm than the Hessian soldiers. It was harder to dislodge. Washington could make the Hessian soldier fly, but all the power in America could not keep the fly out of the wheat. The study of the history of these insects and the means of checking their ravages, now going forward in the Department of Agriculture, may be worth millions to the farmers of this country.

Take, for example, the "scale insect," which well-nigh destroyed the orange industry of California. No instance can better illustrate how profitable are the exertions of the scientific expert and how rich are the rewards of scientific knowledge applied to agriculture. Information of these incursions was sent to the Department. The entomologist took up the study of the white-winged stranger. It was found that his native haunts were in Australia, where he had not been a pest. In this country, however, he multiplied with enormous rapidity. Science arrived at the conclusion that the difference between the insect in Australia and America was that in the former country it was kept down by a parasite, which did not accompany it to this country. Correspondence was opened with Australia, but the scientists of that country knew nothing of the parasite. The sleuthhounds of science connected with our Department of Agriculture pursued the hunt, sent an agent to Australia, found the parasite—"Vedalia cardinalis"—bagged it, brought it to this country, let it loose upon the infested trees, and witnessed the miracle of the destruction of the scale insect and an industry saved from ruin.

But there are more recent achievements than these. The annual report of the Secretary of Agriculture tells of the introduction from Africa of a parasite which preys on the olive scale, a pest of the California olive groves. Locusts have been inoculated with a fungous disease, introduced also from Africa, and the results of importing last year the insect which fertilizes the Smyrna fig are said to have been most gratifying. "In one locality in California more than 6 tons of Smyrna figs of the highest grade of excellence have been produced and packed." Previous to this no Smyrna figs had been produced in this country, but Secretary Wilson predicts that this insect "will make America a strong competitor in the dried-fig trade in the world's markets."

BUREAU OF ANIMAL INDUSTRY.

The gentleman from Michigan [Mr. CORLISS] animadverted with some severity upon the Bureau of Animal Industry. I would like to refresh his recollection of the usefulness of that Bureau. A few years ago a terrible cattle scourge prevailed in many States of the Union, causing dismay and consternation among cattle growers throughout the country. Pleuro-pneumonia was widespread and alarmingly fatal. The Bureau of Animal Industry went swift-footed to the rescue. The Department reported that from August 1, 1886, to November 30, 1888, there were inspected by the agents of the Bureau 50,838 herds, containing 300,837 cattle. There were found 1,828 infected herds, which contained 5,715 infected animals, and there were made 49,073 post-mortem examinations. Wherever a herd was found infected it was at once quarantined and the infected animals slaughtered.

By the wisely directed efforts of the Bureau, guided by the highest attainable scientific skill, the dread disease was effectually stamped out. It is not known to exist now in more than two or three localities, and nowhere in virulent form. But it is a subtle and insidious disease, and the germs are hard to entirely extirpate, so that the greatest and most constant vigilance is required, as well as unceasing readiness to move upon it at any time in any section where it may break out.

Now, let me give you one other illustration:

TEXAS FEVER.

To the exertions of the Bureau is likewise due the rescue of our cattle from the malignant malady disseminated by Southern cattle known as "Texas fever." Anyone can see what a peril hangs over the cattle industry in this country when this malignant infection breaks out, especially along the lines of interstate commerce. The value of the protection to our herds and the destruction and loss prevented by the constant watchfulness of the Bureau and their promptitude in applying their remedies and enforcing their preventive regulations whenever a premonitory symptom appears is hardly within the range of calculation. It has been estimated that the restrictions on the movement of cattle from

State to State, made necessary by the prevalence of the contagion, cost the stock raisers of the country not less than \$10,000,000.

Similarly it has been said that the immunity of our stock yards from the Texas infection, under the regulations of the bureau, is worth \$20,000,000 a year to the cattle industry. And this can easily be understood when we remember that the Texas-fever district extends from the Maryland line on the Atlantic coast to the Rio Grande River, embracing in its sweep 11 States.

But the effectiveness of the work of the bureau is limited by the means supplied for its operation, and I know that the farmers of this country who realize the importance of efficient service on these remedial and preventive lines of work projected for their protection, if they were consulted, would declare with united acclaim for a liberal appropriation to keep this bureau at all times on an effective war footing.

WORK OF SPECIALISTS.

So in the investigation of diseases of plants, trees, and domestic animals the scientific experts, with an energy born of an earnest enthusiasm in their work, are tearing away the mask of mystery that has kept the secret of those scourges hidden from human intelligence while they preyed upon the farmer's gains.

No one can fail to see the importance to the farmer of the quests these specialists of the Agricultural Department are pursuing. They are seeking and, if sustained, will ultimately find answers to the questions, What is plant disease? What is pear blight, peach yellows, and black rot? What is vine disease, rust in wheat, potato rot, and mildew? What is hog cholera, swine plague, pleuropneumonia, Texas fever, tuberculosis, glanders, and horse distemper? When these questions are answered by science, millions will not measure the saving to the farmers of the country.

EXPERIMENTS.

Mr. Chairman, it is easily seen that farmers can not take the initiative in these necessary scientific experiments for two obvious reasons: First, their lack of scientific knowledge, and in the second place their inability to bear the losses incident to experiments conducted on an adequate scale to produce satisfactory results. The speculator may make enough in one successful deal to cover the losses of many an ill-starred venture; but the farmer's gains will not carry double. His losses from storm and drought and worm and beetle are all that he can bear. He can not speculate on the chances of drawing a first prize in the lottery of experiment; so that in order that farmers shall enjoy the benefits of the progress of science in its application to agriculture, and lessen as rapidly as possible the "hit or miss" character of farming, it is necessary for the Government not only to aid in the dissemination of knowledge, but to produce results itself at public expense, and thus be an agency in the advancement of scientific agriculture.

PENNSYLVANIA INTERESTS.

Now, Mr. Chairman, I come to a matter that I approach with great reluctance. In this bill there is a rearrangement and regrouping of divisions to some extent, with a view to greater efficiency, and some increase of salaries. It may be that this portion of the bill is subject to the point of order made by my colleague from Pennsylvania [Mr. MAHON], and if he insists, it will all have to go out, although it is obvious to anyone that it will greatly facilitate the work of the scientific divisions and redound immensely to the benefit of the farmers. To insist on that point of order seems like a deliberate blow at the interests of the tobacco growers in my district, as well as those in the district represented by my colleague who threatens to insist upon the point of order. I hope his second thought will be better than his first, and that mercy to his own constituents as well as mine will lead him to abandon his purpose.

Pennsylvania has appropriated for many years an average of 28,000 acres of her best land to the production of tobacco, producing an average of 30,000,000 pounds a year.

Lancaster County is producing about 15,000,000 pounds a year, the greatest leaf tobacco producing county in the Union, according to the census of 1890.

We import 7,000,000 pounds from Sumatra, at a cost of \$6,000,000, annually. Scientific investigation of soils and modes of culture in several States has revealed the fact that the production of Sumatra tobacco in our own country and the diversion of all this money to our own people is quite within the range of possibility if a little liberality is extended to the scientific service of the Agricultural Department in the pursuit of its scientific exertions in the investigations of soils and modes of culture and curing.

Pennsylvania has suffered severely from "black rot," a disease that is incident to the curing process. An improved method of fermentation will enable Pennsylvania and Ohio to produce a quality of tobacco equal to the Cuban product; but to do this we must have the services of scientific experts, who can only be secured by the payment of salaries in some degree commensurate

with the value of their work. We have lost some exceedingly valuable men recently because higher salaries were offered them elsewhere.

Now, when you consider that the tobacco industry in this country pays into the public revenues annually over \$50,000,000, it does not seem unreasonable to divert a small portion of that sum to the remuneration of services which may very greatly increase the industry and still more enhance the revenue derivable from it.

The tobacco produced at the experimental station in Connecticut sold at 71 cents a pound, while the ordinary product brings about 20 cents.

LIBERALITY IS TRUE ECONOMY.

This is but one of many instances which accentuate the enormous returns for the money expended in scientific experiments in soil and modes of culture. And yet there are those who object to the outlay necessary to keep the scientific bureaus of the Department of Agriculture in the highest state of efficiency. The man who buttoned his collar to a wart on the back of his neck to save the price of a collar button, and stopped his watch at night to save wear and tear, and tied lightning bugs to his bee hives so the bees could see to work at night was benevolence itself compared with a man who antagonizes these reasonable outlays for the benefit of millions of American farmers. If there is any lack of dignity in this illustration I will make the average right by quoting from a sacred writer a passage which I have often commended to those two-penny economists who habitually cavil at our appropriations for the Agricultural Department:

There is that scattereth and yet increaseth, and there is that withholdeth more than is meet and yet tendeth to poverty.

For years the tobacco producers of my district have striven to rescue their industry from the ravages of the Sumatran invasion. They are growing weary of raising fillers at from 2 to 8 cents a pound when they have a firm belief that a little liberality on the part of the Government in the line of scientific investigation of soil and modes of culture and curing would result in the production of a leaf of such a quality as would take the place of the Sumatran goods largely imported now for the manufacture of cigars for American consumption. In this view of the case it affects me with a poignant grief to see my colleague from Pennsylvania [Mr. MAHON] constrained by a sense of duty to mutilate this appropriation bill by striking out that portion of it which gives my constituents a reasonable hope of having their industry redeemed from the ravages of this Asiatic invasion and the value of their product doubled and trebled by improvement in quality. Why there should be any desire on the part of an American statesman to play into the hands of the merchants of Amsterdam and the importers of the products of a Dutch monopoly to the injury of American farmers is not easily comprehended.

A hundred thousand men in Pennsylvania and other tobacco-producing States interested in this legislation are pleading for the scientific help that the specialists of the Agricultural Department could afford if we would give them the means of doing so, and they hold up to us the picture of a balance swinging between the nations, in one scale a Chinese cooly living on 10 cents a day, in the other an American farmer, and they wait with awed and wondering look to see in which scale their Representatives in Congress will place the weight of their influence.

TWO PROPOSITIONS.

Now, Mr. Chairman, without further detail, two propositions are demonstrably clear:

1. The objects to be attained through the instrumentality of the Agricultural Department are necessary to the safety and the progressive development of that great industry which underlies and upholds all others.

2. That no duty presses with greater urgency upon this Congress than that of supplying this Department with the necessary means of subserving the purposes of its creation, and keeping in effective operation its varied agencies, and carrying to successful execution its authorized regulations for giving effect to its exertions on all lines of legitimate work.

PROGRESS OF SCIENTIFIC AGRICULTURE.

Money increases in power and worth to this Department in proportion as scientific knowledge and experience widens its views and its operations approach scientific precision. The waste of experiment diminishes as the certitudes of science increase. Scientific agriculture is advancing with firm and steady step upon the outlying provinces hitherto given over to vexatious doubts and vain conjectures, and is annexing them one by one to the domain of uniform and stable results. The scattered truths of science are coming together and taking form. A splendid body of organized knowledge is emerging from the ignorance of the past and lighting up the farmer's horizon with a radiant promise of a brighter
